In 1877 Slow Go passed into the hands of John Noble of Pittsburg, he having a mortgage on the horse, and with this change of owners came a change of drivers, Moore Floyd, a young man of Pittsburg being retained to guide the gelding. His first race of importance that season was at Chicago, July 17th, the other starters being Little Fred and Badger Girl. Only a week or so previous Little Fred had won a race from Bodine (then just brought back from California by Budd Doble), and showed such fine form that Morrel Higbie had no doubt of his ability to defeat Slow Go. In the pools it was $100 for Little Fred and $40 for the field, and at these odds young Noble and a few friends who had come on with him from Pittsburg backed Slow Go to win a lot of money. Little Fred won the first heat in 2:25, and then the odds on him were greater than ever. But in the second heat Slow Go made none of the breaks that caused him to be behind at the finish of the first mile. The Dexter Park track was never a fast one, and on this day it was deep with dust, so that when Slow Go won the second heat in 2:24½ horsemen saw that the performance was equal to 2:20 at Cleveland or Buffalo. The third heat he won in 2:23½, showing that he was able to beat Little Fred that day, even though Higbie's horse were at his best.

The fourth heat will never be forgotten by those who witnessed it. Seeing that new tactics must be adopted, Higbie, as soon as the word was given, began applying his whip very freely, with the evident intention of sending Slow Go to a break, knowing that once off his feet his chances for the heat were gone. The two horses went away together, and all the way to the quarter pole the noise of the whip cracking around the shafts of Higbie's sulky could plainly be heard. Just as they entered the back stretch Slow Go jumped into the air, and as he did so the hearts of his backers failed them; but when he struck earth again he was trotting, although for an instant the spectators could hardly believe the evidence of their own senses. From that point to the wire the struggle was a hot one, but the big horse came bravely on without faltering, and went under the wire in 2:22, which was, all things considered, the very best heat of his life.

Ten days later Slow Go secured his record of 2:18½, and again his victory was over Little Fred, although this time he had a lot of other good ones to beat as well. The race took place at Cleveland, the starters being Little Fred, Slow Go, Prospero, Adelaide, Mattie, Tanner Boy, May Bird, Hannah D and Bella—one of the best fields that ever faced a starter. Little Fred was played by "the gang" for a winner, but after he had captured the first and second heats in 2:20 and 2:20½, Slow Go came along and took the next three and the race in 2:18½, 2:20½ and 2:22. There was a good deal of talk at the time about the manner in which Jack Phillips, who drove Adelaide in the race, carried Slow Go all over the track, and there is little doubt that in one heat he bit the gelding across the face with his whip, but no inquiry into the matter was ever pressed.

After this race Slow Go never amounted to much. For a year or so a lawsuit over the possession of the horse prevented his appearance on the turf, and after the litigation was ended he was not first class. While in Youngstown, O., some time ago, the stable in which Slow Go was standing was flooded, and the horse took cold, which finally resulted in paralysis and death.—*Breeder's Gazette.*

Closing of Stakes.

Do not forget that the stakes and purses of the Pacific Coast Blood Horse Association close on Thursday, March 1. See advertisement.

Betting in New York.

Although the representatives of Messrs. Watts, Hughes & Cathcart, of Louisville, and Simonton & Co., of Cincinnati, in New York announce that their principals are ready to do a book-making business on some of the Louisville events they have met so far with but little success. In this they are somewhat disappointed, having expected that as none of the larger New York houses were doing business the odds offered by their firms would be freely accepted. New Yorkers have, however, learned a lesson in the business, and, instead of rushing at the odds offered they are waiting until the season really begins. In other words, here, as in England, winter betting is almost one of the things past, and the bulk of the money bet hereafter will not be invested until just before meetings or the night before the race, and for many races not until the numbers are up. Those with speculative instincts are also waiting to see the fate of the amendments offered to the present pool-selling laws, believing that if they pass both houses and receive the approval of the Governor, the competition by large speculators will be so sharp that better odds can be obtained on the race tracks than are now offered for the Withers or Belmont. Of course the amended law will not help those who wish to speculate on the racing to take place at New Orleans, Memphis, Louisville and elsewhere, and what is done must be through agents or by mail. In this respect the Hoboken racing scheme would have been of advantage to the projectors, and to those who follow the races, for among other special inducements were to be facilities to bet on all races run in the United States. In other words, the scene was to be changed from Hunter's Point to Hoboken, and the business confined exclusively to betting. It is not unlikely that if the New York laws are not amended the Hoboken scheme will take a more business-like shape than it has at present. It is also suggested in some quarters that if the New York law is not amended every effort should be made to enforce it, both in this city and neighborhood. As far as New York is concerned there is still some talk of organizing a club similar to the Victoria Club in London, with a limited membership, in which betting on credit may be indulged in, but it is doubtful if such a club would be a success in New York, principally on account of the rivalry among some of those prominently engaged in the business. It is to be hoped, however, that if the Hoboken Racing Association—or by whatever name it may be known—should come into existence it will be in the hands of those who are above doing a "50-cent" business, that combinations will never be allowed and that the percentage on the auction and mutual pools will be about half what is now charged by those in the business.

As to the books opened by Watts & Co., of Louisville, and Simonton & Co., of Cincinnati, the only events selected are the Kentucky Derby, for three-year-olds, and the Merchants', Turf and Louisville Cup for all-aged horses. For the Derby, Cardinal McCloskey is the favorite, only 5 to 1 being offered against his chances. He is by Ten Broeck out of Waterwitch, he by Asteroid. He came into prominent notice at Lexington last September by winning a purse for maidens, which success he followed by winning the Maiden Stakes and the Belle Meade Stakes at Louisville. So far he is said to have wintered well, and, barring accidents, may be considered a sure starter. The next in estimation are Pate's Ascender and the Dwyer Brothers' Barnes at 6 to 1 each. Ascender is at Lonisville and Barnes at Sheepsbead Bay. Both were fair performers last year, but as to whether Barnes will be sent to Lonisville time and condition alone will decide. At 8 to 1 stand Lord Raglan, Leonatus and Punster. Each did well as a two-year-old and may be set down as having fair chances of being a good three-year-old. At 9 to 1 is Drake Carter by Ten Broeck, dam Platina. He was not seen as a two-year-old and is now being trained at New Orleans by Green Morris, who brought Apollo out in such good shape last spring that he was able to win the Derby, although so little thought of that he sold in the field. It has already been rumored that Drake Carter is to win the Derby, which may possibly explain why the odds are so little against him. Among those at 10 to 1 are Bondholder, Pike's Pride and Queen Ban with Hassan and Violator at 12 to 1 and so on from that price to 90 to 1 against the Saratoga-bred Athlete by Highlander. For the Merchants' and Turf stakes Ascender, Checkmate, Monarch, Fellowplay, Queen Ban and Thora are the favorites, while for the Cup 5 to 1 is offered each against Checkmate and Thora, 6 to 1 each against Apollo and Boatman, 8 to 1 against Wildmoor, 9 to 1 against John Davis, 10 to 1 against Harry Gilmore and from 12 to 30 to 1 against the others. As to Thora and the other horses of Mr. Reed's stable, they are all at his farm, four miles from Gallatin, Tenn., where they are doing so well that Thora is expected to equal her last year's performance, when she won the Washington, Baltimore, Westchester and Saratoga cups; only she will this year begin either at Nashville or Louisville.—*New York World.*

Twenty horses with records better than 2:30 died during 1882, the list being as follows: Proteine, 2:18; Pilot R, 2:21½; George Wilkes, 2:22; Tommy Gates, 2:24; Carholic, 2:24½; Gray Chief, 2:24½; Charles Henson, 2:25; Chieftain, 2:25½; Houcst Allen, 2:26; Gen. Tweed, 2:26½; Doble, 2:28; Silver Duke, 2:28¾; William H, 2:29; Factory Girl, 2:29; Louise, 2:29½, Lothair, 2:29½; Fairmont, 2:29½.

War Dance had thirty-five representatives on the turf during the past season (including Sachem and Dakota in England). They started in 347 races, winning 56 of them, getting second place 71 times and third place 56 times. The aggregate of their winnings was $12,925, of which Red Boy won $11,875.

The thoroughbred English stallion Blue Mantle, imported by James R. Keene of New York, last year, died on the farm of W. M. Kenney, six miles from Lexington, Ky., of paralysis, on the 3d inst. He was twenty-three years old.

YELLOW DOCK.

The History of the Mare that Went a Mile in 2:11.

"Yes, boys, I might have had a good one now and be trotting for big money with the best of them, but a fellow can never tell when he sees a good one. I was down in Ohio visiting among my folks a few years ago, and was looking around for a trotter or two. My uncle took me out in the pasture and showed me a sorrel filly, which he said I could have for $150. He said she would make a trotter, but I didn't believe him; she was three years old and meaner than a mule. I just told him I wa'nt a-going to ship her to Iowa and be laughed at. That filly grew into the mare Yellow Dock. She is a half sister to my stallion here, the one I call Richmond; and although he is a good one and I am not ashamed to show him with any man's horse, I guess I would not have lost if I'd brought the filly along instead." Thus spoke a stalwart Iowa granger at a fair last fall—Mr. J. C. Taylor of Postville. As the mare he mentioned is one of the most famous trotters in the country, I requested Mr. Taylor to get from his Ohio friends her early history. This he has done, and I have the pleasure of presenting to the readers of the *Gazette* the following interesting statement written by Mr. James Clark of New Moorefield, Ohio:

"Yellow Dock, formerly Mohawk Maid, was sired by Clark's Mohawk Jr., dam by Kentucky Copperbottom, a sorrel stallion taken from Kentucky to Iowa, near Mt. Pleasant, about 1858. He was a pacer and single-foot racker, a very fast walker, and supposed to weigh about 1,000 pounds. Isaiah Ernst, a resident of this county, moved to Iowa about 1859 and took with him a roan mare brought from Virginia by his father, Jacob Ernst. She was by a thoroughbred stallion called Virginia Spot. This mare was bred to Copperbottom, and after Mr. Ernst moved back to Ohio the roan mare foaled a sorrel filly colt, that at the age of eighteen became the dam of the now famous Yellow Dock. She had no pretensions to speed; under the saddle she paces smoothly, in harness has a pure, square trotting gait, but no speed. She has a lengthy, neat neck, deep shoulders, high, sharp withers, good back and loin, lengthy body, and as good a leg as ever was seen, I reckon.

"Her owner, up to the time of breeding to Mohawk Jr., had never paid over $10 for the service of any stallion; the consequence was she was always bred to common horses—there being no speed to any of her numerous progeny beyond a common road gait—until Mohawk Maid made her advent in the trotting world. I was always an admirer of the old mare, and saw her frequently in the lead of a four-horse team, and thought I would like a colt from her. Finally Mr. Ernst was passing my place one morning, riding the old mare, with the old wagon saddle and blind bridle on; she looked very thin. After the usual salutations, I tried to persuade Mr. Ernst to invest in the service of a $100 stallion. He took it as a good joke at first, but finding I was in earnest, he told me he never paid over $10 for the service of any horse. I finally persuaded him to bring the mare and breed her, and if he did not want the colt at weaning time we would fix it somehow. The old mare was covered but once; in due time a sorrel filly, with some white in her face and three white legs, was foaled, and at six months Mr. Ernst was after me to take the colt. I tried hard to get him to keep the filly and pay the service, but, finding nothing would do but that I must have it, I threw in the service of the stallion, gave him $42 50, and brought the colt home.

At three years old we undertook to break her to saddle, which we found a job. She was determined no one should stay on her back, the boys on the farm taking it by turns as they got enough of it. She was vicious; would bite, strike and kick, and finally was turned into the pasture until late in the fall, when our trainer, Charley Van Meter, began breaking her to harness. She was stubborn and ugly there as well as under the saddle, but Charley finally got her so he could drive her to a heavy spring sulky. After that she was turned out for the winter. In the spring, late, I believe, after we commenced working the other horses, she was taken up to complete her breaking, and was only driven at such times as we found time from other duties. Finally, after several times hitching, she was indulged to the light sulky. Charley, the trainer, hated her so bad that he was constantly advising me to sell her, or turn her out to grass. Finally, one afternoon we went to the track to work 'the devil,' as the boys called her, when she went to throwing her head, and acting like a fool. Charley gave her two or three severe licks with the whip, when she struck the purest, levelest, squarest gait, that is always an accompaniment of the top sawyers. From that it was easy. I saw enough while she went 300 yards to convince me she was a trotter. On returning to the barn I told the boys I believed she would eventually be the best of the lot—a bold assertion, for there were some good ones in the barn, one afterward at seven years old trotting a quarter in 33 seconds, and a mile in 2:21. I refer to Mr. Rockefeller's Jesse, whom I think equal to any Mohawk living, notwithstanding Mohawk Maid's wonderful performance. From that on the Maid came; and before the season closed trotted a mile, with two months' work, in 2:41, the last half in 1:18½. Before I sold her to Mr. Alexander she trotted a mile over the half-mile track at Springfield in 2:25. The old mare is still looking well, and has a filly foal at her side sired by a son of Mohawk Jr., and is in foal by the same horse. The price asked for the old mare is $5,000."

The man who is responsible for the change of name from Mohawk Maid to Yellow Dock ought never to be lucky. It is bad policy to change a name even when an improvement is made, but when a romantic and euphonious cognomen is discarded for such barbarous yawp as Yellow Dock, the perpetrator of the crime against good sense and good taste deserves to be drowned in a decoction of the weed. Mohawk Maid, or Yellow Dock, as I presume she must be called, stands 15 hands 3 inches high, and weighs in good flesh 1,150 pounds. She has a strong, but not very attractive formation, and is a toe-weight trotter, having begun with eight-ounce weights, which were gradually reduced to four ounces. She can speed fastest, however, with six ounces. As it is claimed she was up in the collar much of the time when her remarkable record of 2:11 with running mate was made, it is fair to presume that, hitched with a trotter fast enough, all existing double-team records could be wiped out, while it is also fair to presume, from her great success in harness, that her reserve of speed can also be used at that way of going, and that her harness record is sure, barring accident, to be very much reduced.—*M. T. C., in Breeder's Gazette.*

We call the attention of the owners of stallions to the advantages of the BREEDER AND SPORTSMAN as an advertising medium. No such facility has ever before been afforded on this coast for placing these announcements directly before the people interested. Our rates are reasonable and a place among the royal company now represented in our advertising columns will be a profitable investment.

HERD AND SWINE.

Managing Boars.

Whether the pigs are intended for pork or for breeding purposes, the general care to be given the boar will be in either case about the same. From the time he is five months old he should be kept by himself. He should be provided with a comfortable shelter in an inclosure where he can have the exercise needed to keep him in a healthy and growing condition while young.

As a preventive of his becoming vicious or learning to break fences, it is best that a lot or other inclosure intervene between his own and that in which other hogs—particularly open sows—are allowed to run. If thus kept from the start, any ordinary fence will be sufficient. If by the neglect of this preventive he should acquire the habit of lifting gates and breaking fences, much trouble in restraining him may afterwards be expected. In case he becomes bad in this way, a strong, close fence will be needed to confine him, and besides, he should be treated to one or two rings in his nose. A part of an apple orchard, where the trees are so well grown that he can not injure them, say half an acre or more, as convenience for fencing may allow, would make an excellent yard, affording both shade and pasturage. Where accommodations to this extent can not be had, and the boar must be kept in a dry lot, let it be a yard adjoining the kitchen garden in order that he may be conveniently supplied every day during the growing season with weeds and refuse vegetables. Purslam *(Portulaca)*, lamb's quarter *(Chenopodium)*, pig weed *(Amarantus)* and other well-known garden pests are excellent feed, and may as well be utilized in this way. He will be greatly benefited if sour milk and the best of the kitchen slops can be given him. He should, besides, have at all times a plentiful supply of good, fresh water. His daily allowance of soaked oats or corn should be governed in amount by the quantity and richness of the supplies above mentioned, bearing in mind that he is now to be fed with a view to the most rapid growth consistent with sound health and the best possible physical development, rather than to be made fat. He should be fed all he will eat until a year old; but this cannot be done, and he kept in the thrifty, growing condition to be desired, unless special care be taken in the manner of feeding; the kind as well as the quantity of feed being regulated by or changed according to the changes of season.

The young boar should not be put to service until he is eight months old. At this age it will be no injury to him if allowed to serve one sow a week, although he will get better pigs when a year or more old than at a younger age. When ten months old he may serve two sows each week, and when a year old, if properly cared for to that time, one every other day. When eighteen months old and over he may safely be allowed one sow a day, but must, in the meantime and when in use, be well and regularly fed. As a rule, the boar is needed only for a month or two in the fall and again for several weeks in the spring. As it is usually desirable to have the sows farrow as nearly as possible at the same time, the temptation is to crowd the service of the boar into the shortest time possible. When only a few sows are kept little harm can result from this, but in large herds the advantage gained by having the little pigs all of nearly one age is at the expense of strong, healthy litters, that would mature to the best advantage, whether as feeding hogs or as breeders.

When a sow is to be served she should be turned into the lot with the boar, as it is usually an easier matter to drive the sow away than to return the boar to his place. It is the general opinion among practical men that one service only should be allowed. Two or more are not believed to be any more certain to result in numerous and healthy progeny than one, but are considered a useless expenditure of the strength and vigor of the boar.—*Breeder's Gazette.*

Jersey's Isle.

Jersey is but a small island; if it were square, it would just be six and three-fourth miles each way. Yet this little spot manages to support about 12,000 cattle, that is, roughly speaking, one for every two acres of its surface (rocks, roads, and wastes, and house-room for 60,000 people included). And it has done this for the last twenty years at least; for the census of 1861 gives the number of cattle in Jersey as 12,037. What is more remarkable, it exports every year above 2,000 head (the average export, by the Custom returns, for the last eighteen years being 2,049), nearly one for every ten acres. Now the total number of cattle in England only averages one head to ten acres; it therefore follows that, in proportion to its size, Jersey exports every year as many cattle as England contains. In other words, if England were to export cattle at the same rate, her whole stock would be swept away in a single year, not a hoof would be left behind. The system that enables Jersey to do this must be worth considering, particularly in these days, when the English farmer is at his wit's end what to do, as his sheet-anchor, wheat-raising, lets him drift upon the rocks. But another and not less striking result of our management is the breed of cattle it has produced. Hitherto it has been the accustomed fashion in England to look upon Jerseys as the curled darling of fortune—pretty playthings for the rich—lovely little objects for the lawn, yielding a small quantity of very rich milk, cream and butter, for those wealthy enough to afford such extravagance. That they are small, we admit—beautiful, we grant. Fitness for the work is the thing, all the rest tinsel. The office of the Jersey is to convert grass and roots into butter and beef. She is not bred to be eaten; she is too valuable as a butter machine. Then, why should she be larger? And, far from being the rich man's luxury, she is, more than any other breed, the poor man's necessity, the small farmer's best help. This is very easily and simply proved (in a general way), in our island experience.

We have seen that 12,000 cattle are here kept in a place six miles square, where rent averages £9 an acre, where the farms are smaller than anywhere else in the world, where every farmer works with his own hands, and is brought face to face with the wolf he must keep from the door. What do we see? The island eaten up with cows, and the farmers beggars? On the contrary, the whole island is like a garden, thickly strewn with comfortable, well-to-do houses and homesteads; we find ease and comfort everywhere, poverty and want unknown, beggars none. I do not say this is all the produce of cows, but I do say that our farmers (who have so close a fight, and yet are so wonderfully successful), must understand their business, and do not keep 12,000 cattle at a loss. If Jerseys pay here with land at £9 per acre, can they be unprofitable in England, or anywhere else where butter finds a market? But we go much further; we hold that the Jersey cow is the most beautiful of her species, and the most profitable.

The Jersey does not claim to be the best animal for producing beef, or milk, or cheese—her specialty is butter, and here she stands unrivaled for quality and for profit. All the beef for our 60,000 people is imported every week from the neighboring coast of Spain, and this has been the case for the last hundred years at least, as the Acts of our island abundantly show. With our 12,000 cattle, we do not rear a single bullock; neither do we make a single pound of cheese, and probably never did. As to milk, that of the Jersey cow is far too good for the milkman, who would find an Holstein (or one of the deep-milking tribes of Shorthorns) much more profitable. Neither does the Jersey claim to be "a good all-round cow." The "good all-round cow" is an anachronism; she might have done very well when every man was his own butcher and baker. Nowadays the farmer is obliged to consider what particular line will best suit his circumstances and surroundings—whether beef, or milk, or cheese, or butter—and he must choose his cow accordingly, for on this depends his success or failure. If he decide in favor of butter, there is no cow will suit him so well as the Jersey, for she is the only one that has been persistently bred for butter alone, and she is the accumulated result of some hundreds of years' persevering effort in that direction.

We will sum her merits up as shortly as we can. We hold that the Jersey is the most profitable of butter cows; she will yield more butter (for her size and the food consumed) than any other breed whatever; that a good Jersey will yield half her own weight of butter in a year—she rarely exceeds 800 pounds in weight, and her average is above 700 pounds; cows that yield half that weight of butter in a year are to be found in every good herd; that her milk is richer than that of any other breed, six quarts very commonly producing one pound of butter; there is therefore less water to handle, to milk, manage and find pans for; that her butter is better in color, in texture and in flavor, commands a higher price; that she comes into profit early, her first calf being commonly dropped when she is two years old and often before, and that she is so gentle that the women can easily manage her.—*Agricultural Gazette.*

Farmers keeping stock in the northern part of the Pajaro valley report that blackleg has been playing sad havoc with their yearling and two-year-old cattle. One farmer has lost about fifty head of young cattle by this disease, and his neighbors have lost heavily. He says that cattle take it suddenly and die soon afterward. He has tried several remedies, but none have done good.

There are more than 200 breeders of Shorthorn cattle in Michigan, owning at least 4,000 cattle that are worth $1,000,000.

The *English Agricultural Gazette* notes that the cows in dairies for the London milk trade inherit some Shorthorn blood "in ninety-nine cases out of a hundred."

THE PADDOCK.

High Priced Stallions and Stallion Fees.

We clip the annexed from the London *Sporting Times*, upon high priced stallions and stallion fees:

There are few owners of racehorses who can sell well. The late John Osborne could never resist a good offer, and in this respect he differed very much from the owners of Isonomy, Prince Charlie and Cremorne. For Isonomy it is said that as much as 18,000 guineas was refused; but on the horse being submitted to public auction he realized only half that sum. In a moment of enthusiasm M. Lefevre bid 15,000 guineas for Cremorne, whose price at a sale a year or two later was only 5,400 guineas. The late Mr. Jones, it is notorious, refused 10,000 guineas for Prince Charlie, and yet on the "Prince of the T. Y. C." being submitted to auction last Monday, the hammer fell at 680 guineas. Captain Mitchell once offered £10,000 for Silvio, who was afterwards sold by Lord Falmouth for, if we recollect rightly, 7,000 guineas; but it should be stated that when Capt. Mitchell made the offer alluded to the horse was in active training, and Isonomy, not having yet distinctly made his mark, was looked upon as the champion of the turf, and there were several rich stakes apparently at his mercy. On the occasion of Mr. Padwick refusing 6,000 guineas for Couronne de Fer, Custance remarked philosophically, "Then there are at least two fools in the world, the man who made the offer, and the man who refused it." This remark would apply to all such offers as we have mentioned above. Of late years an altogether fictitious value has been placed on the higher class of racehorses, and the sooner this is realized, the better for the turf. Twenty years ago, when John Jackson of Fairfield accepted 2,500 guineas for Tim Whiffler, he was generally considered to have made a good sale, and we quite agree with the *Sporting Life's* "Special Commissioner" in classing "Tim" among the horses of the century. Twenty years later the same horse would have fetched three times the money, and so far as we can see there is no reason whatever for this enormous increase in value. A horse that has quitted the turf, and has yet to make his name at the stud, cannot possibly be worth 5,000 guineas, and one of these days that will be realized. For the decrease in the value of Prince Charlie a good reason can be assigned. For the last year or two he has got nothing that could run, and this is a fate that may befall any horse. At 680 guineas, however, we look upon him as dirt cheap, for we cannot forget that in only a season or two he earned nearly £2,000, and it has been clearly shown that all his stock are not roarers. It is claimed for the Prince that he was not born a roarer, and many have argued that at no time was he a roarer, but merely very thick-winded. The race he ran in the St. Leger, to some extent, confirms this view of the case, but on the actual question we offer no opinion whatever. We are, however, sufficiently prejudiced to say that he is not an animal we should send a good mare to. As he will now, in all probability, stand at a low fee, we might try the experiment of sending some mare to him that we did not fancy much; and we may remark that, from similar circumstances, some of the best horses have resulted. Tim Whiffler is a case in point, and so is Robert the Devil. We are constantly being told of this animal or the other being wonderfully well bred, but it has been, to our thinking, wisely said that you cannot find a badly bred animal at the stud. When such chance horses—"unfashionably bred ones," we should rather have said—as Robert the Devil and Tim Whiffler make their appearance, the pundits shake their heads and say, "But if you look to the dam, you will find that her dam"—or grandam, as the case may be, or the sire's dam—"was full of Waxy blood," etc. Our object in making these remarks is to discourage owners from paying high fees for the services of a horse. They are wiser in France than we are, and it is not often in that country that the modest "tenner" is exceeded. Plutus stood at eight guineas long after he got Flageolet.

One of the most dangerous horses in the list of favorites for the forthcoming Derby is by a five guinea sire. Balfe's services were available at that sum the year that the dam of The Prince was sent to him. Macheath is by Macaroni, whose sire stood at ten guineas, which is about the sum that was paid Vedetto, the grandsire of Fulmen and Galliard. Sigmophone, who was for some time considered the best two-year-old of last season, is a son of Young Trumpeter, whose list it would, we think, be difficult to fill at ten guineas. The highest price that any one is justified in paying for a horse is fifty guineas, and then only for an almost guaranteed success. When we look at the risk of breeding, it will be admitted that to exceed that price is folly. Let us take the foal list for last season for example, and see how it comes out. Bertram, for instance. For forty or more mares fifty guineas each were paid, and there are only four foals. In connection with the thirty-six mares that were barren, were the fees returned to the owners? Not a penny! Hermit, a 150-guinea sire, and it is to be presumed that forty mares were sent to him. There are twenty-six foals, which is something marvelous; but even this leaves fourteen mares for which 150 guineas each were paid, and without result. Galopin had only ten foals to his name, but in all probability he had not many mares. This year it will be different, and as a sort of "tip" for Galliard, it may be mentioned that Lord Falmouth is one of his best supporters. We may take it that on an average thirty per cent. of the mares are barren each year, but the fees for them have to be paid all the same, and in the meantime they are not earning anything.

The Exciting Property of Oats.

The London *Times* says: Experiments have been made by M. Sanson with a view to settling the question whether oats have the excitant property that has been attributed to them. The nervous and muscular excitability of horses was carefully observed with the aid of graduated electrical apparatus before and after they had eaten a given quantity oats, or received a little of a certain principle which M. Sanson succeeded in isolating from oats. The chief results of the inquiry are as follows: The pericarp of the fruit of oats contains a substance soluble in alcohol and capable of exciting the motor cells of the nervous system. This substance is not (as some have thought) vanilline or the odorous principal of vanilla, nor at all like it. It is a nitrogenized matter which seems to belong to the group of alkaloids; is uncrystallizable, finely granular, and brown in mass. The author calls it "avenine." All varieties of cultivated oats seems to to elaborated it, but they do so in very different degrees. The elaborate substance is the same in all varieties. The differences in quantity depend not only on the variety of the plant but also on the place of cultivation. Oats of the white variety have much less than dark oats, but for some of the former, in Sweden, the difference is small, while for others, in Russia, it is considerable. While some light-colored oats certainly have considerable excitant power, some dark oats have little. Determination of the amount of the principle present is the only sure basis of appreciation, though (as already stated) white oats are likely to be less exciting than dark. Crushing or grinding the grain weakens considerably the excitant property, probably by altering the substance to which it is due; the excitant action is more prompt, but much less strong and durable. The action, which is immediate and more intense with the insolated principle, does not appear till some minutes after eating of oats; in both cases it increases to a certain point, then diminishes and disappears. The total duration of the affect is stated to be about an hour per two pounds of oats ingested.

The Horse That Will Pay.

During the past thirty years the mania for speedy trotters added to the augmented number of animals bred for the turf; a class of horse most essential to the luxurious city livers and agriculturists has been most sadly neglected. We have reference to the fully developed, high-actioned, rangy roadster, an animal weighing from 1,000 pounds upwards, full 16 hands high, stylish and well-conditioned. Such horses as these, when raised by a careful farmer, can be kept at home and made work on the farm until they reach maturity, and then command in any large city a fair price. As early as two years old they can be broken and plowed with or used to the wagon, moderately of course, at first, but in their three-year-old form and up to five or six, do full work without injury or impairing their value, always provided they be handled cautiously and well fed.

In Northamptonshire, Yorkshire and Willshire, England, the farmers breed this desirable class of horses, and it is from these that the handsome, high-stepping London coach horses are procured. In this country we have no such distinctive breed, yet we do often meet with large, well-formed mares which if bred to sires of good size, action and quality, an excellent substitute would be the result, and by care the breed could be improved and made to answer every purpose.

A cross of such mares on the thoroughbred makes a most enduring, stylish and serviceable animal. Many years ago imported Barefoot was stinted to a number of this class of mares in West Tennessee, and produced just such animals as to-day would readily fetch from $1,000 to $2,000 per pair in New York, Boston and Philadelphia, if well-mated and gentle. As to the superiority of the half-breed over the common horse, there can be but little doubt. They are quicker, have more style, and often show speed far above their less well-bred rivals. A pair of horses bred by a gentleman in this State out of a Pocolet and a Leviathan mare by imported Barefoot could trot close on to three minutes, drawing a vehicle weighing not less than 1,200 pounds. They stood sixteen hands high, were high-headed, free steppers, and did constant service for nearly fifteen years.

Where speed is the desideratum no inducement can be offered the breeder or purchaser to use the animal bred for any other purpose until tested and found a failure; by that time the horse is ruined for family use by training and ill usage. Hence the necessity of a portion of our stock-breeders to turn their attention specially to the class of horse adapted to coach purposes, heavy drafts, and for farm purposes. The Percheron and Clyesdale breeds may answer for heavy draft-work in the colder regions of the North, though they are too heavy and unwieldly for our southern climate and miry roads. What we need is the large-bone, medium-sized, active animal, with strength, weight and activity combined. These can never be successfully derived from the monster animals now becoming so popular in this country.

As stated above, the farmer breeding mares to sires with a view of getting the useful horse in question, can have their services for two or three years before selling them, thus enabling them to really make the proceeds of their sale a net revenue to them, as the work of the animals during the years they are kept at home would certainly be worth to keep and expenses of training.—*Southern Industries.*

Breeder and Sportsman.
PUBLISHED WEEKLY BY THE
BREEDER AND SPORTSMAN PUBLISHING CO.
THE TURF AND SPORTING AUTHORITY OF THE PACIFIC COAST.

OFFICE, 508 MONTGOMERY STREET
P. O. Box 2603

Five dollars a year; three dollars for six months; one dollar and a half for three months. Strictly in advance.

MAKE ALL CHECKS, MONEY ORDERS, ETC., PAYABLE TO ORDER OF BREEDER AND SPORTSMAN PUBLISHING CO.

Money should be sent by postal order, draft or by registered letter, addressed to the "Breeder and Sportsman Publishing Company, San Francisco, Cal."

Communications must be accompanied by the writer's name and address, not necessarily for publication, but as a private guarantee of good faith

JOSEPH CAIRN SIMPSON, - - - EDITOR

ADVERTISING RATES.—Displayed $1 50 per inch each insertion or pro rata for less pace. Reading Notices set in brevier type and having no foot marks, 30 cents per line each insertion. Lines will average ten words. A discount of 10 per cent. will be allowed on 3 months, 20 per cent. on 6 months and 30 per cent. on 12 months contracts. No extra rate charged for cuts or cutting of column rules. No reading notice take for less than 50 cents each insertion.

San Francisco, Saturday, February 24, 1883.

SACRAMENTO AGENCY.

Residents of Sacramento and vicinity, desiring to subscribe, or advertise in the *Breeder and Sportsman*, can do so through our agent, Mr. M. J. Henley, Russ House 1009 J street.

CLOSING OF STAKES.

Do not forget that the stakes and purses of the Pacific Coast Blood Horse Association close on Thursday, March 1. See advertisement.

WRONG CONDITIONS.

It is not often that we have to present criticisms of the actions of the associations in California, unless to commend. But the conditions attached to the two-year-old trotting stake which is advertised are so manifestly contrary to a spirit of fairness that the condemnation must be emphatic. The objectionable features are in the clauses granting twenty-five per cent. of entrance money for a walk-over, and sixty-five per cent. of the same to a colt distancing the field. As the $50 each stake is called "entrance" in the advertisement, forfeits and stakes are meant when the term is used, and we do not believe that in the history of the turf or track there can be found a precedent for the action. If even there were precedents it would be contrary to all correct ideas of equity, giving the custodian of the funds the owners advanced seventy-five per cent. for holding the money. In this stake, for instance, should there be the number of nominations required to fill, five, $125 would be the first amount to the credit of the stake. Supposing that two of these made good the second payment, $50 more would be deposited. Only one is prepared to start, and to repay him for the expense of training and taking his colt to Sacramento he would receive $37.50, while the association would pocket $87.50. The number of nominations do not change the proportion, and whenever the result is a "walk-over," the society gets seventy-five per cent. of what it has not a shadow of claim to, and the person who is clearly entitled to it by all laws, rules and precedents is defrauded of that amount. The only difference between a match and a stake is that the first is confined to two persons entering into a contract, the other to three or more engaging in a mutual agreement. If a match were made for a stipulated sum, and a stipulated amount added by a society or proprietor to have it come off on the grounds controlled by the party donating the purse, a claim for seventy-five per cent. of the forfeit, or thirty-five per cent. of the whole amount put up in case one horse were to distance the other, would be such an absurd proposition that we doubt if there is anyone who would give it a moment's thought. It is exactly a parallel case to the one under consideration, and does not vary an iota from the published conditions.

We have always advocated the lightening of the burdens on the owners of horses which are onerous enough with all the concessions that have been made. The Pacific Blood Horse Association absolves them from any tribute in case they start, and every dollar of stakes and forfeits is turned over to the winner. The penalty of non-starting is a safeguard in order to keep the entries within limits and insure the presence of those which are without valid reasons for staying out. If accident, sickness or other cause beyond the power of the owner to avert is the reason, the judges can remit the penalty. The State Agricultural Society in order to lessen the expense and give satisfaction to the owners and trainers of race horses, conceded the right to cook on the grounds of the Association, and the great imposition of deducting from the purses won "stand money" has been done away with. All of these moves were in the right direction and the only explanation for such unlooked-for retrogression is that the conditions were included without giving the subject any consideration. It may have been that the Occident Stakes resulting in a walk-over was the cause of incorporating the objectionable feature. That money, in no manner, or from any point of view, belonged to the society, neither was there a shadow of claim in favor of anyone save the owner of the colt entitled to the stakes and forfeits. But a reference to that of last year will show what gross injustice would have resulted if the same condition as that under discussion had been incorporated in it. At this time, writing at home, we have to depend upon memory for the original list, though the impression is that there were twelve nominations. Of these, eight made the second payment, and five the final payment. This aggregated in stakes and forfeits, $750. Partially depending on remembrance, the status was that Palo Alto made five nominations, made second payment on four and final payment on two. That being correct, and we are certain about the second and final payments, $325, or one-half the stakes and forfeits were from Palo Alto. One of the Palo Alto colts walked over and received $325 more than contributed. Had there been a return of the winner's stake and twenty-five per cent. of the balance, the account would have stood: Bertha's stake returned $100, percentage on $650, $162 50, total $262 50, being $62 50 less than the amount put in. It is not necessary to carry the illustrations further to show the untenability of the plan, and there is not a question that the Board of Directors will rescind the wrong conditions as soon as the matter is understood. We have gone thus far in explanation so as to bring it to the public notice in order that the same mistake may not occur again.

The California societies are worthy of praise for the encouragement that is given to trotting-colt stakes, but hampered with conditions inimical to the interests of breeders, the benefits will vanish.

The National Trotting Association has erred in the legislation, being more favorable to the tracks than owners, and while the latter have been held to a rigid observance, the former have been granted the best of the bargain whenever it came to a contest between the two interests. Both should be guarded, as both are contingent, and if the associations suffer a loss, it reacts on the owners. From the admirable report of the secretary which we published a short time ago, it is evident that the speed department of the fair is the profitable portion of the exhibition. While the figures are favorable on that side, were it possible to show the debits and credits of owners there would be a deficiency which would show better than columns of matter the necessity for reducing the expenses as much as possible. It is true that the advice might be tendered that if a man cannot afford to keep race horses and trotters, let some one maintain them who can, but even the liberal-minded fail to appreciate a luxury when the gratification entails too great a loss and a surrender is the finale.

THE HONORABLE MEMBER FROM NAPA.

Two men at least have made themselves conspicuous in their opposition to the appropriations for the fairs. First, the Don Quixote who is always ready to put his lance in rest whenever he sees a windmill that has any resemblance to the speaker of the House in the whirling sails, and the other his faithful Sancho Panza who squires him in a daily San Francisco paper. Inadvertently the latter betrayed his leader when he ascribed the animosity to his defeat for the speakership, and he has had no end of trouble since to make amends by railing at the Sacramento fair, the Sacramento race track, the brick-red wagons and the big pumpkins. The Don has a good deal of bother to keep the helmet of Mambrino setting properly on his cranium, and the squire has exhausted his stock of polish in trying to make the copper basin take an auriferous hue, and to rid it of the smell of the lather which has defiled it beyond recovery. As long as there is a "sore head" beneath it, it will not rest easily, and had there been only a small proportion of wisdom in comparison with the venom displayed it would have been allowed to still hold seeds in lieu of ornamenting the martial crown of the honorable member. Still it may answer a good purpose that the era of chivalry has not entirely departed, and that when an ogre like La Rue is bound to keep in captivity the fair goddess, after being disenthralled from the embrace of the bedrock, crowned with the insignia of U. S., and put her to such a base use as to compel her to pay tribute to brick-red wagons, fat porkers and big pumpkins, there should be a deliverer. In recompense an island must be discovered for his squire to rule, and the knight—why, his services are beyond recompense, and the honor and glory of killing the enslaver a bountiful reward.

OUR POULTRY ARTICLES.

Those who have little acquaintance with the fascination there is in breeding cannot be expected to appreciate articles that have an absorbing interest to those engaged in the pursuit. They may have some idea of the pleasure there is in owning a successful racehorse or fast trotter, although they are not able to discriminate between ownership by purchase or that which is acquired by breeding and rearing the star. To those in the business there is an intense gratification in producing that which is near the desired type, and we have known many who where compelled by necessity to sell a favorite animal to mourn over the parting with heartfelt sorrow.

Those whose knowledge of poultry is limited to the *gout* with which a nice broiler is devoured, or the turkey which has been roasted to a turn, do not discriminate between the grand bird and the oysters embalmed in the carcass, and are prone to think that the "chicken-rancher" and the oyster-dredger are governed by the same sordid motives, viz.: the money they will bring. In this estimate they are woefully mistaken. While the ability to make the business remunerative adds to the gratification, there are other feelings which lead to engaging in the rearing of poultry, and when the numbers embarked in it are taken into consideration it is doubtful if there is any department of breeding which contributes so much pleasure. Among the thousands of readers of the *Breeder and Sportsman* it may be safely estimated that a very large proportion are interested in breeding poultry. They are few who have not the facilities for keeping a small flock and though it may only be an occasional one who has studied to such a good purpose as to breed them by thousands on a town lot as our contributor "G. E. D." does, the number that can be kept on very limited space affords the opportunity for gratifying the desire.

In the country a place without chickens would be fully as incongruous as a house without a book or paper.

It is bad enough to find a habitation without tree, shrub, flower or climbing vine to relieve the dreariness of the scene, and nearly as desolate would be a handsome cottage, or more stately villa, without the charming notes of chanticleer to welcome the coming day. The resonant notes of the "cock of the walk," the cluck of the hens and the chirp of the chickens are musical to the ear of those who have courted "tired nature's great restorer," in time to enjoy the grandest, finest portion of the twenty-four hours, and though the rattle of the drays, the rumble of the coaches, and the early and confusing noises of the city evoke curses from those who have just got fairly settled between the sheets, in God's garden where there is no such tumult, the gray streaks and the bright rays are welcomed. Men and women who never saw the sun rise have missed a grand spectacle, and those who stayed up all night in order to get a glance of the brilliant luminary waking into life a slumbering world are still worse off. The enthusiast in the poultry world has an additional incitement to early rising, and in town or country there is a desire to be up with the chickens, and thus lay in a stock of health and good spirits which the morning air surely engenders.

We have strayed from the practical part of what we intended to say, and call attention to the articles published from a utilitarian standard. Success, however, is as necessary to sustain the interest to one who engages in the rearing of poultry as a means of recreation as when remuneration is the object, and, as will be learned from the perusal, these articles are thoroughly practical. The author is not only practical in the sense that the word is commonly used, as he has studied the subject with an intensity which can only come from an enthusiastic fondness for the pursuit, and this enthusiasm has sustained him under adverse trials and been the means of acquiring information which would have remained hidden without the stimulus of disappointments. Knowledge comes from failure quite as frequently as from successful experiments, and the lessons which are the result of frequent defeats the most valuable. This, of course, is confined to the individual who does not become disheartened, who has the "game" to struggle and fight against many and bitter disappointments.

Artificial incubation excites so much attention at the present time that a treatise on hatching would be thoroughly incomplete without due attention is given to it. As the article of last week was mainly confined to natural hatching, in this there is a very interesting chapter on the artificial, which the next part will make more complete. It is manifest that the use of an instrument which will take the place of a score or more setting hens increases the capacity for production in nearly that proportion, and to many there is an added pleasure in being able to absolutely control this department. While we hugely enjoy seeing a hen taking such good care of her brood, busy, indefatigable in ministering to their appetites, scratching for dear life, though the prospects are poor for turning anything up, and giving warnings of approaching danger, which call them scampering to her

refuge, there are others who take more interest in providing an artificial mother through all of the stages until the chickens are large enough to take care of themselves.

We are much gratified that a large number of ladies are regular readers of this paper, and to them especially the articles of G. E. D. will be very acceptable. The rearing of poultry comes peculiarly within their sphere, as do the ornamenting of the house, and a general care of the bright side of life. But their mission is not confined to polishing the bright side into a higher luster, as none are so effective in dispelling the gloom which at times troubles the most ardent temperament, and therefore we welcome anything to our columns which will please, while everything that can offend is rigorously excluded.

SISTER TO COLONEL LEWIS.

When the gallant grey scored 2:18¾ on the Oakland Trotting Park some years ago, there was a big commotion in the ranks of those who decried the thoroughbred blood in the trotter. There was any amount of squirming and the most absurd lies were circulated to bring doubt on his paternity.

The clamor resulted in proving beyond question that his sire was Rifleman, and though the pedigree of his dam is lost in uncertainty, there are good reasons for believing that there was high blood in some of his ancestry.

It was remarkable that Colonel Lewis could trot at all, as his feet were in such a shape as to make every step a torture. He was so bad that to relieve them he would lie down to eat, and the last time we saw him it was painful to witness the agony they gave him. His sire, Rifleman, is the only known living son of Gleucoe, and Doctor Esterle brings the information that he is still healthy and in good shape.

The Doctor also brought a three-year-old sister to Col. Lewis, and her appearance still more firmly fastens the belief in the minds of those who have seen her that the dam must be well bred. She is not only a handsome filly, but is as full of quality as can be, in this respect being rarely equaled by those whose lineage is known to be pure. In all save color she bears a strong resemblance to her brother. She is brown of a very handsome shade, and her action is something similar to that of the grey. She will be bred to Albert W, and her owner is justified in expecting something which will well repay him for the expense and trouble of bringing her so far from home. The combination of Electioneer, Whipple's Hambletonian and Rifleman blood in Marlet resulted in one of the best colts ever bred at Palo Alto, and the junction of the lines which will come together in this case, warrants the highest anticipations of excellence. With John Nelson to take the place of Whipple's Hambletonian it is not likely there will be any occasion for regret. It is also the intention to have her exercise during the stay at the track, and we will watch her with a great deal of interest.

MAMBRINO ON TIPS.

The intention was to answer the strictures of the *Turf, Field and Farm* in relation to the use of tips, but the letter of our correspondent saves us the trouble at present, and the introduction to "Tips and Toe-weights," which will be found in another column, is dose enough for one issue. The indorsement of so thoroughly competent a critic as Mambrino is gratifying, if even he does not believe in the advantages as fully as we do. That is, he is of the opinion that "for fast road or track work, not one horse in fifty but requires more weight to balance their action than can be put into a tip," and he also thinks that "low-heeled horses need the protection from concussion of a good, substantial shoe." These objections we will make the text for future articles, confident that it can be shown by sound reasoning that the contrary is the case, and that the practical results, so far as we have been able to test, sustain the argument. Although all of the horses experimented with have good feet, neither high nor low heels, we have one in the paddock since the 22d of November that can be classed with those that Mambrino thinks need protection. When there has been time enough to bring the experiments, in his case, so far as to be able to tell with more exactness the result will he given, although already we feel assured that it will be satisfactory.

If our valued contributor has discovered through actual trials, and these extending over a sufficient period to warrant the conclusion that tips will not "balance" more than one horse in fifty or afford sufficient protection to the low-heeled horse, it would carry a great deal of weight. But it is something which can only be proved after a thorough trial, and the trials carried out with a determination to pursue them for time enough to give the system a chance. It takes time to prepare the foot which has worn a shoe to fit it for a tip, and the erroneous treatment has to be overcome before the benefit can be derived.

THE AUCTION SALE.

All of the horses which are to be sold at auction next Wednesday are now at the Oakland Trotting Park except the work animals. It was a wise plan to take advantage of the fine weather and good roads to move the brood mares and colts, as a journey through the mud would be a serious drawback. There are so many to be sold that it would occupy too much space to give individual descriptions, though a large proportion of those we have seen are well worthy of minute portrayal. And should we select a few to sketch the trouble is to make the selections where there is such a general excellence. The breaking up of such a magnificent breeding farm is greatly to be regretted, apart from the loss of so liberal a man as the late proprietor. Besides the large expenditure entailed, an immense amount of labor and no little judgment and discrimination were necessary to get such a good lot of mares together. Then so far as good looks go the selection of a stallion, worthy to be placed at the head of such a magnificent stud, was well made, and there is scarcely a question that the young Steinways will play a prominent part when the time comes for them to show their metle. To prevent misunderstanding, all of the colts named in stakes were nominated by Samuel Gamble, so that the death of Mr. Cook does not disqualify them, and they will be sold with their engagements. This gives an additional value, which purchasers can readily understand. That bargains will be obtained is as nearly certain as can be, and it is rare indeed when such an opportunity is offered. We would advise those who contemplate buying to visit the park before the day of sale, when there will be a better chance to see them than in the hurry of an auction sale.

EDITORIAL NOTES.

A Horseman of Napa county and a man after our own heart writes us as follows: Inclosed find five dollars, amount for subscription to the BREEDER AND SPORTSMAN. I am well pleased with the investment, as it is the only paper on this coast that makes "honest and equitable sports," especially racing, its principal object, upon which foundation its success is inevitable. Honesty and intelligence are twin sisters, upon which the future success of our breeding and trotting interests depend. You have my sincere wishes for continued success.

Answers to Correspondents.

Questions answered only through these columns. No replies by mail or telegraph.

Ike, Tombstone, Arizona:

We had a race here recently (five horses). They went for a purse. Three of the horses sold as choice in the pools and two in the field. The judges called up the horses and they scored several times but did not get the go. The judges then told them to go to the stable and gave them fifteen minutes to get ready. They were again called up and all came but one (one of the horses that sold third choice). Now, do I get my money back from the pool box on that horse that did not start? He sometimes sold separate and sometimes in the field. I bought him separate. The favorite won and the juges did not say anything about the horse that did not start. They all came up the first time, received their instructions and positions, but they scored so long that they were ordered back to the stables. The second time the horse failed to come up. Do I get my money back?

Answer—It is impossible to arrive at the merits of the case from the above statement of facts. Under the rule a race "starts" when the riders are weighed. After that no horse can forfeit, but must face the starter or be ruled off the course. The question in the case seems to hang on the postponement. Rule 47 says: "If an accident happens to horse or rider the starter may grant a reasonable delay not to exceed fifteen minutes, which in extreme cases may be extended by the judges and when this is granted the riders may dismount and the horses be clothed."

Our corresponeent fails to state what the occasion of the temporary postponement was, or whether on the second appearance of the horses the riders were weighed and all positions drawn again.

A Subscriber, Sacramento:

1. The dam of Judge Clement's colt by Electioneer was Annie Laurie by McCracken's David Hill Jr., second dam Kitty by Owen Dale.

2. He is not gazetted in the "Stud Book."

C. H., Sacramento:

1. From the information we have, and we have no doubt of its correctness, Maggie S, by Bayonet, is the same that was originally called Betsy Bland. First dam Joe Stoner mare by Joe Stoner; second dam by imported Sovereign; third dam Little Emily, by Wagner; fourth dam Emily Speed, by imported Leviathan; fifth dam by Pacolet.

2. We have made several attempts heretofore to trace Lady Fashion, by Belmont, but without success. If you have any information that will furnish a clue, please forward it.

Farmer, Bloomfield:

We pay no attention to anonymous communications.

Ed, San Luis Obispo:

1. Chieftain, b h, foaled 1856, got by Hiatoga (Old Togue), son of Rice's Hiatoga; dam by Trimble's Eclipse, son of American Eclipse. His get have figured on the turf in this State creditably to themselves and their sire.

2. We know nothing of any horse called Wilson Lennon. If you can furnish any data that will assist in tracing do so, and we will endeavor to find the line.

Sub., San Jose:

I would like some information on splints. None of our horse men here seem to understand how to remove them or prevent their coming. Can you remove a splint of one or two years' standing without leaving a spot or blemish?

Answer—The best remedy we have tried is one part biniodide to mercury to eight parts of lard. Mix thoroughly and rub in. Repeat during ten days or two weeks until the enlargement disappears.

Erratum.

By an error in making up the first form of this week's paper the article on Wheatly is badly disconnected at the finish. In the following repetition the lost paragraph is inserted, and the damage repaired as far as possible:

The get of Medoc swept everything before them when they came upon the track, and though he was killed by a falling tree when a comparatively young horse, his sons and daughters played a prominent part in the racecourses of Kentucky and Tennessee. He has been termed the best son of American Eclipse, and with good grounds to base the claim upon. It is needless to dilate on the merits of imported Expedition in California as our Belmont had a double cross of the blood, and in addition to the honors won on the turf it comes into prominence in trotting pedigrees.

Wheatley has not yet had an opportunity in the stud; the only one of his get which we know of having been trained is Rosette. She showed remarkably well, but a leg gave way in the commencement of her career.

She was certainly a very promising filly and in her races at Petalnma in 1881, when she beat Tillie C, Night Hawk and Carmelita 1½ miles in 2:46½, and a race of heats of a mile in 1:47½, 1:52, and won so easily, this was no measure of her speed. On a half-mile track this was a good performance, and insures the get of Wheatley from good mares being "sure-enough" racehorses.

A Concurring Opinion on the Poultry Question.

EDITOR BREEDER AND SPORTSMAN: Your correspondent from East Oakland has about the correct idea as to the poultry diseases of this climate, but I think, with reasonable care in selection of breeding stock, breeding from none but healthy, hardy fowls, with due care in feeding and rearing young, you would be quite free from disease and make the business profitable; but if one thinks all he has to do is to buy the fowls, throw down a little grain occasionally, and get liberal returns, he will find himself mistaken, for I find eternal vigilance is the watchword for a successful poultry fancier. As he says, one might be successful in the East, but would find he had many things to learn here, which would have to be learned by hard experience, although six years ago I was a novice in the business, and started out with a stock of mixed fowls of 106 and cleared $260 that year, after having to buy everything; then I imported thoroughbred stock, and have succeeded well with it; find ready sale for all surplus stock; am using an incubator this season; am in hopes to raise a greater quantity. A. J. ALBEE.

Santa Clara, Feb. 18th.

JOE HOOKER.—Our own preference over Norfolk is the white-faced giant that stands in the adjoining stall to him—Joe Hooker. We will die in the belief that he was the fastest horse ever saddled on a California track if he would have but run kindly. We once saw him sulk and "prop himself" three times in a mile, and then lap out Bradley in the excellent time of 1:46. He is the largest horse we ever saw, not to be called coarse, and has so far gotten more racers than any horse of his age on the coast.—*T. B. Merry.*

SALES BY JAY BEACH.—At Cascade Stock Farm, Linkville, Oregon, the following sales have been recently made: To C. S. Moore, of Linkville, b c, weanling, by Altamont; dam by Joe Hooker, son of Vermont. To S. W. Payne, of same place, blk c Minstrel, foaled 1880, by Altamont; dam the Cranston mare. Also blk c Tresman, foaled 1881, by Graduate, son of C. M. Clay Jr.; dam by Mike, sire of Barney, 2:25¼.

SALE OF SILVERTHREADS.—Henry White has sold the gray stallion Silverthreads to J. D. La Monte, who will drive him as a pole mate for Carlisle, a full brother to Ashley. Silverthreads is a horse of fine style and should make a slashing roadster. He was was bred by L. J. Rose and sired by The Moor, his dam Gleudale, believed to be by Belmont or Owen Dale.

FOAL.—At the Cienega ranch, Los Angeles County, Feb. —, the chestnut mare Eva Coombs, by Billy Cheatham — Ruby by Winnebago, dropped a filly foal, chestnut with strip in face and hind legs white, by Hock Hocking. Capt. Hutchinson claims the name of Eda for this foal, and adds "Eda is, as usual with Hock Hocking's get, very large.

A match race has been made between the Sly mare, backed by Jesse Simpson and others, and Dave Payne's mare, for $500 a side. The distance to be run is a quarter of a mile and the race will take place at Phœnix on Saturday, the 24th inst. Wm. Simpson will ride the former and W. S. Webb Jr. the latter. Two hundred dollars forfeit has been put up, so the event will in all probability take place.

P. Reardon, of San Jose, has sold to W. V. Gaffey, of the San Andreas dairy, Santa Cruz county, a two-year-old Durham bull, by Maynard 2d 46,501 from Nora 2d by Master Maynard 14,881. Mr. Gaffey has given the youngster the euphonious title of Oleomargarine II. He is the only thoroughbred Durham in the Pajaro valley.

Leading cattle men of Colorado express the opinion that the loss of cattle on the ranches by the recent storms will not exceed five per cent. The loss of sheep is somethi

POULTRY.

Modern Artificial Hatching and Hatching Apparatus.

Part II.—The Artificial Method.

I believe that nothing has so perplexed students of artificial incubation as the vast difference in fertility and natural vigor of eggs. The male and female birds may be in the finest condition, apparently, fed and cared for in the best manner; the season may be the most favorable; the eggs, perhaps, thoroughly reliable, even, up to a certain date; yet weak or wholly infertile eggs are liable to be encountered at any time, possibly at the most critical and interesting period. It is beyond human penetration to distinguish between fertile and infertile eggs, by their appearance, before placing them under heat; neither is it possible to foretell the degree of vigor of an egg after it is determined to be fertile, before hatching, except in a very limited way.

As partly stated in my remarks on natural hatching, eggs are sometimes wholly clear and infertile, from which no life can possibly be evolved: then we find those which will, after a few hours in the proper conditions, show a trace of life barely, but the embryo dies, almost at its first appearance; others, a trifle more vigorous, may retain life a few hours or days only; while others still live to the time for hatching, and the chicks die in their efforts to liberate themselves, sometimes even partly out of the shell—all this through difference in natural vigor.

The great obstacle to the novice lies in the fact that good treatment of poor eggs frequently closely resembles, in the outcome, faulty treatment of good eggs. Many a time in my early experience have I undertaken to demonstrate a theory which I had built in my mind, and, upon the unfavorable *dénouement* of a three-weeks trial, abandoned my theory, having lost my time and misspent my money, with really nothing learned, the trouble lying, as my later experience taught me, in the eggs. I have also frequently been convinced, by a single hatch, that a principle was right, judging from the outcome—the percentage of chicks hatched—while the point I was testing, as I afterward demonstrated, was barely endurable to the eggs, and only escaped detection at the time by having been tested on exceptionally strong, vigorous ones. It is scarcely necessary to remark that the effect of trying doubtful principles on poor eggs was depressing in the extreme. The reader may judge something of the pleasures of experiment in this line when I inform him that over two thousand five hundred unhatched eggs were laid away in the cold, cold ground by me in the pursuit of what threatened at times to prove a veritable *ignis fatuus*. If the reader has a friend who is over-sanguine that he can make an incubator "off-hand," at less expense than to buy one of tested and approved principles, do him a service and give him the above facts.

Experiments have to be conducted step by step, twenty-one days, in most cases, being consumed by each step. It is generally impossible to experiment on two or more points at the same time, unless more than one incubator be used, for the reason that success or failure of the trial of a certain question must be determined while all other conditions are unchanged, else effects cannot positively be traced back to their causes, and hence intelligent deductions cannot be made for future guidance.

Among a considerable number of eggs, some will always be found either entirely clear or weak. The greatest outcome of chicks I have ever known to be hatched from a given number of eggs, without loss from either infertility or weakness, was twenty-seven.

All have heard of remarkable hatching by cats, etc. I think no one ever heard, however, how large percentages were brought out by these accidents. Strange instances of the kind have happened. A friend living at Tulare, in this State, tells me that a chicken was hatched, in exceptionally hot weather, from a basket of eggs upon a grocery counter. The chick was cared for and raised as a pet, and was living when I last heard from it. Another friend states that in early times, while keeping a restaurant in the mines, he one day missed a dish of eggs. They were not found until three weeks thereafter, when, chickens being heard to peep in a recess behind the range, the dish of eggs was discovered, with several chickens hatched and hatching. It was recently related in the papers how a prisoner hatched an egg by the heat of his body. Eggs have frequently been hatched accidently from manure-heaps and other places where the heat was approximately right.

It has long been definitely known, in short, that exceptionally vigorous eggs may be hatched (very small percentages) in heat alone, or with but few of the other proper conditions, in widely differing degrees, and it has been by taking advantage of this fact that inferior contrivances have been made to go—speaking of the matter in a commercial sense. If an "incubator" be sold to a novice and he succeeds in making even a desperately poor hatch, he is ready, in the first flush of his unwarranted exuberance, to furnish the deceptive testimonial which sells many more. It may be put down as a rule that the longer a person runs one of the great majority of the machines sold for the purpose, the less flattering will be his indorsement of it, except it be to sell his own machine!

It is this kind of business that has naturally produced, in the minds of many, serious doubts as to the practicability of artificial incubation at all. It was with this class of contrivances that I had my first experience, and it was with them, principally, having tried to hatch according to their "instructions," that I sacrificed much of my time and money, and so many eggs, in the finally vain effort, in most of them, to produce respectable hatches from the best of eggs.

Unfortunately for the poultry world, the results of the investigations of the ablest authorities on this subject have seemingly been suppressed—they are certainly very meager—and a cloud of mystery has been thrown about the subject. In reality the correct principles of artificial incubation are very simple—the application, only, of those principles very difficult. The conditions necessary to the best results (so far as they relate to a hatching machine), stated in terse terms, are simply: Pure, humid air, maintained at the right temperature at the upper side of the egg (the lower being somewhat cooler) the requisite time. Show me an apparatus which will keep up these conditions on every egg, and, apart from considerations of convenience and economy, I will show you an incubator as perfect as can be made, no matter who made it nor where it came from.

Pure air can only be continuous, owing to the throwing off of gases from eggs in heat, and particularly during the last of the period of incubation, by constantly heating cold, fresh air and passing it to the eggs, to be vitiated and carried from them. The problem, therefore, comes to this: How can every egg, in a chamber the lower part or floor of which is covered with eggs, be treated the same? That is, how can the egg chamber, at the upper surface of the eggs, be kept at the same temperature, or approximately the same, in every part, in air constantly in motion, while each receives, also, its proportion of humidity?

But I shall reserve detailed consideration of the mechanical features of artificial hatching apparatus for Part III, and ask the reader, whose patience I may have already taxed, to enter with me upon an imaginary three weeks' hatching enterprise. We will assume that we have a good incubator, for we purpose to pursue the artificial hatching of eggs in a practical and successful manner and according to the best of my judgment, based upon extended experiment and experience. We first start the machine according to instructions and run it until we are satisfied that it is perfectly adjusted as to heat. As our trays or drawers are of the kind which admits of packing the eggs together as closely as possible, we follow the valuable advice of an acquaintance of mine who has ideas of his own, and by turning the eggs partly on their small ends, setting them together so as to occupy all available space, we shall get in at least one-tenth more eggs than would lie flat on the same surface. Our machine is so constructed that we can maintain pure, heated air at the top of the eggs to within one degree of a given point. We run it at the temperature which has been found to be proper for our incubator, which we shall maintain, by the way, through the entire time of hatching, as nature has positively provided for the proper heat for the interior of the eggs at all times, if we look after the exterior only. Taking advantage of this circumstance, we shall, if our incubator is constructed for the purpose (and it certainly ought to be) put in as many trays of eggs at first as we know to be fresh and as we consider to be fertile and strong. We may have had considerable difficulty in getting such eggs, and to fill an incubator of any considerable capacity at one time with them may have been impossible. We may add other trays as we obtain proper eggs, at any time.

It would be difficult to state how long eggs may be kept, without disadvantage, before being set; they sometimes hatch well after having been laid a considerable time. It is my practice to discard eggs that have been laid more than ten days, with exceptions to the rule, however. According to my experience eggs are not easily injured by being jarred, as some people imagine.

Among our eggs we have, in spite of all our pains, obtained them, unknowingly, of wide variation in fertility and strength. However, we shall be able to tell, by and by, which are good and which are bad, and as we have been careful to previously mark each egg with some sign to designate the source whence we obtained it (using a common lead pencil for the purpose) we shall govern ourselves accordingly when we put in the next hatch. Every morning and every evening we turn each egg half over, trim the lamp according to directions and attend to moisture.

For some little time you are somewhat surprised to find the eggs no warmer, but about the fifth day we proceed to a test. We hold an egg to the opening of the tester, with the side up which was uppermost in the machine. It seems semi-transparent, and at the top, close under the shell, we discover an embryo. It resembles, as we have said before, a red spider, the veins which run out from the center of the germ corresponding to the legs of a spider. As we turn the egg about, the embryo travels slowly, evidently seeking the top of the "white," whichever way we revolve it. Nothing else of interest is to be seen. The next egg proves to be a hard one to test, as its shell is so thick and dark that we can scarcely see through it. But we discover the embryo, though it is not so distinct. We try another and find that, although the shell is exceedingly clear, no sign of an embryo is visible. The whole interior seems filled with a very transparent liquid, but after seeking it carefully we find a faint cloud. This is the yolk. The egg is as fresh as when put into the incubator, and would so remain for several days were we to leave it; but we remove it, for there is no life, nor anything that can become life, in it. Next we see an egg which has a thick, colored shell. We can discover no embryo, but as we are not sure it is clear, leave it in. Now comes an egg which has a very clear shell, and we see a small, dark spot floating at the top. As we turn the egg in our fingers the motion of this spot is much more rapid than that of the red spider. This is a dead embryo, the result of a faint trace of impregnation, but too weak to survive more than a few hours, probably. Throw it out. Here is an egg which seems all right as far as the embryo is concerned, but we see a faint red semi-circle, seemingly independent of the embryo altogether. It is but a mere thread, but it means that some of the blood vessels of the germ have been ruptured, and that death is inevitable. We will leave it in and look at it again at the next time for testing. Should we find one with a fractured shell, we will remove it, as it would never hatch.

We have now seen samples of all the eggs at this stage, and we throw out those that we know to be dead or clear and all we know will die, with the exceptions mentioned.

About the seventh day we test again. The thick-shelled eggs we had doubts about have now so far developed that we can determine the actual condition of most of them. Some are still clear, some show a live embryo, and one is yet doubtful, as we can see an embryo, but whether alive or dead we cannot say. So we leave it in for another test. We now find a clear-shelled egg, with a beautiful live embryo, much larger than before, the veins very distinct, and covering one whole side of the egg nearly. Other parts of the egg show somewhat cloudy. The next egg reveals a well-defined red circle. Throw it out or it will rot in a few hours. It is the one in which we saw the small thread of a circle, but in which the embryo was alive two or three days ago. The germ is now plainly dead and adhering to the shell. The egg we now examine shows an embryo, but it looks decidedly sick, and its neighborhood has a mottled appearance. It is of no use. The egg we next examine shows a black spot at one side, fast to the shell. Dead embryo again; hint in this particular case no red ring appears.

Every day we turn the eggs twice, and we are always vigilant to see that the moisture is properly kept up. The machine should give us no trouble whatever so far as keeping heat right is concerned, a few adjustments in the first few days being the entire care, occupying but a few minutes altogether.

We test frequently now, say every third day. As we have been throwing out clear and weak eggs, by the twelfth day or so the remainder will lie down level; and now you see the advantage of my friend's plan in "upending" them a trifle when setting your incubator. I at first feared unfavorable results from this idea, but experiment has removed all doubt. Of course you understand that by the arrangement we economize in space to the extent, generally, of about the number of eggs thrown out.

By this time the eggs begin to feel quite warm, as compared to what they did at first, and they are steadily becoming less clear, while the chick moves about more, and is a very prominent object.

From this time out testing is quite different. If we find a cold egg we may be sure it is dead. If we find one which gives a peculiar, ground-glass ring as you handle it, it is probably one of those we were in doubt about and is now certainly bad. If you should leave it a day or two longer, it would exude yellow, moist spots, and if not taken out soon, would burst. It is to avoid such eggs remaining with the others that we have taken so much care. Their presence is damaging at all times, and if suffered to accumulate, they would do much harm. If we have accomplished our work well, every part of the egg chamber, up to the time of hatching, will be perfectly sweet, with a slight smell of fresh lime, and the eggs have the same appearance as though from under a hen. Little can be done with the tester from about the fifteenth day, because of the eggs becoming too opaque, except to find, occasionally, a dead chick, when, instead of being darker, generally a considerable portion of the egg is quite watery.

On the nineteenth or twentieth day the chick shows a trifle in the air-cell. If we have attended to the instructions regarding moisture, the air-cells are only a little larger than when we put them in.

When an egg is "chipped" or "pipped," it is something of an advantage to place it so the chick can easily cut around the cap (as described in natural hatching) without meeting an obstacle on the outside. This can usually be done by turning the large end up a little, as when placing them in the machine at first.

It sometimes happens that a little assistance can be given a chicken in its efforts to escape from its shell; but, as a rule, a bird which cannot free itself is too poor to be of any value should it emerge.

Our incubator having the proper arrangements, the chicks in the trays which are hatching cannot foul the later eggs which may be in the machine. This is important. When all eggs are hatched that are due at one time, the egg-chamber must be free from all traces of anything which could decompose in the heat, if later hatches remain in the machine.

I have described natural hatching at some length in Part I, and have repeated, purposely, in this part, most of that which corresponds to natural hatching, with the intent of impressing the salient points on the mind of the reader, who is, I presume, in most cases a novice in the matter.

It all lies in a nutshell. If you have a good machine, if care is taken to turn the eggs, to give them the requisite heat and moisture, and to keep bad eggs from accumulating, you have accomplished all, in my judgment, that can be accomplished by natural incubation, and your percentages will be as good. If you are unwilling or incompetent to take the pains, take my advice and let others run incubators. Seventy-five per cent. I consider fair, eighty per cent. good, eighty-five per cent. excellent, and ninety per cent. and upward extraordinary. Clear eggs must be left out of the account altogether.

It is an exceedingly convenient thing if an incubator is so made that the chicks can remain in the egg-chamber until perfectly dry, which may occupy say four hours or so.

East Oakland, Cal., Feb., '83. G. E. D.

The Odds in England.

Winter betting in London, especially for the Guineas and Derby, is less this year than ever before. The papers more or less in the interest of the "leviathan bookmakers" made the most of every hundred bet, while those against the system are ever ready to deal it a blow. Among them is *Truth*, which on the 25th ult. said: "Till within the last fortnight backers have treated the 'classic' races with what Burke termed 'a salutary neglect.' Two years ago St. Louis, Bal Gal and Scobell were all the rage at this period of the winter for the coming Two Thousand and Derby. Not one of these animals ever obtained a place, and last year it was the same melancholy story with Dutch Oven, Gerald and that arch imposter, Troll. Shotover and Quicklime, first and second in both races, were not mentioned till after the Epsom Spring meeting, as had been the case the previous year with Peregrine and Iroquois." With this warning, we present the following as the latest quotations for both the Two Thousand Guineas and the Derby:

Two Thousand Guineas, run April 25; distance one mile and seventeen yards:

Eleven to 2 against Mr. Crawfurd's Macheath (tk.), A. Taylor, trainer.

Seven to 1 against Lord Hastings' Beau Brummel (tk.), M. Dawson, trainer.

Eight to 1 against C. Blanton's Prince (tk.), C. Blanton, trainer.

Eight to 1 against C. Perkins' Chislehurst (tk.), W. P. Anson, trainer.

Nine to 1 against Lord Ellesmere's Highland Chief (tk.), C. Archer, trainer.

The Derby, run Wednesday, May 23; distance one and a half miles:

Ten to 1 against Mr. Crawfurd's Macheath (tk.), A. Taylor, trainer.

Ten to 1 against Lord Hastings' Beau Brummel (tk.), M. Dawson, trainer.

Ten to 1 against Prince Batthyany's Talmen (tk. and o.), J. Dawson Sr., trainer.

One hundred to 8 against C. Blanton's Prince (tk. and o.), C. Blanton, trainer.

One hundred to 6 against Lord Falmouth's Galliard (tk. and o.), M. Dawson, trainer.

One hundred to 6 against Mr. C. J. Lefevre's Ladislas (tk.), T. Jennings Jr., trainer.

Twenty-five to 1 against Lord Bradford's Laocoon (o.), T. Wadlow, trainer.

In addition to the above-named, Sigmophone (T. Cannon), Energy (C. Arnull), Clairvaux (C. Archer), Keir (C. Arnull), Highland Chief (C. Archer), Acrostic (F. Bates) and the Hetty colt (A. Taylor) have from time to time been supported. Nearly all these horses are more or less dismissed by the *Truth* as of no earthly account except Clairvaux, who is an own brother of Thebais and St. Marguerite, Keir, Energy and the Hetty colt. Of the last-named *Truth* says: "He is probably a dangerous candidate, but it must be manifest to the most crude of tyros that, with a large and smart team, nothing can be more imbecile than to lay out a copper on anything of Mr. Crawfurd's until the market shows which is the best, and this is not likely to be made clear until the eve of the race;" while as to the field the same authority says: "If ten to one on the field is a proper price for the Derby, six to one certainly is not a fair offer for the Two Thousand, considering the probable strength of the field; but I can only repeat my sagacious advice of last year, to leave both races alone till within a few days of their decision. It is a long time since they have appeared so open."

During the past two months Arthur Davis has trapped forty beavers on Butte Creek. The hides brought him about $4 each. These animals have been caught at one dam on the creek. He intends trapping along Feather river also. —*Chico Record.*

CORRESPONDENCE.

Tiskilwa, Ill.

EDITOR BREEDER AND SPORTSMAN: In spite of storms, your paper arrives promptly on time, which it has done from the beginning, excepting one week, when it was carried by. How wonderful are the mail facilities with which we mortals are blessed! and still there are greater improvements constantly being added to the system. To say that we enjoy reading your excellent editorials is not giving the paper half the respect we entertain for it; though it comes from far away over the mountains, telling of a climate that is peculiar to itself, giving us information of a character that is particularly interesting, speaking of horses and domesticated animal life that originally hailed from this side of the Mississippi, still there is a fascination to all it contains that exactly adapts itself to those natures who are given, even the least bit, to visionary thinking.

As you have afforded myself great pleasure in placing before the readers of the BREEDER AND SPORTSMAN graphic accounts of the California horses, it is but mete and proper that a return of knowledge he furnished, and though the supply to draw from is not by any means sensational, it may prove better than it reads to the writer.

Tiskilwa is an old village, snugly nestled in a bend of the Big Bureau, a tributary of the Illinois river, into which stream it pours its waters some eight miles below this point. During the fifty years of its life Tiskilwa has had numerous grades of inhabitants; at first they were the true pioneers, a roving race of Esaus, then a more industrious class, and from this latter type sprang a thrifty, venturesome race. While the third generation lived and flourished sporting of all kinds held full sway. It was during the height of those young bloods' supremacy that our driving park assumed proportions and gave promise of being a permanent fixture; but alas for the plans of man! the hard times of 1877 pinched the pockets of the principal stockholders, they were compelled to close out their business, and nearly all who were most closely identified with the trotting interests pulled up their tents and like the Arabs "stole silently away."

With the many young men who sought new homes farther west journeyed the life and hope of our local driving park, and that body corporate gradually became a wreck of its former vitality. During the four years that meetings were held on its grounds the society enjoyed as full a patronage as could be expected at a race meeting in the country. Freeport, Tiskilwa, Mendota and Earlville formed a very strong interior circuit and at our meetings the entries were sufficiently numerous to pay all purses; this is not the case with many of the meetings at present which are held on tracks of minor importance. Of the four tracks named as being members of this local circuit not one exists to-day in working condition, hard times and a change in the sentiment of the communities in which they existed having been the main cause of their failure. At Tiskilwa a new grade of society came to the front; the young men having left, their places were filled by persons of older years and of entirely different tastes. The draft horse has taken the place occupied by the trotter, while creameries and cheese factories absorb the attention of the majority of our farmers.

As came, flourished and departed these various types of humanity, so throve and passed away the different breeds of horses. The Morgans were the only class held in repute during the early years, afterwards succeeded by the Tuckahoes, who in time were a greater success, to judge from the number of their followers, than ever the Morgans dared to be. An American Star cross next attracted general attention and when their day had ceased, the Norman and Clyde made their appearance, shortly followed by members of the Hambletonian, Bashaw and the Canadian families, until at present every breeder can he suited in his tastes. From Wineman's Logan (2:28) and Clay Patchen, a son of C. W. Clay Jr. (Strader's) there came a light sprinkling of Clay blood; these stallions made one season each in this vicinity and left some stock suitable for farther breeding. A son of Green's Bashaw added his mite to the list and he, too, went his way, to be followed by Menelaus, who, in the single season he remained here, sired the since famous mare Cleora, record 2:18¾, that was glory enough for the son of Hambletonian, and he was returned to Chicago. At present, we have Captain, record 2:28, by Billy Denton, son of the Hero of Chester; McGregor Chief, by Robert McGregor (2:18), dam by Toronto Chief; Temple O, by Post's Hambletonian, dam Lady Hunt, by Starlight, a son of Blood's Black Hawk; Hancock, by Romulus, dam Jennie L (2:29½), by Hoagland's Grey Patchen, dam Zepher, the dam of Harry Clay (2:23¾; and last but not least, a son of imported Messenger, something in the way of horseflesh that no other section can boast of. This last animal is seven years old and was either sired by the ghost of the old grey stallion, or else sprang at once, like an *ignis fatuus*, from the grave of that celebrated sire. The general impression at present is, that the son of Messenger will appear another season as a direct offspring from the bay stallion that Noah carried with him in the ark; whether this is only a surmise or the work of an incredulous believer, I am not prepared to say. Of all the many classes of horses with which we have been blessed, the imported draft horse appears to be the only one that has come to stay, and it must be admitted that the Norman and Clyde stallions have brought more dollars to our community than all others. While my preference has always been with the clean-limbed runner and the sure-footed trotter, I have never allowed myself to become prejudiced against the draft animal, for it is a settled fact that large horses have to be reared in order to meet the demand caused by heavy work and it is preferable to have those that are in every way fitted for the laborious calling. Excellence, I hold, is as necessary to success in the breeding of draft animals as it has been demonstrated to be in the rearing of race horses. In conclusion, it is not necessary to state that a few regret the inertia which prevails among the many, nor that they refer with pride to those days when the mountain came once a year to Mahomet, and brought among us the stir and hustle incident to a week's racing; for the future it will be necessary for poor, dilapidated Mahomet to hie himself away to the high hill if he cares to witness a horse race. COLUMBUS.

Tiskilwa, Ill., Feb. 8, 1883.

In and About Chico.

EDITOR BREEDER AND SPORTSMAN: Horse news is very scarce up here at present, but all the people in the business are giving their favorite colts and trotters their first touches towards getting them in order for the fall races and fairs. The epizootic and pinkeye have been quite bad up here this winter; quite a large portion of the farm horses and mules have been down, and several fine bred ones. I saw a notice of the death of Blue Bonnet in your last number, and Mr. McIntosh came very near losing Exact about the same time. Mr. McIntosh has a half-mile track at his ranch and has six colts leading and being driven, some of them showing a fine turn of speed. The first is Exact, a bay filly by Prompter—Kate Signal, by Signal, her dam by Illinois Medoc, Prompter by Wilson's Blue Bull. This filly was showing very well before she was taken with pinkeye. Sally McKim, two years, by Prompter—Susie Brown, by Blackbird, is a good one and is entered in the Stockton Stakes to come off during their fair. A yearling by Singleton—Kate Signal; this colt is named Signet and is a large, rangy fellow, and if he does not prove a trotter, I shall be disappointed. Black filly Solitaire, by Singleton—Kate by Frank Tollman, he by the sire of Ella Lewis, who has a record of 2:27, Kate's dam Kate Signal. A weanling by Singleton, dam by Gen. Reno, is just as fine a colt as ever I saw and has a fine way of going. Tim Barnard of the Fashion Stables has a two-year-old by Buccaneer that he has just commenced to break and like all that horse's colts I ever saw is well gaited. At the track Jas. Hasty has a two-year-old by Buccaneer, dam by Gen. Reno. I have not seen it moving but the boys say it is a clipper. Sherman has a three-year-old filly; also a two-year-old by Brigadier, that could trot in three minutes last fall, and a fine rangy chestnut colt, weanling, by Brigadier.

Tim Murphy has a chestnut roan, Maggie R, three years, by Veto—by Belmont. She is working for half-mile running races. Also a light roan two years old by Billy Newell—by Belmont; also a black gelding, yearling, by Prompter—by Belmont. He is being broke to harness with a view of making a trotter out of him. We had an impromptu race here on the 10th. Mr. McIntosh named bay gelding Fred Ackerman, pacer. Chas. Sherman named a grey gelding who does not yet sport a title. Ackerman won in straight heats. Time, 3:03, 3:08, 3:01½. Stakes $40.

I was over to the Rancho Reavis a few days ago and saw some very fine colts, also that game old trotter Blackbird; although over twenty years of age he shows all the fire and vigor of a young horse. There are about seventy brood mares on this ranch and they are stinted to different horses, some to Mr. Reavis' Norman horse Bloomington, some to the old hero Blackbird, Gibraltar, Singleton, and others to his jacks, of which he has two imported from Kentucky, and are fine looking fellows. They have the largest bone I ever saw for jacks and they should produce fine mules. I saw May Howard and her colt William B, by Blackbird. He is three years old, a fine looker. Mamie Hall by Blackbird—by Billy McCracken, full sister to Susie Brown, who trotted at three years old in 2:42. Mattie Solomon by the old horse—by Independence, by Boston. This mare and Orphan Girl are in foal to Abbotsford and should produce trotters. A very fine chestnut colt by Blackbird—by imported Hercules, is a yearling and a beauty to look at. We were next shown Ned Forrest, a chestnut gelding by Blackbird—by Volscian, by imported Glencoe. He has shown 2:25 in his work but seems to be unlucky, always meeting with some mishap to keep him from showing his speed in public. The next was a black filly, yearling, by Blackbird—by Volscian, bay colt by Blackbird—by Blackbird. This latter fellow is as fine as silk. And now Mr. Gore introduces us to his favorite, a black filly, yearling, with a small star, by Singleton—by Blackbird, grandam by Lancet, and her trainer and groom tell me she is a perfect marvel of speed in the hitting harness. We saw some very fine two-year-old Buccaneers, but time was too short to look at any except those that were up; in fact one would have to stay a whole day at least to give them a fair notice. One can buy any size, shape or color he may fancy at the Rancho Reavis. He has quite an extensive herd of thoroughbred Durham cattle. His bull Twilight—by Stonewall, is a magnificent animal. Mr. Reavis is building a mile track and a string of stables and when finished they will he the equal of any private training establishment on this coast.

I noticed an article in your last number advocating the placing of shelves around the inside of box-stalls to prevent horses from rubbing. A plan that I have tried with success is to place the lining or casing boards up endways and let the foot or lower end stand out from the wall say ten inches and the upper ends against the wall of the building. Then it will he impossible for your horse to back up and rub and does not seem favorable for neck or mane rubbing as is the case with shelves. OCCASIONALLY.

Chico, Feb. 18, 1883.

Mambrino on Tips.

EDITOR BREEDER AND SPORTSMAN: For many years I have been an interested reader of your writings upon various subjects pertaining to horse economy. Particularly have I been interested in your articles upon the horse's foot, and tips and their uses. I also read and greatly enjoy the varied and excellent writings upon the horse of Mr. Busby. Of late, Mr. Busby has expressed a decided opposition to the use of tips and criticizes you most liberally for advocating their use.

In your issue Jan. 28, under caption: "Tips Will Do," you answered in a measure his criticism, the reading of which I greatly enjoyed.

In this controversy it seems to me that you have greatly the advantage of Mr. Busby, as you give us the benefit of a series of practical experiments, while Mr. Busby simply quotes the views of an English veteran of strong prejudices, also the remarks of a disappointed and passionate turfman who had lost a race from the "rocking-horse gait," of his losing horse caused by wearing tips. Evidently the trainer believed in tips, had galloped his horse in tips previous to the race and liked his form sufficiently well to start him. The owner, of course, must attribute his failure and disappointment to something, so vented his spleen on the use of tips. Who think you was the better judge of racing form and the use of tips, the trainer or "Me Lord" his owner?

Now, friend Simpson, I am no novice in the use of tips myself; for more than twenty years I have experimented with them and for many conditions of contracted as well as sound feet, consider them at times indispensable. I have now an old family pet, twenty-three years old; owned him nineteen years; bred in Alabama, and as he is more than one-half thoroughbred; has to all appearances the perfect foot of the thoroughbred. For many years he was my favorite roadster; has trotted, without other preparation than roading, in a race in 2:34. I first wintered him North when eight years old; after the winter's use in the snow, his feet became hard and the horn brittle, and in spite of careful attention he went lame in May. I then took him to the blacksmith, attended personally to applying tips, giving him a fair frog bearing, and in two weeks he was all right; put on his shoes again in July and had lots of fun with him at the fairs and winter sleighing. The next spring, lame again, and again tips and "old Mack" was O. K. again. For years he has been my wife's phaeton horse but his summer wear has been tips and he is, to-day, like an eight-year-old. Several years ago, returning from a short absence in the spring, my wife remarked to me: "Old Mack has been very lame but the man has had his tips put on and he is all right."

Three years ago I traded for a very fast mare; her feet were badly contracted, and although her owner was a noted horseman, he had allowed her feet to grow outrageously long, explaining, "If you cut down her heels she will he so tender she can't go a bit." I cut them down however, applied tips, preserving the proper angle and bearing, drove her all summer and winter in them. I blistered her around coronets three times, and the following spring I had a mare that would pass as sound to even the critical eye. A year or two ago I purchased a handsome black mare in Chicago, cheap, as her owner, although fond of his mare, would not bother with her feet, saying: "One blacksmith would cut too much, another not enough," etc. She was lame when I bought her, the owner said, "because her heels had been cut too much," and they were then more than one-half inch too high. I took her home, put on the tips, cut her heels down. She was going sound inside of two weeks, trotted faster than ever and has not taken a lame step since; in speeding had to add a light toe-weight. As you say, "Tips will do."

Now, if tips bring relief to the horse suffering intense pain from the inflammatory condition of the contracted foot, and in many cases restore the foot to its normal condition, they certainly can work no injury to the sound foot.

The claim that the use of tips causes undue strain upon the flexor tendons and suspensory ligaments, with corresponding tendency to break down, has no force with me, for the same angle can he given to the foot, if tips are properly applied, as if shod with heavy shoes. I have shod a great many colts with tips, and it is my custom to shoe in the early spring with tips all the horses kept up for pleasure and exercise during the winter months. Next spring nine will jog our graveled roads in tips, but when track work begins they will pave shoes of various weights, as required by different gaits, nailed to their rested feet.

I don't wish to be understood that all feet are suited to their use, as there are many low-heeled horses that need the protection from concussion of a good, substantial shoe.

There is no danger of their going into general use for fast road or track work, for not one horse in fifty but requires more weight to balance their action than can be put into a tip. But for certain conditions of the foot and ordinary road work over good dirt roads nothing can surpass the use of tips, in comfort to the horn and protection from quarter cracks, gravel (so-called) and contraction. I shall look for your future articles on tips with considerable interest, as I know the subject will be fully and philosophically treated.

MAMBRINO.

BASE BALL.

Batting.

The signs of the times in the professional arena indicate a decided improvement in batting in the near future, leading players of the fraternity having at last come to realize the fact that they have yet a great deal to learn before they become thorough batsmen. In fact there was quite a change noticeable in the past season in the views of the more intelligent class of players as to what constitutes true batting skill. The great drawback to a similar improvement in batting to that which has characterized the fielding within the last decade is the premium which has practically been offered to batsmen to play for their record instead of for the side in the handling of the ash. With the publication of monthly, and even weekly, lists of a team's averages at the bat, and the annual statistics of the season's batting, a powerful inducement has been offered to every batsmen to play for his record only. A batsman by constant practice can become quite expert in the use of his bat, even against the swiftest curve-pitching, and yet be ignorant of the science of batting. This science lies in the application of a special theory in regard to the most advantageous method of using the skill acquired by practice in handling the bat. The object aimed at by the scientific batsmen is to secure the most runs with the least expenditure of muscular strength, and rules which are laid down for his guidance in this respect constitute the science of batting. Professional baseball playing is not engaged in for mere recreation by the members of the team, as in the case of the amateur class, but for business purposes only, and to make attractive sport for the patrons of the game. Thus far fielding has kept pace with the march of improvement, which has been taken up by the professional fraternity, but batting has almost stood still, there being but little improvement exhibited by the generality of batsmen over the play of a dozen years ago. While "headwork" play has come to be an essential of first-class pitching, mere muscular strength is exhibited in the batting department of the game with no more skill than was noticeable in the days when nothing under a hundred runs to a match would satisfy a club's team. By reiteration we might pursue a lengthy argument in support of our theory, but it must suffice to say that all intelligent players now recognize the fact that that style of hitting which secures the first base by safe hitting the oftenest is the only true criterion of skillful and scientific play at the bat. Whenever a batsman is seen to neglect opportunities for safe hitting he is either a player who has not brains enough for scientific batting or he is striving solely to excel in the season's batting averages, and therefore is playing only for his record, irrespective of any thought of what good team-work play requires. Club-managers should make it a part of a batsman's duties as a team-player to make sacrifice-hits whenever an extra base or a run can be scored by such a hit. Sacrifice hitting at times is just as effectual in scoring a run as a base-hit, and every time a run is scored on such a hit the batsman should be credited with a base hit. To see skillful batsmen facing for the right position in batting and trying to place a ball when men are running bases is to see batting in its proper form. When no one is on a base then a home-run hitter can indulge in his pet hit without cost. When all the bases are occupied, too, it is perhaps worth while to go in for a long hit, but even then it depends upon the effectiveness of the pitching opposed to the batsmen.—*New York Clipper.*

The National Club of Washington will re-enter the professional arena this coming season under the management of Mr. Warren White. Among the players will be D. Allison, Hangh, Joy, Evers, Barclay, Noble, Kipp and Robinson. The Nationals have an inclosed ground and they will join the American Alliance.

The new playing rules of the two eastern professional associations, who make the rules of the game, differ this season in only one essential point. The League plays the fly game entirely; the American Association admits of the bound catch of foul balls.

A league of the colored clubs of Richmond, Va., Baltimore, Philadelphia and other cities is to be organized in April for a series of matches played for the colored championship of the United States.

THE GUN.

Trap and Wing.

The near approach of the close game season has revived the interest usually taken in pigeon matches, and within the past few days the matter has received considerable attention at the hands of the varions shooting clubs. Profiting by the experience of former seasons, sportsmen generally are inclined to take time by the forelock and by this means avoid many of the disagreeable features which have retarded both the making and the popnlarity of matches. Pigeons have usually been scarce, and when delay has occured in making contracts for their delivery, they have been invariably held at such high figures as to make shooting at least a very expensive pastime. There is every reason to believe, however, that the present year will he a notable exception to the rule as there appears to be no dearth of birds, and arrangements have already been entered into by which the varions clnbs will he fully provided against any emergency. A pleasing feature in connection with the near approach of the pigeon shooting season, is that the interior clubs who are proverhial for the iuterest manifested by them in the sport, are discnssing the advisability of making frequent visits to city sportsmen, on which occasion an interchange of courtesies hy way of friendly matches will in all probability be arranged. Club matches are exceedingly popular in the Eastern States, and any departure in this direction is calculated to make the sport all the more lively and interesting. Considerable difference of opinion exists among local clubs as to the best grounds for trap-shooting purposes. At a recent meeting of the Cosmopolitan Club, the snbject was thoronghly ventilated, and it was finally decided to confer with the directors of other clubs, with a view of finally determining the choice of grounds. With a view of stimulating a friendly rivalry between the members, the club proposes to offer three gold medals for competition, and which will become the property of those making the first, second and third best averages for the season's shoot. The diamond medal, which was won from the California Wing Shooting Clnb, will be offered as a special medal, subject to monthly competition at club shoots and to be won by the person making the highest score. It is also liable to challenge. Meetings will be held by other clnbs in the near futnre, and all details for what gives flattering promise of heing a successful trap season will be finally arranged.

Should Be Stopped.

Complaint is made that the game laws are openly violated in the vicinity of Menlo Park, where deer are known to have been killed within the past ten days. On Sunday last a number of gentlemen from this city started ont on a visit to a friend who owns a farm some eight miles north of the station, and were surprised on the following morning to see a brace of hounds closely pursuing a good-sized buck, and shortly afterwards followed by a man on horseback. At some distance from the farmhouse the hnck was intercepted by some Chinamen who dispatched it only to be deprived of their booty hy the mounted hnnter. From the statements which have recently come to hand, the party complained of as having little respect for the close season is in the habit of making frequent sallies of this kind, and at the same time taking little pains to conceal his nnlawful condnct. Another complainant states that fish are heing destroyed by wholesale on the Garcia river hy means of giant-powder cartridges.

M. Anlt is proverbially a lone hunter and his manner of decoying the sly canvasback has frequently excited the admiration of less fortunate sportsmen. With the aid of an old-fashioned flat bottom, he reaches apparently inaccessible haunts after having bravely defied the Alviso waves and winds, and last Sunday after a few hours' hnnt he made the excellent showing of thirteen widgeons, eight sprigs, two mallards and four teal.

Messrs. Putzman, Higgins, Stackpole, Mitchell, Wright and Dr. Kane, visited the Mission San Jose early during the present week and claim to have struck upon new ground for quail shooting. They report excellent sport, and regret the near approach of the close season. During a comparatively short time they had the good fortnne to kill some ninety quail.

An interesting match was shot at Bird's Point last Saturday afternoon between Sergeant Nick Williams of Oakland and Mr. Hopkins of this city. The conditions of the match were fifteen birds, thirty-one yards rise, according to Hnrlingham rules. Clean scores were preserved by the contestants on five birds, tho match finally closing in favor of Williams hy a score of thirteen to nine.

The statement made by a contemporary recently that the largest hag secured in California hy a sportsman in one day was 80 ducks, is erroneous. Mr. Lingenfelsen of the California Schnetzen Club, on January 21 last, while visiting Alviso, killed 85 ducks in five honrs, nsing bnckshot during the last portion of the time.

A remarkable score was recently made at double birds in a sweepstake match, $25 entry, between Stockton sportsmen, 15 pairs, 18 yarda rise, 100 yards boundary. C. A. Merrill, who won the money, succeeded in killing 14 pairs, the odd bird dying out of bounds.

The Alameda Sportsmen's Club held a clay pigeon ahoot at Adams Point on the following day, five birds at fifteen yards, with the following score: Williams 5, Smith 4, Lowrie 4, Alexander 4, Scott 4, Coffin 4, Rector 4, Batchelder 4 and Derby 3.

A number of good haga were secured last week by local aportsmen in the vicinity of Alviso, and in consequence it is only reasonable to expect that the vicinity of the snccessful shooting ground will ho hesieged hy enthusiastic gunners.

A match has been arranged to take place at Adams Point to-morrow hetween Nick Williams and W. L. Taylor. Conditions, 50 clay pigeons each, 20 yards rise.

J. P. Anderson returned on Wednesday from a two weeks' visit to Stockton. He reports excellent duck shooting in the tule lands along the San Joaquin.

Nick Williams and O. K. Hopkins will shoot a match at Bird's Point this afternoon. Fifteen pigeons each, 31 yarda rise. Hurlingham rules.

There will a pigeon match to-day at Bird's Point between N. Williams and Mr. Hopkins for $50 a aide, 22 birds. Pool shooting afterwards.

On Snnday last Messrs. Spencer, Stack, Bowen and Briggs ancceeded in bagging fifty ducks, at a point known aa the bridge.

Morris Lachman returned to the city from a trip along the narrow gauge on Snnday night with average success.

Pigeon Shooting at Bird's Point.

The San Francisco Gnn Clnb held a shoot on Washington's birthday at Bird's Point instead of San Bruno, being unable to secure a snfficient number of birds at the latter place. Bird deserves a word of praise for the number of pigeons he procured on so short notice. The match was a haudicap, twelve birds, grounds traps, and nnder rules. The cluh's gold medal was won hy Mr. Al Havens with a score of nine. Being the first trap shoot of the seasou the snap shots had not got their hand in yet; in fact the shooting was very poor, hut then the pigeous were all strong and lively flyers and lost hut little time fooling around the traps, which fact may in a measure account for the numerous 0's as seen in the following scores:

	Handicap Distance											Total
Butler	30	1	0	0	0	1	0	1	0	1	1	1—7
Ewing	30	1	0	0	1	0	1	0	1	1	1	1—8
Fuller	28	0	0	0	0	1	1	1	1	1	0	1—7
Randall	30	0	1	1	1	1	0	1	1	0	0	1—8
McShane	26	0	1	1	1	1	0	1	1	1	0	0—7
Wilson	30	0	1	1	1	0	1	0	0	1	1	1—8
Davis	30	0	0	0	0	1	1	0	0	0	0	1—3
Grant	26	1	1	1	1	1	1	0	0	0	0	0—6
Havens	30	0	0	0	1	1	1	1	1	1	1	1—9
May	28	1	0	0	1	0	0	1	1	0	1	1—7
Babcock	30	1	0	0	1	1	0	1	1	0	1	1—7
Orr	30	1	1	0	0	1	1	1	0	1	0	1—8
Coleman	28	1	0	0	0	0	1	1	0	0	1	1—6
Gordon	28	1	1	0	0	1	0	1	1	1	0	0—6

After the above match was shot, several freeze-ont matches were shot off. The same handicap distances were observed in these as in the first and only members of the club were allowed to participate. The first pool was $27 50 which was divided between Mr. Orr and Mr. Gordon on five birds. Mr. Ewing killed four, Babcock two, Coleman three, Fuller two, Havens one, May two, Grant one, McShane none, Butler three. The second freeze-out was for a pool of $30. In this Mr. Babcock and Mr. Gordon tied on four birds and divided the purse. In the third the same contestants shot as in the other matches, for a pnrse of $25 which was divided between Coleman and Fuller who tied on five pigeons. Several shots having dropped out, left the third pool only $20 which was won by Mr. Ewing on five birds. The fourth pool was $17 50, won and divided hetween Ewing and Babcock, three pigeons each. By this time the live pigeous were running short so the ground was cleared and clay pigeons substituted. The first clay match was five clays, eighteen yards rise; there were six entries for a small purse. Some of those who had had poor luck shooting live birds thonght to do hetter with the pottery game, but found the flight of the one as uncertain as that of the other. One sportsman threw down his gun with the remark that "he was tired of shooting at cups and sancers." In the first match Mr. Havens won with a clean score of all hit. In the second match of six birds Mr. Ewing was the winner with a score of five hits. Following are both scores:

	FIRST MATCH.					SECOND MATCH.					
					Total						Total
Havens	1	1	1	1	1—5	1	0	0	1	1	0—3
Butler	1	0	0	1	0—2	1	1	1	0	1	0—4
Babcock	0	0	0	0	1—1	1	1	0	1	0	0—3
Ewing	0	0	1	1	1—3	1	1	1	1	0	1—5
Fuller	0	0	1	0	1—2	0	0	1	1	1	0—3
Orr	1	1	0	0	1—3	1	0	1	1	0	1—4

This about ended the Gun Club's first shoot of this year and in considering the poorness of the scores we mnst also consider the adverse snrroundings to good scores. The day was cloudy and the smoke of the first harrel wonld not rise to give the shooter a chance to get in the second shot with any effect, and also being the first shoot, the sportsmen had not got their hand in yet. A great many very pretty long range shots were made. Aside from the members of the clnb there were a great many spectators present and the ontside betting was quite lively. The average rnn of the betting was two to one on the man thongh as high as these was sometimes bet on some of the best shots. Mr. H. H. Briggs acted throughont in the double capacity of judge and score keeper to the entire satisfaction of all interested. Harry Bird, the veteran trapper, was at his post. The sportsmen and spectators left the grounds at about five o'clock, all well satisfied with the day's sport.

A Mosquito-Proof Tent.

Noticing with what unanimity my brother sportsmen complain of the persecutions of the mosqnitoes, while in the woods, I am led to give them my experience, and it is quite extensive, beginning in 1872, in the mountains of this State, and since then extended to upper and lower Michigan and both shores of Lake Snperior.

My first regular business interview with the mosquito was early in June, 1875. We had pitched teut for the night on the shore of Batchawaung bay, near the Harmony, on the north shore of Snperior. Onr tents were sound and we had taken the precaution to hang two thicknesses of mosqnito netting inside the doors. We turned in, hut alas, not to rest. The sun had scarcely set when our friends began to drop in, and in a short time the air was thick with them; they went to work as though they had not had a meal that season, and drove us nearly frantic. We flashed powder nntil the air was so thick with smoke that we were obliged to lie down in order to breathe; but it was of no avail; the smoke seemed just the sance they needed for their meat, and finally we were obliged to take to the boats and lie off shore until morning, when we rescued our property from the fiends and proceeded on our way. That night broke the spirit of P., who left for home next day on a steamer we met at the mill. It was days before we recovered from the effects of the poison.

That and numerous other similar experiences disgusted me so much that I invented what probably many another sportsman has made, but I have never seen it mentioned in print. In the Lake Superior country I always use a wall tent, and in addition have a tent the exact dnplicate in size made from fine tarlatan, which I suspend inside the canvas tent. It is heavily bound at all the seams and has four brass rings made fast at equal distances along the ridge. There are also other rings placed at intervals of, say, a foot along the eaves, i. e., the angle of the roof with the wall of the tarlatan tent.

After pitching the canvas tent I hoist the tarlatan teut up to the ridge pole by means of cords made fast to the rings on its ridge aud passing over the ridge pole. I then hook the rings along the eavos into hooks or snaps which are placed along the top of the wall inside the canvas, thus making the tarlatan fit snugly to the inner side of the canvas. The hooks and rings along the wall may he dispensed with and pins nsed instead, but I have yet to see the man who loved a pin.

The wall of the tarlatan tent shonld be made extra long so that, say, eighteen inches of it lies ou the floor of the tent. Place yonr baggage along the sidea and it will keep the tarlatau tight to the ground, and no mosquito or other post can enter, aave the few who slip in when you enter the teut.

Fine tarlatan or other similar material should be nsed, as the meshes of ordinary mosqnito netting are too coarse, and great care should be used in making it up. The seams and edges should be securely bonnd with linen or other snitable material to insnre dnrability. The one I have was made in 1878 and is as good as new to-day.

My experience in the woods leads me to the following conclusions, which can be taken for what they are worth, viz.: That hlack flies are active in the daytime and prefer the open to the thick woods, while on the contrary mosqnitoes are active principally at night, and in the thick woods and underbrush. I therefore pitch my camp in the wood, within a short distance of the stream, and am annoyed hnt little while attending to camp dnty in the daytime, while at night I bnild a ronsing fire in front of the tent, throw open the canvas front and lie inside the tarlatan enjoying my pipe, the cheerful fire, a game of cards and above all the angry protests of the infuriated mosqnitoes who have assembled in clouds hnt can't get in.

The tarlatan is light and packs in a very small buudle, aud when on the march shonld be packed inside the canvas or in a hag, to prevent it from heing torn. This arrangement allows yon the free nse of yonr tent without the annoyance of being compelled to nse a head net or other similar device.

I have called the attention of several dealers in sporting goods to my tent, hnt as yet know of none who have put them on the market.

A word in conclusion. I have found that cosmoline or vaseline with a little pennyroyal mixed in it preferable to oil of tar for several reasons, one alone causing me to prefer them, viz.: that you can carry them in a box and are not annoyed by the bottle breaking as it frequently does when you use the tar.—*Presque Isle, in Forest and Stream.*

THE RIFLE.

At Shell Mound Last Sunday.

The guns lately received by the police department were tried last Sunday at Shell Monnd Park, and some very creditable scores were made nnder the tutelage of Lieutenant Klein of Company C. Sighting shots were allowed, after which the following score was made at 200 yards:

Fields	4	4	4	4	5	5	4	5	5—43	85		
	4	4	5	4	4	5	4	4	4—42			
Klein	5	4	5	4	4	4	4	3	5—42	85		
	4	4	5	5	4	4	5	4	4—43			
Nash	5	4	5	5	4	4	4	3	4—42	85		
	3	4	4	5	5	5	5	4	4—43			
Charles Carr	4	4	5	4	4	5	4	4	4—42	84		
	4	4	4	5	4	4	4	5	4—42			
Bailie	5	4	4	4	4	5	3	4	4—40	80		
	5	4	3	4	3	3	5	4	5—40			
Clark	5	4	3	4	3	3	4	3	5—38	80		
	4	4	5	4	4	4	5	3	4—42			
McCarty	4	4	4	4	3	3	3	4	4—37	76		
	4	4	3	4	4	4	4	4	4—39			

The California Schuetzen Clnb will hold a large shooting festival during the latter portion of June, at which about $500 in prizes will be distributed. The match will be open and invitations will he issned to sportsmen throughout the United States. The shooting will mainly be at 200 yards, ring hullseye and man targets.

To-morrow a match for a small purse will he shot at Shell Monnd Park. The contestants are H. J. Mangels, O. Lemke, L. Haak and Chas. Thierbach. The match is twenty shots at 200 yards on a twelve-ring target.

The proposed match between a pistol team under the captainship of Col. Beaver, and a team of archers under J. P. Allen seems to have been lost sight of.

Officer P. D. Linville and L. R. Townsend will shoot a match at 200 yards at the Shell Mound range to-morrow for $10 a side. Linville allows ten points in fifty shots.

Philo Jacoby has heen doing considerable qniet practice of late, indicating that there is imminent danger of a challenge.

There will he considerable fnn among riflemen at Shell Mound to-morrow. Several matches on the tapis.

Major Smith and Lieutenant McElhinny are annonnced as probahle competitors for a valnable trophy.

The Turners' Sharpshooters annonnce a shoot for April 1st.

FISH.

Trout versus Carp.—Mr. Still of Willow hrook, tells a good joke on himself. It is known that three years ago he engaged in carp culture, with which effort catfish and high water played the mischief. Bnt he knew there were some large carp left in the pond, and with these he determined to do the fair thing. He fed them lavishly with curd and other good fish food, until one day he saw a trout jump in the poud. This discovery aroused his snspicions, and he concluded to investigate with a hook and line. In the course of thirty minutes he landed some twenty fine trout from a foot to twenty inches long. His researches in the way of cleaning one or more of the fish showed that they were loaded with fat, while the stomachs were completely gorged with curd. It didn't take Mr. Still long to figure ont what had heen become of his young carp and carp spawn, for the trout were large and ravenous enough to have eaten np the parent carp.—*Eureka Times-Telephone.*

John Twigg, the boat builder, has built six large salmon hoats for the Sacramento river, since the first of December. These hoats are twenty-five feet long and cost $250; he has orders for more boats than he can attend to. The salmon catching on this coast is fast becoming one of our principal industries. Mr. T. expects soon to have an order for fourteen large hunting and fishing boats from far-away Alaska whose fisheries are fast hecoming profitable institutions.

Triplets.—Thos. Meagher of Vallejo township has a Devon cow that he is justly proud of. He says that she furnishes milk that is rich as Crœsus, and that she is "as prolific as a minister's wife." She has frequently presented him with twins, but last week she did better than usual, and brought forth three heifer calves. "They are all doing as well as could be expected under the circumstauces."

H. H. Briggs has experienced quite a demand for the yonng pups product of Belle, who won the second prize in the all-age dog stakea recently at Gilroy.

Capt. J. N. King, Molalla, lost his valuable mare Ida, mother of the fine stallion Sherman, last week.

Rings and a Tree's Age.

M. Charnay, in one of his *North American* papers a year ago, declared that he did not trust the concentric rings of a shrub as a record of its age in years. He had put the popular theory to a test during his Central American explorations, and had found it to err. Dr. A. L. Child, in the current *Popular Science Monthly*, says he never until then had seen the authority of this age record dispnted, and when he came, some months later, to cut down four small trees which he knew were planted in April, 1871, he resolved to test the matter, and found that, although they had only twelve years' growth in them, he could count on each from thirty-five to forty concentric rings. "I could select twelve more distinct ones," he says, "between which fainter and narrower or sub-rings appeared. Nine of these apparently annual rings on one section were peculiarly distinct, much more so than any of the sub-rings, yet of the remaining it was difficult to decide which were annual and which were not." Dr. Child then proceeds:

"Now, to ascertain what relation or connection there might be between the meteorology of the several seasons and the growth made during the same, I selected from my meteorological records the maximum, minimum and mean temperature, and the rainfall of the six growing months of spring and summer of each of the twelve years of growth. These extracts I have tabulated, and have appended to each season the thickness of the ring formed, as measured on the oblique cut previously described. An examination of this table shows a general relation of cause and effect between high temperature and large rainfall and greater growth. But it falls very far short of proving a general law of 'so much heat and so much water during the growing season, to produce so much wood.' For example, compare the years 1875 and 1878. The temperature of 1878 for the season is better than four degrees in excess of the season of 1875, and the rainfall only a little over four inches less, and yet the growth of 1875 is seven times what it was in 1878. This almost unparalleled growth of 1875—that is, as compared with the other years—cannot be explained by the above general law. But I think the May and June record of that year throws light upon it. We see there a maximum heat in May of ninety-six degrees, higher than I have ever known it in an observation and record of twenty-five years, and a mean temperature of the whole month, also unequaled, of seventy-one degrees, and this great heat continued through the month of June, and no cold spells after the heat set in sufficient to check the growth. Then, in connection with this heat, the ground was well saturated with water when this heated term began (May 6th) by 1.62 inch of rain on the 4th. From this on to the 26th of June, fifteen inches more of rain fell, so apportioned over the time as to keep the ground saturated. This synchronous excess of heat and water evidently produced the abnormal growth. And probably, as this matter is further studied, it will be found that these agents, rightly proportioned, operating synchronously, produce these thicker rings; while as one or the other is in excess or absent, the growth is checked, and thus has time to condense and harden, and form these sub-rings; and the more frequent these alterations, the greater the number of them."

Chicken Chat.

Somebody wants to know if incubator chicks are as strong and healthy as those hatched in the "good old-fashioned way." Yes sir. Within the last two years we have raised over 3,000 incubator chicks, and we never raised anything better in the chicken line. We have a lot of incubator pullets, hatched last March, that have been laying these three months. In the early days of our incubator experience we, much to our surprise, hatched out some half a dozen chicks in a home-made machine, and they were about the weakest looking lot of chicks that ever came out of egg-shells. We wondered much then, but later we knew that we had kept the temperature of the egg chamber too high—not high enough to cook the eggs outright, but it came precious near it. Moral: When trying to batch eggs in an incubator, keep the temperature just where the directions say; don't try the forcing process.

How much does it cost to run an incubator? Well, that depends upon the kind of incubator and the price of oil in your locality. For the first-class incubators you may count upon using about a quart of oil in twenty-four hours. Now, how much does it cost to "run" a sitting hen three weeks? Remember that one 300-egg incubator does the work of twenty-five or thirty sitting hens.

Several somebodies want to know if they can make the business of raising early chickens for market pay. There you go again! How can I tell whether you can make anything pay or not? I don't know what kind of stuff you are made of. I have made it pay, and others have made it pay, and you can make it pay if you can go at it in the right way and stick to it. There is not a city in the United States where nice, plump, early spring chickens will not meet with ready sale at paying prices. Large, early spring chickens were quoted at $6 a dozen in Chicago markets last season. Judge for yourself whether that would pay or not.

In regard to the best breed to keep for early market chicks, I must say that the Plymouth Rocks fill the bill exactly. The farmer who has good common hens can produce a good chicken for spring market by mating his hens with pure Plymouth Rock cocks. Leghorns and Hamburgs are too small for market chicks, and the farmer who has a flock of either variety, and desires to raise chicks for early market, would do well to kill or sell the cocks and then mate the hens with Plymouth Rocks. A cross between the Asiatics and Leghorns will also produce good chicks for early spring market. The pure bred Asiatics in their youth run too much to legs and pinfeathers to make them desirable as broilers.

Mind you now, I do not recommend any of these cross-bred chicks as superior, or even equal to the pure Plymouth Rocks; I am only telling those who have the Asiatics, Leghorns and Hamburgs how to make the most of them at the least expense.—*Fanny Field in Prairie Farmer.*

For Colds, Asthma and Throat Disorders, use BROWN'S BRONCHIAL TROCHES, having proved their efficacy by a test of many years. *Sold only in boxes.*

Market Report.

FLOUR—We quote: Best City Extra, $6@$6 12½ Superfine, $4 50@$5; Interior Extra, $5@$5 50; Interior Superfine, $3 75@$4 50 ₱ bbl.

NO. 508 MONTGOMERY ST.

FOR SALE.

For Sale—Young Copperhead.

A BEAUTIFUL DARK BROWN stallion, seven years old, sixteen hands high, weighing 1,200 lbs; can trot in three minutes; kind and gentle in every particular. May be seen at Oakland trotting park until sold. PEDIGREE—Sired by Copperhead (2:34), by Owen Dale; dam Nellie Eastman by the Watkins horse (Black Hawk) from Missouri. His dam was a Printer mare; Nellie Eastman's dam, Nancy Ringo, was by Tinker, a thoroughbred horse, out of a Selam mare, grandam by Old Haul, by Ned Burns, he by John Richard by Sir Archie. This is an excellent large stock horse, well adapted to all purposes, especially as the sire of roadsters and carriage horses. Price $1,200, less than half his value. Address

Oakland racetrack or 1306 Pine street, San Francisco. 7t2

Thoroughbred Colt for Sale.

CITO, CHESTNUT COLT, FOALED APRIL 5, 1882. By Joe Hooker, his dam Too Soon by Norfolk, grandam Lady Davis (dam of Dashaway) by Red Bill, son of Medoc, etc. This is a highly-formed colt, of good size and a hearty feeder. Being nearly a brother in blood to Fred Collier (Lady Davis being the great Grandam of Fred, and his dam also being by Norfolk) and the Joe Hookers so far as tried all racehorses, this is a good chance to get a colt of great promise for a moderate sum. He has four white legs above knees and hocks, a white face and other white markings. Price $300 if applied for before the 1st of March. For further particulars address this office.

FOR SALE.

A VERY FINE HAMBLETONian stallion, imported from Syracuse, N. Y.; nine years old; mahogany bay; sixteen hands high; perfectly sound; well broken; very stylish; cost over $1,500; property of a banker; full papers; got by Hambletonian Prince, be by Volunteer. Can be seen at Club Stables.

FOR SALE.

THE WELL-KNOWN TROTting mare Nellie Grant, by Fred Low, from old Lady Grant, of Whip, Morgan and Copperbottom stock. Nellie Grant is black without white, sixteen hands one inch high, of fine form, and free from hereditary defects. She was a very fast trotter but incapacitated from track work owing to an accident. From her breeding, form and speed she should prove a very valuable broodmare. Can be seen at McCarthy's stable, Cor. Tyler and Jones streets. Apply to

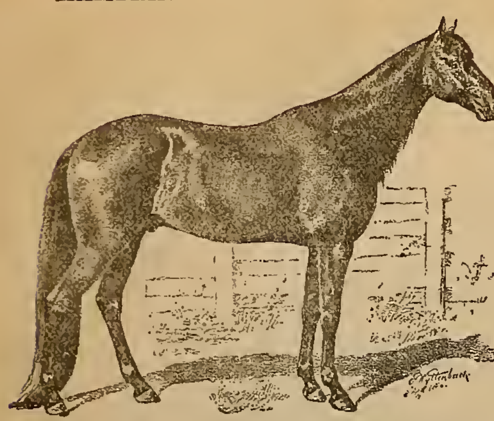
MAMBRINO TROTTING STALLION



ABBOTSFORD.

☞ Record at Six Years old, 2:21½. ☜

PEDIGREE.

BY WOODFORD MAMBRINO, HIS DAM COLUMBIA BY YOUNG Columbus. Woodford Mambrino by Mambrino Chief, his dam Woodbine by Woodford, a thoroughbred son of Kosciusko.

Woodford Mambrino is recognized to be the best son of Mambrino Chief. His own record is 2:21¼, and there are a large number of his get in the 2:30 list. Among them: Abbottsford, 2:21¼; Convoy, 2:22¼; Magenta, 2:24½; Lady McFatridge, 2:29; Dacia, 2:29¼; George A. Ayer, 2:30.

Besides those having public records, he is the sire of the two celebrated mares owned by Robert Bonner—Manetta and Malice. Manetta, with a running mate, and harnessed to a road wagon, trotted two miles in 4:27¼, and Malice trotted a trial, on the same track, a mile in 2:19¾. Woodford Mambrino is also the sire of Princeps, the sire of Trinket; record, 2:14. Woodbine is also the dam of Wedgewood, record, 2:19. Yonng Columbus, the sire of the dam of Abbottsford, has nine of his get in the 2:30 list, so that on both sides of the house there are notable performers. Abbotsford is a rich rosewood brown, 15¾ hands, and of very high form. His get are very promising, his daughter Jasmine having won the Embryo Stake for yearlings in 1881, and every one which has been put in training has shown good speed.

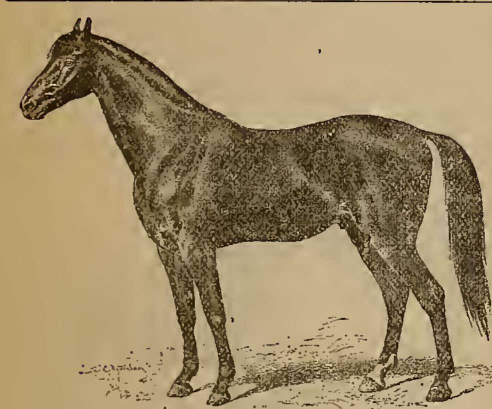
TERMS.

Seventy-five dollars the season, to be paid before removing the animal. Mares not proving in foal can be returned the following season free of charge. Good pasturage at reasonable rates, and extra pains taken, but no liability for accidents or escapes.

LOCATION.

Abbotsford will make the ensuing season, 1883, on the ranch of S. B. Whipple, Esq., San Mateo, season commencing February 15th and ending June 1st, 1883. For full history see the issne of BREEDER AND SPORTSMAN of August 5th, 1882.

GEORGE BAYLIS, Agent, San Mateo, Cal.



MAMBRINO WILKES.

Black Stallion, sixteen hands in height, by George Wilkes, son of Rysdyk's Hambletonian, bred by B. J. Treacy of Fayette County, Kentucky. Dam Lady Christman by Todhunter's Mambrino or Idol, son of Mambrino Chief. Second dam by Pilot Jr. Third dam by Kentucky Whip. Idol's dam was thoroughbred and was by American Eclipse.

THIS IS THE LARGEST AND ONE OF THE BEST COLTS OF George Wilkes (weighing at this date 1,260 pounds) combining the Hambletonlau and Mambrino strains and also several thoroughbred crosses. His colts demonstrate that he possesses in an eminent degree the same faculty of transmitting the family qualities to his offspring which put George Wilkes in the front rank as a sire of trotters.

Will make the ensuing season, beginning February 1st, 1883, at STOCKTON.

In putting the price by the season at the low figure of $40 the owner does not acknowledge, thereby, any inferiority on the part of this horse to any other sire of Trotters.

IRVIN AYRES.

ANTEEO.

DARK BAY COLT, NEAR HIND FOOT WHITE; FOALED MAY 5th, 1879; bred by Joseph Cairn Simpson, Oakland, California.

BY ELECTIONEER.

10th " By imported Janus.
11th " By imported Monkey.
12th " By imported Silvereye.
13th " By Spanker.

See Bruce's American Stud Book, vol. 1, p. 307, and vol. 3, p. 70.

Will make the ensuing season, 1883, from February 15th to June 15th, at Oakland Trotting Park. Terms $50 the season.

JOSEPH CAIRN SIMPSON,
Oakland or 508 Montgomery street, San Francisco.

STALLIONS.

STEINWAY.

TWO-YEAR-OLD RECORD 2:31¾; 3-YEAR-OLD RECORD 2:25¾.

TERMS

WILL SERVE MARES THE PRESENT SEASON AND ENDING July 1, 1883, at the stock farm of the late Daniel Cook, Danville, Contra Costa county, Cal., at $100 for the season, payable before the animal is removed. Mares not proving with foal can be returned free the next season. Pasturage at $6 per month, and extra pains taken with mares in attendance, but no liability for accidents or escapes. Mares sent in care of of McCleverty & Noblett, Fashion stable, Oakland, S. J. Bennett, Martinez, or D. S. Smalley, Oakland, will be forwarded immediately to the farm.

DESCRIPTION.

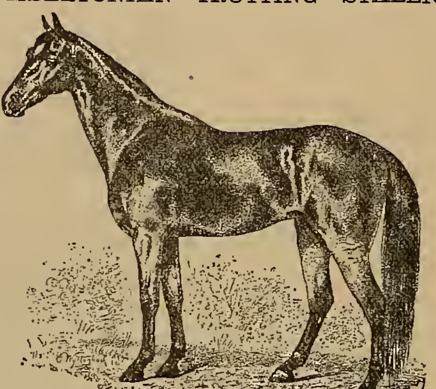
He is a rich bay; 15¾ hands high; long, flowing mane and tail; two white hind ankles; remarkable style and lofty carriage; has a good, resolute head, set on a stout neck; his shoulders are of the Hambletonian form—do not mount very high at the withers; has great length and capacious middle piece; plenty of bone and substance, and his gait is big and square.

PEDIGREE.

Steinway was sired by Strathmore.
First dam Abbess by Albion, the sire of Vanity Fair, with record of 2:24.
Second dam by Marshal Ney, by imported Emancipation.
Third dam by Bertrand, by Sir Archy.
Steinway's dam is the dam of Solo with five-year-old record 2:28¾, and also the dam of W. S. Buckner's colt Currency that trotted as a yearling last fall in 2:46. See N. Y. "Spirit of the Times of November 18, 1882. Strathmore is the sire of Santa Claus 2:17½; Chestnut Hill, 2:22½; Steinway, 2:25¾; Alice Stoner, four years old, 2:24; Nannie Talbot, four years old, 2:29; Solo, five years old, 2:28¾; Monitor, five-year-old record 2:29; by Rysdyk's Hambletonian, the sire of 35 in the 2:30 list. Address

SAMUEL GAMBLE,
Danville, Contra Costa Co., Cal.

HAMBLETONIAN TROTTING STALLION



BOB MASON

By Echo. His dam Belle Mason by Belmont, Thoroughbred.

Echo by Rysdyk's Hambletonian, his dam Fanny Felter by Magnolia (by American Star). Belle Mason by Belmont (Williamson's); First dam Lucy Johnson by the Pony (son of Imported Leviathan); second dam Catalpa, by Frank; third dam by John Richards.

WILL MAKE THE ENSUING SEASON, LIMITED TO TWENTY mares, commencing February 15, 1883, and ending June 15, 1883, at the stables of his owner, Figueroa street, Los Angeles.

DESCRIPTION.

Bob Mason is a mahogany bay, with inside of off hind ankle white and star in forehead; sixteen hands, and weighs 1,100 pounds. Foaled May 10, 1879. He is of fine, kindly disposition, a natural trotter, and has shown great speed, but as yet has no public record. For full history of his sire, Echo, see BREEDER AND SPORTSMAN July 29, 1882. See also, for his full brother, Exile, BREEDER AND SPORTSMAN, issue of September 16, 1882.

TERMS.

One hundred dollars the season, payable at time of service. All mares at risk of owners. Mares not proving in foal can be returned the following season free of charge. Address

CHARLES J. ELLIS,
Post office box 55, Los Angeles, Cal.

THE TROTTING STALLIONS

SINGLETON AND LA HARPE.

SINGLETON WILL MAKE THE COMING SEASON, FROM Mach 1st to July 15th, 1883, at the farm of the owner, three miles north of Chico, Butte Co., Cal.

PEDIGREE.

Singleton is by Willie Schepper, a son of Rysdyk's Hambletonian, his dam Lightfoot (the dam of Pride) by Flaxtail, a son of Pruden's Blue Bull.

DESCRIPTION.

Singleton is a dark brown horse, tan flanks and muzzle, a little touch of white on hind feet and one fore foot, and star in forehead. He is 15¾ hands high and weighs 1,100 pounds. He was bred by Dr. M. W. Hicks, foaled spring of 1878.

TERMS.

Fifty dollars the season. Mares not proving in foal will be bred the following season free of charge. Mares from a distance will be pastured without charge during the season. Mares shipped to Chico, consigned to me, will be received on arrival of train, and taken to the ranch. Mares kept in any manner their owners desire, at reasonable rates. There is every convenience on the place, boxes, paddocks and plenty of shade and water.

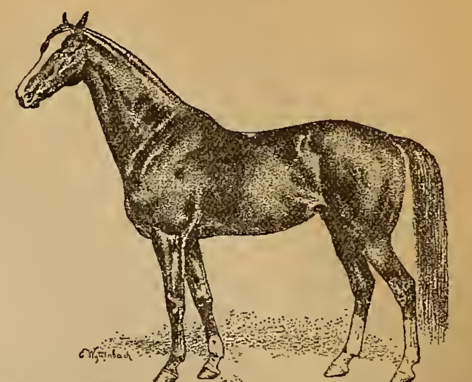
L A H A R P E

Will also make a short season at the above place on private terms. La Harpe is by Fame, a son of Alexander's Belmont, his dam Prairie Bird by Flaxtail, the dam of Flight and Prompter. Address

J. T. McINTOSH, Chico, Cal.

STALLIONS.

THE THOROUGHBRED STALLION



W H E A T L E Y

WILL STAND THE ENSUING SEASON, ENDING JULY 1ST, 1883, at the Oakland racetrack.

TERMS—$50, payable at the end of the season. Satisfactory arrangements can be made for pasturage near the track for mares from a distance.

PEDIGREE AND DESCRIPTION.

Entries to stakes and purses not marked closed, will close March 1, 1883.

Races to close will be run nnder weights adopted at annual meeting, 1881.

Starters in all races must be named at 8 p. m. the day preceding race, any other rule to the contrary notwithstanding.

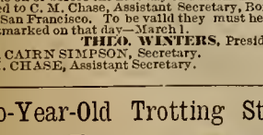
Non-members will be placed on the same footing as members of the association in regard to the payment of purses and stakes advertised, and should there be a deficiency the winners will receive a pro-rata division.

Parties making nominations will be required to record colors at time of making entries, and after record will not be allowed to ride in other colors. This rule will be strictly enforced.

All nominations in stakes and entries in purses must be made on or before the first day of March next, 1883, directed to C. M. Chase, Assistant Secretary, Box 1961, P. O., San Francisco. To be valid they must be plainly postmarked on that day—March 1.

THEO. WINTERS, President,
JOS. CAIRN SIMPSON, Secretary.
C. M. CHASE, Assistant Secretary.

Two-Year-Old Trotting Stake for 1883



A TROTTING STAKE FOR COLTS AND FILLIES (foals of 1881), to be trotted at the California State fair of 1883; $50 entrance, of which $25 must accompany nomination, and the remaining $25 to be paid Aug. 1, 1883; $500 added by the society.

Conditions.

The above stake to be mile heats, in harness, and to rules of National Trotting Association. Entrance money to be divided as follows; Fifty per cent. of stakes to first colt, 25 per cent. to second, 15 per cent. to third and 10 per cent. to fourth. Five to fill.

The $500 added money to be divided as follows: One hundred dollars each to winners of money and $100 to the stallion whose get wins first money, if the stallion is owned in California. Entries close March 15, 1883, with the Secretary. A colt making a walk-over is entitled only to his own entrance, and but 25 per cent. of entrance money received; a colt distancing the field is entitled to bnt one money and 66 per cent. of stakes.

P. A. FINIGAN, President.
EDWIN F. SMITH, Secretary.

ANNOUNCE THE FOLLOWING

Trotting Stakes for 1883 & '84.

Three-Year-Old Stakes.

No. 1—The Ashland Trotting Stake, 1883, for colts and fillies (foals of 1880); to be trotted when three years old, during the summer trotting meeting of the Chicago Driving Park for 1883; $100 entrance, of which $15 is forfeit and must accompany the nomination; $15 payable May 1, 1883; $20 on June 1, 1883, and the remaining $50, from those who start only, at or before 8 o'clock p. m. of the day preceding that named for the race; the Chicago Driving Park to add $1,000.

No. 2—The Ashland Trotting Stake, 1884, for colts and fillies (foals of 1881); to be trotted when three years old, during the summer trotting meeting of the Chicago Driving Park for 1884; $100 entrance, of which $10 is forfeit and must accompany the nomination; $15 on January 1, 1884; $25 on June 1, 1884, and the remaining $50, from those who start only, at or before 8 o'clock p. m. of the day preceding that named for the race. The Chicago Driving Park to add $2,500.

Four-Year-Old Stakes.

No. 3—The Chicago Trotting Stake, 1883, for colts and fillies (foals of 1879); to be trotted for when four years old, during the summer trotting meeting of the Chicago Driving Park for 1883; $100 entrance, of which $15 is forfeit and must accompany the nomination; $15 payable on May 1, 1883; $20 on June 1, 1883, and the remaining $50, from those who start only, at or before 8 o'clock p. m. of the day preceding that named for the race. The Chicago Driving Park to add $1,000.

No. 4—The Chicago Trotting Stake, 1884, for colts and fillies (foals of 1880); to be trotted when four years old, at the summer trotting meeting of the Chicago Driving Park for 1884; $100 entrance, of which $10 is forfeit and must accompany the nomination; $15 on January 1, 1884, $25 on June 1, 1884, and the remaining $50, from those who start only, at or before 8 o'clock p. m. of the day preceding that named for the race. The Chicago Driving Park to add $2,500.

Conditions.

All of the above stakes to be mile heats, best three in five, in harness, and to the rules of the National Trotting Association. Moneys to be divided as follows: Seventy-five per cent. of entrance fees, forfeits and added money to the first horse, 15 per cent. to the second horse and 10 per cent. to the third horse. In all stakes, five entries required to fill. All forfeits and payments must be made in cash on the day specified by the conditions of the stake, and in case of default of any payment the horse is out, and all payments made before such a default are forfeited. Entries for all the above stakes close on Thursday, March 1, 1883, and nominations must be accompanied by the forfeit money and addressed to

D. L. HALL, Secretary,
7t2 116 Monroe street, Chicago, Ill.

THE

SOUTHERN PACIFIC R. R. CO.

RESPECTFULLY CALLS ATTENTION TO THE

SUPERIOR FACILITIES

AFFORDED BY THEIR LINE FOR REACHING with speed and comfort the best places in the State for

Sea Bathing. Shooting and Fishing.

TRAINS LEAVE SAN FRANCISCO DAILY FOR

MONTEREY,

THE MOST CHARMING

Summer and Winter Resort of the Pacific Coast,

with its beautiful Groves and delightful Drives. Trout in abundance can be obtained from the several streams in the vicinity of Monterey, and the best shooting may be had in season.

THE BAY OF MONTEREY

Is noted for the extent and variety of fish which abound in its waters, notably Salmon, Rock Cod, Barracuda, Pompino, Spanish Mackerel, and Flounder. The above-mentioned attractions, in connection with the low rates of fare, rapid transit, and the superior accommodations furnished at the "HOTEL DEL MONTE," have made Monterey a paradise for sportsmen.

THE BATHING ESTABLISHMENT

OF THE

"HOTEL DEL MONTE,"

IS UNSURPASSED.

A SPACIOUS SWIMMING TANK

(150 x 60 feet)

FOR WARM SALT WATER, PLUNGE AND SWIMMING BATHS.

ELEGANT ROOMS

For Individual Baths with DOUCHE and SHOWER facilities.

MAGNIFICENT BEACH

Of pure white sand for SURF BATHING, Etc., Etc,

THE FAVORITE ROUTE to those well-known Watering Places,

APTOS, SOQUEL AND SANTA CRUZ,

IS VIA THE

Southern Pacific Railroad,

(Broad Gauge), and tha

SANTA CRUZ RAILROAD.

☞ At PAJARO, the SANTA CRUZ R. R. connects daily with Trains of the S. P. R. R.

The S. P. R. R. runs through the counties of San Mateo, Santa Clara, San Benito, Santa Cruz and Monterey, in each of which game abounds in great variety. Notably

Quail, Pigeon, Snipe, Duck, Geese, Deer and Bear.

Lakes PILARCITOS and SAN ANDREAS are reached by this line. Stages connect with trains daily at San Mateo for those well-known Retreats, PUBLISIMA, SAN GREGORIO and PESCADERO. We would particularly call attention to the unlimited extent of range at and about SAN BRUNO and McMAHON'S for RIFLE PRACTICE.

These resorts are but a short distance from San Francisco and offer special inducements to the lovers of this manly sport.

SPECIAL NOTICE.

Sportsmen and others presenting Passage Tickets o any description issued by this Company will be entitled to

FREE TRANSPORTATION OF THEIR DOGS

when carried in Baggage Cars and put in charge of Train Baggagemen. Train Baggagemen are instructed to issue CHECKS for all dogs received in Baggage Cars.

☞ In order to guard against accidents to Dogs while in transit, it is necessary that they be provided with COLLAR AND CHAIN. Guns and Fishing Tackle checked and carried free of charge. Guns taken apart and securely packed in wood or leather cases may be taken in Passenger Cars.

HORSEMEN, ATTENTION.
The Horse's Friend
Prof. W. H. Woodruff,
VETERINARY DENTIST,

LATE FROM BOSTON, CALLS THE ATTENtion of horsemen to the fact that there are hundreds of horses in this city absolutely suffering from sore mouths and other complications directly caused by bad teeth, and they show this by the following bad habits:
Bit Lugging, Driving on one Rein, Balking, Bolting, Tossing the Head while Driving,
PULLING ON THE BIT,
Drooling and Foaming at the Mouth,
and other faults which can be corrected by dental manipulation. The Professor can be consulted at his office at the Fashion stables, 221 Ellis street. Office hours from 8 to 9:30 a.m., 1 to 2:30 and 6:30 to 7:30 p.m., Tuesdays excepted, when he will be at Thirteenth street stables in Oakland. Orders left at the Club stables, Taylor street, and the St. George, Bush street, or by mail, will receive prompt attention. Consultation and examination gratis.
N. B.—Particular attention paid to gents' drivers.

THE SEMI-WEEKLY EAST OREGONIAN with pictures of Pendleton, Centerville, Weston Umatilla City, Echo City, Pilot Rock and Heppner, to any address three months, $1; six months, $1 75; twelve months, $3. Sample copy of paper and picture, 18 cents. The best and truest description of Umatilla—the great wheat and sheep country—ever written. Address EAST OREGONIAN PUBLISHING COMPANY, Pendleton, Umatilla county, Oregon.

BREEDER AND SPORTSMAN

Vol. II. No. 9.
NO 508 MONTGOMERY STREET.

SAN FRANCISCO, SATURDAY, MARCH 3, 1883.

SUBSCRIPTION
FIVE DOLLARS A YEAR.

ALONZO HAYWARD. OWNED BY HENRY PIERCE.

"Why, he is as handsome as a picture," is often the remark of those who are looking at a horse which comes up to their conception of what a horee should he.

We have often regarded it as a vile slander when a majority of pictnres were the comparison, and even many of those which were the work of artists, deeervedly ranking high in the profession as deliaeators of eqnine form, are somewhet wide of the mark in presenting the real configuration aud appearance. While it is not very good taste to be so continually "blowing onr horn" in regard to the merits of the pictures that appear in the BREEDER AND SPORTSMAN, they are certainly entitled to preise, and as that is earned by the delineator and the workmen who transfer from paper to mctal it is not so bad.

The horse ie given and not the imaginings of some one who can hardly tell a horse from e mnle, and we have not the least hesitation in claiming that, as a whole, the seriee has never been equaled in any jonrnel, American or foreign. There is an individuality, a catching of the expression as it may be termed, for horsee as well as men are distinct in this respect, and no matter how closely they resemble each other in form there are differencee which our artist is extremely happy in discovering and reprodncing in the sketehes.

It is nnnecessary to revert to the family from which Alonzo sprang, on the paternal side, as the history of the Haywards wes presented only a few weeks ago. Thet he is not an nnworthy seion is proved by his performances, end his form as is shown hy the portrait is capital.

He is not only a large horse when the standard and tape is bronght into reqnieition hut he is also a "hig horse for his size."

Immensely powerful all over, hulk of muscle, big bone, large teudons and yet with finish and without grossness in any respect. Sixteen hends in height, lengthy with a gre[illegible] middle piece eonnecting capital qnarters and shonlders, [illegible]

(CONCLUDED ON PAGE 137.)

THE STABLE.

Still More About Tips.

Now that the last pages of "Tips and Toe-Weights" have been sent to press, the introduction published, and all but the dedication accomplished, it was thought that the task for a time at least was completed. But the letter of Mambrino given last week, the strictures of the *Turf, Field and Farm*, which are copied and appended to this article, necessitate retouching. We do not intend the issuing of the book shall close our labors in the field. Feeling that the question is momentous, that, in fact, it is one of the most important in the whole range of stable economy, we shall endeavor to add to the information contained in the book whenever we think that there are new features to present, new views to discuss.

Mambrino presents two objections which have not as yet been considered, and we are pleased to receive them and communications on either side of the case. In this respect we feel as an old friend remarked some years ago when men who were acknowledged to be good judges of the form of horses were looking at his stock. His words were: "I shall feel obliged if you will point out the defects; the good points I think I can discover, while it is very likely that favoritism for my own may warp my judgment." In our predilection for tips it may be that the favoritism blinds, and that there are reasons for the belief expressed by Mambrino, although so far he has only made the charge without supporting it by reasoning or arguments based on practical results. He states: "I don't wish to be understood that all feet are suited to their use (tips), as there are many low-heeled horses that need the protection from concussion of a good, substantial shoe." A low heel is generally accompanied by a large foot, in which there is little concavity of sole, and when in a natural condition with the frog of more than comparative magnitude. Dealers reject them as unfit for use on city pavements, the unfitness arising from inability to withstand the "battering" even when protected with a huge mass of iron called a good shoe. There is not only a wide-webbed shoe, but that is also raised as much as possible by high calkins, and notwithstanding this artificial guard against concussion, animals of this kind are not purchased for city use unless at an inferior price. The illustration which was given of the foot of the elephant enters appropriately into the consideration of the big, flat foot. The heels being low, there is not the same depth in the commissures, and consequently not so much spring in the quarters. But the increased ground surface, the larger frog and the more easily springy bars compensate for the deficiency, and though the better formed and more solid hoof is to be preferred, we are of the opinion that the protection afforded by the tip is sufficient to guard against wear at the toe, and that the anterior portion is more thoroughly protected by the natural than the artificial appliances. "But it will wear through these natural guards," the objectors claim, "and in a little time the sensitive tissues will be exposed without any guard." The answer is, how do you know that this effect will follow? And if a fair trial has not been given the mere claim does not carry weight. As has been found in our experiments the horn grows more rapidly when it is exposed to wear, and even with the partial covering such as a tip affords there is still an acceleration of the deposit of horn, consequent upon the natural functions being left, in a measure without interference. Then the horn is enabled to endure a greater stress, and does not wear away so readily. Still, if shoes were removed from a low-heeled, flat-footed horse, the horn having been cut away from wall and sole, as is the common practice with shoeing-smiths, the horse would cripple from the start. Give time, however, to recover from the malpractice, or with a foot in its natural state, wall, sole, bars and frog intact, and there would be no trouble; that is, in our opinion. We can only give it as an opinion, not having subjected a horse of that description to a test which is thorough enough to give authority to the diction, though from finding that there is a surplus of horn in a "strong foot" which requires a lowering of the heels when the tips are reset, it is probable that this ground will be substantiated on actual trial. In one case a trial of three months has been given, and, though this is manifestly too short a time to arrive at a full conclusion, so far it sustains the position. The subject was a large horse over 16 hands high, with a decidedly flat foot, low and narrow heels, caused by contraction. He had been used for some time as a road horse in San Francisco, could trot quite fast, though at times inclined to hitch. He had a good deal of knee action, striking the ground hard when going fast. He was shod with the ordinary flat shoe, which would probably weigh about 16 ounces when first made. The web was wide, though it was rather thinner than usual, five nails on the outside, three on the inner, and a small clip at the toe. The inner portion was cut away some in order to guard against striking the knees, although knee-boots had to be worn, and be struck them with a good deal of force. The shoe was well made, according to the accepted ideas of what is proper, and set by a smith who is acknowledged to be a better mechanic than usual. Standing in front of the horse the fore part of the foot shows round, and from that point of view it would be thought that he had a good and natural foot. The heels are much narrowed and the shrinking is still more evident when a comparison is made with a foot which is natural. A tip which extends a trifle back to the point of the frog has a crose measurement of 5⅝ inches; one made for Anteeo at the same place is 4½ inches, though the straps on the quarter-boot buckled in the same hole when the tips were first set. This came from the greater width in the heel of Anteeo, and if there was no "moving in," there would be at least an inch and a half more in circumference of the foot of the larger horse.

The shoes had been set some time when we got him, and in order to get as much growth of horn as possible before taking them off, they were allowed to remain until the 15th of January. In the mean time the hind shoes were worn entirely through, and desiring to make another test with this horse he was driven barefooted behind. His work was jogging on the road, and during the best weather this was mainly on the macadamized streets. The horn of the hind feet broke away, and for a few days there was a good deal of soreness from the breaking at the toe. On the 15th of January tips were put on weighing five ounces each, the width of the web eleven-sixteenths at the toe, five-eighths at the posterior part, the thickness at the toe one-quarter of an inch, the posterior being three-sixteenths. There was just growth of horn enough to bed this thickness and keep the foot level. The shoes that were pulled off weighed 13½ ounces each, his action being such as not to wear them as much as horses usually do, and that confined to the toe and the outside of the shoe. The inner side had evidently been made narrow with the intention of guarding against injury to the knee, and originally it may have been forged rather thicker than the outside. There were marks which had evidently been made with the toe of the hind shoe, and when he came he had cut the front part of both hind pasterns.

It was not the intention to have him driven fast for some time after wearing the tips, but desiring to see what change there was in his action I had the man who takes care of him trot him through the back stretch. He showed about a "forty gait," but, as I expected, was inclined to single-foot. In order to see if that could be remedied by the application of weight at once, on the following day put on toe-weights of 3¾ ounces each, and he trotted as squarely as a horse could, moving the quarter in 39 seconds with great ease. This was the 22d of January, and since then his work has been comparatively slow. Still it has been strong enough to test whether the heels of his fore feet would stand the concussion without injury, and whether the hind feet could be used without any protection in the shape of the shoe, and at the present writing there are favorable indications in both cases.

One fact was demonstrated, that after making allowance for a slower growth of horn in feet of that description the deposit was so much less in the horses which wore tips that the position formerly taken, that the wear induced quicker growth, was surely correct.

Short as the time has been to arrive at definite or reliable conclusions, accelerated horn production is clearly shown, and the quarters have perceptibly expanded in a little over a month. The 27th of February the same quarter-boots were put on and the straps could not be drawn to buckle in the hole which received the tongue on the previous trial. So far this may be regarded as an indication that even a "low-heeled" flat foot will receive benefit from wearing, though it is also evident that the time is too brief to afford a satisfactory test. Again there is nothing to warrant the prediction that they will not go "into general use for fast road or track work, for not one horse in fifty but requires more weight to balance their action than can be put in a tip." No one is better aware than Mambrino that the "balancing" does not depend upon the amount of weight, but rather on the means of applying it, and in a quotation from from him in a late article a case was given where a reduction of weight gave a more satisfactory balance. This term has come into use of late years, and has become a favorite expression among those who write and talk horse. We cannot see that it carries a very clear meaning.

Oftentimes horses of the finest action cannot trot fast, while others of a slovenly style cover the ground with great rapidity. But inasmuch as the word conveys a meaning which is now generally understood it may stand in lieu of a better, and for "balance" we will accept the definition that it means a higher rate of speed. Now to make an authoritative statement that only one horse in fifty will be enabled to trot fast with tips it would be necessary to take that number for a test. As has been told, our experience has shown three that could trot faster with tips than with full shoes, and as the trials were restricted to that number we have yet to find an instance which was not in favor of the tips. To add to this experience there is a trial of 2:30½ for a three-year-old which never wore anything but tips, and a yearling which trotted in a race in 3:02 without even the weight of a tip to balance him. Farther than that we do not believe that any three-year-old ever trotted faster than the time given with the same amount of unsystematic exercise, and the yearling can be classed in the same category.

Restricting the argument, however, to theory, which must be the only basis for the statement that forty-nine horses will require shoes to balance their action to one which can go in tips, and we are decidedly of the opinion that the weight of reasoning will be in favor of the side we advocate. It has been discovered that weight on the outside of the wall, and that placed higher than the shoe, has a more potent effect than when incorporated in the shoe.

Years ago we tried shoes which were cast after patterns that were made heavy at the toe, and found that this was not satisfactory. At that time Mambrino coincided in the same view, and about the same period shared our belief that it was not the amount of weight but the manner of applying it that caused the effect.

Ten years ago toe-weights of a pound each were in common use, and these were worn with a heavy shoe. Now six ounces is nearer the maximum, and shoes of twelve ounces and under are not unusual. The toe-weight, as its name implies, is an appendage designed to be he worn on the toe, and its efficacy must depend upon its locality. A twelve ounce shoe and a six ounce toe-weight will add at least two-thirds of the weight to that part of the foot which is anterior to the point of the frog. If the unequal distribution of the weight is the cause for the balance, then it is evident that a tip will produce the effect with more certainty than a shoe which extends to the heel. Adopting this view and we will expect that a toe-weight of three ounces will be as potent on a tip of the same weight as the six ounces to a shoe of twelve, and at the same time the strain on the legs and feet will be far less. We have not the least hesitation in predicting that when Mambrino gives the same trials to tips on the track, and for fast work on the road, as he has to the curing of lameness by their use, he will find that the practice will upset his theory in this respect. He gives practical results, and very interesting they are, to justify his indorsement that "tips will do," and if he will pursue the experiments still further we have the fullest confidence that he will also agree that the action can be balanced as well.

The *Turf, Field and Farm* has not yet presented an argument to show that tips will not do. Quotations from "horse farriers" of the last century, and ipse dictum will not convince. Scientists of that day were just as ready to dispute the discovery of the rotation of the earth upon its axis, and learned medicos were just as certain that Harvey was wrong in his theory of the circulation of the blood.

It is now nearly the universal custom among trainers of racehorses to gallop without shoes, whereas only as far back as thirty years ago a man would have been held demented who followed that plan. The intelligent trainer of racehorses is now getting as close to nature as possible, relieving his pupils of many shoes, heavy blankets, and the balls, drenches and blisters with which they were tormented. If a piece of iron or steel on the toe weighing, perhaps, one ounce, can transform the action into the gait of a rocking-horse, when a plate of say two ounces extending to the heel keeps it perfect, the "ounce at the heel" is more potent for good than it was ever thought to be for evil.

But to prove that the *Turf, Field and Farm* is self-cognizant of standing on untenable ground, the manifest purpose to distort the statements we have made is sufficient evidence. The admission that we were in a "quandary" about weight was to the effect that we were unable to account for the known effects of unequal distribution of weight in the case of toe and side-weights. We are still in the belief that this is a puzzle which no one has yet solved and made public the solution, and in this estimate we are sustained by everyone with whom we have conversed on the subject. Neither can we authoritatively state what is the proper weight for a tip, and though the experiments have been made with a variation of from one to eight ounces there is not data enough to guide to exactness. The statement that Anteeo went repeatedly lame is not sustained by what we have written, and in place of warranting the implication that the lameness came from his wearing tips, it was expressly written that it came from a wrench to his knee which the blacksmith gave him when about fifteen months old. That it was a serious injury is evident, as he did not recover from it for nearly a year, and that the cause was apparent was distinctly stated. We have not the least doubt that if the injury had been supplemented with wearing shoes, and driven as much as he was before recovering, that he would have been irretrievably injured. As it now stands, after recovering from the pinkeye last year he was "worked" harder, the exercise being more trying to his legs than one three-year-old in a thousand is subjected to, and yet he never took a lame step for the whole of the past season, and his legs and feet are the admiration of all who see him. The foot is perfect, the horn smooth, the heels wide, the frog elastic; not a place that could be changed for the better. There is not a puff or blemish on his forelegs, not a particle of enlargement of knee or pastern, and he stands as squarely on them as a soldier at drill. There is never an inclination to "point," or rest one by placing it in advance or behind the other. There cannot be better indication of complete freedom from any injury to the feet than this, as all will agree who have the least acquaintance with the foot of the horse, and that shows more conclusively that it is in a normal condition. As the short history published proves, he was subjected to severe work in order to overcome an obstinacy for which it was the only remedy. Three heats of two miles each, every mile at a rapid pace, and invariably the last the fastest. Rattling him along after intervals of idleness without the opportunity for "seasoning," had he worn shoes feet and legs must have given away.

The readers of the *Turf, Field and Farm* who have not seen the articles which have appeared in this paper may be misled by the garbled accounts, and what object is to be gained by the distortion we are at a loss to know.

The chapter referred to as being contrary to our present views was written some years ago, when we ascribed part of the cure of a "kneeknocker" to wearing a fore shoe made heavier on the outside. Later experience leads to the belief that this was not the reason, that it had nothing more to do with the use of tips than it had to an overdraw. The advice proffered it is not likely will be accepted when the two years' later experience has shown the fallacy of the course, and it must be a teacher who advances sounder logic than a rehash of old notions to cause the order of "the d——d tips off."

Mr. Simpson of the California Breeder and Sportsman, still advocates the use of the tips, notwithstanding he ad-

mits that he did not pnt them on his own colt Antevolo, that repeatedly trotted barefooted, quite satisfactorily, last fall. Why did he allow that colt to trot barefooted, if he really helieves, as he has often stated, that tips increased the speed of horses? When we saw the statement in his own paper that he did not nse tips on his own colt last season, were we not justified in asking if he, too—like Veterinary Surgeon Goodwin—had found they would not answer, and had abandoned their use, as they had been abandoned in England long ago?

In addition to the emiuent English veterinary surgeon from whom we have already qnoted, let ns quote from one or two more distinguished veterinarians who have written on this suhject. J. Carlisle in the London *Veterinarian* for March, 1838, says:

"Tips may serve for a horse at grass, or for one to scamper in a straw-yard, and even these may be productive of great mischief to an animal with long and oblique pasterns, weak and badly developed ligaments and low heels. They are sometimes applied to the foot of the racehorse. I have heard a nohleman who stands high in turf matters, and who had a fine horse engaged in a race and which was plated with the tip, after the first heat order his groom to have those d—-d tips taken off for they made the horse into a rocking machine. 'Remove those tips immediately,' said he, 'and make him a plated horse.'"

John Lawrence, another veterinary surgeon, writing in 1810, says:

"Half-moon shoes, reaching only balf over the horse's foot, will suit very few horses indeed. I have often smiled at my own credulity, when, many years ago, I set off, top full of theory, to ride my hack forty miles, shod with a brand new pair of half-moou shoes. She carried me without mnch apparent uneasiness; but on my return, the following day, refnsed to go faster than a walk after the first five or six miles, and in five or six more came fairly to a standstill, when I dismonnted and drove her hefore me to the nearest inn. I made repeated trials afterward with the same, and with other horses, hnt with no better success."

We still have hopes of Mr. Simpson. That he is honest in giving expression to his views the following confession proves:

"As regards effect of weight, I am in a qnandary, and at the present time inclined to think tbat the ideas expressed in this chapter are wrong."

He promises to give his reasons for this change of belief when he coms to treat of toe-weights. At the same time, we shall expect to see him confess that, like Mr. Lawrence, he "set off top fnll of theory," and also like the nobleman who stood high in turf matters, "order those d—-d tips taken off." He should have done the latter when his colt Anteeo, a year or two ago, was repeatedly lamed while wearing them.

Tupper's Bear Story.—Tnpper went hear hnnting once near Red Blnff. Jnst as he was about to start a certain doctor requested him to he snre and save the oil and he wonld give him two dollars a gallon for it. He went and hunted for his bear, bnt nary bear could he find. At last, however, he espied a large wild boar and shot it. Thinking to have some fun with the doctor (jnst like him) he rendered the old hoar up and sold the lard to Doc. for hear's oil. In a few weeks he met his customer and asked him how he came on with his bear's oil. Doc. said: "I done well with it; it just went off like hot cakes. And say! let me tell you something; I mixed it half iard." This ended Tnpper's bear story. Looking out of the window he remarked that he helieved "this cold spell wonld end with a warm thaw," and gaye way to the next epeaker.

Murray on Mustangs.—The Rev. W. H. H. Mnrray writes enthusiastically to the Boston *Herald* that Texas is jnst the place for horse hreeding, and that the tough little mnstangs are the right stock to take hold of for improvement. He declares that they trace their origin hack to a "race of equine kings and queens," and have only deteriorated under hard nsage. "I have seen these little 800-pound horses," he says, "travel eighty miles, with a 180-pound man up, under a southern sun, in a ride across tbe country, without roadways, from suu to sun, and that, too, on little grain, perhaps nothing hut the grass they get from the prairie at night. Many of tbem pace—pace like the wind—pace so fast that they play with yon on the prairie, thongh you have a hlooded mount that can run like a greyhound. Others trot—trot natnrally—with stifles ont and perfect kuee action, and will do nothing hut trot, however hard pressed. I have raced through the prairie grasses and flowers at tbe rump of a mustang stallion 15½ hands high, and blood-bay in color, with a tail as black as night and that would sweep the gronnd a foot, and been unable to break him from his trot or range np to his side, although my monnt was a three-quarter bred mare of 1,000 pounds weight, that took to the chase with her eyes blazing and ears laid back in a way that plainly told her rider that she felt a good deal as he did." Mr. Murray advises a cross from a thoroughbred stallion, believing tbat it would increase the size without losing toughness, and produce the best saddle horses as well as trotters.

Prospect of a Bench Show.—A numher of gentlemen who have been prominently identified with local kennel matters have been for some time past canvassing tbe question of another hench show similar to that given at the Mechanics' Pavilion. A formal discussion on the advisability of announcing such an event will he held early next week, with every prospect of arriving at a satisfactory conclusion. The experience which has been gained hy the first show would materially aid the promotere in giving such an exhibition as would not only he profitable but eminently successful from a critical standpoint. The first show was mainly speculative in its natnre, and naturally enough it failed to bring out a full representation of choice hreede, with whicb the State abounds. It is contended hy some that the date was rather early and tbat if the bench showe in fnture should commence during the month of Junc, the dogs, especially sporting speciee, would be in far hetter condition for pnhlic display. Shonld definite arragements be made, and another show he decided npon, there is little doubt that the interest which was manifested two years ago will be increased to snch an extent as to make similar events more important and interesting.

It is not always the longest-legged trotters that make the most successful campaigners or win the fastest heats. Flora Temple, the first trotter to beat 2:20, stood only 14¾ hands high, yet when in her prime no trotter upon the turf was big enough to heat her in a race when in condition. Hopeful, whose record to harness is 2:14¾ and to wagon 2:16¼, a figure never yet eqnaled hy any other trotter to wagou in a public race, atande hut 15 hands high when sbod. The stallion Hannis, whose record of 2:17¾, made some time ago, had at that time been heaten by but a few trotters of his class, is only a trifle over 15 handa high. Jay-Eye-See, the fastest four-year-old that ever won a pnblic race, is aleo a small horae, whose height does not vary mnch from 15 hands.

TURF AND TRACK.

Horse Racing in Olden Times.

Ahout the latter part of the last century the sporting literature of England may be said to have commenced. At that time there was only one sportiug paper, the *Sporting Magazine*, while at the present time patrons of racing and sporting generally have no less than one daily, one bi-weekly and six weekly papers wholly devoted to their interests. The records of the first Derby, Oatland Stakes, and other principal races date from the period referred to; and in 1784, as stated in a previons issue, the Prince of Wales, afterwards George IV., commenced his career on the turf, and kept a magnificent racing establishment. Taking into consideration the advantages which a personage in his high positiou might he expected to command, it must be said that his Royal Highness was particularly unfortunate in his turf transactions, as will be seen further on. Up to this time horse racing had been considered merely as a pastime practiced for pleasure rather than for profit, and without the least idea of utilizing it as a method of gambling. It was then ranked with hunting and hawking, as opposed to dice and card-playing; but the remark made hy Bnrton, the anthor of "Melancholy," that "Horse racers are desports of great men and good in themselves, thongh many gentlemen by such means gallop quite out of their fortnnes," may be taken as a plain indication that at the time he wrote the noble sport had hegun to he productive of mischief. The Prince of Wales was only 22 wben he "went on the turf," and his yonth may, to a certain extent, account for his immense losses. It is recorded that in ahout two years he lost no less a sum than £640,000, and he became so embarrassed that he was compelled to sell off the whole of his stud. Some time afterwards, his dehts having been paid, and his income increased by Parliament, and heing an ardent lover of horses and horse racing, he again formed a stud, and in 1788 won the "Derby" with Sir Thomas, by Pontiac. At that time, and for many years afterwards, the Derby was not nearly so popular as it is now-a-days, and the nnmber of suhscribers was very limited. In 1780, the first year it was run, there were only 36 subscribers, and this was not exceeded until the year 1792, when there were 50 subscribers. In the year 1831 the numher had increashd to 105, aud in the year 1870 to 251. The favorite aud most valuable race at the time we are speaking of was the Oatlands Stakes, ruu at Ascot, 100 guineas each, half forfeit. To this race in 1791 there were 41 suhscribers, the net value of the stakes being 3,000 guineas. The rece, which is said to have been the most important run np to tbat time in England, was won by the Prince of Wales' Baronet, beating Mr. Bnrton's Express and other notable horses. It is said that there were upwards of 40,000 people present at that race, aud that as much as £100,000 was lost and won. the Prince's own winnings amounting to £17,000. In the following year this race was run at Newmarket, the net value of the stakes being 3,725 guineas. At this time horses were, as a rule, ridden by their owners or the grooms that looked after them, and Sam Chifney had shown such superiority in the saddle that in 1790 the Prince engaged him as his jockey at a salary of 200 guineas per annum. It was the suspicious riding of this jockey that caused the Prince's second retirement from the turf. The circumstances were as follows: Chifney had several times ridden against a very good horse named Escape, which having heaten Nimble, the winner of many races, and several other fast horses, he considered the best racer in England, and which he advised the Prince to purchase. Later on, in the beginning of October, Chifney having ridden Escape in two races and wou them both, the Prince went up to him, shook him hy the hand, and said: "Sam Chifney, no person hut you shall ever rido for me." About a fortnight afterwards Escape ran in a £50 eweepstakes, and the Prince on eeeing his horse saddled, said in a loud tone: "Chifney, Escape is snre to win, is he not?" Chifney replied: "I don't think he's sure to win to-day," aud advised the Prince not to hack him. "No," said the Prince, "I will not hack him, hut he's snre to win." Four competitors faced the starter. The course was "The Ditch In," two miles, ninety-siven yards, at Newmarket, and they passed the winning-post in the following order: Mr. Dawson's Coriander, 1; Lord Grosvenor'e Skylark, 2; Lord Clermont's Pipeator, 3; Prince of Wales' Escape, 4. Betting: Two to 1 Escape, 4 to 1 Coriander, 5 to 1 Shylark. The result caused no remark, for the defeat of a favorite was as eommon au event in those days as it is now. Chifney, knowing be had not had a sweat since he last run in public, a fortnight before, made a waiting race and was heaten. The Prince said to him: "Chifney, you lost the race through not making strong runuing; or what is the reason that Escape was beaten today, as you have often told me that he is the hest horse in the world?" "I did tell you," said Chifney, "that he was the best horse in England, and I think eo now; he was unfit to-day. He will run both faster and stronger to-morrow." As will be seen Chifney's judgment proved correct. Next day Escape started for a race over the "Beacon" course (four miles, one furlong, 138 yards), when the Priuce instructed Chifney to make the pace fast, and the latter expressed a wish that His Royal Highness should hack him, which he did. There were six starters, and they finished in the following order: Prince of Wales' Escape 1, Lord Barrymore's Chanticleer 2, Lord Grosvenor's Skylark 3, Dnke of Bedford's Grey Diomed 4, Lord Claremont's Pipeator 5, Mr. Bartou's Alderman 6. Betting: Seven to 4 Chanticleer, 3 to 1 Skylark, 5 to 1 Escape, 6 to 1 Grey Diomed. Escape won easily, and this caueed quite a eensation on the heath; queer remarks were made about Chifney'e riding, and nasty iusinuations were indulged in against the Prince. The Jockey Club took the matter up, sent for Chifney and examined him. On the morning after the race H. R. H. sent for his jockey and said: "I have an unpleasant husiuess for you. I am told you won £600 or £700 when you lost the race on Escape, and about the same when he won." Chifney denied the truth of this and was requested to make an affidavit stating all the bets he had ou both racee. He did eo, aud the result was that Sir C. Bunhury, representing the Jockey Club, informed the Prince that if Chifucy were allowed to ride his horses no gentleman would start against him. The Prince was displeased with this decision, which was simply au acquittal of H. R. H. on condition that he diepensed with Chifney's services. He was too partial to his jockey, and too generous in disposition, to accept euch humiliating terms. He eent for Chifuey and informed him that, "I intend to give up racing, hut you shall have 200 guineas a yoar. I can't give it you for life, but so long as I live you shall have it." In the month of Decemher he sold off his stud, consistiug of fourteen horses in training, two stallions and eleven brood mares. About six years after this the Jockoy Club felt the losa to racing, and the sport generally, caused by hia retiroment to be so serioua that they passed a resolution, at a meeting held at Brighton in the month of August, 1805, soliciting hie return to the turf, and forwarded the following letter:

"May it please your Royal Highnees:

"The memhers of the Jockey Clnh deeply regretting your absence from Newmarket, earuestly entreat tbe 'Escape' affair may be bnried in oblivion, and sincerely hope that the different meetings may again he honored with yonr Royal Highnes' attendance."

The Prince did consent to forget the past, but never gave the turf that warm support which previous to the unfortunate Chifney *contretemps* he had accorded it. Sam Chifney himself wroto a book, "Genuis Genuine," fully oxplaining the whole of the particulars, in which he declares that be did nothing to prevent Escape winning on the first day; but on the contrary, did everythiug which his judgment suggested in order to win, and that he felt sure that the imperfect condition of the horse was quite sufficient to account for his defeat. The decision of popular opinion was that both the Prince and his jockey were blameless in the matter.—*Federal Australian.*

How to Lay Out a Track.

For a mile track, a field of forty-two acres will do. Draw a liue through the oblong center, 440 yards in length, setting a stake at each end. Then draw a line on either side of the first line exactly parallel with and 140 yards from it, setting stakes at either end of them. Yon will then have an oblong square 440 yards long and 280 yards wide. At each end of these tbree lines you will now set stakes. Now then, fasten a cord or wire 140 yards long to the center stake of your parallelogram, and then describe a half circle, driving stakes as often as you wish to set a fence post. Tbis half circle commencing at one side and extended to the other will measure 440 yards. Wben the circle is made at both ends of your parallelogram, yon will have two straight sides that measure 440 yards each, and two circles of exactly the same length, which, measured three feet from the line, will be exactly a mile. The turns should be thrown up an inch to the foot.

Half-mile track—Draw two parallel lines 600 feet long, and 452 feet 5 inches apart. Half way between the extreme ends of the two parallel lines drive a stake, then loop a wire around the stake, long enough to reach to either side. Then make a true curve with the wire, putting down a stake as often as a fence post is needed. When this operation is finished at both ends of the 600-foot parallel lines, tbe track is laid ont. The inside fence will rest exactly on the line drawn, but the track must measure a half-mile three feet from the fence. The turns should be thrown up an inch to the foot. The stretches may be anywhere from 45 to 60 feet wide.

Foals.

At E. J. Baldwin's Santa Anita Ranch, Los Angeles county, Feh. 19, Ophir hy Baywood—Lag by Loadstone, dropped a bay colt, black points, a few white hairs in forehead, by Grinstead.

At Jas. B. Chase's Stock Farm, Sonoma County, Feb. 25, Rosemary hy Joe Daniels—Wild Rose by Norfall, Mayflower hy imported Eclipse, dropped a chestnut colt, three white feet and strip in forehead, hy Wheatley.

Trotting at the Bay District.

San Francisco, Feb. 22 and 23.—Purse $100.

O. A. Hickok's b m Sadie S.	3	1	1	3	0	3	1

J. W. Donathan's b g Johnny	1	3	3	2	3	2	2

Time—2:39, 2:36¼, 2:37¼, 2:37¼, 2:38, 2:38½, 2:36.

When old Parole went to England a few years ago and carried off the five principal spring handicaps in gallant style, his performances caused the turfmen of the land across the water to look with considerable respect, not unmixed with awe on the hitherto despised "Yankees," as they were fond of calling the American horses. But the lesson of these victories, although a severe one to the national pocket and pride, was not lost, and since then no American horse has had half a cbance in the English handicaps. Knowing tbat enough weight is certain to prevent even the best horse in the world from winning, the English bandicappers have, since the Parole year, always heen careful to give the American representatives such a load as to effectually dispose of whatever chances they may have had of winning with an equitable distrihution of tbe weights. This year the old game has beeu repeated, as the weights assigned in the Lincolnshire Handicap, the Great Metropolitan Stakes, and the City and Suburban Handicap, received by recent mails, show. In the Lincolnsbire, Iroquois and Wallenstein are given the top weight, 126 pounds. Iroquois is also first on the list on the Great Metropolitan, 130 pounds heing his weight. Foxhall hnd Iroqnois stand at the head of those entered for the City and Suburban, being at 130 and 128 pounds respectively.

Produce Stallion Stakes.—The entries to tho Produce Stallion Stakes of the Kentucky Agricultural and Mechanical Association closed February 1, with twenty-nine nominations. Of these tbe following are from Palo Alto: b c Doolittle, by Electioneer, dam by Black Hawk; b f Alta Belle, by Electioneer, dam by The Moor; b f Chiquita, by Electioneer, dam hy Geo. Lancaster; b f Morning Glory, by Electioneer, dam hy Hambletonian; b g Gypsum, by Electioneer, dam by Abdallah; ch g Wyandotte, by Geu. Bentou, dam by Almont; b c Alban, by Gen. Bentou, dam by Rysdyk's Hambletonian; br c Edos, hy Gen. Benton, dam by Mohawk Chief; b c Ione, by Gen. Benton, dam by Mohawk Chief; b c Peyton, by Electioneer, dam by Glengary; b c St. Just, by Electioneer, dam hy Volunteer.

The noteworthy performancee of the Ticonderoga Association at Lake George, N. Y., 23d and 24th ult., were as follows: Bessio L, a two-year-old, won the colt race, half-milo heats, in 1:32, 1:28. The trotters of the 2:30 class showed the difference between racing ou the ice and dirt. On the 23d Crown Point Maid won the first heat in 2:20, Judge Davis the second in 2:18½, Ellen the third in 2:17½, and next day the Judge won the race in 2:16. The 2:35 class was won by Fanny Russell in 2:23½, 2:22, 2:24. Billy Shoridau took the first heat in 2:24.

Santa Claue has been under veterinary treatment for some months for foot troubles and weak tendons, but has so far recovered that he will he given jog work in a week or two longor.

C. D. Hara, Montana Territory, has purchased the imported hrown horse True Blue, foaled 1866, hy Videtto—Amaranthe, by Newminster.

Mr. A. T. Hatch will have his stallion Admar by Ad[illegible] in the stud thie seaeon, making the circuit of Vallejo, [illegible]ville and Hatch's ranch.

Stake Programme, N. A. T. H. B.

The Executive Committee of the National Association of Trottiug Horse Breeders announces, in addition to the three stakes already closed, for foals of 1880 (the Mali, the Annual Nursery, and the National Trotting Stallion Stakes), the opening of the followiug stakes, to be trotted for at the annual meeting next fall, date and place to be hereafter determined and announced.

Atlantic Stakes, for foals of 1878; Pacific Stakes, for foals of 1879; Initiation Stakes, for stallions that have never beaten 2:30; Confirmation Stakes, for stallions that have never beaten 2:25; $250 entrance in each class, payable in tbe followiug forfeits: $50 to accompany nomination May 1, 1883, $50 additional July 1, 1883, and the remainder ($150), twenty days before the meeting. Hopewell Stakes, for stallious tbat have never beaten 2:40; Everett House Stakes, for foals of 1880; Union Stakes, for foals of 1879, and Manhattan Stakes, for foals of 1878, by stallious whose get have never beaten 2:45, 2:40, and 2:35 at the respective ages; Standard Stakes, for mares that have never beaten 2:30; Sequel Stakes, for mares that have never beaten 2:40; $100 eutrance in each class, payable in the following forfeits: $25 to accompany nomination May 1, 1883; $25 additional July 1, 1883, and the remainder ($50), twenty days before the meeting, "New Discovery" Stakes, for foals of 1880, and "Late Discovery" Stakes, for foals of 1879, which have never been entered, matched or trotted in a race; $100 entrance in each stake (play or pay) to accompany nomination twenty days before the meeting of 1883, when the stakes will be trotted for.

Iu addition to the foregoing the following fixed events are renewed to name and close May 1st next: The National Trotting Sires Stakes to close May 1, 1883, for sires at $50 each, and for their get only, foals of 1883, May 1, 1884; $100 entrance, payable in the following forfeits: $25 to accompany nomination, May 1, 1884; $25 additional May 1, 1885; $25 additional May 1, 1886, and remainder ($25) twenty days hefore meeting of 1886, when the stake will be trotted for; the Mali Stakes, for foals of 1881, $250 entrance; $500 added hy Mr. H. W. T. Mali; payable in the followiug forfeits: $50 to accompany nomination, May 1, 1883; $50 additional May 1, 1884, and remainder ($150) twenty days before meeting of 1884, when the stake will be trotted for; the Annual Nursery Stakes (sixth renewal), for foals of 1882, to be trotted as three-year-olds; $150 entrauce, payable iu the following forfeits: $10 to accompauy uomination, May 1, 1883; $25 additional May 1, 1884; $50 additional May 1, 1885, and remainder ($65) twenty days before meeting of 1885; the Juvenile Stakes, for foals of 1882, to be trotted as three-year-olds, by stallions whose get have not heateu 2:30 at three years old or under; Everett Honse Stakes, for foals of 1882, to be trotted as three-year-olds, by stallions whose get have never heaten 2:45 at three years old or under; $100 entrance in each class, payable iu the following forfeits: $10 to accompany nomination, May 1, 1883; $15 additional May 1, 1884; $25 additional May 1, 1885, aud the remainder ($50) twenty days before meeting of 1885, when the stake will be trotted for; the ——— Stakes, for foals of 1882, to be trotted as three and four-year-olds, by stallions only for whom the sum of $200 each is subscribed, of which $100 mnst accompany nomination of sire, May 1, 1, 1883, when subscription for sires will close, and the balance ($100) one year thereafter; the amount of the first payment on the snbscription of sires to he added to the three-year-old stake; the amonnt of the second payment in the snbscription of sires to be added to the four-year-old stake; $100 entrance iu the three-year-old stake; $150 entrance in the four-year-old stake, payable in the following forfeits: $10 to accompany nomiuation, Oct. 1, 1883, for each race in which the colt or filly is entered; $40 additional May 1, 1884, in the three-year-old stake; $10 additional May 1, 1884, in the fonr-year-old stake; $50 additional May 1, 1885, in the three-year-old stake; $30 additional May 1, 1885, in the four-year-old stake; $50 additional May 1, 1886, in the four-year-old stake; and final payment, $50 each in each stake, twenty days before the meetings of 1885 and 1886 respectively, when the stake wili be trotted for. A failure to pay the balance ($100) due on the subscription of any sire within the time specified in the foregoing conditions will disqualify all the nomiuations of the get of such sire in the four-year-old stake, and forfeit all payments made on all the get of such sire in said stake.

Colonel Lewis, the famous California trotter, raised and owned by the late Judge E. J. Lewis, one of four noted California bred trotters who have scored less thau 2:20, is uow a cripple for life. He was owned until recently hy Col. Hawkins. A short time siuce while exercising in a lot he jumped into a mower or header and cut the tendons of one or two of his legs below the pastern joint, which has so disabled him that he will never go on the turf again. Colonel Lewis' record at Oakland some years ago was 2:18¾, and it was the intention of his owucr, if he had not got crippled, to have trained and entered him in the fall races.

It is wonderful how easy it is to gentle and accustom a weanling to harness as compared with the work if delayed until older. A small harness made to fit them, a little skeleton cart with straight-out shafts and a level path complete the necessities. A few days in the stable with bit and harness, then a few daya of edncation out of doors without the cart, and then ten or a dozen times hitched np with from half a mile to two miles of gentle drive gives the best foundation possible for a safe and well-broken road horse.

Ten-thonsand-dollar races for trotters are becoming fashionahle, and already the Hartford Association is ont with the announcement of oue to be trotted during the summer meeting at Charter Oak Park. It is for horses of the 2:19 class, and the entries close April 15th, each nominator to pay $1,000 entrance fee, as follows: $250 at the time the entries close, $250 July 18th, $250 August 15th, when tbe horses must be named, and $250 the night before the race. Failure to make any payment on the day it is due forfeits what may have already been paid.

Give the colt good air, clean quarters, plenty of room and opportunity for exercise, and he requires very much food—far more, it would seem, than many people dream of; and he should be well supplied. The more pure air and healthful exercise the more food required, and the more food admiuistered — in seasou — the greater the growth and strength, and as a result all valuable powers will be supplied. This ia the course of true economy.

Comrade.—Dan McCartby has sold the trotting stallion Comrade to Michael Lynn of Salinaa. Comrade was bred by Dr. Hicka, and was sired by Marion (by Mambrino Cbief), dam Tinsley Maid (the dam of Buccaneer) by Flaxtail.

Monroe Salisbury bas sold to H. M. Johnston of Los Angeles the pacing stallion Dashwood, by Legal Tender, and the horse has been put in the stud at the Ela Hills farm.

The Santa Cruz Fair Association has iuvested $2,500 in land for fair ground purposes, and proposes to make extensive improvements. There was a balance in tbe treasury of $490 after paying all expenses of the fair last season.

Of the famous trotters now living Maud S is nine years old; St. Julieu, fourteen; Rarus, sixteeu; Goldsmith Maid, twenty-five; Clingstone, eight; Trinket, eight; Hopeful, seventeen; Edwin Thorne, teu; Dexter, twenty-five.

Mrs. J. M. Paul, better known as Belle Cook, champion long distance rider, died in San Jose last Sunday morning. She was a native of Eugland, aged thirty-four years.

Brown Prince, one of the first lot of American horses sent to England by Mr. Sanford, is now doing stud duty in Ireland. He is by Lexington, dam Britannia IV.

Mr. L. L. Lorillard will sail shortly for England to represent the racing interests of his brother, Mr. P. Lorillard, on the British turf.

Soln.—W. W. West, of Scappoose, Or., to N. J. Walker, of Gaston, bl c Major Bruce, three, by imported Gleneld. Price, $800.

The City of Mexico Jockey Club's spring meetiug will open on April 22d, and the stakes on that day will amouut to $8,000.

TOO LATE TO CLASSIFY.

Prize Mud-Hen Shooting.

W. V. Gaffey of Watsonville, the dairyman convert to oleomargarine, has been much troubled by mud hens which make their home iu the slough adjoining the San Andreas ranch, of which ranch his dairy farm is a part. Last Sunday local sportsmen had much enjoyment shooting these fowls for the following prizes, offered by Mr. Gaffey, To the person killing the most mnd hens, $5 in coin; the one killiug tbe second largest number $2 50 in coin; to the third, one roll of fine dairy butter; to the fourth, a roll of oleomargarine; to the fifth all the dead mud hens.

The sbooting commenced at 10 a. m. and continued until 4 p. m., with an iutermission of one hour for a lunch furnished by Gaffey. About 1,100 birds were killed and those entitled to prizes made the following score:

H. S. Fletcher....131
Jas. M. Clark....114
Fred Ferguson....95
Geo. Hernandez....81
Hans Struve....70
Jos. Frizzel....70

Frizzel and J. J. Shinabarger ran out of ammunition at 1:30 and did not shoot any more. However they did the best shooting, Frizzel killing 70 birds in 76 shots, and Shinabarger killing 58 in 65 shots. To-morrow Gaffey offers the following prizes:

To the person killing the largest unmber of mud hens, a hog weighing 100 pounds; to the second, a hog weighing 50 pounds; to the third, a roll of fine dairy hutter; to the fourth a roll of oleomargarine. He has also adopted the following rules to govern the match:

1. Shooting to commence promptly at 10 o'clock a. m. Any person not on the ground at that time will be harred from competing for the prizes.
2. Each competitor to use hut one gun, and to load it himself.
3. No two competitors allowed to place their hirds together, or to shoot from one stand.
4. Each competitor to he allowed a dog to retrieve; if he has no dog, then he can use a boy for that purpose.
5. All hirds to he killed while on the wing. No hird will be counted if shot while sitting upon the ground or on the water.
6. Each competitor will cut off and preserve the heads of the birds he kills, which he can bring to the scorer at any time, during the hunt and receive credit therefor. Such heads, when properly counted, to he placed in a sack with others and not to be again counted for any person.
7. Between 12 and 1 o'clock there shall he no shooting. Shooting to re-commence at 1 o'clock and continue until 4, when the match terminates, and prizes will be awarded.

The large field in which the match is to take place is perfectly dry, so that there is no need of any person getting wet or muddy. Mr. Gaffey will hring all hunters to town that wish to come after the match has ended.

Monarch Wins the Match.

The match between J. F. Carroll's Monarch and Mark Devlin's Chief of the Canyon was run off at Byron last Tuesday in the presence of a large attendance of spectators, some forty teams being present from Livermore in addition to a number of visitors from this city and numerous delegations from the immediate locality of the race. John Selley, the judge selected by Mesers. Carroll and Devlin, was unable to attend and Messrs. Sexton and Fallon were chosen to judge the match with Robert Warwick as referee. William Lane officiated as slipper. The first course was a short one aud was declared an undecided course. The second and third were both awarded to Monarch, who was declared winner of the match and stake. Little if any outside money was staked on the match, the uncertainty of the result preventing much speculation. At the conclusion of the main event, a match was run between Grace's Paruell and Goran's Jeff Davis in which Parnell was the victor. Mr. Carroll expresses his willingness to arrange a return match for any amount from $250 to $1,000, time, place and other details to be mutually agreed upon.

Pacific Coast Coursing Club.

To-night at 8 o'clock the members of the Pacific Coast Coursing Club will meet at 539 California street to enter dogs and elect judges for their meeting at Merced on March 7th and 8th. Entriea are open to all dogs in the State with a fee of $5, and as every nominator has a voice in the selection of judges, slipper, etc., it is their own fault if these officials are not satisfactory; bnt there is no fear of that, as it is a matter of pride with the club that there shall be no kicking. The stake will be very large and there are many fine dogs engaged. Fowler's Delebute is a very prominent candidate for first honors. It is to be hoped that there will he a large attendauce at the club to-night as the proceedings will be very iuteresting. The sale of tickets for the excursion is already large.

Tbe proposed three-mile-with-a-turn sculliug race between Austin Stevenson of Vallejo and McInnerny, the Boston rower, for $500 a side, has fallen through. Stevenson came down from Vallejo on Monday aud a meeting between the rivals was arranged at which the former's propositiou to close the match for four weeks hence was broached. McInnerny demurred on the ground that he needed a much longer time within which to prepare himself. Stevenson stated his iuability to wait any louger as he had a contract to furnish fish for a cannery which commenced in the early portion of April. He states, however, that he will hold bimself in readiness to row tbe Boston man at the close of tbe salmon aeason. McInnerny seems anxious to make a similar match with Peterson of the Golden Gates, either in shells or Whitehall boats.

Coursing at Dixon.

The coursing match at Dixon on the 22d ult. was attended by a large crowd of spectators bnt the dogs entered were somewhat conspicuous by their absence.

The prizes were in cash, first $50, second $35, third $15. In the first ties Nellie beat Lady Gay; Pride of the West ran a bye; Blue Jacket heat Maud; Jingle ran a bye; Nellie beat Prince; Blue Masse ran a bye.

Second ties, Nellie beat Pride of the West; Dakota beat Fly; Blue Jacket beat Jingle; Nellie B beat Blue Masse.

In the third ties but one conrse was run when Blue Jacket beat Nellie. Blue Jacket and Dakota divided first and second money and Nellie and Nellie B, both Sacramento dogs, divided third money.

The fact that no definite programme has been announced by the Califoruia Rifle Association has occasioned a suggestion on the part of certain gentlemen who are prominently identified with the sport, that a notice of the regnlar shoots and the competitive events should be made public as soon before the tournament as possible, so that an opportunity may be afforded those who desire to participate of entering. It invariably happens that the number of entries is small when a sufficient time for preliminary practice has not been given. It can hardly be expected that intendiug shooters will enter into competition with onr crack shots when the announcement of tbe tournament is made shortly before it comes off, while on the other hand little douht is entertained that with a reasonable time between the issuance of the notice of the shoot and the shoot itself the field would be very materially increased.

Quite an enjoyahle target shoot occurred on Washington'a Birthday at Joe Deaves', between the Citizens Hose Company of Alameda and Joe Hooker Post No. 11, of the G. A. R. The affair partook of the uature of a prize shoot, distance 200 yards, six shots, ordinary rifles. Tbe following scores were made: Johnson 22, Lindermann 20, Dnbbs 17, Everett 17, Victors 17, Banta 16, Barton 16, Liese 15, Sherman 15, Kay 15, Muth 15, Winaut 14, Metzger 14, Burns 14, Hartwick 13, Krauth 13, Miller 12, Colton 12, Porter 12, Thompson 11, Benshaw 11, Dunning 10, Seymour 10, Jnkes 9, Maillht 9, Gray 9, Weyburn 8, Boehmer 7, Clausen 7, Wheaton 7, Bekker 6, Beckman 6, Peck 6 and the others ranging from 5 to 0.

The great journalistic sculler will shortly put in an appearance at the Pioneer Boat house, and owners of small craft in the vicinity are notified to act accordingly.

Owing to a typographical error the amount of prizes to be awarded at the tournament of the Schutzen Club was announced as $500 when it should have beeu $1,500.

The wherry rowers at the south beach are uot as lively as they used to be.

The Ariels are endeavoring to fix up their four-oared Shell.

The remark is often made by men of some experience in turf matters that they prefer a trotter which will bear the whip some to a high-spirited, nervous one. This is all very proper, and as the country is full of the former class, they can be accommodated with all they desire, It is au established fact, however, that the brightest lights upon the trotting turf have been animals of naturally a highly nervous temperament, which did not need the stimulus of the lash to urge them on to victory. Maud S (2:10¼), St. Julien (2:11¼), Rarus (2:13¼), Goldsmith Maid (2:14), Trinket (2:14), Clingstone (2:14), Hopeful (2:14¾), Lulu (2:15), Lucelle Golddust (2:16¼), Edwin Thorne (2:16½) and many other first-class animals, were naturally so nervous and seusitive that an iujudicious use of tbe whip would undoubtedly have spoiled them, as it has many a promising young trotter.

Mr. Daniel S. Lathrop of the firm of Thacher, Lathrop & Co., car wheel mauufactnrers, died at Albauy, N. Y., on the 13th inst. Some time ago Mr. Lathrop suffered a paralytic stroke, and was supposed to be recovering when his complaint took an unfavorable turn. Mr. Lathrop was a very popular man, and an enthusiastic lover of the trotting horse. Among the well-known broodmares bred and owned by him were Lady Larkin, the dam of Happy Traveler (2:27½), Lady Lightfoot, Victress, Ironetta, Jonlite and Mistress. Mr. Lathrop was a brother-in-law of ex-Governor Leland Stauford, and was fifty-eight years of age. The trotting turf has lost an able supporter in him.

Mares will abort without any known cause. Of course fast driving, or short turning in slow work, or starting heavy loads, jumping, being kicked by mau or beast, etc., will cause abortion. It is said that seeing food when desirous to obtain it, and failing, will so affect the nervous system as to cause abortion. Do not confine her within doors, but let her have all the exercise outdoors that she desires, in pastnre or yard. If you confine her she will most likely take lymphatitis and endanger her own life and that of her colt.

A sandy, gravelly, limestone or rocky country is best to grow up the sure-footed and leg-enduring horse. Start with sound horses in the breeding stud on such soil, give the right sort of food to the colts to make ivory bones, tough muscles and sinews, keep them duly exercised while growiug, and you may be sure then to raise first-rate, serviceable, long-enduring stock; and when this is accomplished, be able to sell them at extra high prices, thua being well paid for all extra care bestowed iu raisiug them.

I find, without a single exception, animals with a dark (leaning to yellow) skin produce richer milk than the light (with a teudency to blne) skin. A negress furnishes richer milk than the Caucasian, a mulatto richer than either. But the richness now decreases with every cross. A dark-colored cow, sheep or horse, with a yellow hide gives richer milk than one of light color, especially when accompanied with a hlue akin.

Mr. D. R. Dodge of Charlton, Mass., keeps his cattle free from lice hy using a sheet-iron smoke-pipe about two and one-half inches in diameter with a wooden mouth-piece, which he fills with plug tobacco, and gives them a thorough smoking. This proccess, repeated occasionally, has the effect of keepiug his cattle iu good condition, instead of looking poor, as they are sure to do if covered with lice.

In the case of an "unusually well-developed heifer" there is no objection to having her first calf before she is two years old, but when undersized or at all weakly, it is safer to let her reach the age of two and one-half years. If thrifty heifera come in at an early age and are properly attended to, they usually make better milkers than when they come in late.

High feeding of cows belore calving tends to milk fever. To save our best cows from death all stimulating food should be withheld for a mouth before calving.

ATHLETICS.

A Lodi Race.—A running race iu which considerable interest was manifested took place receutly at Lodi, between Nelson and George Harrison, the Stockton sprinter, for $200 a side. The match was characterized by an unusnal amouut of partisan feeliug between the adherents of the respective sprinters, and for some time after the result of tbe race, a free fight seemed imminent. The distauce was 100 yards. Harrison, previous to the start, complained of being uuwell, and is known to have receutly recovered from an attack of pneumonia. The race was run in heats, hest two in three. Harrison won the first after a desperate run, leading the Lodi man by ahout twelve inches, and carrying away the tape in 10½ seconds. Nelson, who seemed to regard the first heat as a preliminary warming up, came iu ahead on the second and third heats, leading Harrison in the second heat by four or five feet, aud closing in 10½ seconds. The third heat was made in faster time, Nelson finishing strong ahout two feet in advance of Harrison in 10¼ seconds. Another match hetween the men is spoken of, with every prospect of early settlement.

The usually attractive quarters of the Olympic Club have assumed a confused aspect in consequence of improvemeuts which are being made iu and abont the building in which the rooms are situated. The eutrance has heen moved farther west, and considerable valuable space on the first floor where the office stood has heen devoted to a large skylight and well, and the lockers have taken the space formerly occupied hy the hairdresser. On tbe completion of the work being done at present, the rooms will be newly carpeted and otherwise brightened. The hilliard room will be eularged so as to admit of another table hy extending it into the card room. As soon as matters are straightened out a reception will be given, and in all probability arrangements will he made for a summer meeting, which will be held on the cluh grounds in Oakland. Some of the members are discussing the advisability of having a feather-weight boxing tournament, for which a medal would he given. Among those who would enter are L. P. Ward, Van Court, and possihly three or four others.

The Sentors at the State Capital have whiled away the tedium of law-making by an occasional resort to the gloves, and many an amusing tale is told of the manner in which the neophytes have heen handled by a correspondent with sportive inclinations. The chairman of the Committee on Commerce aud Navigation was induced to put on the mittens and after a short hout was fully convinced that the logic of a hlow was decidedly more forcihle and impressive than the highest flights of oratorical display. At last accounts a conference was being held with a view of selecting some one of ahility enough to bring the correspondent to terms.

A meeting of cricketers will be held next week for the purpose of arranging for the season's play. It is expected that a match between the Occident and Merion Clubs will take place during the latter portion of next month, and as both clubs have been reinforced by recent arrivals, a series of close contests may he confidently expected. The Gentlemen's Eleven, who competed successfully with the Australians, are expected to retnrn here during April, and if possihle a match will he arranged with them.

George Hazael, the six-day pedestrian, arrived in New York last Wednesday from England on the steamer Abyssinia. Hazael said that whenever opportunity offers he will again compete in a six-day match. He intends to make America his home.

An inter-club competitive meeting is being agitated. It is suggested hy interested parties, who expect to participate, that a programme of events be left to a committee of two, representing each cluh.

Local amateur athletes are falling into a grievous mistake in supposing tbat records are made, or races, won without much assiduous practice.

Muscular Christianity is fast pressing its claims, and receiving consideration from amateurs in this city.

A number of business men propose to establish a small gymnasium in the Western Addition.

The California Athletic Club claims to have a number of invincible sprinters.

YACHTING.

Small Steam Yachts.

There ia such a lot of red tape in the matter of keeping a amall steam yacht or launch that few people care to indulge in the luxury. In thia hay we have had the aame experience aa elsewhere in this reapect, and steam launchea have come into disfavor from the mere worry entailed in trying to keep track of useless regulations and red tape rules. The laws bother owners of large yachts and worry the owners of amall ones immenaely. A correspondent of *Forest and Stream* touchea on this subject. He says:

"First you must have everything built according to Government atandard, then you must pay $25 each year for inspection of boiler, and, according to size, for inspection of hnll. Next, no matter what the size of the craft may he, there must be two pumps, two safety valves, apparatua for extinguishing fires, life saving apparatus, and last but not least, a licensed pilot and licensed engineer. I have not a word to say against the lawa for inspection of steamers engaged in trade, but I claim it is no more neceasary or just for the Government to tell me how to run a steam yacht, than it ia for it to tell me how to run my horse and carriage.

"I am not alone in the idea that these laws are not what they ahould be, aa Secretary Folger in a late deciaion aays: The lawa as at present existing are practically prohibitory of the building and use of this clasa of vessela. And he further said that in hia forthcoming message to Congress he ahould recommend a change, but a carefnl reading of the message does not disclose any such recommendation."

Mr. S Clem Uhler, an old San Francisco yachtsman, now in New York, ia a full-fledged "cutter man" and has a little yacht of that build and rig.

Commodore R. L. Ogden, well known to all our local yachtsmen, is in London.

John T. Lewis, one of the former owners of the yawl Enid, ia in town.

The S. F. Y. C. has its monthly meeting on Tuesday evening next.

Mr. Kelly has made a very handsome model of the Lurline.

The yachting season opens on the firat of April.

FISH.

Salt Water Fishing.

The change in the weather from the severe cold to the warm aud mild days that we now are enjoyiug has made a chauge in the luck of the fisherman. The cold snap kept the fish far down in the warmer strata of water aud the favorite fishing grounds were for a time almost deserted hy the finny trihe, hut in the last two weeks the pleasaut rays of old Sol have called them hack again to their former feeding grounds. Tbeir return to their old haunts is marked hy the numher of fishing boats at anchor there, the uumber of patient anglers and the number of their own species (who have been tempted hy the deceitful hait once too often) iu the fishermen's baskets. Of the successful fishers who have come to our notice is J. E. Shaue and party who were near Point Diahlo last Sunday aud caught a striug of thirteen beautiful fisb. The catch consisted principally of sea trout and cabersones, several of the latter fish weighing four pouuds each. The same day Mr. Blaney aud party were in Raccoon straits and had more than average luck. Last Monday Capt. Tulloch aud party were fishing from a boat on the east side of Goat Island and made a splendid catch of 441 tomcod. Many other boats were in the same viciuity aud all did well with hook and line. Duriug the past week a large fleet of fishing boats have frequeuted the Fort Point side of the bay just iuside of the bar, which is au indication of good fishing in that locality.

For several weeks past two enterprising boys who combine pleasure with profit have been making a living hy fishing around the rotten spiles of several of the wharves on the city front. They make from 75 cents to $1 50 a day hy catching and selling silver trout and porgies that frequent the eddies to feed on the worms that are on tbe rotten timbers. Excellent grounds are reported to lie along the coast about twelve miles north of Point Diablo; most of the fish caught in that vicinity run from two and one-balf to seven pounds in weight. Some of our most experienced fishers look for good fishing during the coming season; they say that along tbe Saucelito shore the sea weed and kelp is actually covered witb the spawn of fish, probably sea trout and perch, that run into the bay nights and out after depositing their spawn. Vast numhers of small fish, just hatched, can he seen along the shore in the crevices and around the rocks. On the strength of this and other good indications the anglers predict good fishing in no distant future.

Though this may seem to he rather a fishy story, we hear from a gentleman in whose truthfulness we have entire coufidence that two boys last Wednesday at Hunter's Point fishing off the dock caught over a fifty-pound flour sack full of heautiful white or silver perch. Several persons were fishing near these juvenile anglers but they had very poor luck. The success of the boys was owing to the fact that they used small, fine lines, whereas the others used large, heavy ones that were enough to scare the fish away.

Considerable interest is taken in bay fishing hy captaina of British vessels now in port, and within the past few days some really excellent catches have been made. On Saturday last Captain Tulloch and a party of gentlemen from this city, while fishing on the east side of Goat Island, where one of the ship boats was anchored, succeeded in catching 276 fish most of tbem being tomcods, including some thirty good sized rock cod.

A party of gentlemen recently left Sancelito by private conveyauce and proceeded to Bolinas, where they report having au excellent time. Green cod bit quite freely, one of which when landed weighed as high as eight pounds. Cabersones were ahundaut.

A fishing fever seems to have attacked the captains of ships lying in this bay. Last Wednesday Capt. Scott of the four-masted ahip Walter H. Wilson was out fishing on the east side of Goat Island aud on his owu liue caught 130 tomcod.

Capt. Tulloch and party of six persons on Wednesday were over near Alcatraz Island fishing, and on the flood tide caught 576 fish, most of which were rock cod, though there were many tomcod and sea trout.

A large number of salmon trout were caught on Sunday last in Russian river near Duncan's Mills. Two baskets' full were sent to a gentleman in this city, some of the fish being quite large.

A gentleman on Wednesday, fishing from a boat close to Barrel Rock, hooked forty-nine rock cod, none of which weighed less thau one pound.

Last Sunday several parties fishing at the wharf at Fort Point had good catches, mostly rock cod that were over two pounds in weight.

The hest bay fishing has been done during the week on the Fort Point side of the harbor. Perch are said to be lively iu tbat vicinity.

Jas. T. Ellford during three hours' fishing in the lagoon at Pescadero caught twenty-four good sized salmon trout on Monday last.

BICYCLING.

The first athletic meeting of the aeason was held by the members of the Merion Cricket Club ou Washington'a hirthday. Among the events was a handicap bycicle race in which H. C. Finkler started from scratch, Fisher 75 yards, Tenney 95 yards, Mohrig 105 yards and Day 120. The track is uarrow, corners sharp, and it is geuerally unfit for bicycling and could he greatly improved in other respects. A fair start waa made, Tenney showing considerahle sprintiug power, passing Mohrig aud Day almost immediately and contiuuing to gain during the first lap, hut Mohrig overhauled him in the second, and finally beat him out about twenty yards, Finkler third by ahout the same distance. Fisher lost a pedal in the second lap, which threw him out of the race. Time of winuer, 3:19 3-5.

Dr. Coleman, a prominent bicyclist of Canandaigua, N. Y., and a party of five friends, are en route for California for a four-months trip. Two of the party hring their wheels aloug.

If good weather continues there will he aome handicap races at the Olympic Athletic Cluh grounds within a few weeks, to he followed by the apring meeting in May.

The annual Stanley ahow of hicycles and tricycles was held in Alhert Hall, London, in the early part of Fohruary. Between 700 aud 800 machines were on exhibition.

The locality of the next league meeting is already beginning to be talked of. The New Yorkers hegin to think that they are entitled to it this year.

Market Report.

FLOUR—We quote: Best City Extra, $6@$6 15; medium grades, $5 25@$5 50; Shipping Superfine, $4 25@$4 75.

WHEAT—The situation seems to increase in strength every day. Sales of No. 1 Shipping are reported at $1 96¼. Purchasers are in the majority, as holders have but little inclination to part with their grain at the present figures. Recent sales are: No. 1 White, buyer, March, $2@$2 02½; do., buyer, the season, $1 11.

BARLEY—The market is very uncertain, running up to extremely high figures, and then down again to something near the old prices. The prices in this grain of late transactions are spot Brewing, $1 50 ℔ ctl.; No. 1 Feed, spot, $1 45; do. March, $1 36@$1 43; do. April, $1 42 @$1 45; do. May, $1 40@$1 43.

OATS—Fair Feed, $1 70@$1 75; Good, $1 77½@$1 85; Choice, $1 87½@ $1 97½ ℔ ctl.

RYE—Quotable at $1 75@$2 for fair to good.

FEED—Ground Barley, $31 ℔ ton; Cracked Corn, $36@$37 ℔ ton; Shorts, $17@$19 ℔ ton; Oilcake meal the oilworks sell to the trade at $35 ℔ ton, less the usual discount; Middlings, $24@$25 ℔ ton for lots at the mill.

HAY—Alfalfa, $15@$16 50; Wheat, $17@$18 75; Wild Oat, $16 50@ $18 75; Mixed, $15@$17 ℔ ton.

STRAW—80@$1 per bale.

PROVISIONS—Eastern Hams, 16½@16¾c; California Hams, 15@15½c for plain, 15½@16c for sugar-cured canvased; Eastern Breakfast Bacon, 16@16½c; California Smoked Bacon 14@14½c for heavy and medium, and 15@15½c for light and extra light; Clear Sides, 14½@14¾c; Pork, $18@$18 50 for Extra Prime $20@$20 50 for Prime Mess, $23@24 for Mess, $25@$25 50 for clear and $26@26 50 for extra Clear; Pigs' Feet, $16@$18 ℔ bbl; Mess beef, $15 50 for bbls and $8 75 for hf bbls; Extra Mess Beef, $16 50 for bbls and $8 75 for hf bls; Family Beef, $18@18 50 ℔ bbl; California Smoked Beef, 13@13½c ℔ lb.

FRUIT—We quote: Apples, 30c@50c for common and $1@$1 60 ℔ box for good to choice; Lemons, $6@$7 per box for Sicily; California Lemons, $2 25@$2 50 per box; Limes, $10 per box for Mexican; Bananas, $1 50@$3 ℔ bunch; California Oranges, $1 50@$3 per box; Pineapples, $6@$8 ℔ doz. Western Cranberries are offering at $15@$16 ℔ bbl.

VEGETABLES—We quote: Marrowfat Squash, $8 to $10 ℔ ton; Carrots, 30c@50c; Turnips, 76c@$1; Cauliflower, $1 50 ℔ dozen; Cabbage, 75c@$1 ℔ ctl; Garlic, 2c ℔ lb; Celery, 50c ℔ doz; Dried Okra, 20c@30c; Dry Peppers, 10c@12½c ℔ lb; Green Peas, 6@12c; Green Peppers, 5c@6c per lb; Tomatoes, 6c@8c ℔ lb; Cucumbers, 50c@$1 25 per doz.; Asparagus, 40c ℔ lb.; Sprouts, 3c ℔ lb.; Artichokes, 10c@15c ℔ doz.; String Beans, 32c@35c ℔ lb.

POTATOES—River Red, 75@85c; Early Rose, 75@85; Tomales and Petaluma, $1 10@$1 15 ℔ ctl; Humboldt Red, $1 25@$1 30; Kidney and Peachblow, $1 30 per ctl; New, 3c@3½c per lb.

ONIONS—Range from 90c to $2, according to quality.

BEANS—Bayos $4@$4 60; Butter, $3@$3 25 for small and $3 40 @$3 50 for large; Lima, $3 75@$4; Pea, $3 30@$3 50; Pink, $4; Red, $4; small White, $3 30@$3 50; large White. $2 75@$3 ℔ ctl.

BUTTER—We quote jobbing lots: Fancy, 25; choice, 23@24; fair to good, 20@22c; inferior lots from country stores, 16@18c; firkin, 21@23c for good to choice, and 18@20c for ordinary; pickled roll, 19@21; Eastern, 15@20c ℔ lb.

CHEESE—Firm. California, 14@15c for choice; 11@13 for fair to good; do, factory, in boxes, 14@16c; Eastern, 16@17c.

EGGS—California, 22@23c ℔ doz.

POULTRY—Live Turkeys, gobblers, 17@18c; do Hens, 18@20c; do dressed, 19@20c; Roosters, $7@$7 50 for old and $8 50@$10 for young; Hens $7 50@$8 50; Broilers, $7@$7 50, according to size; Ducks, $10@$11 ℔ dozen; Geese, $2 25@$3 ℔ pair.

GAME—Prices steady. Quail, $1@$1 12½ ℔ doz; Mallard Ducks, $2 50@$3 50; Sprigs, $1@$1 25; Canvasback, $3@$4; Brandt, $1 25 @$1 50; Gray Geese $2@$2 50; White Geese, $1 25@$1 50; Honkers, $4@$4 50; Snipe, $2 25@$2 50 for English and 50@75c for common; Teal, 75c@$1; Widgeon, $1@$1 25; Hare, $1 50@$2; Rabbits, $1 25 @$1 75.

WOOL—Fair inquiry. We quote fall: San Joaquin and Coast, 8@ 11c; San Joaquin and coast Lamb, good, 9@11c; Northern Fall, free, 15@18c; Northern Fall, defective, 11@14c; Northern Fall, Lamb, 15@ 17c; Free Mountain, 11@16c; Eastern Oregon, 16@22c; Valley Oregon, 22@26c. We quote spring California ℔ lb 14@20c.

HIDES AND SKINS—Dry hides, usual selection, 18@18½c ℔ lb; culls one-third less, and Mexican Hides 2c ℔ lb less. Dry Kip, 18 @18½c; Dry Calf, 20c; Salted Steers, over 55 lbs, 11c ℔ lb; Steers over 55 lbs, 11c; Steers and Cows, medium, 9c@ 10c; light do, 9c; Salted Kip, 15 to 30 lbs. 11c; Salted Calf, 14@15c ℔ lb; Salted Veal, 12½c; Sheep Skins, 25@30c for Shearlings; 30@ 50c for short, 60c@$1 for medium, and $1@$1 50 apeice for long wool and wool skins. Butchertown Green Skins bring higher prices.

TALLOW—Quotable at 7¾@8c ℔ lb for rendered and 11@12c for refined, both in shipping order.

MEATS—Following are rates for whole carcasses from slaughterers to dealers:

BEEF—Prime, 7½@8c; medium grade, 6½@7c; inferior, 5@5½c ℔ lb.

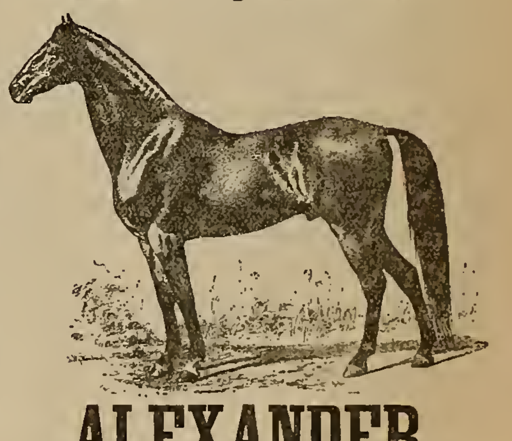
VEAL—Large Calves, 8@9c; small ones, 7@9c ℔ lb.

MUTTON—Wethers are quotable at 5½@5c and Ewes at 5@5½c ℔ lb, according to quality.

LAMB—Quotable at 12½@15c ℔ lb.

PORK—Live Hogs, 6½@7c for hard and 5¾c@6¼ for soft; dressed do 9@9½c ℔ lb for hard grain hogs.

The Fast Trotting Premium Stallion



ALEXANDER

WILL STAND THE PRESENT SEASON AS FOLLOWS: MONdays, Tuesdays and Wednesdays at Clark's stables, Santa Rosa. Balance of time at Fashion stables, Petaluma.

Alexander is by Geo. M. Patchen Jr., the sire of Sam Purdy (2:20½) Starr King (2:22) and Vanderlynn (2:22). Dam Lady Crelm, by a son of Brown's Bellfounder, by imported Bellfounder. For full description see Breeder and Sportsman of Sept. 9, 1882.

Of Alexander's get Tommy Dodd has a record of 2:24, Reliance 2:22¾, Nellie Patchen 2:27¼, Eudora 2:31½, Inauguration three miles in 7:29—last mile in 2:26, Sonoma Boy 2:37. Alex. Button proved by his performance in 1880 to be one of the best three-year-olds which have ever appeared in any country. He won the stake for three-year-olds at the State fair, beating Belle Echo, Annie Laurie, Len Rose and others, winning the first, third and fifth heats and making a dead heat with Annie Laurie in the fourth; time, 2:34½, 2:30, 2:29, 2:30¾, 2:35. At the fair of the Santa Clara Valley Association at San Jose he won, beating Belle Echo and Len Rose; time, 2:28¾, 2:30¼, 2:33¾, 2:31¾. Belle Echo won the first heat. He won at Stockton, beating Honesty, Len Rose and Upright in straight heats; time, 2:32, 2:33¼, 2:32½. In 1881, as a four-year-old, Button made a record of 2:26¾ over the Santa Rosa track. Dot Craig, by Alexander, has a private record of 2:29.

The Frasier team took first premium at the Sonoma and Marin District fair; also at Oakland for best carriage team.

Mares left at the City Front stables, San Francisco, will be forwarded. For further information apply to

T. T. UNKLESS, Petaluma.

ANTEEO AND X. X.

Mares intended for either of the above stallions, and sent by ... line, Petaluma, Sacramento or Stockton boats consigned ... Morshead, City Front Stables, will be received, good care ... them and forwarded to Oakland.

OUR NEW YORK LETTER.

Phenomenal Weather—Southern Racing Matters—Theatrical Notes—Etc.

EDITOR BREEDER AND SPORTSMAN:—Thunder and lightning! This is what was vouchsafed us dwellers in this Empire city week before last, and though not such a great rarity in our rigorous winters, last year having witnessed a similar phenomenon, it is of unfrequent enough occurrence to excite much comment and remark, especially when the electric fluid plays such unusual winter pranks as it did on the present occasion. In one neighboring suburb, the City of Churches, it rang the bells on the telephones, played general havoc with the telegraph apparatus, and capped the climax of its audacious and unlooked-for visitation by striking a dwelling house, tearing a great hole in the masonry and going further down in the house, wound up its Arctic spree by very forcibly separating a woman and her baby, fortunately without serious injury to either, other than throwing them violently in opposite portions of the room, and on the ground floor tackling a butcher. The knight of the cleaver was in the act of polishing off his mutton, it is presumed, and the fire bolt very nearly finished the job for him, together with his personal "mutton" also, for when order was brought out of the temporary chaos that ensued, cleaver, block, mutton and butcher finally came together again from the four corners of the shop, where their electric visitor had deposited them, as he made his exit through the cellar. Winter lightning in these latitudes at the present season, frequently presages the breaking-up of winter and early spring, but as yet there are no signs that such is to be the outcome of the late aerial visitation, for as I write the snow lies thick outside my window. To the sporting world generally "spring, gentle spring," will be very welcome this year, and can come none too soon, after the long embargo, which the cold breath of winter puts upon our Northern outdoor sports.

That this impatience is more than justified can be readily understood, when we are reading in the daily exchanges of flowery Florida, gay Louisiana, and sunny, tropical California, telling us that in the one place fish, flesh, fowl and fruit are as plentiful as the most ardent "tramp" could desire, ducks having to be shoved aside to allow river boats to pass, 2,000-pound manatees or sea-cows are captured, and the oranges grow so thickly that the yield of a single tree sells for $87, that Crescent city dwellers have for their delectation the pleasures of the carnival, cock-pit, and race track, that intermediate and tropical California is enjoying her usual perennial summer, your Marysville turning out fragrant, fine flavored Japanese oranges, fifteen inches in circumference. All these tidings of out-door life in the localities named serve, therefore, to enthuse us New Yorkers at the prospect of soon being delivered from our dead season and the wintry bands that now environ us, when genial winds and sunny skies will once again bring back the pleasures of field and flood, of forest and river, of rod and gun, and of the post and the paddock. Such are the express present longings of the votaries of sport in the frozen North, and while, of course, winter has its sleighing, skating, coasting, curling and kindred pleasures, they are enjoyed principally by the wealthy few, the great majority of city dwellers being heartily glad when the icy winds flee and the rising temperature again invites them to renew their excursions to beach, glade, river and meadow.

The followers of the turf, the sport of kings, are about the most eager of this large band of expectant waiting suppliants at the throne of that very important potentate "the clerk of the weather," and having nothing more important to do just now, are filling the "gap" by circulating rumors of every description touching candidates for turf honors during the coming racing year. Mr. A.'s mare, who had a fashion of getting "leg-weary," last season, something entirely at variance with her usual excellence as a stayer, has now, so they say, recovered her wind, and will sweep all the cups from the racing boards that she goes for.

Mr. B.'s colt, who was a good performer last year, and of fair size, is "too small" this spring, so the connoisseurs say, and a stable companion, who was a "runt" only a short while ago, and did not win a race, is set down by the knowing ones as far better than the tried performer and winner in good company, though the latter is known to be well and lusty.

Mr. C.'s dark, untried three-year-old has the Kentucky Derby already won, and Mr. D.'s six-year-old is going across the briny deep to beard on their native heaths the best racers in all England.

These and a thousand other rumors are floating around in all manner of distorted shapes, and of all of them probably the only one that has any foundation in fact (for what do the owners and trainers of racing stock in these parts know yet as to their additional merits except that he or she is in good or poor health) is the last, which refers to one of best known of last year's famous runners. This is the Leamington mare Giroflé, the victress last summer and fall over our best performers, and although she did not defeat Hindoo, Bend Or or Thora (when the latter was right) the exhibitions she made at different times of Eole, Barrett, Bootjack, Monitor, Pawle, Glenmore, Pinafore, Carly B, Lida Staunbope, Herbert, Gen. Monroe, Fair Count and all the other fast horses who came across her path, will never be forgotten by those who witnessed her great races. Early in the year Eph. Suedeker, her astute and shrewd manager, tried his best, and with some success, to mislead the turf world, particularly the handicappers, as to the mare's real abilities, and first he would claim she could not go a distance, and then that they were trying to anchor her with weight, but after she won at two miles and a quarter, and beat field after field of handicap horses, carrying as high as 121 pounds, these cute theories were thoroughly ventilated, and "Eph." gave it up, declaring that the mare had fooled him, as well as others. Very likely story! He probably took his cue from Wyndham Walden, who always declared the same about Ferida, until she demonstrated its fallacy in more than one hard-fought race. Giroflé will not go to England much before July, so it is said, and if she stands the voyage well, should give a good account of herself, provided the Messrs. Weatherly do not put a house and lot on her back. Judging by the case of Pinafore, Pierre Lorillard's four-year-old daughter of Enquirer, it looks as if they will, for the English handicappers weighted her (Pinafore) beyond all reason in the spring events just closed, and Tom Cannon very sensibly declared her out of each and all of them for although she might be the superior of any horse, mare or gelding of her age entered in the races just closed, it is hardly within the bounds of fair play to give an animal that has come 3,500 miles by sea, to a trying climate, etc., the top weight of her age in every stake save one. And this because Parole, Foxhall and Iroquois showed their excellence after acclimatization. Pinafore has yet to face the starter in her new field of action, and it would have been more like the proverbial fairness of English sporting men to have given her a chance to show that she is, what they seem to estimate her as, the best of her age in all England. Should they treat Giroflé in like manner, it may check the creditable ardor of the American gentlemen, who go so many miles at such great risk and expense, to pluckily throw down the sporting gauntlet and Messrs. Weatherly should not at this late day so lack on their heretofore fair and reasonable treatment of foreign visitors. It cannot be, as they would lead us to suppose is the case, that they want no more of the American "invasion," be they English, French, German or American. However, notwithstanding the apparent injustice of the English handicappers in regard to Pinafore, and the fact they have put the top weights for each of the pricipal spring handicaps on two other Yankees, Iroquois and Foxhall, we find that this country will be quite strongly represented after all, and the managers of the Lorillard and Keene stables have pluckily left in the two great horses named above, and also Sachem, Aranza, Golden Gate, etc., the maximum weight being 130 pounds, and the minimum 93 pounds on Aranza, which impost in the City and Suburban Handicap she ought to carry very near the front, for when in this country she was considered one of the best Bonnie Scotlands that ever looked through a bridle, her English career thus far having been a series of disappointments.

Betting on these races in London has not yet opened, although there has been some "nibbling" at Macheath, Bean Brommel, Galliard, Fulmen, Prince and other prominent contestants for the Guineas and Derby. Indeed, both these races have a very open look this year, and there may still be a chance for the American three-year-olds engaged, who were a very ordinary lot last fall, judged by their two-year-old running. For the One Thousand and Oaks, however, both filly races, Mr. Lorillard has a good one on the spot in Parthenia, half sister to Parole, who, if in good fix, will trouble the best of them to beat her. Last year's Derby and Grand Prix winner, Bruce by Seesaw, was lately sold at auction, his destination being the stud. He was a very fine two-year-old, and stayed much better in his three-year-old form than most people supposed.

Within the last week Mr. Keene's imported stallion Blue Mantle, foaled 1860, by Kingston, died near Lexington, Ky., where he was making the stud season. As the horse was splendidly bred, and has sired winners in England, his loss is a most unfortunate one for his enterprising owner.

From Gen. Harding's stock farm at Belle Meade, Tenn., comes the news that Luke Blackburn has grown and filled out into a magnificent horse, and as the death of old Scotland left a void that should be filled by his sons if possible, his well-known owner wisely determined to give Luke and Bramble every possible chance to show their excellence. Bramble also looks well the picture of the dead hero, his sire, and will have a goodly number of foals to his credit this spring. Belle Meade has also those proven great sires, Enquirer and Great Tom, and a collection of brood mares of great value. Their yearling sale will take place this year, as usual, at the close of the Nashville spring meeting, or about April 30.

"No book-peddlers, venders of quack nostrums, insurance agents, lightning-rod men (particularly lightning-rod men), tramps or mendicants of any class admitted on these premises. Only visitors, who are always welcome, or those who wish to buy or sell thoroughbred stock." So reads a large placard at the entrance to Maj. Barak G. Thomas' Dixiana farm, near Lexington. Maj. Thomas is well known throughout the length and breadth of the Blue Grass region for his generous hospitality, notwithstanding the notice at his gate. His place is noted as the home of the popular stallions King Ban, Lelaps and Himyar, the latter untried, but as he is by Alarm, dam Hira by Lexington, he should beget racers, for he was a first-class runner himself, although a very unfortunate horse, accidents incapacitating him for a much greater share of honors than fell to his lot. Maj. Thomas has some some very promising two and three-year-olds in training, mostly by Lelaps and King Ban. Pike's Pride, three years old, by the last-named stallion, out of the dam of Gen. Pike, he sold last week to W. O. Bernard of this city for a good price. George Evans also selected for the same buyer several two-year-olds by Springbok and Strathmore (by Waverly) from Megibben's farm near Lair's Station, Ky.

Desultory racing has been going on at New Orleans and Augusta, Ga., since I wrote you last, but nothing of much interest has transpired. Suspicion has also been attached to some of the running at the Crescent City, notably so on the 11th, when the horse Wedding Day, who that last week won a mile race with ease in 1:44¾ (fast for the track), was beaten in slow time by Potomac (Athlone) and Uberto. A "pull" was openly charged and the disgust there is so general that there will probably be no more racing for the present, at least unless responsible men take the helm. It is only just to the Louisiana Jockey Club people to state that they have had nothing to do with the late racing, having allowed the horse-owners there to manage affairs themselves, with the result as stated, Engeman and his "suite" having left long before. Regular racing at New Orleans will begin on March 31st. On April 17th comes Memphis into line, then Nashville the last week in April, May 8th Lexington, Louisville 20th, and so on to Covington, Ky., where the inaugural meeting of the Latonia Jockey Club, whose stakes have received over 800 entries, will be held June 1st and the racing circuit be in full swing.

Betting here is freshening up a little and a few large wagers have been laid. Four hundred dollars to $100 against George Kenney for the Withers, and $500 to $100 against Pizarro for the same race, have been laid. Six hundred to $100 against Eole (5 years) for the Coney Island Cup, $2,000 to $40 against General Scott (5 years) and $1,000 to $10 against Secret (4 years) both these long shots for the cup also, have been recorded in one hand. For the Kentucky Derby $500 to $50 against Drake Carter, Green Morris' "dark un," and $250 to $50 against Thora for the Louisville Cup, all also registered wagers, but speculation is light yet, bettors biding their time and the fate of the revived pool-hill.

The Lenten season here does not seem to have effected much diminution of the attendance at the theaters. "The Corsican Brothers" at Booth's has been put on the road and "Monte Cristo" revived with a strong cast, including your favorite actor, Mr. Jas. O'Neill. It scored a rather qualified success, the star not being quite the ideal Edmund Dantes, either in physique or execution, Fechter's remembrance in the part being still fresh in the minds of Metropolitan playgoers. It was the last character the writer saw the late great actor assume, and the scene was the Mission Street opera house in San Francisco, six years ago. "Young Mrs. Winthrop" at the Madison Square, "A Parisian Romance" at the Union Square, "The Silver King" at Wallack's and McSorley at the Comique seem to have come to stay, judged by the public appreciation, and while manager Haverly's two theaters are also doing a large business, Barton Hill, from your California Theater, making his reappearance at the Fourteenth street house on last Monday evening in a new play, "Her Atonement," the Casino still keeps "The Queen's Lace Handkerchief" to crowded houses, and "Iolanthe" is doing the same for the Standard. Mr. Daly has revived the charming play, "The Squire," finding another comedy revival, and the Kiralfys at Niblo's are drawing large houses with the spectacular "Black Venus." C. R. Thorne Jr.'s death last week was quite unexpected, for his friends had great hopes at the time that he was recovering, but his time had come, and without any religious ceremonies whatever, this being his express wish, his body was consigned to its long rest in beautiful Woodlawn cemetery. PACIFIC.

New York, Feb. 14, 1883.

Our Rifle Future.

There are many good observers who find reason to think that without rifle shooting and the rivalry which naturally springs out of its pursuit the Volunteer movement in Great Britain would have been a failure ere this. Instead of making the enrollment and the drilling of bodies of men the one great end and aim of the National Home Guard, the requirements of an efficient Volunteer embraced that of shooting fairly well. Here came in an element which set the men individually on a level, and while the metropolitan centers gave large commands admirably drilled and fit to make a brilliant showing on parade, it was the little squad of a company far off in some scrubby hamlet which, likely as not, carried off the shooting prizes, and so the honors were distributed about in such fashion as to keep the whole force a vigorous and healthy one. The city commands might have fine chances for parade over broad thoroughfares and with commodious drill-rooms, but the country guardsman with a range at his back door burned powder, kept a clear eye and a steady hand, and was very properly recognized as a very important factor in the make-up of the whole force.

The National Rifle Association came in as an important adjunct in this direction. While structurally independent of the Volunteer force it lived only for that force, and was controlled by it. It was not a bureau of the regular establishment, yet without it the force would have lost an essential part of its life, and it is doubtful whether either could have long survived the other. Shrewdly managed in a business way it has prospered through liberality. Seemingly at times over-conservative, its record will show that there has been a steady encouragement of the best arms, and it is safe to assert that without Wimbledon the world to-day would not have several of the rifles which are now recognized as the best. The rules of shooting have been changed and altered from time to time, and though always against a certain amount of protest, yet always for the betterment of rifle practice. There have been many reasons which have helped the managers of the National Rifle Association. They were enabled to draw a very large clientage from a very small area of territory. The run up to London is but a matter of a few hours from any part of the kingdom. The time of holding the meeting is well selected. There is a widespread feeling of intense local patriotism or clannishness which institutes sharp distinctions of section, and upon this feeling it is easy to build up a rivalry such as has been seen at Wimbledon from its first establishment. Then, too, special journals most admirably conducted, and generous notice and encouragement in the ordinary press channels, have helped the movement greatly, until we see it to-day rich and as firmly established as it is possible for such an agency to be.

On this side the water there have been at times expressions of surprise, that in ten years of existence, modern rifle shooting should be in such a backward state. The error which was the foundation of this surprise, is in supposing that the United States will ever in proportion to its population make such a showing as that annually seen at Wimbledon.

It will be noticed at once that many, if not all, of the conditions which have made the broad common on the outskirts of London such a popular resort are wanting in this country.

We have no such Volunteer force or National Guard as that which exists in Great Britain, simply because we do not need any such a cumbrous agency of defense. To preach the danger of foreign attack is to be laughed at, and with a few companies of reliable militia, ready to act on call as a sheriff's posse in suppressing any riotous demonstration, we have all the National Guard which is really necessary. The regular army is little more than this and both organizations deserve support, mainly because they serve as schools for officers, and in this fact there is a feeling of security for Americans and a quieting hint to would-be meddlers with us as a nation. We have little of that clannishness which is so marked abroad, and repeated attempts to push inter-State matches show the absence of that sentiment. In short, the conditions and environments of position of feeling which go to make Wimbledon such a busy center during a certain period each year are entirely wanting on this side the ocean, and all steps in the encouragement of rifle shooting must be taken with that fact plainly in view.

This condition of affairs does not mean, however, that there is to be a dying out of rifle practice here. Just as a single regiment of our National Guard in the late war furnished officers for an army, so the handful of marksmen who practice intelligently and persistently before the butts keep alive a knowledge of the art, and when occasion requires it they form a nucleus about which there soon clusters an efficient corps of riflemen. The American works under impulse, and it is idle to expect a large body of men to undergo the drudgery of ball practice when there is no incentive in view. We have no organization with a richly endowed prize list which would encourage, if nothing more, at least a certain amount of pot-hunting workmanship; neither can we secure the use of the ranges by vigorous orders to our National Guard. The members would not permit their labor of love to be turned into a toil under a task master. Quick to catch and improve upon an idea, with no prejudices born of established practice, the American marksman should fill the post of an expert observer.

Wimbledon itself is an excellent place for study, and had more note been taken of what was going on there, the fiasco of our international military match of 1882 would not have taken place. We certainly should have known something of the sort of rifles the Englishmen were using for the style of work in which they challenged our competition. That the British pursue this plan of observation and adoption is manifest by their ready acceptance of the sensible American device of a wind gauge for military rifles.

There is no reason, then, why America may not and should not hold her own with the other nations in the matter of rifle making and shooting. She should hold her place at the front of the line, but this can only be done by an intelligent noting of what is going on the world over, and it may be carried on without those great gatherings of marksmen engaging in a whirl of competitions, and then rushing away to renew the struggle a year later. A score of ranges here and there over the States, by an interchange of continuous records, can do fully as much for the real advance of marksmanship as any central gathering, and then the need of a National Rifle Association will come in as a regular body, to make rules, secure uniform conditions of practice, and point the way to the best endeavor in the line of new work.—*Forest and Stream.*

SUCCESSFUL STALLIONS.

What They Owe of Their Financial Success to Printer's Ink.

EDITOR BREEDER AND SPORTSMAN: While thinking of the success of stallions, in the matter of making themselves profitable to their owners, I have become convinced of the fact that they owe their achievements to a liberal outlay of money in printer's ink; and to prove my theory, will mention a few stallions, some of whom have proved themselves a source of revenue to their owners, while others have not.

The horses that I have taken for subjects are those with whom I have long been acquainted, if that be a proper term to use, and are known by the following generic names: Durango, Almont Rattler, Hero of Thorndale, King Mambrino, Col. West, Wapsie, Felter's Hambletonian, Menelaus and Romulus.

To begin at once with a phenomenon may rob the remainder of this article of what practical bearing it has, but the strange favor which has seemed to form the lot of Durango, compels me to speak of him first.

The Peoria stallion Durango has, without douht, proven himself to be the most profitable piece of horseflesh exported from Kentucky. Scarcely had the black colt landed in the great city of distilleries, ere his name and exploits were borne on the wings of popular talk all over the surrounding country, the local press, dozens of county organs in neighboring districts; the sporting papers of Chicago, Indianopolis and New York, added to all the live stock periodicals east of the Mississippi and north of the Ohio river, were soon overflowing with long-winded articles regarding the nine days' wonder, Durango. The result of all this advertisement soon made itself manifest in the most liberal patronage ever bestowed upon a young stallion of any breed, until it is now claimed that his profits in the stud have amounted over $10,000, which, for a stallion whose oldest get are only two-year-olds, is a fabulous sum. Durango has yet to engage in his first race, and from the wonderful tales that have been floating around since he was a three-year-old P. V. Johnson (in whose hands Durango has been placed) should blot out the record made by Smuggler, and place a mark so low down in the teens that all other stallions will have no chance of reaching it.

It was published that Durango has shown authentic trials of a mile in 2:16 as a three-year-old, and quarters in thirty-two seconds as a four-year-old, but it invariably happened that he was out of form during each of the State Fairs held at Peoria, since he adopted that city as his home. Durango, by Cassius M. Clay Jr. (Strader's), dam Mattie West, by Almont, has placed upon record the great results to be derived from a liberal use of printer's ink. King Mambrino, by Mambrino Patchen, dam Zepher, a fast pacing mare, has made three more seasons than Durango, at this place and Hennipen, the last a small town on the Illinois river, forty miles above Peoria. Zepher, the dam of King Mambrino, was likewise the dam of Harry Clay, record 2:23¾. Harry Clay is the only representative that Strader's C. M. Clay Jr. has in the 2:30 list and he lost the race that he obtained his record in. Now, here is the stallion King Mambrino, by Mambrino Patchen, out of the only mare that ever gave C. M. Clay Jr. (Strader's) a 2:30 colt, and yet, his owner has not managed the horse in a way that has made him profitable. He used the press and printer, but very little, and his stallion is not known of thirty miles from home. King Mambrino is undoubtedly a sire of more than ordinary rank, for one of his daughters trotted in 2:35 as a three-year-old, at the Bureau county fair of the year 1881. Several more have shown themselves quite speedy.

Almont Rattler, a son of Almont and owned at Clinton, Iowa, has received nearly as liberal an advertising as Durango, and has proven a valuable horse to his owner. One of the methods of advertising resorted to by the owner of Almont Rattler, and to very good advantage, has been the trotting of his colts from the time they were two-year-olds. These sons and daughters of Almont Rattler won nearly all the races they were engaged in, even though they competed with colts possessing greater speed; how they were enabled to become so successful as purse winners remains a one of the secrets of the turf and I have not evidence sufficient to prove that there was a nigger in the fence. They have never been able to trot in 2:40, and several are five-year-olds, but that is of little consequence, so long as the fact is established that they are winners. As a result of this novel way of advertising, coupled to a free use of the press, the owner of Almont Rattler has gained large lists of mares, all seeking the embrace of his stallion, and a plethoric pocketbook is the positive proof that the end has justified the means. Hero, of Thorndale, by Thorndale (2:22½) is owned at Washington, Ill., a thrifty village, twelve miles east of Peoria, and has come into direct competition with Durango. The breeding of this half brother of Edwin Thorne (2:16¼) is superior to that of the Peoria stallion as his sire was a better horse and his dam, Heroine, was an own sister to Volunteer, the sire of St. Julien (2:11¼). Hero of Thorndale is himself the sire of trotters, as for example: Combat (2:42), Pinafore, two years old, (2:40), Puss Thorn (2:34), Verbena (2:36), and Alice Tyler (2:30), yet the patronage given to this horse has not amounted in dollars and cents to one-quarter that furnished his stud rival Durango. Another proof that it pays to house up one's stock and never let the world know you have anything worth the naming: Col. West, by Almont, a stallion hid away down at St. Joe, Mo., is something of a trotter himself, having a record of 2:35, and, better still, is the sire of a number of colts that have the faculty of trotting fast and are beginning to make themselves known ere this account; it is no fault of the owner of Col. West that the offspring of his stallion were not allowed to remain unknown, for he cared but little regarding the matter. Since Mabel H has acquired a four-year-old record of 2:31¾ and was purchased by that good judge of horses, J. I. Case for $3,000, Col. West has emerged from his hiding place and will probably be patronized to a small extent. I have never met an owner of a stallion who appeared to care so little about the success of his horse as the man who controls Col. West. He has not so much as patronized his home newspaper, neither has he caused the job printer to strike him off a few handbills such as used by many owners of local stallions, and the result has been that Col. West has not paid for the feed he has consumed, nor the service of the groom required during the short spring season.

Wapsie, a stallion that is standard by all the rules laid down in Wallace's Register, has served out rather a long life in the central part of Iowa, and though his fee of service has only been $25 for the season, his owners cannot say that Wapsie has ever paid the interest on the money they invested in him. Wapsie is undoubtedly the best son of the old Iowa favorite, Green's Bashaw, and aside from being a trotter of no mean merit himself, he is the sire of a number of horses who have proven themselves performers: Gen. Grant (2:21), West Liberty (2:23), Kokomo (2:30), Jim Laue (2:34) and numerous others with records better than 2:40, are all by Wapsie and should certainly make their sire a popular horse. By the way, Kokomo was out of a thoroughbred daughter of Simpson's Blackbird and is only one of the many young horses who are giving proof of the value of that blood which flowed in the veins of the Falcon. Only last fall, while in attendance at the Kansas State fair, I formed the acquaintance of an old resident of Iowa, and he remarked that Green's Bashaw and Wapsie were both dead. When corrected regarding the report of Wapsie's death, he gave as a reason for this belief that having heard or seen nothing regarding the horse he concluded that his old favorite was dead. Well, he might as well be dead for all the average horseman knows, for he is buried away in an interior town called Winterset.

Felter's Hambletonian, a standard horse that was owned until his death at Davenport, Iowa, was another good animal that very few knew anything about. Lucy, 2:26¾, and Lady Tighe, 2:29, are Felter's representatives in the 2:30 list, and for a horse that had limited means in the stud, having died while a young horse, he makes a very good showing. What Felter would have accomplished had he been managed on a liberal plan is all conjecture, but the belief of many is that he would have proved himself to be one of the best young sires in Iowa.

Romulus, one of the most fashionably bred sons of Rysdyk's Hambletonian, at the era when an American Star cross was thought to be the great and positive source of speed, has spent the greater part of his life at Moline and Prophetstown, Ill., where he has enjoyed every opportunity that could be offered. This phlegmatic son of the Old Horse is thirteen years old, and during his life in the West has been a well-advertised horse; though proving a fortunate animal in the large lists of broodmares sent to his harem, Romulus has not given evidence that he is a sire of trotters, none of his produce having been able to get within the charmed circle. Still, it has proved a great blessing to Illinois and Iowa, this introduction of Romulus, with his rich heritage of blood, for out of his loins have sprung a strong, thrifty race of broodmares, and who, when bred to stallions of merit, have given fair promise to produce offspring that will do credit to the great family of which they are part.

Menelaus, by Rysdyk's Hambletonian, was originally purchased at a long price, and placed in the private stud of Wadsworth Bros. After their failure Menelaus was sold, and his present owner has shipped the stallion all over Illinois and Indiana, never leaving him at one place long enough to allow the breeding public an opportunity of watching his success. Almost anyone can guess the result of such a management, for the horse did not pay his way one-half of the time. Cleora, 2:18¾, Maggie F, 2:27, and Romeo, 2:29¾, are positive proofs that Menelaus is a sire of trotters. At present, this stallion is thought to be afflicted with an incurable disease. Should he by chance recover, it is to be hoped that his owner will place his services at some point where such a patronage as he deserves can be secured.

Though I have given but a hurried description of the eight stallions whose names I cited as illustrations, still this letter has assumed a weary length. A review of the successes and failures of these horses' career in the stud will satisfy any sane individual that it is utter folly to think of hiding one's light under a bushel and yet expect the world to notice its glare. I am thoroughly convinced of the great help to be derived from a liberal advertisement, held within bounds of the legitimate; and fully persuaded that a truly valuable stallion can in no wise receive harm by such a proceeding, though I do decry any attempt at sensationalism without the slightest grounds for such work, and trust all candid men will refrain from that method. COLUMBUS.

Tiskilwa, Ill., Feb. 19th.

An Act of Justice.

EDITOR BREEDER AND SPORTSMAN: In the issue of *Turf, Field and Farm* of a late date there appears an article giving the credit of the development and performances of Wildflower and Bonita to Chas. Marvin. In justice to Henry McGregory, formerly of Detroit, Mich., and now in the employ of Mr. Wm. Corbitt, of San Mateo, Cal., I send you a short history of the colts and McGregory's connection with them. He commenced work at Palo Alto on or about the 1st. of December, 1880; previous to that time Wildflower was handled by the late H. R. Covey. Bonita and Marlet were still in the breaking stable and as soon as they were well broke they with Wildflower and the others were placed in Mr. McGregory's stable. At that time Wildflower had been driven a mile in 3:22. From that time, Dec., 1880, when the colts were yearlings until Sept., 1882, he was the sole trainer. He drove Wildflower as a two-year-old at Sacramento her first race, which she won, getting a record of 2:33. At San Francisco, Wildflower had a walk-over for the two-year-old stake. He next appeared behind the fleet filly, when he astonished the world by trotting a mile in 2:21. He afterwards drove her on exhibition one-quarter officially timed in 32 seconds. He started Marlet in the two-year-old stake at San Jose and got a record of 2:59¾; this colt he drove a mile at Palo Alto as a two-year-old in 2:29, and about two weeks before he was shipped East he trotted a mile at the same place as a three-year-old in 2:24½. He drove Wildflower, then three years old, a mile the same day without even clucking to her in 2:23¾. Of the six colts he handled, three beat 2:30 and two beat 2:40; the sixth one after being handled but a short time was turned out, she having grown so large that it was considered best to wait on her for a year. McGregory's success with Wildflower and Bonita was but a little over a year ago published in all the leading papers in the country, and if the *Turf, Field and Farm* had looked over their exchanges for that year they would not do him the injustice of placing the credit of the development and wonderful performances of these colts to one who never drove them until one week before they started East to fill their engagements. As Henry McGregory is well known both East and West, a man whose reputation is above reproach, I trust the *Turf, Field and Farm* will now give the credit to one who fairly earned it.

* * *

As a rule the pig is reared for the money that is in him. We may talk about cheap meats for the million as a necessity justifying the rearing of the swine, and persuade ourselves that the man is excusable who at this day places before his fellow men, as an article of diet, that which in olden times was rejected by an honored people as unfit for human food. Little difference, however, does it make to the man thus excused, whether we think of him as a philanthropist or as one engaged in leading mankind astray, so long as he has a fair profit on the pigs he rears, or on the pork products he can place on the market. If there were no money for him in the breeding and rearing of hogs he would not engage in the business. We find, however, that to nearly every farmer and cottager in the land there is a profit in pig raising, and so long as such is the case, we may expect to see this among the leading industries in civilized America.

The Rubber.

The general public knows comparatively nothing of a class of men who form an important feature, in their way, of the trotting turf. The rubber is a type of humanity that stands alone. In the majority of cases he is a man of nearly, or quite, middle age, and not infrequently his hair is tinted with the silver marks of time. His business is simply and solely to look after the trotter committed to his charge, and in some instances the position is one of considerable responsibility, although this is not often the case. When a horse has been "worked" during his preparation for the trotting campaign, or during its continuance, it is the duty of the rubber, upon the animal's return to the stable, to see that he is properly "done up," this term being used to signify the attentions which it is necessary that a trotter shall receive after the exertions of a heat in a race or a sharp "repeat." Of course, in cooling out a horse between the heats of a race, the operation is superintended by the driver, providing that personage be at liberty; but it is oftentimes the case at the great trotting meetings that a driver is engaged in two races on the same day, and as the horses in one class are called upon the track as soon as those in the preceding race have finished a heat, it is a physical impossibility for a driver to attend personally to the cooling-out of his horses. In these instances the responsibility must fall upon the rubber of the animal, unless, as is often the case in large stables, there is a head groom or rubber, who assumes the general management of affairs in the absence of the driver.

As a rule, rubbers are men of more than average education, their knowledge of the world and its ways having been acquired in the rough school of practical experience, but in their own sphere they are apt to be very bigoted and display that uniform pig-headedness that is so often a characteristic of men whose lives revolve in a very small circle, indeed. Between the rubber and the horse to whose wants he ministers there frequently exists an affection that is surprising. The rubber is, alas, too frequently inclined to inhulousness, and his invariable refuge at the time when liquor has all but rendered his faculties of no avail, is the stall of the animal with which he is associated. He will tumble in there at any hour of the day or night without the slightest fear of consequences, and very rarely, indeed, is his drunken confidence in his equine companion misplaced. Long years ago Geo. B. Mansur of this city owned a little chestnut stallion called General Grant that was one of the most vicious brutes imaginable. When sober, Grant's rubber would never enter the horse's stall without first taking ample precautions, in the shape of a whip or stick, to secure his personal safety; but, after filling up for a few hours with bad whisky, he would reel confidently into the stallion's stall and deposit himself at full length on the floor thereof. Then the horse, that would at other times have resented such an intrusion with teeth and hoofs, would shrink into one corner of the stall and gaze earnestly at the man, trembling all the time as if in the greatest fear. Hanmis, who is as vicious a little fellow as can be found, would never make a mean move towards "Old Mike," his rubber, during the time the little chestnut stallion was in Turner's stable. But perhaps the heartiest friendship that ever existed between man and horse was that between Goldsmith Maid and Charles Crocker, or "Old Charley," as he was universally known. For five years the old man never slept but two nights outside the mare's stall, the third inmate of the place being a little dog. It was "Old Charley's" habit, upon going to sleep for the night, to use as a pillow a small bag containing the mare's oats for the morning meal, and about 5 o'clock she was certain to come over to Charley's corner and poke away at the bag of oats with her nose, thereby saying, as plainly as words could have said, that it was breakfast time and she would like to be fed. With the dog, a fine specimen of the Scotch terrier, the Maid was on friendly terms, except when Charley would fondle and pet the animal in her presence, and then, jealousy getting the best of good nature, she would rush savagely at her companion and drive it out of the stall forthwith. After the Maid had retired from the turf and given birth to her first foal (a fine colt by General Washington, that was accidentally killed) Charley went down to Trenton, N. J., one day to see the old mare. The attendants warned him to be careful, saying that since the birth of her colt the Maid had been so cross that it was unsafe for anyone to approach her. The old man, learning where the mare was, placed himself where he could not be seen and called to her. The Maid, recognizing at once the voice of her old friend and companion, gave a joyful whinny, and started in the direction from whence the sound came. Instead of resenting any approach to her colt, as she had done with others, she ran her nose all over Charley, and called his attention in an unmistakable manner to her baby, of which she was as proud as any mother could be of her first born.

During a race in which his horse is engaged, the rubber is in his glory. Armed with a bucket of water and a sponge, he is ready to do any little odd jobs that may be required while the horses are warming up, to "sponge out" at the end of every five scorings, and when the heat is over he unchecks the tired trotter, relieves him with a dash of cold water between the ears, and a swallow of the same fluid from the ever-present bucket, and then leads him away to the stable.—*Breeder's Gazette.*

I have seen salt fed hogs for more than fifty years, and in the last twenty years have fed many heavy hogs, ranging from 300 to 600 pounds net. I fed them all liberally with salt; have never lost one nor has one been sick an hour. These hogs have been fattened in a close pen, and their principal food was corn meal made into a dough. This dough I have salted at least once a day. Sometimes my hogs would fail to clean out their trough; in that case I would put a handful of salt into my bucket, with some water, pour it into their trough, and they would lick it up with much relish. In addition to the salt, I feed coals from the stove. I make it a regular custom to feed coal, and it is astonishing what a quantity a hog will eat, and how healthy and robust it will make him. Let the hogs have plenty of salt and charcoal, and we shall hear less of the cholera.—*Southern Farmer.*

The practice with many of discarding old sows, and filling up from the young litter, is very unwise, provided the dams are of equal merit and breeding with the pigs. If, however, a young sow be kept till she is a year old, well fed in the meantime, before being bred, she will bring as strong and growthy pigs as the older sows. The notion that a sow should be bred early, that she should become a good suckler, is erroneous. Maturity in growth of the whole body is quite necessary to the development of the milk glands, and, as we have proved to our own satisfaction by sufficient test, a well-nourished sow, dropping her first litter at sixteen m[illegible] will, as stated, bring as good pigs as the older sows, quite as likely to have an ample supply of milk.

JUDGE HAYES ON THE THOROUGHBRED.

A letter from Judge Hayes of Clinton, Iowa, and which is copied from the *Turf, Field and Farm* will be found in this paper. The Judge takes a common sense view of the subject he treats and does not materially differ with us in opinion. It is just as essential that the proper thoroughbreds be chosen to obtain the benefit of the blood in the trotter as it is in tbe other families which are kept in trotting studs and to select a sire or dam merely because it is thoroughbred will result in many failures. There are numbers of tbe recognized trotting strains that have proven entirely worthless as the progenitors of fast trotters and it cannot be otberwise than that the blood-horse mnst be liable to the same uncertainty until tried. The thoronghbreds that have demonstrated a capacity to produce trotters have, in a majority of cases, had little opportunity to display their powers, and even after it was evident, have been neglected. Nearly twenty years ago there was a fast-trotting three-year-old in Chicago by Bonnie Scotland. He was altogether the fastest colt of his age in training tben, but owing to an attack of distemper which left him broken-winded he had to be thrown up. Had he sbown his capacity in public, it is likely that more attention would bave been awarded his sire as a trotting progenitor. But what may appear anomalous is the statement that a thoroughbred stallion located in a country where tbere are few thoroughbred mares has a better cbance to get fast trotters than when the reverse is the case. Not that the thoroughbred mares are lacking in tbe elements for tbe dams of fast trotters but owto tbe fact that their produce is destined for another field. And the more celebrated the stallion as a race horse getter the less chance there is for him to excel as a harness sire. It is doubtful if there was a single colt of Bonnie Scotland's which be got after his location in Tennessee, wbich had any trotting training, and tbe only ones we bave beard of were Scotland, the three-year-old mentioned, Dan Donaldson, and a chestnut gelding which John Muir sold in New York and which trotted a trial in 2:38. Mr. Kulz bad a pair of Bonnie Scotland's which he drove in his carriage which could sbow close to a three-minute gait witbout any track work. We owned a colt by Bonnie Scotland from a Knight of St. George mare, and she from Bellamira by imported Monarcb that was broken to harness at two years old and witb very little handling he could beat any colt of his age at Atwood Place wbere we had a large number in training. He died, unfortunately, before bis speed could be tested. Now the commingling of the blood of Blackbird througb his son A. W. Richmond and that of Bonnie Scotland througb his daughter Columbia, produced Columbine who showed a 2:36 gait at four years old, and Lady Richmond who was reported to have shown trials very fast. The logic of Judge Hayes is sound so far as the necessity for selection and his concluding sentence a sensible conclusion.

Blackbird only covered tbe mares known to be thoroughbred, Kitty Hunt by Alex. Churchill, and Polly Tompkins by Mirabeau. The former bad a colt, the latter was barren. The colt was taken to New York by the owner John Cannon, and driven by the side of a grey mare that had trotted to the pole in about 2:46, and for which Mr. Cannon paid $1,800. We rode with him several times behind the pair, and the colt could carry her off her feet in every brush. An injury to his back incapacitated him or we feel positive he would have made a good mark.

We think that Judge Hayes errs when he appends "mildly" to the benefit derived from the Trustee blood, as Exchequer, John Nelson and others give strong testimony in favor of it. Exchequer, a thoroughbred grandson shows Lucille (2:21) and Rigolette (2:23¾). John Nelson, a son, Nerea (2:23½, Aurora (2:27), Gov. Stanford (2:27¼).

THE AUCTION SALE.

It was a grand sale of trotting stock at the Oakland Park last Wednesday, and gave a great deal of encouragement to those that are engaged in breeding road and trotting horses on this coast. It proved that the breeding of the right sort will pay, and that animals of approved form and of the right blood will remunerate those who are engaged in breeding them. In another column will be found a list of the animals sold, buyers and prices, and the perusal will demonstrate that there is a general desire to buy stock of the description offered. There was a marked feature in the sale, viz., that those who bought were in the main men who are not largely engaged in breeding. The only exceptions were J. B. Haggin and L. J. Rose. The former bought Nourmahal, and Mr. Rose Sweetbriar. These are certainly fine additions to these fine breeding farms, and though old associations may have a tendency to warp the judgment and give an undne bias, tbere is not an untried mare in the United States that we would prefer to Nourmahal, and the form and breeding of Sweetbriar are just right for Sunny Slope. That the union of Sultan and Sweetbriar will result in high excellence is partially proved by a son which showed such a fine gait that there was a brisk contest to obtain him, and a few colts of the strain cannot fail to well repay the outlay. The other buyers showed a proper appreciation of pedigree, and tbose of fashionable blood bronght prices that proved that this essential feature is becoming better understood. The day is past when buyers of stock, the object being to breed trotters and road horses, sneer at the proof of a good ancestry, and the remark once so common, "—— the pedigree, show me the horse," seldom heard. Higb form is an inheritance, and those which show the most symmetrical proportions are the descendants of others which have been distinguished for tbe same characteristics. There never was a sale when the get of an untried stallion brought such high prices. This was in consequence of the form being satisfactory, and the buyers logically argued that with proper shape and the breeding of the right sort there was little risk of failure. The Steinways are a level lot of colts, and among the large number there were few, indeed, that were not worthy.

While the animals were superior, the sale was well-managed, and from the commencement there were judicious movements. The stock looked remarkably well, especially at this season of the year, the advertising was done so tboronghly that there was a general knowledge throughout the conntry of what was to be offered, and tbe result was a fine attendance. Admitting all tbese points and there remains the encouraging fact that there is still a horse market, and that in a few years it is only reasonable to anticipate that there will be a corresponding demand from other places.

NOMINATIONS IN THE TROTTING STAKES AT CHICAGO.

From what we can learn there has been a good many nominations made in the trotting stakes at tbe summer meeting, 1884, Chicago Driving Park. We predicted that tbere would be thirty nominations in the Ashland and Chicago Stakes of next year, and thougb many scoffed at the idea, and made the counter propbesy that Palo Alto would be the only representation of the Pacific Coast, from wbat we hear tbe sanguine guess is likely to be nearest the truth.

The engagements in Eastern stakes has a more direct bearing on tbe trotting interests now tban many are aware. It sbows tbat breeders have confidence in the merits of the stock they are rearing, and, notwithstanding the drawback of a journey of thousands of miles, tbey are willing to accept the handicap and try conclusions witb tbose more favorably situated in respect to propinquity.

Successful (and our confidence in this respect is abiding) then is tbe best certificate imaginable. To win after a railway ride over the biggest part of the continent, to pit the few from the Sunset Slope against tbe many from all of the breeding States, and hold the fort, or rather compel the surrender of the myriad of defenders, will be a token of merit which cannot be disputed. The advance guard gives words of encouragement. Not a battle lost when there was only a single champion, how can there be anything but victory when there are reinforcements behind. But it will not do to depend on what has been done, or abate one iota of the vigor which is necessary ere the commencement of the campaign. There must be constant endeavor. There mnst be continued work and a determination not to let anything interfere with the necessary preparation. There are four hundred and odd intervening days before the colts stakes of 1884 will be summoned, and not an available day should be lost in preparing for the contest. There mnst be a constant, unremiiting attention. Not an opportunity lost whicb will add to the chances. It is all bosh to decry the giving of fast work, absurd, nonsensical, to imagine that something is to be gained by breaks in the exercise. This old idea of "letting up" is an obsolete idea. The teachings of the past must be ignored when there is clearer light. That every one of these four hundred and odd days can be made use of to increase the vigor, perfect the gait, bring nerve and muscular force into the highest degree of perfection in the advantage we have. Throwing that aside and the advantage which overcomes all others is lost.

There is a higher stake to play for than the winning of stakes and wagers. The contest is sure to bring out the whole strength of our antagonists. Cute, persevering, indefatigable, not a move which can better their chances will be overlooked, every effort conceivable made to strengthen their position. The whole trotting world will watch witb eagerness the result.

The acknowledged supremacy gained in the last two years will nerve the defeated to unusnal exertions, and this will excite an interest never before felt in trotting races. The number of nominations from California will give tbe opportunity to claim that it is an equal fight. Should there be twenty in the Ashland Stakes for 1884 from this Coast and two hundred from all other sections the ten per cent. will give the chance to say that it is a fair trial. This we do not find fault with if every man who has a colt engaged will realize the importance of giving it the attention it ought to have. In all probability there is not one individnal who is not in a more favorable position to give this care than we, and should it prove that the preaching and practice do not tally it must be ascribed to adverse circumstances beyond control. With one nomination there is just the same cause for unremitting attention than if there were half a score, Every day mnst be made the means of progressing toward tbe desired point. There must be contentment at a fair degree of advance. But to keep an improving rate it is necessary that there should be constant study. If the colt does not improve there are causes which it must be the endeavor to discover. When there is a retrograde movement be assured that something is wrong, and that something usually discernable to one who will seek with diligence, and award with discrimination.

"Turning out" is a favorite course of proceedure when the trouble baffles the penetration of the trainer, but "just as sure as eggs is eggs" that course will not answer with colts that are to trot in three-year-old stakes in 1884. And it may be that when the necessity for constant work in order to insure constant improvement is realized, there will be an increase of attention to discover the ailment, and a better remedy than a complete cessation of exercise. This, of course, only applies to cases where tbere is not an apparent injury. Should there be lameness, or an accident likely to be aggravated with work, sucb as a blow to the knee or shin, or cntting of the quarter, or a strain, etc., rest is imperative.

With care, however, these accidents are not so likely to occur, as a lack of improvement from hitching, single-footing, shortening of the stride, pulling, driving on one rein, irritability, unsteadiness, loss of speed and some other things of the same nature, and which can usually be remedied by a change in the management.

It may be premature to discuss the question before tbe actual standing of tbe stakes is known, though as every person who has made a nomination is aware bow he stands, we earnestly urge them to commence to prepare for the fight at once, and never slacken an effort from this time henceforward.

The moment the President and Directors of tbe State Agricultural Society became aware of the objectionable features incorporated in the trotting stake for two year-year-olds tbe order was given to the Secretary to withdraw it.

The error came from a misunderstanding, and as the matter was treated fully in the paper of last week there is no necessity for further comments.

We felt fully assured that when tbe explanation came it would be satisfactory, and such is proven to be correct. When tbere is a regular meeting of the Board it is likely that several trotting colt stakes will be opened for discussion at the fair this fall.

HONOR TO WHOM HONOR IS DUE.

There is no question that the error of the *Turf, Field and Farm* in relation to the education of Wildflower, Bonita, Marlet and others arose from Mr. Marvin having Wildflower and Marlet in charge when he made the Eastern trip. The letter from * * * corrects the error, and places the credit where it properly belongs.

There is not a particle of doubt that Mr. Marvin would have done the same if his attention had been called to the article.

With the number of colts in training at Palo Alto several men are required to teach them, and the pupils which were under the charge of McGregory are the best recommendations as to his efficiency as a tutor.

A very remarkable thing in Wildflower was the lowering of 3:22 as a yearling to the 2:21 of a year later. This should be an incentive to those who have colts which did not show as well as some others in their yearling form, for the comparatively slow youngster when one and two years old may be the crack of the three-year-olds.

The Daniel Cook Sale.

The auction sale of the stock of the late Daniel Cook took place at the Oakland Trotting Park last Wednesday, and was the occasion of a grand gathering of horse fanciers and solid citizens, and was notable for the presence of many gentlemen as bidders and buyers who have not heretofore evinced any interest in the well-bred horse. Mr. Sam Whitehead wielded the baton. The following list of sales includes the principal numbers in the programme, several roadsters and some utility stock being sold in addition. The total proceeds were about $35,000.

1. Nellie Irvington, bay mare, foaled 1877, by Irvington, dam Lady Allen, gandam Peanuts. Stinted to Del Sur. D. McCarthy.....$210 00
2. Lady Slasher, bay mare, foaled 1867, bred by A. Mailliard Esq., Bordentown, New Jersey. Ay Slasher, by Childe Harrold, by imported Sovereign, by Emilius, Sarah Washington, etc. Lady Slasher's dam by Vermont Hambletonian. Stinted to Steinway. S. Gamble..... 200 00
3. Ohita, iron grey mare, foaled 1860, by Nutwood, first dam Maud M, by Stockbridge Chief Jr., second dam by Belmont. J. S. Steinberger..... 370 00
4. Nourmahal, brown mare, foaled 1863, by Simpsou's Blackbird, first dam, white mare, brought from Cleveland, O. to Iowa; second dam by Spotted Ranger, called an Arabian. Stinted to Steinway. J. B. Haggin..... 350 00
5. Carrie Clay, grey mare, foaled 1876, by Coaster —Calypso by Mambrino Chief. S. Hart..... 640 00
6. Crazy Jane, sorrel mare, foaled 1868, by John Nelson. Mr. Nielson..... 107 50
7. Kishemcower, bay mare, foaled 1872, by Hamlet —Jennie, by Star Davis. M. Biggs..... 585 00
8. Kity, brown mare, by Speculation—Kitty Mills, by Burr's Washington. M. Carter..... 265 00
9. Gilda, chestnut mare, thoroughbred, by imported Mango—Juliet, by imported Sovereigu. Stinted to Steinway. J. Newman..... 145 00
1. Grapevine, bay mare, foaled 1867, by Whipple's Hambletonian. Stinted to Steinway. S. Hart..... 475 00
11. Fannie Malone, bay mare, foaled in 1866, by Niagara—Fannie Wickham, by imported Herald. Stinted to Steinway. C. O'Connor..... 220 00
12. Dazzle, chestnut mare, foaled 1870, by Billy Golddust—by Jehu, a son of Sherman Black Hawk. Stinted to Steinway. M. Bulger..... 330 00
13. Softly, bay mare, by Speculation—Lady Softly. Stinted to Steinway. J. C. Cousins..... 170 00
14. Leah, bay mare, foaled 1868, by Woodford Mambrino—by Alexander's Abdallah. Stinted to Steinway. S. Hart.....1180 00
15. Sciatica, iron grey mare, foaled 1873, by Shiloh —imported Lady Egerton, by Ratan. Stinted to Steinway. E. Newland..... 135 00
16. Katie G, bay mare, foaled 1878, by Electioneer. —Fannie Malone, by Niagara. Stinted to Steinway. S. Hart.....1000 00
17. Brnnette, brown mare, foaled 1867, by Rifleman—Fannie Fraser by Bertrand. Stinted to Del Sur. J. L. Jones..... 300 00
18. Imogene, bay mare, foaled 1876, by Norwood, —by American Star. Stinted to Del Sur. A. T. Hatch 410 00
19. Lady Dudley, sorrel mare, foaled 1869, by Tom Dudley—by Bertrand, Jr. Stinted to Steinway. J. H. Teunent..... 200 00
20. Maguire Mare, brown mare, foaled 1870, said to be by a Morgan Horse out of a Black Hawk mare. D. McCarthy..... 135 00
21. Lady Winkley bay mare, foaled 1866, by Signal —by Illinois Medoc. Stinted to Steinway. C. O'Connor 130 00
22. Ellen Swigert, brown mare, foaled 1872, by Swigert—Blondina, by Mambrino Chief. Stinted to Steinway. M. Biggs.....1250 00
23. Petaluma, sorrel mare, by Belmont. Stinted to Zeta-Phi, by Monday. — Bergelin..... 25 00
24. Sweetbriar, bay mare, foaled 1875, by Thorndale—Ulster Queen, by Rysdyk's Hambletonian. Stinted to Steinway. L. J. Rose.....1300 00
25. Maud M, gray mare, foaled 1868, by Stockbridge Chief Jr.—by Belmont. Stinted to Steinway. J. C. Wolfekill..... 350 00
26. Tiffany Mare, bay mare, ——, the dam of Gibraltar. Stinted to Steinway. A. T. Hatch..... 275 00
27. Phaceola, roan mare, foaled 1877, bred by L. J. Rose, San Gabriel, Cal.; by Silverthreads—Minnehaha. Stinted to Steinway. S. Hart.....1075 00
28. Ella Elmo, chestnut mare, foaled 1879, by Seale's Elmo—Maud M, by Stockbridge, Jr. Stinted to Corbitt's Arthurton. J. Walkington..... 205 00
29. Ella Patchen, iron gray mare, foaled May 12, 1877, by Geo. M. Patchen, Jr.—Maud M, by Stockbridge Chief, Jr. Stinted to Steinway. D. McCarthy..... 315 00
30. Annie Laurie, bay mare, foaled 1877, by Echo—by Jack Hawkins. Stinted to Steinway. S. Hart.... 830 00
31. Maud, gray mare, foaled —, pedigree unknown. Stinted to Grand Central. J. L. Jones..... 155 00
32. Norfolk Mare, bay mare, foaled 1873, by Norfolk, dam unknown. Stinted to Steinway. J. S. Burpee..... 170 00
33. Ellen, chestnut mare, foaled —, by Jack Hawkins, dam unknown. Stinted to Steinway. A. W. Glass..... 145 00
34. Contra, bay filly, foaled 1879, by Electioneer, —Mrs. Newby, by Cheatham. A. J. Talbot..... 162 50
35. Lady Budd, chestnut mare, foaled ——, by Belmont, dam unknown. Stinted to Steiuway. E. Newland..... 200 00
36. George Wiley, black colt, foaled April 16, 1881, by Elmo—Tom Maguire mare. W. T. Coleman..... 260 00
38. Graves, chestnut gelding, foaled 1871, by Whip-Hambletonian—Rose Austin. H. Washburn.....1510 00
39. Danville, bay gelding, foaled April 18, 1881, by Whipple's Hambletonian—by Speculation. W. T. Coleman..... 425 00
40. Victory, chestnut gelding, foaled March 20, 1884, by Whipple's Hambletonian—Katie Tricks. W. T. Coleman..... 510 00
41. Dew Drop, iron grey gelding, foaled May 7, 1880, by Echo—Sciatica, by Shiloh. Dr. Dutch..... 210 00
41. Allie Whipple, bay gelding, foaled April 7, 1880, by Whipple's Hambletonian—Martha Washingson. Dr. Dutch..... 765 00
43. Redwood, bay gelding, foaled 1867, by Kentucky Hunter—by Belmont. D. McCarthy..... 355 00
44. Costa, iron grey colt, foaled April 17, 1882, by Steinway—Carrie Clay, by Coaster. S. Hart..... 650 00
45. Clermont, chestnut colt, foaled May 8, 1882, by Steinway—Lady Dudley, by Tom Dudley. M. F. Tarpey..... 200 00
46. Belnor, bay colt, foaled April 22, 1881, by Strathmore—Carrie Clay, by Coaster. S. Hart.....1880 00
47. Standard, bay colt, foaled May 12, 1881, by Steinway—Maud M, by Stockbridge Chief Jr., W. T. Coleman..... 640 00
48. Constantine, dark bay colt, foaled March 28, 1882, by Steinway—Kitty by Speculation. J. H. Kimball..... 400 00
49. Cleon, brown colt, foaled March 19, 1882, by Steinway—Nourmahal, by Simpson's Blackbird. John Ryan..... 480 00
50. Capri, brown colt, foaled March 13, 1882, by Jas. Lick—Lady Budd, by Belmont. Entered in Embryo Stakes 1884, 1885. A. J. Zane..... 145 00
51. Clovis, brown colt, foaled April 27, 1882, by Sultan—Sweetbriar, by Thorndale. Entered in Embryo Stake. 1884, 1885. S. Hart..... 720 00
52. Conde, chestnut stallion, foaled March 6, 1882, by Abbotsford—Katie Tricks. Entered in Embryo Stake 1883, 1884, 1885. W. T. Coleman..... 525 00
53. Crecy, bay stallion, foaled April 22, 1882, by Abbotsford—Softly, by Speculation. Entered in Embryo Stakes 1883, 1884, 1885. W. T. Coleman... 255 00
54. Coligny, bay stallion, foaled May 3, 1882, by Echo—Tiffany Mare. Entered in Embryo Stakes 1884, 1885. Cal. Reames..... 190 00
55. Crisis, chestnut stallion, foaled April 9, 1882, by Alexander—Gilda, by imported Mango. Entered in Embryo Stakes 1885. W. T. Coleman..... 240 00
56. Gipsey Huntington, chestnut mare, foaled April 22, 1874, by Geo. C. Gorham—Kate, by son of Belmont..... 325 00
57. Collette, dark chestnut filly, foaled April 6, 1881, by Steinway—Nourmahal. Entered in Embry Stake, 1884. S. Hart..... 790 00
58. Princess, dark bay filly, foaled April 10, 1881, by Administrator—Priceless, by Volunteer. Entered in Embryo Stake, 1883, 1884. C. Derby.....2170 00
59. Zola, chestnut filly, foaled April 15, 1881, by Steinway—Fanny Malone. Entered in Embryo Stake 1874. M. Carter.....1660 00
60. Charity, bay filly, foaled April 15, 1881, by Steinway—Kishemcower, by Hamlet. Entered in Embryo Stake 1884. J. H. White..... 750 00
61. Hortense, bay filly, foaled April 11, 1881, by Abbotsford—Crazy Jane, by John Nelson. Entered in Embryo Stake 1883, 1884. W. T. Coleman..... 400 00
62. Anna Titus, bay filly, foaled May 10, 1881, by Echo—Tiffany Mare. M. Carter..... 470 00
63. Solo, gray filly, foaled April 14, 1881, by Steinway—Sciatica, by Shiloh. John King..... 300 00
64. Capella, bay filly, foaled March 29, 1882, by Steinway—Kishemcower, by Hamlet. Entered in Embryo Stake 1885. J. C. Wolfskill..... 600 00
65. Clito, bay filly, foaled May 1, 1882, by Steinway—Maud M, by Stockbridge Chief Jr. Martin Welch..... 300 00
66. Casa, roan filly, foaled March 22, 1882, by Steinway—Sciatica, by Shiloh. C. Kiernan..... 170 00
67. Corolla, bay filly, foaled April 3, 1882, by Steinway—Lady Winkley, by Signal. Entered in Embryo Stakes 1884, 1885. J. C. Wolfskill..... 300 00
68. Colima, chestnut filly, foaled March 15, 1882, by Whipple's Hambletonian—Ellen, by Jack Hawkins. Entered in Embryo Stake 1885. M. Carter.... 316 00
69. Nell Gould, bay mare, foaled 1877, by Elmo—Fannie Howard, by Patchen Vernon. H. D. Barrett..... 240 00
70. Bonny Blink, sorrel mare, foaled 1877, by Antelope—Mrs. Newby by Cheatham. D. McCarthy... 95 00
71. Gazelle, sorrel mare, foaled 1876, by Antelope —Mrs. Newby. D. McCarthy..... 105 00

(CONCLUDED FROM PAGE 129.)

cular neck and yet tapering nicely to throttle, a cleanly cut head denoting intelligence, and with placid eye showing that his disposition is all right, there is a combination of good qualities that make him a desirable horse in almost any place. His record of 2:30 which gives him a place among the "standard sires" was not a measure of his epeed. His former driver, A. L. Hinds, informs us that he is confident there were times when he could have driven him very close to 2:25, and, as he trotted one half-mile in a heat of two miles in 1:13 in a race that does not appear to be an over-sanguine estimate. Mr. Hinds also states that he never drove a horse that would rate along more steadily, and his endurance as shown by the race of nine heats which he won at Oakland as a five-year-old, and the race at heats of two miles with Red Cross and Bullet, was first-class.

There is no question that the union of Billy Hayward and the Poscora mare, dam of Poscora Hayward, Dr. Pardee's chestnut horse, Buena Poscora, and Poscora Belle was a grand "nick," and that these are the bright, particular stars of the family. This does not detract from the merits of the others of different maternal connections, adding to the luster and giving them additional value. As Mr. Pierce is the owner of the dam, still vigorous, and Buena Poscora and Poscora Belle, he has a good deal of interest in the Haywards, and with such representations he should be well satisfied. There is not a member of that family that has not the fast-trotting knack and as we find it in a large majority of the get of their sire it is an established trait. In 1877 Alonzo trotted the nine-heat race alluded to and in which were Kirat, Pat Hunt, Vashti, Lady Lightfoot, Gray Steel and Alice Garrett. It was a remarkable race throughout and showed the winner to be as staunch as his sire.

In 1878 he won three races, one of these being at seven heats. In these he beat Patchen Girl, Belle, Prophet and Alice Garrett. In 1879 he trotted a remarkable race, although he was beaten. It was at the time General U. S. Grant visited Oakland Park. Pete won the first heat in 2:28, Alonzo winning the second in 2:30, Pete distanced. He won the third in 2:32½, and then fought the battle to the end, being second in the sixth and seventh heat, the race won by Volunteer.

At the San Jose fair in that year he beat Zero and San Juan Belle, winning the first, third and fourth heats in 2:34, 2:35½, 2:33¾; Zero the second, which it was evident the driver of Alonzo did not care about getting, in 2:36¾. He won the first and second heats at Petaluma, his old antagonist, Volunteer, winning the race, but this may have resulted from his driver taking umbrage at the action of the judges in not giving him the fifth heat, and sending him to the stable. This was the last year that Alonzo was trained, since that time having been used on the road. In this place he is hard to beat, being pleasant to handle, safe in any position, and "no road is too long for him."

Before we close this brief sketch we again call attention to the portraiture, as it is such a correct representation of the horse.

BASE BALL.

Rice and Harlow Boyle will make their reappearance on the diamond with the California Club, after an absence of over three years. Both are good and reputable players.

A benefit has been tendered Jim McDonald. Piercy, Denny and Smith of Knickerbocker fame, will guard the bases on that occasion. They will be well guarded.

Court Commissioner J. J. Mone has been siezed by the base ball fever and will preside over the destinies of the Niantics.

A nine composed exclusively of insurance men has been organized and will probably join one of the Leagues.

Frank Smith, formerly short stop of the Californians, will resume his position between the bases this season.

Percy Jacobus and David Rich, the stockbroker, are doing considerable quiet work for the Oakland clubs.

The Renos, under the management of Hennessy, promise to make it lively for the other clubs.

Denny and Irwin leave for the East during the latter portion of March.

The Nationals will be managed by Edwin Morris.

Answers to Correspondents.

T. T. Unkless, Petaluma:

Kentucky Hunter (Skenandoah), bay horse, foaled 1854, bred by John H. Sykes, Lennox, Madison County, N. Y., by Broken Legged Kentucky Hunter; dam's pedigree unknown. Brought to California in 1861 and died in July, 1871.

The Eastern Agents of the Associated Press have sent several dispatches over the wires during the past week announcing that Gov. Stanford will send a stable of thoroughbreds to campaign in the East this year. What facilities these reporters enjoy for obtaining information we know not, for if Gov. Stanford has any such intention he has not made it known at Palo Alto.

Spring Race Meeting.—The nominations and entries in stakes and purses for Spring Meeting of Pacific Coast Blood Horse Association closed on Thursday. The indications are that the list will be full, but the date of closing too recent to give the entries this week.

POULTRY.

Modern Artificial Hatching and Hatching Apparatus.

Part III.—Incubators.

Modern incubators may be divided iuto two well-defined classes—the hot-air and the hot-water. Heat is generated for nearly all of them from coal-oil. In the hot-air macbiues the heated air is separated from the fumcs of the burning oil and projected upon the eggs without other medium for carrying it; in the hot-water, heat is couveyed from tbe lamp to the eggs by means of heated water. In tbe bot-air machines tbe temperatnre is supposed to be kept uniform either by opening and closing a valve or its equivalent in the throttle leading from the heat-produciug device to the eggs, or by increasing and diminishiug the consumption of fuel; in tbe hot-water this regulation is supposed to be accomplished by openiug and closiug valves in flues over the eggs, and, in some, by increasing aud diminishing the consumption of fuel as well, the devices by which these movements are automatically actuated, or supposed to be, being far more numerous than any otber requisites in hatching machines. (In my remarks I shall purposely avoid commeut ou the priuciples of machines without automatic regulating apparatus, for without snch, to a vast majority of people they are useless. My idea of this feature of au incubator is a machine which, no matter how excellent its other points, is impracticable unless it will run witbout attention for twenty-four hours at least, if called upon, after having been properly provided and adjusted, maiutaimng heat at the eggs, even though there be a considerable variation in the temperature of the room meantime, to within one or two degrees of a given point. This is necessary for sleeping-time and mauy contiugencies.) In bot-air machines humidity is supplied either by charging the heated air with moisture before reaching the egg-chamber or by placing the eggs on damp sand or its equivalent; iu the hot-water, by sprinkling once or twice daily and by evaporation of water from pans, sponges, etc., under them.

It is a well-known principle in natural philosophy that a body of air heated (and therefore rarefied and expanded, more than that which surrouuds it, seeks a higher position, with force varying according to the intensity to which it is heated and the height to which it is carried in a column without being absorbed or diffused. This principle, while it is of the greatest utility in accomplishing desired results in an incubator, if nsed to the best advantage, is oue which renders hot air an exceedingly capricious aud ungovernable thing to handle if not thoroughly understood. If heat be introduced into one end of a box, for instauce, and it is attempted to take it across to the opposite end without other medium for carrying it, aud maintain the same temperature on the entire lower part of the box, it could be more nearly accomplished by generating heat considerably below the box, and, taking advantage of the upward pressure created before entering, carrying it quickly across the chamber. But even then it would be impossible to accomplish well what is desired for the purposes of incubation, for, upon enteriug the box, most of the heat would rush to the top, and, no matter whether the point of exit be located at the top or bottom of the opposite end, the heated air could uot he made to move across uniformly at the bottom, where the eggs in an incubator must lie, though it could be approximately at the top, were that their proper location. Many incubators have been made on this principle, but are imperfect. Heated air eeeks the highest point in a chamber as unerringly as it does elsewhere; and to maintain the same temperature on the upper surface of eggs resting on or near the bottom, and where air must flow to secure the proper couditions, is simply impossible. If the openings for outgo of air be located near the level of the eggs, heat introduced at the opposite end, near the same level, would very nearly describe a semi-circle in crossiug, the central point of which would be at the top of the box, leaving the middle portion at the bottom without the proper circulation of air, and the whole surface without uniformity. Should it be attempted to carry heated air across the egge in a thin sheet, by constructing the top of the chamber close to the eggs, an approximation to uniformity in temperature could only be attained for a short distance, and that by the consumption of too much fuel, by reason of the great quantity of air which it would be necessary to heat to carry it qnickly enough across, in proportion to the number of eggs under it; and here would also come in an objectiou which can only be understood by the novice after other important reqnisites in au incubator are treated of—the heat-governing and registering apparatus. No matter what particular shape a machine may be made in, the results are nearly the same if heat be introduced at the side; and as it must be applied to the upper surface of tbe eggs, it follows that only one more place remains to us for its entrance iu a hot-air iucubator—the top. Few machines of which I have knowledge thus apply heat, and each have other widely differing principles. In the class of machiues I have meutioned, which admit air by the opening of a valve, the accumulation of heat in the generating apparatus causes a blast of hot air to be thrown into the egg-chamber, equilibrium being thus destroyed and partly recovered at each successive opeuing and closing. Iu this manuer mnch more heat is generated, and consequently more fuel is consumed, than is necessary (the portion not allowed to enter the machiue being lost iu the room), to say nothing of defective diffnsion in the egg-chamber. The best way to run these machiues would be to use tbe least combustion that would maintaiu maximum heat; but as the temperature of all ordiuary rooms varies greatly every few houre, the impracticability of such adjustmeut of consumption of oil is apparent. In these incubatore the flow of air is completely cut off at intervals, so that considerable of the timo no air at all passes into tbe egg-chamber or from it.

In the hot-water machines dead heat could be quite evenly distributed by a proper circulation of water over the eggs, but next we must consider the question of a correct circulation of air, besides other grave obstacles. Let us always remember that *heat rises*. To obtain sufficient of it at tho surface of eggs, without being compelled to accumulate more in the water than is compatible witb economy, tho chamber over eggs in such machines is necessarily somewhat shallow—that is, the water must bo near the eggs; yet the difference between the heat of the water and hatching heat at the eggs ie very considerable, and as there is in such a machine no means of forcing heat downward, except by direct radiation, the consequence is that every half inch iu height in the chamber represents a marked difference in temperature. Circulation of air in this class of machines is limited almost wholly to what is produced in the regulation of heat, while allowing a portion of heated air to escape upward through the opening of a valve in the flue before alluded to, and the small amount produced by any leakage around such a valve. Tbe sensitive motor of tbe automatic governmeut must he above the eggs, below the water, and consequently in different heat from that at the egg-level, aud it follows that the eggs may be materially cooled or beated before tbe regulation of heat is affected by the opening or closing of the valve. The regulating device in such a coustruction is influenced both by the beat from above aud by the eggs and colder air below, each being changeable in its relations to the otber, according to the proportion of heat diffused from the bottom of the tank and the temperature of the room outside. Perhaps this may be more plainly stated by sayiug that beat is radiated from the water to uncertain distances downward, according to the beat in the tank and the coldness of the room. As iu the case of tbe bot-air-valve machines, the best results would be obtained by keeping heat in the water in proportion to the temperature of tbe room, and in most machines this would be equally impracticable, for reasons which will be shown hereafter. Tbe eggs in such incubators are placed upon bars, wire cloth and other open-bottomed drawers of different kinds, and when tbe valve above them opens, a body of hot air rushes upward and out, drawing in a corresponding body of cold air about and between them. Eggs are cooled by beiug exposed twice a day iu the process of turning, to sufficiently imitate the hen in this particular, and such successive heatiug and cooling of eggs is derogatory to correct conditions and consequently harmful. Devices have been used in some machines to temper tbe air before reaching the eggs; but air should uot be drawn to the bottom of the eggs nor upward between them at all. The gases which are constantly generating are somewhat heavier than air, and falling as they are generated, vitiate the air which is being drawn upward. The sballow chamber makes it almost impossible to correctly measure heat witbin it. A thermometer laid horizoutally will not register accurately. Tbe mercury will rise correctly enough, as that is by expansion; but when it contracts in falling, it has nothing but its own cohesion to draw the column back, and it is not to be depended upon. In some of these hot-water machines a thermometer is inserted by means of a vertical flue through the tank, the bulb being at the eggs, but tbe stem of tbe thermometer is heated much warmer near tbe tank and iu passing through it than at the bulb, and the distance is so short that a very perceptible difference is made in the registering—not uniformly, however, for, as I said before, the heat in the water must vary to produce approximate and governable heat in the egg-chamber. A short thermometer, without metallic connections, set with the stem somewhat elevated, will give the nearest approach to correctness possible in such machines.

The most absurd of all contrivances in this line I have ever seen is one where a tank of water is placed over drawers with perforated or wire-cloth bottoms, one placed above the other. The proper conditions cannot be maintained in such a contrivance. Heat must be applied from *above*, and if the lower drawer has no more than the right temperature, what must be that of the upper? This is not all. The keeping of the lower sides of the eggs in the topmost trays materially cooler than the upper is out of the question.

No machines of the hot-water class I have yet seen have been so constructed as to prevent their becoming "air-bound," that is, air collects in the pipes or tauks, and, forming impassable air-cushions, the circulation is impeded or stopped altogether. Between the lamp or boiler and the point of stoppage the water will become much hotter than that between the stoppage and the "return" or "cold" pipe which leads back to the boiler, resulting iu destroying the evenness of heat under the tank or pipes, aud the eggs suffer. This is liable to occur at any time.

A great hut avoidable fault in this class is the large quantity of water used in the tanks of most of them, presumably to "keep the heat even," as I have been told. Just how it is expected to accomplish this I have not been informed; but it must he supposed that the iuventors calculated that outside variation could not so immediately affect the eggs if such large body were used. I will endeavor to show that tbe reverse is frequently the effect. Supposing we have a machine so constructed, running in weather like that of the preseut winter, when there has been a great difference in temperature between the days and nights. The water in our machine has about the proper temperature to maintain correct beat iu the egg-chamber and allow of the opening and closing of the escape valve so as to produce the best distributiou of heat possible through the day. During the night the outside air becomes much colder, so fast does the cold increase that our great body of water cauuot be heated fast enough to counteract its effect for a long time. Through the entire night the valve over the eggs has been closed, and the lamp has been burniug at its best, yet the heat at the eggs has beeu several degrees too low. Just before the time the sun has warmed the atmosphere, in the morning, the water in the tauk has become hot enough to raise the heat at the eggs to the desired point. As the room becomes warmer the valve opens and closes automatically for a time, but finally, with further increase of heat iu the room, it remains open altogether. The heat in the tank is so great that, combined with that from the room, the temperature in the egg-chamber rises, in spite of the open valve and low flame, perhaps, and we are compelled to opeu its doors to prevent our eggs from cookiug. Experience and great care can partly obviate this, but a much more sensible plan would be to make the tank very shallow in the first place; then the small body of water could be quickly heated aud kept up to the requirements, by an automatic increase of flame at the lamp, aud, reversely, when outside heat iucreased, the lower blaze which would automatically succeed would permit the quick cooling of the water and correspondiug results. The inventors of such machines must be sadly deficient in physics did they not know that as much heat is radiated from the surface of a thin sheet of water as from that of a thick one, if the same temperature is maintained in both.

But after all, the most serious objection I entertain toward hot-water machiues, because it seems to me to be a radical defect, lies in the concentration of heat under the flue or flues when the valve or valves open to allow heated air to rush upward. When this occurs, cold air rushes in, as explained, at the bottom, from all quarters, and the hot air which was in the corners, as well as all parts of the machiue, is concentrated directly under these flues. The corners and sides of such an incubator are much the hardest to equalize the heat in at the best, and this device for governiug the general temperature destroys the last chance of equilibrium at every successive escape of hot air. Had the facilities for measuriug heat in these machines been as good as in the hot-air incubators, this all but fatal defect would have beeu generally known yeare ago—I presume it *has* heen known to many beside myself, but I have never heard the matter spoken of, nor have I seen it in print. So we observe that eveuness in heat in hot-water machinee is not affected by vertical disturbances alone, but by horizoutal as well, at the eame time and hy the same meaus.

The application of moisture is very a important and interesting consideration, and in thie respect the hot-air machines have the advantage. Chargiug the air with moisture before coming to the eggs does very well, yet the plan is not eo perfect as placiug the eggs on damp sand. As the only moieture the eggs receive, by the former plan, comes in the air, it follows that more or less moisture is administered, according to tbe amount of hot air passed to the eggs, which amount is variable according to the temperature in the room, the least, however, being sufficient ventilation for the eggs in a good machine. The eggs, remember, must be in the same heat, consequently evaporation from them is at work at all times equally, whether the equivalent in moist air is furnished or not. Continuous and even application of humidity is therefore exceedingly desirable. If the eggs are on moist sand they are in an envelope of humidity at all times very nearly the same, as the sand is heated in its proper proportion, if the machine is properly proportioned, as well as the eggs, and by the same application of heat. Other important objects are attained by sand—the keeping of the *bottom* side of the eggs cooler than the top, tbe perfect bed on which to handle and place eggs, and the economy in space attained.

In bot-water machines dependence is placed on sprinkliug once or twice a day, and upon placing pans of cold water under and near tbe eggs, to keep the lower sides cooler and to aid in maiutaining moisture. Humidity produced by sprinkling is entirely evaporated in a short time, and all that the eggs in such a machine receive otberwise is quite inefficient.

Much ingenuity has been shown in automatic heat governors. The clock work, valves, etc., in use are far too numerous for enumeration, and are, besides, much tbe least difficult and interesting features. Any clever mechanic could easily adapt and properly attach a good original principle when once understood. The heart of every system for the purpose is the sensitive device which must be in the egg-chamber, close to the eggs, and which must in some manner effect tbe opeuing and closiug of valves or tbe difference in consumption of fuel, or both. The commonest form of this instrument is tbe "tbermostat," formed of strips of two or more materials of differing susceptibility to expausion in heat, riveted together their entire length, the tongue thus formed being rigidly fastened at one end and free at the other. Considerable tact has been used in rechristeuiug this device, and we have it under a great variety of names. It will easily be understood that it "warps" one way or the other, according to the temperature in which it is placed. In some machines direct connection is made with the "escape" of clockwork, and in others the circuit of an electric battery is opened and closed, the energy supplied by the battery either actuating the "escape" or accomplishing its ends direct, without the aid of clockwork. The great fault of most of these devices is the large amount of snbstance to be heated through to do the work. Motion and power are required, and it is just here that electricity, that wonderful and much-abused agent, lends its aid. The variatiou of, say, half a degree, in a temperature of about 105 degrees Fahr., cannot be expected to produce much motion or much force from anything, but it is quite sufficient to alternately separate and join two pieces of platinum, and, with the aid of electricity, that is all that is required. By this ageut it is made possible to so construct a motor that, being of slight substance, heat or cold has its ultimate effect upon it quickly. There need be no great variation, if it be only quick, sure and uniform.

The eare of electric batteries of incubators has been, it seems to me, a sort of bugaboo to people in general, and the sellers of incubators without electrical connections have not heen slow to make the most of this senseless superetitiou. When I commenced the use of electricity for the purpose I had uot the slightest knowledge of a battery; I have since run four kinds of incubators with electricity, and I never yet lost au egg thereby. I regard the electric battery as by far the most reliable of all points about the majority of machines using them. It is like a clock; wiud it up and it will ruu; do not wind it and it will stop—you alone are responsible, providing you have the necessary instructions. I consider that a person who is not intelligent enough to give a battery the requisite care is unfit to run an incubator, no matter how simple it may otherwise be. Numerous other contrivances are used for the purpose, but I believe nothing has been or will be made to take the place of electricity successfully. I repeat it: A body of any material which would vary so as to give sufficient motion and power to actuate the "escape" of clockwork, even, by direct inherent energy, bas too much substauce to reach its ultimates of chauge in a variation of a degree or so, and do it *quickly enough*, so that neither before nor after the reversing of the governing device will heat go up or down appreciably in the egg-chamber.

I am not in favor of the egg-turniug devices in use in some machiues, for several reasons: In the first place, many more eggs cau be put into a machiue which does not use one. Secoudly, as the reader who has followed me thus far knowe, it is of the highest importance to handle the eggs every day and inspect them frequeutly with a good tester, and this renders such device of little use. Eggs can be turned very quickly by haud with a little practice. But the eggs need exposure to cool air just about as much every twelve hours as the time consumed in turning them by hand, and this alone settled the matter with me loug ago.

I have already touched upon the subject of thermometere, but only as used in hot-water machiues. No metal sbould be allowed to be near the bulb, aud should only be as near as absolutely necessary to the stem, if at all. Take a strip of metal correspondiug in thickness, width and length to the scale-plate of an ordinary thermometer and suspend it horizontally near the top, or where the heat is introduced into the egg-chamber of a hot-air incubator. After leaving it there say half au hour, it will be found to be much hotter than the surrouuding air. It has absorbed heat faster thau it has radiated it, hence the accumulation. Now suspend it close to or below the egg-level for a like period, also horizontally. Leave it half an hour and you will find it is colder than the atmosphere it is in. Suspend it vertically, the top near the iucomiug hot air and tbo bottom at or below the eggs, and the top will be hotter thau the air abovo, aud the bottom cooler than the air below, whou you examine it half an hour later. At a certain point between the ends it will be of the same temperature as the snrrounding air. It is easy to understand from this why I iusist upon metallic substances beiug removed from the bulb of thermometers, without further explanation.

It would be a reflection upon the sagacity of my readers who have followed this treatise from its commeneement, to advise them to accept with caution the averments of incubator-sellers who say their machines will "hatch every fertile egg," and the like. The most experienced aud well-meaning hen could not do this, and every raiser of poultry kuows it. Neither will I eaution them against extravagant professions regarding economy in coal-oil, for it is too apparent tbat a sufficient *flow* of heated air can only be attained hy adequate cousumption of fuel. It is true that some machiues use oil out of all conscience; it is also true that some burn so little that fresh air and eggs rarely meet except outside the egg-chamber, while being turned. If an incubator were constructed with no circulation of air at all, heat could be maintained with a smaller consumption of oil still! I venture to say that a flat blaze the eize of your smallest

finger-nail could be made to furnish sufficient dead heat over 500 eggs; but the false economy of this would be painfully apparent when the percentages were computed at the end of the hatch.

In the foregoing I have embodied what I consider to be the true idea of what an incubator ought and ought not to be, in the most essential particulars. Minor matters, relating to convenience, etc., are left out entirely. I do not wish to be understood as utterly condemning every incubator containing a bad principle or in want of some good one, but I do insist that my criticisms of principles are simply just—no more nor less. Every person who has attempted artificial incubation unsuccessfully will recognize the correctness of my strictures as they apply to the machines working his discomfiture; and everyone who has succeeded will allow that it has been done with machines having the fewest of the faults touched upon, and that the degree of his success has been not only in proportion to their absence, but also in proportion to the presence of the principles I have laid down as correct. G. E. D.

East Oakland, Feb., '83.

Judge Hayes and Simpson's Blackbird.

Judge Walter I. Hayes of Clinton, Iowa, in a letter to the *Turf, Field and Farm*, says: Your "impetuous" correspondent Lexington falls into quite a number of errors in his communication to the last *Turf*, but as I am too busy at present, and too peacefully inclined to enter into anything like a controversy, I will only mention those that refer to myself. He cites me as a convert to the running-blood theory for trotters, and as one who has experienced a great change of heart on the subject, and as proving my faith by my works in buying daughters of Simpson's Blackbird, "out of thoroughbred mares," for breeding purposes, etc. In all of this he is mistaken. While I am always open to conviction, glad to learn and free to admit change of opinion and past errors, there has in fact of late been no particular change in my ideas upon this important question. Neither have I bought any daughters of Simpson's Blackbird. The youngest daughters of that excellent horse are now over twenty years old, and there are but very few alive. In fact, I know of but about three all told, and one of those, the dam of Little Fred, 2:20, I have owned for a long time. None of these are out of a thoroughbred mare. I do not know to a certainty, but from the character of the early horse stock here, and from what I have seen of his get, I doubt if he ever served a thoroughbred mare in Iowa, and feel perfectly confident that in no event did he serve many, and I know that no part of his well-earned good name rests upon any such foundation. Simpson's Blackbird was so nearly thoroughbred that it is quite fair to concede him to that side of the argument (with a thought, however, of the possible effect of the outcross), and, in doing so, will say that it seems strange that there is so much argument by its advocates in favor of running blood, as a general term, in the trotter, without any attempt to limit its necessity and utility to those strains that have demonstrated an ability to mix kindly with trotting blood. Without now looking over trotting pedigrees at all to post up, I will say that I have failed to observe, to an extent sufficient to make any lasting impression, the blood of any late day thoroughbred contained in enough trotters and through enough different channels and different blood lines to make it reasonable to suppose it has any great effect, outside of Gray Eagle, American Eclipse, Simpson's Blackbird, and, perhaps, mildly, imported Trustee.

The fact that a trotter or a certain strain of trotters have a particular strain of thoroughbred blood mixed with trotting blood, of itself does not argue much for the thoroughblood, but rather weighs for the trotting blood in overcoming it, but when this particular strain of thoroughblood crops out in different fast-trotting channels, through different sources and with different crosses, it begins justly to attract attention and weigh as an argument. Simpson's Blackbird is a good illustration of the idea aimed at, namely, the difference in value of thoroughblood abstractly, and of particular strains of it, in a trotting pedigree. This horse was brought to this locality at a time when there was little horse interest and less good blood, and still, with these unfavorable surroundings and limited opportunities, he sired trotters and made a lasting impression on the horse stock of this locality. He has a son with a record of 2:22, and a grandson with a record of 2:19½, another grandson with a record 2:20, and probably a dozen colts with records of from close to 2:30 down to 2:45, in all a roll of honor that many owners of trotting-bred stallions would be proud of. On the other hand, he was followed in this locality by many thoroughbred stallions with far more aristocratic lineage, from a racehorse standpoint, such as sons of the great race mare Fasbion, of imported Bonnie Scotland, of imported Australian, of Van Waggoner, of imported Leamington, of Lexington, of imported Monarch, of imported Scythian, etc., etc., all of whom had vastly better opportunities in the stud than Blackbird; still no one of them has made the slightest good impression on the trotting and roadster horse interests in Iowa, and all put together have not sired as many horses capable of beating four minutes as he did capable of beating three minutes. To my knowledge some of these stallions have been largely bred to the daughters of Blackbird, and the produce of none have equaled the dam in trotting ability, nor, with all the difference in age, been worth as much in the market. Now, in seeking to breed trotters, even with a thoroughbred foundation, with such results and arguments as guides, and I imagine it is about the same everywhere, it would seem to me quite sensible to build up from Simpson's Blackbird, and that such course would afford good ground for hope of success, while if treated merely as an argument for thoroughblood in the trotter and an indiscriminate use of that blood was indulged in, I, at least, should expect failure.

The discovery of a method for producing aluminum cheaply enough for practical uses in art and manufacture seems to be a fact. It is said to have cost the inventor thirty years of labor and $150,000 to perfect his method, but as it is also reported that offers for patent rights for various countries already amount to several millions of dollars he is likely to reap a rich reward for his labors at last. From all accounts, it is creating a most excited interest among manufacturers everywhere, and we trust those in the bicycle trade will be prompt to test its practicability for uses in the construction of 'cycles.

The latest news from Yakima is of the most disastrous character. Forty degrees below zero. Cattle and sheep dying in great numbers.

Early in the spring Mr. Beach will place Maggie Arnold in charge of McManus, who will put her in training at the City View track.

The Chinese Avengers.

Random Sketches.—No. 5.

[Written for the Breeder and Sportsman.]

The chief headquarters for all the old-time athletes and sporting men in San Francisco was a place euphoniously called Bill Davis' Slaughter House. This was ostensibly a saloon, but nearly all the business of the house was done in a large room at the rear of the bar, in which all the young aspirants for pugilistic fame used to make their first appearance. As well as being the resort for all the sports, Bill Davis' Slaughter House was the place in which all the practical jokes were put up and many a one was perpetrated inside the place itself. It was quite the proper caper at Bill Davis' to take hold of some country greenhorn who thought he could box a little, and steer him across the hardest hitter in the place, who, as soon as the boys had got through laughing at the greenhorn's clumsiness, would sail in and reduce his face to a jelly as quickly as possible. If the victim was game the amount of this kind of fun he would furnish was limitless, but generally one bout was enough and the victim declined a second invitation to knock the entrails out of an alleged softer. In justice to Bill Clarke, who is still alive and now keeping a sporting house in New York, I believe, I must say that he would never allow a joke to be carried too far nor a man to be badly hurt in his house. One of the most constant frequenters of Bill Clarke's place was Bill Daily, who is known to every man, woman and child in the State as the life-saving hero of Santa Cruz beach. Daily was full of fun and thought no risk too great nor trouble too much to spend for a good joke. He was always in wonderfully fine condition in those days; could row a boat against any man on the coast; could run, jump and wrestle and above and beyond all was a first-class boxer.

One day Clarke and Daily were discussing the Chinese question when Daily chanced to remark that though he hated a Chinaman worse than poison he did not like to see them abused and beaten without cause.

"That's so," replied Clarke. "It's a durned shame that the gang down at the gas house should lay for every Chinaman that goes down on the flat after dark and beat him for no other reason but that they are able."

"It would be a good thing to teach those fellows a lesson," said Daily. "What is the best way to do it, Clarke?"

Clarke thought for a moment and then suddenly his face was illumined with a smile and he said: "By gum, Daily, I've hit on a good scheme. Lets you and I fix up as Chinamen and sneak down to the flat after dark and when some of them gas house fellows start in to lick us, turn round and give 'em a surprise party."

Daily jumped at the idea. It was a good joke and besides it gave him boxing exercise not so tame as that with the gloves. Tom Gossman, the property man of Maguire's old theater, was taken into the scheme, and next night Daily, who is a smooth-faced man and wears a wig, was fixed up with an elegant queue and with a suit of Chinese clothes and a basket of washing looked the Chinaman to the life though a trifle too big for a Mongolian.

It was winter time and by seven o'clock, when Daily in his Chinese rig sneaked down to Brannan and Third streets, the sharpest eyes could not penetrate his disguise. Seeing a couple of toughs coming along, Daily put his basket down on the sidewalk as if for a rest and waited for developments. As the toughs passed him one aimed a blow at his face while the other kicked the basket over into the muddy street as though it was the best fun in the world. Their fun did not last long, for in an instant the supposititious Chinaman had grabbed the pair of them, and beaten their heads together until they howled with pain. After rolling them in the mud, Daily marched off home, changed his clothes and went up to Bill Clarke's to report progress.

Clarke was tickled to death at the success of the joke and next night determined to act as the Mongolian avenger himself. Again Tom Gossman's aid was called in and in a short time the retired pugilist was effectually disguised as a Chinese rag picker.

In the evening, Clarke made his way to the gas house district and got ready for the fun. Soon a couple of laborers came along going home after work. Seeing the supposed Chinaman raking patiently in the gutter, one said to the other:

"Whist, Mike, look at that dammed heathen there. The nerve of him, coming to this end of town."

"Aisy, Pat," said the other. "Let's walk by him as though we took no notice. I'll trip him up wid me feet and yon fall on the blagard and squaze the life out of him."

The programme was a good one, but did not work, for the instant Mike reached out his foot the despised Mongolian knocked him down with a blow that would have brought Mace's Maori to his knees, and then proceeded to wear out his rag crook over the head and shoulders of the other. The attack was so fierce and so unexpected that it was more than the two gentlemen could stand and they took to their heels, while Bill Clarke hurled a volley of imitation Chinese oaths, interspersed with a little good American, at their departing figures.

Clarke and Daily kept this fun up for nearly two weeks, until it chanced that one of the parties they had taught a lesson was so far able to sink his pride as to tell a friend that he had been whipped by a big Chinaman. His friend had a similar experience to relate, and the affair was talked over until a dozen men had put themselves on record as being the victims of Mongolian hate. Then revenge was decided on and an ambuscade arranged. This was too good to keep and the plan to waylay and pulverize the audacious heathen was told to Daily by one of the victims, who little suspected that he and the athletic heathen were one and the same.

As soon as Daily got all the particulars of the ambuscade he posted off to Bill Clarke and warned him not to go on the flat that night in Chinese dress.

Now it chanced that at that time a burly bruiser who was always blowing about his skill as a fighter and his pluck used to haunt the slaughter house. For some reason Clarke had taken a great dislike to this man, whose name was—well, call him Barry, and the idea flashed across his brain that it would be a good scheme to fix Barry up as the Chinaman and find out what kind of a fighter he was in a crowd. He communicated his idea to Daily, who at once fell in and the pair took Barry aside and with many pledges of secrecy told him of the fun they had been having as Chinamen. Barry dropped instantly into the trap and begged to be allowed to take a hand in the game himself.

"Well, no, Barry, I can't allow that," said Clarke. "Three or four of those fellows might fall against you together and I would not like to see a friend of mine beaten up for a joke."

"Oh nonsense," replied Barry. "I can whip a dozen of those loafers, and I flatter myself that if it is safe for you and Daily it is a durned sight safer for me."

"All right, then, if you feel confident you can get away with a crowd there is no harm in your trying," replied Clarke, and in a short time Barry had donned the rig and started out on the warpath.

Daily and Clarke followed him to see that no serious injury was done to him and also to get a share in the fun. They had not long to wait. Barry was stooping down groping in the mud when three powerful men walked up to him. He was ready, but so were they, and failing to take them by surprise the pseudo Chinaman had the worst of the battle from the start. He fought valiantly for a little time, but others came to the assistance of his attackers, and seeing that he had no other show to save his hide he ran away at a rate of speed that would put Meyers to the blush. Clarke and Daily managed to get to the Slaughter House by a short cut ahead of Barry, but were scarcely inside before he came in. The sight of his torn and disordered condition was too much and the pair burst out laughing. In an instant Barry saw that some job he did not understand had been put upon him, and fearing to face the ridicule he felt was awaiting him, he rushed out of the place and was never seen there again.

Many a time since then Clarke and Daily have had to listen to the story told them by the very men they had assaulted, but up to the present time no one but myself was ever let into the whole secret of the affair.

A Trapper at Home.

I found a man the other day who never took a newspaper. He lives in a narrow canyon that heads away up in the Blue mountains whose ever vernal crowned summits are not half as "green" as is this man's knowledge of this glorious land of the free. His family consists of a wife and nine children. The oldest, a girl of seventeen, has never been ten miles from the parental abode. Bangs, chignons, pull-backs are unknown to her. Moccasins answer in lieu of French gaiters. The rest of the children were running around bare-footed despite the cold weather. Five dogs were ready to greet me with a noisy welcome. Twice a year the old man goes to town after "flour'n merlasses an' aminitiou." His whole time is devoted to hunting and trapping by which he realizes quite a "snug little sum o' cash dur'n' ther year." His gun is one of the old-fashioned long-barreled muzzle loaders and, as he expresses it, "shoots to kill." He has about fifteen acres of land ("tater patch where we raise crook neck squashes an' sich") fenced in with elk and deer antlers so as to be hog tight. Just as the old man began to tell me how the recent cold weather reminded him of the time when it was so cold that he used to find elk, deer, bears, and other wild animals frozen "plum stiff" standing in the snow, and how he used to "snake 'em hum an' tie 'em down an' pet 'em 'til they were right smart fat an' then kill 'em," one of the numerous cats ran up to the girl and began to sharpen its toe nails on the girl's shapely ankle which caused "Hertha" to give a kick that landed the kitten in a large pan of sour dough that was near the fire-place. When it got out it presented a doughful appearance.

After this incident, the dough pan was set upon a shelf and covered over with a dry coyote skin, and then the old man asked me where I come from, where I was going, and how long I would stay. He said I need'nt be in a hurry, as it was near dinner time and it wouldn't take the old woman long to stir up some bread and set a "snack" on the table, but I was in a trifle of a hurry and couldn't wait.

Libels on American Pork.

The cry against American pork and hog products which was raised in various countries of Europe a year and a half ago has not wholly died out on the continent, and there are indications that a decree prohiting their importation into Germany may yet be adopted by the authorities of that country. German pork dealers, who believe that they see in the increasing demand for the American article an element of injury to the business which they are conducting with several European countries, are probably at the bottom of the threatened interdiction. Americans will be somewhat surprised to know that the same article of food which is consumed in such enormous quantities in this country becomes dangerous to health when it reaches German territory. The fact is that American hogs are corn fed and better fed than those of any other country in the world, and that the selection, inspection and slaughtering of American hogs, as well as the preparation and salting of their meat, is unequaled in any other country in the carefulness and attention which is paid in this particular industry.

The cheapest meat for the farmer is mutton. It may safely be said to cost nothing, as the fleece from a sheep of good breed will pay for its keeping. Then, for additional profit, there is a lamb or two, the pelt of the animal, if killed at home, and the riddance of the pasture from weeds, to which sheep are destructive foes. With the exception of poultry, mutton is almost the most convenient meat for the farmer. A sheep is easily killed and dressed by a single hand in an hour, and in the warmest weather can be readily disposed of before it spoils. Science and experience both declare it the healthiest kind of meat.

Stock Sales in Montana.—W. Raymond, Belmont Farm, Montana Territory, has sold the following trotting stock:

To J. H. Baker, Virginia City, M. T., the bay stallion Chicago, by Com. Belmont, son of Alexander's Belmont, dam Sue Preston by Forest King, son of Mambrino Patchen.

To H. M. Kirk, Gallatin County, bay stallion Commerce, foaled 1879, by Com. Belmont, dam Jane by Bay Chief, son of Mambrino Chief, $400. Also two bay fillies foaled 1880, by Longwood, son of Thorndale, and one black mare foaled 1876, by Matt, son of Kentucky Chief; price for the three $600.

To J. L. Morgan, Idaho, the chestnut stallion Dakota, foaled 1880, by Com. Belmont, dam Calliope, by Fancy Golddust; price $400.

To S. E. Larabie, Deer Lodge, the bay mare Blossom, foaled 1877, by Dictator, dam by Lumber, son of Ericsson.

To J. G. Lewis, Gallatin County, bay stallion Commodore, foaled 1879, by Com. Belmont, dam Lucy by Consternation. Also bay stallion Dragoon, by Longwood, dam Leanora by Alexander's Belmont; price for the two $800

To I. Pendarvis & Son, Upper Ruby Valley, M. T., the bay stallion Egmont, foaled 1881, by Com. Belmont, dam Fannie Hooker by Joe Hooker, son of Mambrino Chief.

Ukiah Park.—At a meeting of the citizens of Ukiah, Mendocino county, held last week, the Ukiah Park Association was organized and articles of incorporation filed. Capital stock $5,000. E. W. King, L. F. Long, J. S. Reed, J. B. McClure and A. C. Perry were elected directors for the first year. The directors will purchase the necessary land and construct a half-mile track immediately. Some of the leading citizens of the district have interested themselves in the matter and the grounds will be fitted up in first-class

THE RIFLE.

Target and Table.

Last Sunday a match was shot at the Shell Mound range between two teams composed of members of companies C and G. The contest was a friendly affair between the officers and privates, the losing side to furnish a dinner to the party. The day was as pleasant as could be wished and the marksmen were on the ground at an early hour. The light was excellent and no wind to speak of. The conditions of the match were that each was to shoot twenty shots, ten on the 200 and ten on the 500-yard target. The officers led off and if one wishes to see a military man do good shooting, let him put a dinner behind the target. First scores were at 200 yards:

Lieut. J. E. Klein	5 5 4 5 5 5 4 4 4 5	5—45
H. T. Sime	4 4 4 4 4 5 5 5 4 5	5—44
Capt. H. S. Templeton	5 4 4 4 4 5 4 4 4 4	4—42
Maj. A. F. Klose	4 4 4 4 5 4 3 4 5 4	4—41
Lieut. F. J. Kremple	0 4 4 3 5 5 3 3 3 3	3—33
Total		205

Five hundred yards:

		Grand Total
Klein	5 5 3 5 5 5 5 4 5 3	4—45 / 90
Sime	4 5 5 5 4 4 5 3 5 5	5—45 / 89
Templeton	3 4 5 4 5 5 4 5 5 3	4—43 / 85
Klose	3 2 5 3 5 4 4 5 2 5	3—38 / 78
Kremple	0 3 0 4 3 4 3 4 4 3	2—23 / 51
Total		209 / 403

Following are the privates, two hundred yards:

Kelly	4 4 4 5 5 5 4 4 5 5 5—45
Ray	4 3 4 4 4 4 4 4 4 4 4—39
E. W. Snook	4 4 5 4 3 4 4 4 4 4 5—41
Julius Klein	4 5 3 5 4 4 3 4 4 4 4—40
Sherman	3 3 3 5 3 2 4 4 4 4 4—35
Total	201

Five hundred yards:

		Grand Total
Kelly	4 4 5 5 4 5 4 5 4 4	4—44 / 90
Ray	4 5 5 5 3 4 5 5 3 5	5—44 / 83
E. W. Snook	4 5 5 5 2 4 4 4 4 3	4—40 / 81
Julius Klein	3 5 2 5 5 4 3 4 4 3	3—40 / 80
Sherman	0 2 3 5 3 3 3 3 5 4	3—31 / 56
Total	199	/ 400

As seen by the scores the privates were beaten by three points. After the match, the military men under the command of Capt. Templeton formed a double column and made an attack on the well-spread dinner-table of mine host, Capt. Siebe. Lient. Sime made a bold charge on the enemy's front while Lient. Klein ou one side and Lieut. Kremple ou the other side thinned ont the line of dishes that dared to oppose them. Corporal Rnddock swung aronnd and fell on the enemy's rear and skirmished aloug the entire line of battle, inflicting terrible punishment on the rebellions ranks of roast chicken, beef, pie, etc. While the contest was at its highest Major Klose arose and ponuding on the table with a greasy chicken bone, proposed a toast for the winning party, bnt the rattle of knives and forks, greater than the din of mnsketry, drowned his voice and he met with only a weak "here" from Corporal Palmer who had ent his way so far nnder the crust of a cranberry pie that only his feet were ont in sight. In conversatiou with mine host, he said: "Lent makes no difference with military meu; they are always good eaters. With a large military man one can pnt an estimate on his capacity bnt the little meu and slim men are like a sausage skin, the more you pnt in, the greater the stretch and the greater the capacity. There is nothing made in feeding soldiers." After the battle the roll was called and thongh all responded, still many showed by their looks how great the contest had been, bnt it can be promptly said that no one reqnired either a shutter or the aid of a comrade's arm to help him off the field. The five p. m. train took the party home, all of whom expressed their satisfaction with the day's sport and recreation.

Shooting Stars.

The new rifles that the Police Rifle Team sent to the East for having arrived has prodnced a desire among the officers to test the shooting qnalities of the weapons, and also to try their ability as marksmen. On the 22d of February a little match was shot at Shell Mound Park in which Officers Baillie and McCarthy and citizen J. M. Pike were the contestants. The two first-named nsed the Sharps-Borchard and the latter a globe-sighted Ballard. Following are the scores:

J. M. Pike	5 5 4 4 5 4 5 5 5 4	5—46
	5 4 4 4 3 4 4 3 4 4	4—39
	5 5 4 4 4 4 4 4 4 4	4—42
	4 4 4 4 4 5 3 4 4 4	4—40
Total		167
Officer Baillie	4 3 4 3 5 4 4 4 3 4	4—38
	4 3 5 4 4 3 3 4 4 5	4—39
	4 5 5 5 4 2 5 4 4 3	4—40
	4 3 4 4 5 5 4 4 5 4	4—42
Total		157
Officer McCarthy	4 5 4 4 4 4 4 4 4 5	4—42
	5 4 5 4 4 4 4 4 4 4	4—42
	4 4 4 5 4 4 4 4 5 4	4—42
	4 5 4 4 4 4 4 4 3 5	4—40
Total		166

Linville and Townsend.

Last Sunday the match between the above-named contestants came off at the favorite range, Shell Mound, resulting in Officer Linville winning by four points. The conditions of the match were fifty shots at 200 yards, Linville to handicap Mr. Townsend ten points, for a purse of $20. Both gentlemen used the Sharps-Borchard rifle. Each took two sighting shots. Townsend led off with a 3 and 4, Linville with two bullseyes. As seen by the following tables the P. C. won the match and money by four points over the handicap although at the second and third rounds the member of the City Guards pressed his score forward very close to the front. It might be well here to suggest that in shooting these long strings the riflemen would allow their pieces to cool off after every ten shots or so, as both the rifles in this match were very much overheated by the rapid firing, and the heated air rising from the barrel produced a kind of mirage that made it very difficult to bring the sighting down to a fine point; we think that better scores could have been made by both of these men, especially Mr. Townsend, had this been more particularly observed. Following are the scores:

P. D. Linville	5 4 5 5 4 4 4 4 4 5	4—44
	4 4 4 4 5 4 4 4 3 5	4—41
	4 4 4 4 5 4 4 4 4 4	4—45
	5 5 4 5 4 4 4 4 5 5	4—45
	4 5 4 4 4 5 4 5 4 5	5—44
Total		215
L. R. Townsend	4 4 5 4 4 4 4 4 4 4	4—41
	4 4 4 4 4 4 5 5 5 4	4—43
	4 4 4 3 4 4 3 4 4 4	4—38
	4 4 4 4 4 4 4 3 3 3	3—37
	4 4 4 3 4 5 5 4 3 4	4—40
Total		199

Townsend's 199 points and the handicap of ten points made him 209, and even then he was behind Linville's score. It is expected that a similar match will be shot between these two before long. Ed Covey acted as score keeper.

On the Ring Target.

The four rifle shots of the San Francisco Fusiliers whose scores have often been given in our columns were again last Sunday at their target at Shell Mound. Heretofore they have nsed the Creedmoor target, but in order to change the monotony of affairs their last shooting was done on the ring target. The match was twenty shots for a purse of $20; the two best marksmen were to divide the money. Following are the contestants and their scores:

O. Lemke	11 9 5 3 10 7 6 11 9	9—80
	0 8 9 8 5 8 10 7 8	3—69
Total		147
C. Thierbach	5 11 7 0 5 2 10 8 3	0—53
	10 4 4 7 11 4 0 8 4	1—52
Total		105
L. Haake	5 3 12 2 7 9 5 5 0	0—49
	3 9 0 4 5 8 3 3 2	9—51
Total		100
H. J. Mangels	8 4 6 1 0 0 8 3 7	7—44
	2 6 11 1 7 3 0 7 6	10—53
Total		97

Almost the Champion.

For a great many years several of the better class of rifle shots have wasted, as some consider it, considerable time and ammnnition in order to be able to be the champion shot on the 200-yard target of the Pacific coast. Of the several, two, Howard Carr and Fred Knhnle, have become so expert in the nse of the rifle that their scores leave those of other marksmen far in the rear. Some months ago Kuhnle at Petalnma made 457 points in a string of 100 shots; this for a time stood at the head of the list. On the 22d of February Col. S. E. Beaver and Howard Carr went over to Shell Monnd to shoot a hundred-shot match, bnt the object was to beat the best score made in this State. Col. Beaver, to accommodate his friends, had loaned his rifle on several occasions and when he was ready to nse it, as might be expected, he fonnd it sadly ont of order and before the first shot was fired he was confident of making a failnre, bnt under the circnmstances he did very well. Following are the scores:

Howard Carr	4 5 4 4 4 4 4 4 4 4	4—41
	5 4 5 5 5 4 4 4 5 5	4—46
	4 5 4 5 5 4 4 4 4 4	4—43
	5 5 5 4 4 4 5 4 4 5	4—45
	5 4 5 4 5 5 5 5 5 4	4—47
	5 5 5 5 5 4 5 5 5 5	4—49
	5 5 5 5 4 5 5 5 4 4	4—47
	4 5 5 5 5 5 5 4 4 4	4—45
	4 5 4 4 5 5 5 4 5 4	4—45
	5 5 5 4 5 4 5 5 4 5	4—47
Total		456
J. E. Beaver	5 4 4 4 4 5 4 4 4 5	4—43
	4 5 4 4 5 4 5 5 4 4	4—44
	5 5 4 4 4 4 5 4 5 4	4—44
	4 4 4 4 4 3 5 5 4 4	4—40
	5 4 4 4 4 4 5 4 4 4	4—42
	4 5 4 4 4 5 5 4 4 4	4—43
	4 4 4 4 5 5 4 4 4 4	4—42
	5 3 5 4 4 4 4 4 4 4	4—41
	4 5 5 4 4 4 4 5 4 4	4—44
	4 5 4 3 4 5 4 5 4 4	4—42
Total		425

After Mr. Carr had finished his tenth round he continned another string of ten shots and made 44; had this taken the place of his first round it would have put three points ahead of the present champion's score of 457. After the match was finished the target, which was a new one, was taken down and brought to the city and examined by competent men and it was found to contain 458 points, two points more than the score called for. We examined the target and found that there were two questionable shots that were scored as fours, and to all appearances were fours, but on a close inspection they proved to be fives, having just cut the bullseye. Had these been scored to Mr. Carr as fives it would have made him the champion 200-yard shot of the State, but as the score stands he missed taking the laurels by one point. Mr. Carr will again before long endeavor to beat the record. Mr Edward Hovey acted as score keeper.

Los Angeles and San Bernardino.

A match between Rifle Clubs of Los Angeles and San Bernardino was shot on the 22d nlt., each team shooting on its own range and transmitting the result by telegraph. The score of the Los Angeles Club was as follows at 200 yards, Creedmoor rules:

G. H. Wilson	40
W. A. Trick	42
Chas. Vincent	38
J. H. Schroerlncke	37
F. Holbrook	41
R. W. Pridham	37
Ben. Straus	42
G. W. Williamson	40
C. M. Kirk	38
J. B. Leonard	37
Total	392

The individual scores of the San Bernardino team are not at hand, bnt the total was 397, winning the match, which was a friendly contest without stake or other consideration except glory. A return match will probably be shot in the near future, when the Los Angelenos hope to set the figures the other way

THE GUN.

Pigeon Money.

A unanimous sentiment prevails among sportsmen who devote considerable attention to trap shooting, that the sport has been to a certain extent retarded by high figures at which birds are invariably held as the pigeon shooting season comes to hand. It is confidently expected that, with concerted action on the part of all the clubs, the price could be kept at reasonable figures, and certainly the evil appears to be easily remedied. Birds are purchased in open market by those who supply sporting clubs at prices varying from $1 25 to $1 75 per dozen, only to allow the fortunate dealer a profit of over one hundred per cent. on his original investment. Contracts generally made with sporting clubs merely give them the bare privilege of shooting at the birds, which, when killed, belong to the dealer and are by him peddled or sold on the ground to restaurants and hotels. The modest price charged for the privilege rarely falls below $3 50 per dozen. Until very recently clubs and even private sportsmen have allowed the imposition to assume very large proportions, so that it finally became necessary to abide by the exorbitant demands of the dealers, or take the only alternative, that of not shooting. There is no dearth of birds in the market and certainly none in the interior, and no good reason exists for allowing dealers to reap a rich harvest at the expense of the clubs and sportsmen generally.

WATERFOWL.—During the last week, in fact the last two weeks, the duck hunters have had very poor luck in their pursuit of sport or game. Last Sunday quite a number of hunters were at the marshes of Alvarado and Alviso, bnt they got bnt little game, some none at all. Early in the morning there was a small flight, bnt when the sun came ont the marshes were simply dead. Like the Ancient Mariner on the water question, so with the hunters—ducks, ducks everywhere but not one single shot. Thousands of wild game were to be seen but they could not be induced to fly. It was so warm about noon that hunters took off all the clothing that circumstances would permit. In the expressive though questionable language of one of the hunters, "the sun seemed to stand for three hours directly over our heads and it seemed as though it was a pot full of hell." The largest bag that was made last Sunday was made by Mr. Hoefling Sr., who brought in the splendid bag of nine ducks. There were plenty of ducks at San Pablo, but as elsewhere there was no flight. There was one place last week where there was plenty of lively wild fowl and bnt few hunters. Hundreds of fine ducks have for the last week been congregating in the sheltered coves near Lime Point. What the attraction is for ducks in this vicinity has not yet been explained, bnt there is no doubt there are many over there still.

CRACK SHOTS.—A trap shooting match will come off in a few days that will interest all the lovers of the trap and trigger in this city, as the contestants are the best shots in the State at the trap or in the field. The shooting will be for a pool, with $25 to enter. The following men will shoot: S. A. Tucker of New York, Crittenden Robinson, Frank Maskey, P. D. Linville and G. W. Roche. The conditions are 25 pigeons, 30 yards rise from ground trap, and Hurlingham rules to govern the shooting. A similar match was shot among the same parties a year ago at San Bruno.

Last Sunday, a party composed of Putzman Spencer, Stackpool, Higgins and others were over in the Calevaras valley on a quail hunt. The first-named pair of hunters brought in thirty quail and the latter about twenty; the party bagged about sixty quail in all. The day being very warm the birds, and many of the hunters as well, kept under cover.

On Saturday last a number of the members of the Alameda Sportsmen's Club were out duck shooting at Mallard Station and carried home some well-filled bags.

A meeting of the Cosmopolitan Shooting Club was held on Friday evening for the purpose of discussing matters relative to the approaching trap season and for the transaction of regular club business. A large number of applications for membership were received and placed on file pending the usual preliminary investigation. The directors were ordered to make arrangements for three gold medals which are to be placed in competition for members of the club and to be awarded to those making the best average for the season. The medals will cost $60 each. After considerable debate as to the location of grounds upon which the club contest will take place, it was finally decided to shoot at San Bruno. The club by its action in ordering Robert Tallant before it, on a charge of acting in an unbecoming manner in having wantonly shot a hog on Sherman Island during the winter, shows a disposition to discountenance many of the practices which have brought gunning into disfavor with owners of interior lands.

The members of the Gilroy Rod and Gun Club recently went out on a shooting expedition to Soap lake, but after reaching the ground the sport was forgotten in their enthusiasm over Washington's Birthday. It is given out that Pyle managed to secure five teals, which was all the game shot.

A match for a purse of $200 came off recently at Redwood City, fifteen birds at twenty-one yards rise, in which the first prize was won by Taylor of Mountain View with a score of 14, Hanson and Welch tying on 12 birds, Hanson winning with a clean score at six birds.

In a recent lecture, E. O. Wieuer stated that rain could be induced by cannonading the clouds. The experiment has been frequently tried by local hunters, but without any such result.

Brown's Bronchial Troches for Coughs and Colds: "I have been trying to get along without them, but with the odds rather against me. I do not see how it is possible for a public man to be himself in winter without this admirable aid."—*Rev. R. M. Devens, Pocasset, Mass.* Sold only in boxes. Price 25 cents.

FOR SALE.

THE FAST TROTTING STALLION

ALONZO HAYWARD

IS OFFERED FOR SALE AT $2,000, IF APPLIED for on or before the 10th of March. Should he not be sold by that time he will make the ensuing season at San Jose at $50 the season.

No. 20—Hurdle race; purse $200, of which $50 to second horse; entrance free; mile and repeat over four hurdles.

Entries to stakes and purses not marked closed, will close March 1, 1883.

Races to close will be run under weights adopted at annual meeting, 1881.

Starters in all races must be named at 6 p. m. the day preceding race, any other rule to the contrary notwithstanding.

Non-members will be placed on the same footing as members of the association in regard to the payment of purses and stakes advertised, and should there be a deficiency the winners will receive a pro-rata division.

Parties making nominations will be required to record colors at time of making entries, and after record will not be allowed to ride in other colors. This rule will be strictly enforced.

All nominations in stakes and entries in purses must be made on or before the first day of March next, 1883, directed to C. M. Chase, Assistant Secretary, Box 1961, P. O., San Francisco. To be valid they must be plainly postmarked on that day—March 1.

THEO. WINTERS, President,
JOS. CAIRN SIMPSON, Secretary.
C. M. CHASE, Assistant Secretary.

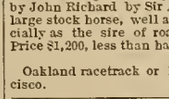
Thoroughbred Colt for Sale.

CITO. CHESTNUT COLT, FOALED APRIL 5, 1882. By Joe Hooker, his dam Too Soon by Norfolk, grandam Lady Davis (dam of Dashaway) by Red Bill, son of Medoc, etc. This is a highly-formed colt, of good size and a hearty feeder. Being nearly a brother in blood to Fred Collier (Lady Davis being the great Grandam of Fred, and his dam also being by Norfolk) and the Joe Hookers so far as tried all racehorses, this is a good chance to get a colt of great promise for a moderate sum. He has four white legs above knees and hocks, a white face and other white markings. Price $300 if applied for before the 1st of March. For further particulars address this office.

For Sale—Young Copperhead.

A BEAUTIFUL DARK BROWN stallion, seven years old, sixteen hands high, weighing 1,200 lbs; can trot in three minutes; kind and gentle in every particular. May be seen at Oakland trotting park until sold. PEDIGREE—Sired by Copperhead (2:34), by Owen Dale; dam Nellie Eastman by the Watkins horse (Black Hawk) from Missouri. His dam was a Printer mare; Nellie Eastman's dam, Nancy Ringo, was by Tinker, a thoroughbred horse, out of a Selam mare, grandam by Old Paul, by Ned Burns, he by John Richard by Sir Archie. This is an excellent large stock horse, well adapted to all purposes, especially as the sire of roadsters and carriage horses. Price $1,200, less than half his value. Address
G. S. BANKS.
Oakland racetrack or 1306 Pine street, San Francisco. 7t2

FOR SALE.



A VERY FINE HAMBLETONian stallion, imported from Syracuse, N. Y.; nine years old; mahogany bay; sixteen hands high; perfectly sound; well broken; very stylish; cost over $1,500; property of a banker; full papers; got by Hambletonian Prince, he by Volnnteer. Can be seen at Club Stables.

Berkshire Pigs for Sale.

A few Thoroughbred Berkshire Pigs for sale. Apply to
CAPT. FOSTER,
At the Cliff House.

We have for sale at our farm at Mountain View thoroughbred

BERKSHIRE PIGS

From our thoroughbred Berkshire Boar and Sow, which we imported from England in 1880. Pigs from imported boar and sow, $25 each. From imported boar and thoroughbred sow, $10 to $20. Our imported pigs are as nice pigs as there are in the State. Address
I. J. TRUMAN.
8m1 511 Market street, San Francisco.

Sportsmen & Pleasure-Seekers.

THE

SOUTHERN PACIFIC R. R. CO.

RESPECTFULLY CALLS ATTENTION TO THE

SUPERIOR FACILITIES

AFFORDED BY THEIR LINE FOR REACHING with speed and comfort the best places in the State for

Sea Bathing, Shooting and Fishing.

TRAINS LEAVE SAN FRANCISCO DAILY FOR

MONTEREY,

THE MOST CHARMING

Summer and Winter Resort of the Pacific Coast,

with its beautiful Groves and delightful Drives. Trout in abundance can be obtained from the several streams in the vicinity of Monterey, and the best shooting may be had in season.

THE BAY OF MONTEREY

Is noted for the extent and variety of fish which abound in its waters, notably Salmon, Rock Cod, Barracuda, Pompino, Spanish Mackerel, and Flounder. The above-mentioned attractions, in connection with the low rates of fare, rapid transit, and the superior accommodations furnished at the "HOTEL DEL MONTE," have made Monterey a paradise for sportsmen.

THE BATHING ESTABLISHMENT

OF THE

"HOTEL DEL MONTE,"

IS UNSURPASSED.

A SPACIOUS SWIMMING TANK

(150 x 50 feet)

FOR WARM SALT WATER, PLUNGE AND SWIMMING BATHS.

ELEGANT ROOMS

For Individual Baths with DOUCHE and SHOWER facilities.

MAGNIFICENT BEACH

Of pure white sand for SURF BATHING, Etc., Etc.

THE FAVORITE ROUTE to those well-known Watering Places,

APTOS, SOQUEL AND SANTA CRUZ,

IS VIA THE

Southern Pacific Railroad,

(Broad Gauge), and the

SANTA CRUZ RAILROAD.

☞ At PAJARO, the SANTA CRUZ R. R. connects daily with Trains of the S. P. R. R.

The S. P. R. R. runs through the counties of San Mateo, Santa Clara, San Benito, Santa Cruz and Monterey, in each of which game abounds in great variety, Notably

Quail, Pigeon, Snipe, Duck, Geese, Deer and Bear.

Lakes PILARCITOS and SAN ANDREAS are reached by this line. Stages connect with trains daily at San Mateo for those well-known Retreats, PURISSIMA, SAN GREGORIO and PESCADERO. We would particularly call attention to the unlimited extent of range at and about SAN BRUNO and McMAHON'S for RIFLE PRACTICE.

These resorts are but a short distance from San Francisco and offer special inducements to the lovers of this manly sport.

SPECIAL NOTICE.

Sportsmen and others presenting Passage Tickets o any description issued by this Company will be entitled to

FREE TRANSPORTATION OF THEIR DOGS

when carried in Baggage Cars and put in charge of Train Baggagemen. Train Baggagemen are instructed to issue CHECKS for all dogs received in Baggage Cars.

THE KENNEL.

Cause and Treatment of Gun Shyness.

As I have had quite an experience with gun shy dogs, and have been very successful, I will give yonr readers the benefit of the same. I do not think that the puppy inherits gun shyness, my reasons being, that in a certain litter you will find some that are very timid, while others are not in the least so. The best dogs I have ever seen were very gun shy, or else made timid by abuse when puppies? My experience has heen, that a bitch which is in the least timid, when coming in season shows her timidity more than at any other time. How many dogs are there that have been so abused that they could not be broken to hunt, and yet have heen used for breeding purposes. If we only knew the abnse that some dogs receive when undergoing what is called training; and, more than likely, this very abuse comes just when the bitch most needs kinduess, and at a time wheu it is most likely to inflnence her progeny, because if the bitch is at all inclined to be shy, that is the time she will display it the most. In my opinion, these are the causes of so much gun shyness, and also my reasons for not believiug it to be hereditary.

I have yet to see a gun shy dog that I could not cure after a time, and the exercise of considerable patience. My methods are as follows: The first care is to have a good strong collar, attached to which must be a cord of good length, say twenty-five or thirty feet, snfficiently strong, uot bungling, to insnre the dog in not getting away from me. I put the collar on tightly enough so that there need he no fear of its slipping over the dog's head (a good choke collar is a good thing), and make the cord fast to it. I uext start for some field where I can get plenty of room and be alone, taking with me a small pistol upon which I can snap caps. Wheu I am ready I assure myself that the cord is securely fastened at my eud of the same, as well as the dog's; then I call the dog to me and commence patting him, let him smell the pistol and give him some sweet bread that I have brought with me for the occasion. After I have fooled with him a short time, I explode a cap; when, if the dog is a timid bolter and has been spoiled, the music commences. I let him run a short distance, then check him, drawing him to me again, slowly, and repeat the proceediugs. He will probably sulk, but I take hold of his head, raising it up, try to get him to eat again, patting and talking kindly to him all the time. I fire from four to six caps, after which I lead him home, and chain him to the kennel. Always hold the pistol in your hand, and endeavor, if possible, to get them to smell of it. Never, nnder any circumstances, allow the dog to get away from you, as therein lies the secret of the whole business. Next day repeat the whole thing.

Do not expect to break a bad case in a few days, but make up your mind before you start, that it may take two months. Keep on in the above manner until you can see some improvement; it is hetter to spend fifteen minutes, once a day, for two weeks, than to try to do it all in one week. I would say that I have often seen the time when I was sorely tempted to whip the dog, bnt I will not allow myself even to slap him; I am teaching him not to be afraid. As soon as I notice an improvement, I put in a small charge of powder, and finally a full charge. I next try to get the dog to notice small birds, such as stink birds, brown thrushes or robins; and, in case he has never hunted hefore, I shoot a few, and get a little courage into the dog. My work is fast now coming to a close. Toward the last I encourage him to play, first with the cord fastened, and finally without. I do this after I have gone through firing. Never try to fire once more because he is doing so well, unless you are certain he cannot get away from you, shonld he attempt it.

I believe all dogs should he broken to the gun, and if it is done as I have described, you will never have trouble with them after. I never take a dog to the field to shoot over, nnless I know they have first had a lesson in being hroken to the gun, and this caution has saved me lots of trouhle.—*American Field.*

Fine Bull Terriers.

Mr. Tiffauy of Ellis street in this city has recently imported the finest pair of bull terrier pups that have ever been seen in this country. They were whelped on August 22, 1882, in the kennel of Lieutenant-Colonel Blaine, St. Johne, New Brunewick, who imported the sire and dam from Fred Hiuks, Bath Road, Birmingham, England. The pedidree follows:

Dog and bitch by Spring—Nellie.
Spring by Old Spring—Gypsy.
Old Spring by Bill—Kit, she by Prince.
Nelhe by Rebel—Kit II.
Rebel by Eclipse—Rose.
Rose by Task—Brute.
Kit II by Nob—Old Kit.

This is a royal pedigree and includes some of the best dogs that England has produced. Stonehenge, in his celebrated work on the doge of the British Isles, gives a portrait of Old Spring as a model English bull terrier. Mr. Tiffany considers the dog pup the handsomest of the pair, but the bitch, which he calls Nellie, ie a perfect picture. She is a long bitten dog with straight, even teeth, fine ears, black patch over left eye, fine tail, stout loins, short coupling and perfect eymmetry of form. Thongh perfectly kind she is dead game.

Pacific Rowing Association.

At the meeting of the various rowing clubs in the State for the purpose of organizing a rowing asociation for the Pacific Coast, held Feb. 21, the following clubs were represented:

Golden Gate—John Griffin, Jas. Finn.
Dolphin—George Lee, H. W. Fraser, G. Van Gulpeu.
Pioncer—Jas. Sullivan.
South End—J. Bender, H. Toner.
Ariel—Eugeno Flanders, Mr. Steveneon.
Alerts, Vallejo—Messrs. Shelly and McKnight.

The above clubs affected a permanent organization with the following officers:

President, H. W. Fraser, Dolphin; Firet Vice-President, E. Flanders, Ariel; Second Vice-President, Jas. Finn, Golden Gate; Recording and Corresponding Secretary, Goorge Lee, Dolphin; Financial Secretary, H. Toner, South End; Treasurer, J. Sullivan, Pioneer. The Executive Committee to be elected by the delegates sent in from the various clubs at the next regular meeting. The following gentlemen were appointed as a committee on constitution, by-laws and regatta rules: Messrs. Sullivan, Pioncers; Van Gulpen, Dolphins, Finn, Golden Gates; Flanders, Ariels; Shelly, Alerts; Bender, South Ends. After which the organization adjourned to meet at 155 New Montgomery street, room 1, March 16, 1883, at 8 p. m. All clubs are requested to eend delegatee to the next meeting.

The Effect of Mule Breeding on Mares.

In your January number I noticed an article headed "Mule Breeding." With your permission I will give the readers of your *Journal* my experience in raising horses and mules. Twenty-five years ago I purchased a three-year-old filly. She inherited wonderful staying qualities; in fact, there was no let up to her, and she was a wonderful feeder. At four years old I hred her to a jack, and produced a mule colt the exact color of the jack. I then bred her to a thoroughbred Kentucky horse, and when the colt came it was the color of the sire. I then bred her to a jack. Since then I have bred her to horses. The colts have all inherited the exact color of the sire, with the disposition of the mare. I have several of her colts that have been breeding for several years, and for 20 yeare there has not been a colt dropped on the farm but what was the exact color of the sire. I invariably stint them at three years old to a jack, and then breed to horses afterwards. My reason for first breeding to e jack is that the colts are generally smaller, and not so liable to injure the mare; the colts come stronger and get up and suck without any assistance. I have uot seen any symptoms of breeding back after the jacks, and I have had over forty of the old mare's colts and grand-colts. We have twenty on the farm, all having sprung from the old mare. They are all either bays or blacks. Cross-bred or mongrel mares may have a tendency to breed back or throw "sports." My experience is that all well-bred animals produce their own likeness, and the better the breeding of both parents the more certain of a good offspring. I find in breeding cattle that the get of some bulls come all shapes and colors, no two of them alike, while the same cows bred to a bull of pure breeding will briug calves that are uniform in color, and form or shape. The same principle holds good with sheep. Any man that is a good judge can pass through a herd of cattle, or any other stock, and tell whether they are well bred by the uniformity of their shape and color, for they all have the same general characteristics.—*U. S. Veterinary Surgeon.*

The rapidly-growing interest in swine breeding in the Union is shown by the late ceusus returus. According to these there were on farms, in June, 1880, 47,683,951 hogs, the rate of increase since 1870 being ninety per cent., while the rate of increase in populatiou during the same time was only thirty per cent. The census returns show also that nearly two-thirds of the hogs in the United States in 1880 were in the five States of Iowa, Illinois, Missouri, Indiana and Ohio. With facts and figures such as these at hand it is not surprising that the live-stock and agricultural papers, particularly those of the West, should devote more attention than formerly to swine husbandry, and that public records of breeding stock should be established and sustained; nor, on the other hand, that all parties interested in swine breeding should more eagerly avail themselves of every means calculated to aid in the successful prosecution of this work.—*Breeder's Gazette.*

THOROUGHBRED STALLION

X X,

BY MALCOLM, HIS DAM COLUMBIA, WILL MAKE THE ensuing season at the Oakland Trotting Park. Terms, $25 the season.

X X (Doublecross) is of as high and fashionable breeding as any stallion in the country. His sire, Malcolm, is by imported Bonnie Scotland, his dam, Columbia, also by imported Bonnie Scotland, hence his name. Malcolm was one of the best racehorses of his day, and Columbia was also a fine race mare. For extension of Columbia's pedigree see advertisement of Anteeo. Her dam, Young Fashion, was the dam of Surprise, Scotland, Wauanita, Bonnie Kate (the dam of Bonnie Lizzie), Andes, Hoek Hocking, Three Cheers, etc. The dam of Malcolm, Lady Lancaster, was the dam of Sagamore, Ontario (the dam of McWhirter), Regent, Lady Fairfield, Lady Amanda, Lady Middleton, etc., and a reference to the racing calendars will show how distinguished the members of these two families are. This is the only Bonnie Scotland stallion in California, and from his inbreeding has as much of the blood as if he were a son of that renowned sire. He is a horse of immense substance, good size, high form, and of the best disposition.

JOS. CAIRN SIMPSON, Oakland, or 508 Montgomery street.

STALLIONS.

THE CELEBRATED TROTTING STALLION

ERWIN DAVIS

WILL MAKE THE SEASON OF 1883 AT OAKLAND TROTTING park.

DESCRIPTION.

Erwin Davis is a beautiful mahogany bay with very black points and one hind foot white; 15 hands high; of superior good disposition and fine trotting action.

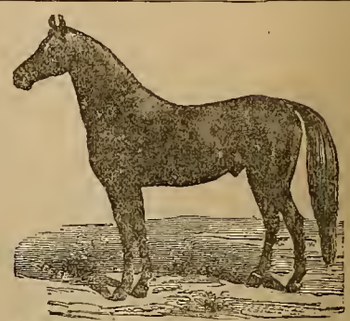
PEDIGREE.

Erwin Davis was sired by Kentucky Hunter (Skenandoah) by broken-legged Kentucky Hunter (the sire of Flora Temple) by Ferguson's Kentucky Hunter, by old Kentucky Hunter, by Highlander. Erwin's dam was Lost Diamond, by Vermont Hambletonian.

TERMS.

Twenty-five dollars for the season, payable at the time of service. Good pasturage at $5 per month. No responsibility for accidents or escapes. For particulars apply to

JOHN ROGERS.
Oakland Trotting Park.



THAD STEVENS.

THIS THOROUGHBRED HORSE WILL BE AT AGRICULTURAL Park, Sacramento, for the season commencing Feb. 1 and ending the 1st of July next. Good pasturage for mares will be provided at $3 per month. For terms and particulars apply to or address

W. M. MURRY, Agent,
Sacramento Racetrack.

TROTTING STALLION

Eugene Casserly.

SIRE OF SWEETBRIAR, 2:26¼; NAPA QUEEN, 2:38¼; ROCKwell, 2:39; Bill Woodward, 2:40; Smoothbriar, two-year-old record 2:57; May Day, two-year-old record 2:59¼. Will make the season of 1883 at Oakland on Thursdays, Fridays and Saturdays and at Walnut Creek Sundays, Mondays, Tuesdays and Wednesdays. He was sired by General Taylor, dam Jennie by Lexington. Terms $30 for the season. Good pasturage at reasonable rates. No responsibility for accidents or escapes. Address

THOMAS S. BREMNER.
Seventeenth street and Telegraph Ave.,
Or J. M. Heinold, 1426 San Pablo Avenue, Oakland.

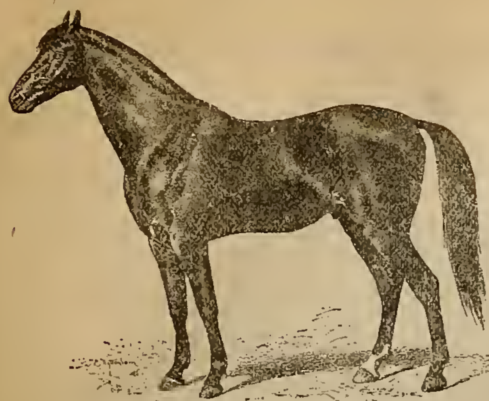
Stallion bills printed in first-class style. Call at this office and see samples.

NO. 508 MONTGOMERY ST.

STALLIONS.



MAMBRINO WILKES.

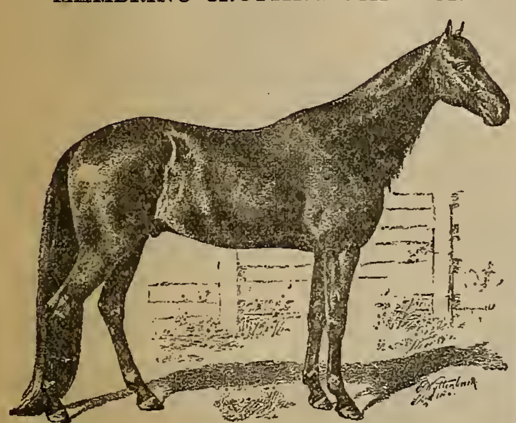
Black Stallion, sixteen hands in height, by George Wilkes, son of Rysdyk's Hambletonian, bred by B. J. Treacy of Fayette County, Kentucky. Dam Lady Christman by Todhunter's Mambrino or Idol, son of Mambrino Chief. Second dam by Pilot Jr. Third dam by Kentucky Whip. Idol's dam was thoroughbred and was by American Eclipse.

THIS IS THE LARGEST AND ONE OF THE BEST COLTS OF George Wilkes (weighing at this date 1,260 pounds) combining the Hambletonian and Mambrino strains and also several thoroughbred crosses. His colts demonstrate that he possesses in an eminent degree the ssme faculty of trsnsmitting the family qualities to his offspring which put George Wilkes in the front rank ss a sire of trotters.

Will mske tbe ensuing season, beginning February 1st, 1883, st STOCKTON.

In putting the price by the season at the low figure of $40 the owner does not acknowledge, thereby, any inferiority on the part of this horse to any other sire of Trotters. **IRVIN AYRES.**

MAMBRINO TROTTING STALLION



ABBOTSFORD.

☞ Record at Six Years old, 2:21½. ☜

PEDIGREE.

BY WOODFORD MAMBRINO, HIS DAM COLUMBIA BY YOUNG Columbus. Woodford Mambrino by Msmbrino Chief, his dam Woodbine by Woodford, a thoroughbred son of Kosciusko.

Woodford Mambrino is recognized to be the best son of Mambrino Chief. His own record is 2:21½, and there are a large number of his get in the 2:30 list. Among them: Abbottsford, 2:21½; Convoy, 2:22½; Magenta, 2:24½; Lady McFatridge, 2:29; Dacia, 2:29½; George A. Ayer, 2:30.

Besides those haviug public records, be is the sire of the two celebrated mares owned by Robert Bonner—Manetta and Malice. Manetta, witb a running mate, and harnessed to a road wagon, trotted two miles in 4:27½, snd Malice trotted a trial, on the same track, a mile in 2:19½. Woodford Mambrino is also the sire of Princeps, the sire of Trinket; record, 2:14. Woodbine is also the dam of Wedgewood, record, 2:19. Young Columbus, the sire of the dam of Abbottsford, has nine of his get in the 2:30 list, so that on both sides of tbe honse there are notable performers. Abbotsford is a ricb rosewood brown, 15½ bands, snd of very high form. His get are very promising, his daughter Jasmine having won the Embryo Stake for yearlings in 1881, and every one which has heen put in trsining has shown good speed.

TERMS.

Seventy-five dollars the season, to be pald before removing the animal. Mares not proving in foal can be returned tbe following season free of cbarge. Good pasturage at reasonable rates, and extra pains taken, but no liability for sccidents or escapes.

LOCATION.

Abbotsford will make the ensuing season, 1883, on tbe ranch of S. B. Whipple, Esq., San Mateo, season commencing February 15tb and ending June 1st, 1883. For full history see the issne of BREEDER AND SPORTSMAN of August 5th, 1882.

GEORGE BAYLIS, Agent, San Mateo, Cal.

ANTEEO.

DARK BAY COLT, NEAR HIND FOOT WHITE; FOALED MAY 5th, 1879; bred by Joseph Cairn Simpson, Oakland, California.

BY ELECTIONEER.

1st dam—Colnmbine, by A. W. Richmond.
2nd " Colnmbia, by imported Bonnie Scotland.
3rd " Young Fashion, by imported Monarch.
4tb " Fashion, by imported Trustee.

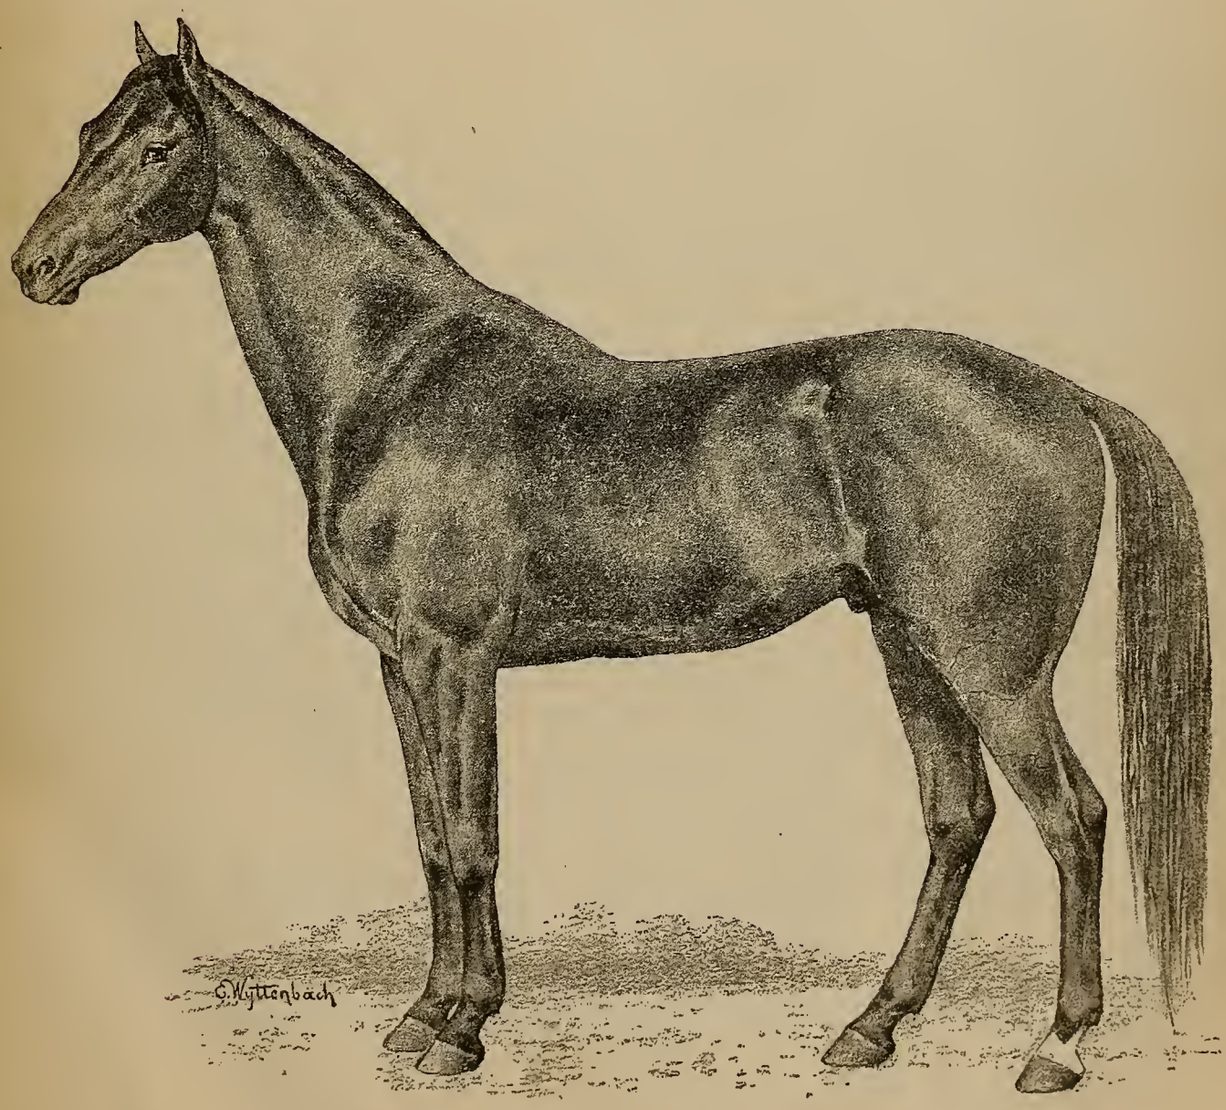
FIVE DOLLARS A YEAR.



ANTEEO. By Electioneer, his dam Columbine by A. W. Richmond.

It is scarcely necessary to write anything laudatory of th Electioneers further than a reference to the records. Hinda Rose, yearling record, 2:36½; Wildflower, two years old, 2:21; Albert W, four-year-old stallion, 2:22. This is the "top notch" in all of the colt places, and to expatiate would be something akin to refining pure gold or adding to the whiteness of the lily. With the paternal side of the house then there is only a necessity for reference to the doings of those that are near of kin, and on the maternal side Anteeo has also claims to distinction. The sire of his dam Columbine was A. W. Richmond, the sire of Romero, with a record of 2:19¼ as a five-year-old, and who has shown such a flight of speed in his exercise as to warrant the belief that he is capable of lowering that mark enough to give him the first place among trotting stallions. A. W. Richmond is also the sire of San Diego, Lady Richmond, Sue Rose, Mavis, etc., and it is claimed by those who are conversant with the stock that every colt of his get could beat three minutes when driven enough to be "bridle wise."

His grandam—Columbia was a fine race mare, and of very superior form. Fully sixteen hands and of great muscular power she was as nearly a model as is often seen. She had very fine trotting action and there is scarcely a question that she would have shown well in this line if she had been trained.

All the thoroughbred strains in Anteeo have demonstrated a capacity to trot fast. The Blackbirds are so well known that is is unnecessary to repeat their performances. A son with a record of 2:22, a grandson 2:19½, 2:20, and in every instance whenever a Blackbird was trained to trot in every instance there was a good show of speed. For tho nnmber of Bonnie Scotlands that have been trained to trot there is scarcely a parallel In all probability there were never six of the get of Bonnie Scotland trained to trot, and two are in the records "low down in the twenties." Imported Monarch Jr., and Monarch Rule, each with a record of 2:24½. Then come the Trustees, and there will scarcely be any one who will deny their claims to trotting lineage. For obvious reasons we do not wish to amplify on the merits of Anteeo and still we will have to place it on record that in our opinion he is well worthy of a place in the picture [illegible] of the BREEDER AND SPORTSMAN.

OUR NEW YORK LETTER.

Champion Stallion Stakes—Brighter Prospects for American Horses in England—Etc.

EDITOR BREEDER AND SPORTSMAN: Our winter here still continues and the prospective early spring, which a week or two since bid fair to becoms a reality, seems now as far off as ever notwithstanding that the "ides of March" are so close at haud. You, in sunny Califoruia, can hardly realizs the impatience with which the lovers of the field sports in this frozen Northeast are wooing the sun-god that he may hasten his tirsless revolutions in space, bringing us uearsr aud usarer to his blazing warmth which alons can dispel the chains of the ice-king still holdiug us in their Arctic grasp. However, the present week is a very busy week in turf circles.

To-morrow entries close for a large number of racing stakes at Wasbington, Jerome, Monmouth Park, Saratoga and elsewhere and owners and trainers have their hands full to properly engage their high-mettled steeds in compauny and at distances best suited to their supposed caliber. It seems a very easy matter to nominate the different members of a racing stable for their future engagements. On the contrary, a judicious selection of just where to euter each two, three and fonr-year-old, together with the older memhers of a crack stable, requires much thought, study and thorough familiarity with the capabilities of each animal towards "earuing his keep," or the close of the season will find forfeits innumerable as the result of undue haste in this particular. Another matter is the consideration of what kind of company the prospective candidate for the honors of the turf will meet in this or that race. Of course, with such an immense field as the Eastern racing circuit embraces, to estimate with absolute certainty the character of the prospective entries in a stake is impossible, but it can he determiued in a geueral sort of way, and it is surprising how near some of our horsemen come to it. Yon ask them why they did not euter some fair animal for such and such a cup or stake. They answer: "I kuew those three 'nailers' would all be in and my only chance to get a bit of the money would be that at least two of them should break down, and all three are sound as a uut. I've got uo money to spare for forfeits."

One of the richest three-year-old stakes for some years closes this week. I refer to the Champion Stallion Stakes, one mile and a half, for colts and fillies foaled iu 1880. Eighteen stallions were entered in 1881, at $500 each, making a fund of $9,000 to start with. Of course none but the progeny of these sires can compete next September, the time of running the race, and the association east of the "Father of waters" that will add the most money is to have the contest decided over their track. These bids close to-morrow with Mr. Pierre Lorillard, the originator of the stake and as Saratoga and Moumouth cannot exteud their summer meetings, they are out of the compstition, as also is Baltimore and Jerome Park, for hoth of whom it is probahly too early in the fall. This narrows the field down to the Coney Island Jockey Club, and probably Louisville and Chicago. Bids are estimated at from $5,000 to $10,000, which latter figure is said to have been offered hy the Lake City Club, provided some Eastern horses wonld come on. Should the lower price he the figure, and ten horses start at $250 each, the race will be worth $16,500! Shall any one say the turf in America is not progressing, when we have races nearly approximating in value to the richest prizes of Euglaud and France? The Derhy and St. Leger of 1882 were worth but a trifle over $22,000, and the turf here is yet in its infancy as it were.

The sudden death of Mr. Stirling Crawfurd on Saturday last at Cannes, France, has caused mnch regretful comment in turf circles, particularly, of course, in England, where its effect is so plainly felt. His large stahle of thoroughbreds were very heavily engaged this year, and their consequent disqnalification came like a thunderbolt from a clear sky, particularly to those unlucky wights among the British speculative public who have heen quietly and steadily hacking his colts Macheath, Energy, Clairvaux, etc., for the Guineas aud Derby. His old horses Edelweiss and Buchanan were favorites also for the Lincolnshire Handicap, run March 27, and a list of the eugagements rendered void would fill more space than I propose to take up in yonr columns. It seems as if there ought to be some rule governing such unfortnnate occurrences as this, which have happened quite frequently of late years, and that some amendment might he made whereby the engagements left by a nominator's death might be rendered binding on his heir or heirs. That any ench would repudiate these engagements ie not at all likely, for as a general thing, where this has happened, the next in kin of dead turfmen would have beeu only too glad to complete the work already begun. Old timers will say: "All bosh! not fair to the rest of the nominatore in the race, whose cbance of winning is rendered better hy having a dangerous candidate disqualified," etc, hut that some amendment to the existing turf law on this subject will be made is only a qnestion of time, and Mr. Crawfurd's death may hasten mattere. The deceased turfite had over forty horses in training under Taylor and Arnull, and his stable was at the head of the winning list in England for 1882, the total being nearly $130,000 (£25,800). However, what is undoubtedly a great loss to tbe English turf (for the deceased gentlemau was very popular, whatever might be the adverse criticisms that were justly showered on hie eccentric spouse, the Duchess of Montroee), is "a lion out of the path" for the American stables in England whose chances for dnplicating their victories of 1881 look rosier every day.

Our mail advices represent Foxhall, Iroquois, Sachem, Arauza, Pinafore, Parthenia, etc., as doing etrong work, and tbat each one of the five named will be a winner this year seems only a qnestion of health. Indeed the redoubtable hero of the Cesarewitch and Cambridgeshiro, the great Foxhall, is eccoud favorito for tbe prinicipal of the spring handicaps, the City and Suburban at Epsom, the middle of April, and Sachem, Mr. Lorillard's four-year-old son of War Dance and Sly Boots by Rivoli, has grown and improved so much in his looks that his name is in the mouth of every "sporting prophet" in England. Whether the double change of trainers has worked theso marvels or not it is hard to tell, and it will suffice us if they do themselves credit in the arduous campaign to come.

Geo. W. Lee, the New Jersey oarsman, who is now in London trying to get on some matches, is having poor luck in his negotiations. Rowell and Peter Duryear are his companions, and the three are unanimous in writing back home that "British professional rowing is at a low ebb. Haulan, Laycock and Rosa seem to have taken all the pluck out of them." The season, however, will begin in two weeks with the University race hetween Oxford and Cambridge, of which the dark blues were the favorites at last advices. On the 12th inst. the Cambridge crew, wbile at practice on the Thames, were swamped and had to swim for it, which untoward event did not improve any the morale of tbe light blues, it is to be presumed.

Tbs National lins steamer Queen arrived here on Saturday last with a largs consignment of thoronghbreds and a small menagerie, all ths property of Adam Forepaugh, the well-known circus manager. Tbs weather across was a succession of hnrricanes, tbat of ths 14th causing ths death of poor Delaplains of ths St. Lanrent, who was swept off the bridge and never seen again. Tbs Queen was eight days at sea when shs encountered this same hurricane and three of the thoroughbreds and one ostrich succumbed to ths severity of the elements, in spits of ths unequaled facilities on board this line, whose vessels are well known to bs the favorite ones for shippers of live stock across the ocean, on account of the convsnisnt arrangements for, and care shown to, consignments of this character. Had the ill-fated Blue Gown been sent in one of these steamers instead of being hurried off, as was ths case, hy one of the fast passsngsr vessels, not intended to transport equine freight, he might have been alive to-day doing Mr. Keens and ths racing blood of tbis country much service. These horses are intended for the series of hippodrome races Forepaugh will give in connection with his circus this year, although some of them may he trained and run at our racing tracks, and two of them are very fashionably bred mares tbat will find ready purchasers for the breeding paddock after their racing days are over.

The trotting stallion, Voltaire hy Taula, record 2:21, has been sold hy W. N. Crawford to the Stanhopes of Lexington, Ky. Voltaire's dam is Portia hy Mamhrino Chief, a very stont combination of trotting strains.

Maud S is in good shape, and Bair says he expects to "knock ont" father Time this season. If he equals that 2:10½ he will do well. Ex-Governor Stanford annouuced to a representative of the New York *Sportsman*, a few days ago, his intention to hring East this summer some of his racing as well as trotting stock.

Precious, the four-year-old filly by Lever, who ran so well at fonr miles on your track at Bay District, is to be entered against onr long distance horses in the four-mile races this fall at Sheepshead Bay and Pimlico. Her debut in the East will be watched with interest.

A new departure in the wintering of thoronghbreds in a cold climate comes from Cassadaga in this state, where Asahel Burnham, or "old cheese" as the boys call him, has his string of racers. It consists in exercising the "wild steed" hefore a sleigh on the road, aud old "Linen Duster," another pet name A. B. goes hy, says that thongh they tried to get away with him at first, as wae quite natural, after he got them broke they did well, and he considers their legs to be much benefited hy the nnusual drudgery. Truly wonders will never cease. Burnham's featherweight jockey has left bim, hut the "hahy" is small loss.

California quail are being quite largely exported abroad, principally to the highlands of Scotland. The little tufted beauties should thrive there and benefit the Scottish breed by crossing in a judicious manner. Per contra Mr. Lorillard's importation of English pheasants at Rancocas have taken kindly to their new home, aud are greatly admired hy those that have seen them.

Betting here on American events is yet at a etandstill, speculations being very light. In Louisville tbe betting hooks and almost all kinds of trade and commerce are suffering from the disastrous floods. Still Watts & Co. report some hnsiness on Thora, Apollo, Checkmate and Boatman for the Cup and Ascender, Drake Carter aud Punster for the Derby. In the Merchants' Stake Meditator, four years, Ascender, three years, Queen Ban, three years, Thora, five years, Paul Jennings, four years, Fellowplay, five years, and Checkmate, aged, have also heeu backed heavily at various prices. Reed has het $1,500 to $7,500 that his mare captures the Cup, and unless old "Check" has fair weather and pleuty of work, Thora will down him snre.

Late reports from Jim Williams' farm in Henry county, Ky., represent Checkmate as doing poorly, but, coming from the quarter they do, perhaps the rumor had better he taken "with a grain of salt."

Williams will train again, so he says, the magnificently hred Aspinwall, seven yeare, by Australian—Hester. This horse is a full brother to the great Springbok, and bas through accidents, etc., been in hnt very few races, not over three or four during his whole career on the turf. Williams has also six or seven others in training including Messmate, a four-year-old filly hy Alarm out of Checkmate's dam. She ought to gallop a little, "suah."

In my last letter I mentioned that the famous English horse Bruce had been sold. The report was erroneous. He was offered at a reserve of £2,500 ($12,500), hut there was no hid at these figures. Craig Millar, however, foaled 1872, and the winner of the St. Leger of 1875, was recently sold to go to Hungary for the large price of $32,500. This is accounted for partly hy reason of his stock having already run and shown well on the British turf. Craig Millar is hy Blair Athol out of Miss Poland.

Tom Bowling, tbe famoue son of Lexington and great race-horse of ten years since, has been sold to I. E. Simmons of this city, to stand at the old home of the trotting stallion Geo. Wilkes, in Kentucky.

McGrath's famous horse has thus far sired nothing of any accouut hut Gen. Monroe and Bowling Green; hut he has had few good mares. Perhaps with hetter opportuuities to show his prepotency, a different sbowing may be obtained, for the horse is of good size and unsurpassed lineage.

A very cruel story comes from Bowling's old home, the McGrath farm near Lexington, now the property of Milton Young, ex-turfman and now a breeder. Yonug, last fall, bought the stallion Onondaga by Leamington from the Dwyer brothere of this city, aud since the horse arrived in Kentucky, his always violent temper has grown very ungovernable, so much so that one day last week it was decided to blind the horse, not temporarily, but to remove his eyes. The borse was secured, chloroformed and the horrible operation performed. We bave aa yet no particnlars as to just what particular savagery tbe poor beast had beeu guilty of, or what nsefulness of his, in the performauce of his duties as a lord of the harem, had been impaired by his temper, and until more ia kuown it looks like a disgraceful picce of harbarism nnworthy of all tbose connected with it.

At Nashville, Tenn., a great many promising two and three-year-olds are wintering. Prominent among them is Toplight, five years, hy Great Tom—Vandalite, and two Glengarry two-year-olds out of Dora and Kathleen respectively. The latter are owned by Capt. Franklin, the breeder of Blackbird, Aranza and Geo. Kenuy and ho has been offered large figures by parties negotiating for their purchase.

Thoronghbrods seem to bo higher than ever, which is as it should bo considering tbo vast amount of racing that will he be done tbis year. Tho sports in this State, however, received a hard blow this morning in Albany, where the resuscitated pool bill to permit selling in legalized tracts only, not in cities, came up and was lost by a vote of sixty-one to thirty-seven. The fool-killer ought to visit some of the fanatics in our State Legislature, those fellows who frown down this so-called evil, which in reality helps to support horse-breeding, a State industry, while they wink at and countenance margin and bucket gambling in stocks and allow the gildsd card palaces full sway. Consistency is said to be a jewel, but they and thsir ilk are strangers to the term.

Eole, ths celebrated five-year-old grandam of Leamington, and his young three-year-old brother tbat has never started yet, have been sent by their owner, "Freddie" Gebbardt, to Eph. Snedeker, the silent trainer. Both are in good shape and will be heard from this season.

The old black gelding Gen. Butler by Contraband, a contemporary antagonist of Dexter, Geo. M. Patchen Jr., Lady Emma, Fillingham, etc., twenty years ago, is still hals and hearty at a farm near this city; ths old horse must be thirty years old hy this time.

The poultry show at Madison Square Gardens was a great success, and Black Spanish, Silver Laced Bantams, Houdans, Gams varieties, Jacobins, Carriers, Crested Fantails, Pouters, Trumpeters, Turbits, and scores of other fancy hrsede claimed the attention of many visitors, as did ths ths dog show ths week after.

All the theaters are doing good business notwithstanding the Lenten season, and for the gay and festive New Yorker in search of pleasnre "all goes merry as a marriage hell."

New York, Feh. 28, 1883. PACIFIC.

Mr. Thomson Criticized.

EDITOR BREEDER AND SPORTSMAN: Permit me to correct and complete a qnotation from the New York *Sun* made by Mr. Allen W. Thomson in his contribution to the "Morgan Controversy" published in the BREEDER AND SPORTSMAN of Jaunary 27. One period of the *Sun's* article reads as follows: "He was taken across the lines into Connecticut, and is said to have been the sire of the famous Morgan stock; *bnt this is by no means certain.*"

Mr. Thomson omits these last seven words, which I have italicized, although quoting the words next followiug them, and everything else in the paper relating to True Briton. The suppressed words are only an expression of opinion, it is true, but they held the opinion of John Anstin Stevens, the distinguished historical scholar, late editor of the "Magazine of American History." It seems a little nnfair to Mr. Stevens to use his article and suppress bis seven-word opinion on the matter at issue.

Mr. Stevens' *Sun* article was written as long ago as 1877, and what he even then regarded as so doubtful has been rendered highly improbable by later discoveries of dates and circnmstances.

Mr. Thomson does not succeed in stating the case of hie opponents qnite accurately. He says: "It was claimed at first that True Briton was not stolen from Col. James De Laucey. Now it is claimed that True Briton was not much of a horse." I think nohody has denied the stealing. The qnestion is, was Selah Nortou's carriage horse, Beautiful Bay, ever De Lancey's saddle horse, True Briton? It is uot the theft but the identity that is doubted. Conld a horse that was "in his prime" in 1791 have been a favorite saddle horse, for we know not how many years, in 1776?

The De Lauceys fled the country and their property was confiscated. There could therefore have been no need of attempting to conceal the captured horse's identity by a change of name, which, in so far as it succeeded, would have destroyed his prestige also. Beautiful Bay may have heen True Briton broken to harness later in life, after coming to New Eugland. It is certain tbat John Morgan asserted that he was the very horse, and advertised him as "True Briton, or Beautiful Bay." But in no other contemporary mention is he spoken of as True Briton. Both before and after that advertisement he was called Beautiful Bay, and nothiug else. Mr. Justin Morgan Norton, his owner, and the owner of his colts, called him Beautiful Bay, and uothing else. It is quite probable his owner knew at least as much abont him as John Morgan did. In short, it is certain that he was Beautiful Bay, and it is uot at all certain that he was True Briton. He is not known to have horne the latter name at all, except as an alternative title in the mouth of one man, not his owner.

To write of him constantly as True Briton is a mere begging of the qnestion, a piece of partisan perversity.

In regard to the alleged attempt to make him ont "not much of a horse," that was made more exasperating hy his detractor's hringing in his owner, his keepers and his patrons to testify the comparative value of his stud services, whereby it was shown that the horse stood at a second-rate price, and that even that price was lowered from time to time as his stock became better known. The zeal of Morgan writers has foisted upon the horse an nnwarranted name and an imaginary importance. Whether he was the De Lancey True Briton or not, there are ample and imperative reasons for disbelieving that he was the sire of the great little horse, Justiu Morgan.

I am indebted to the courtesy of Mr. Thomson for the opportunity of thne briefly criticising his work.

Springfield, Mase., Feh. 27, 1883. O. W. COOK.

George Wilkes has twenty performers with records of 2:30 and better. Alma Mater, dam of Alcautara; Lady Carr, dam of Ambassador; the daughter of Kentucky Clay, dam of Blondine; Minna, dam of Kentncky Wilkes; Little Ida, dam of So-So; Miss Coons, dam of Wilson; Dolly, dam of Onward; the danghter of Mamhrino Patchen, dam of Rosa Wilkes; Zora, dam of St. Gothard; Lady Belmont, dam of Sherman; Neilson, dam of Prospect Maid; Missie, dam of King Wilkes; and the American Clay mare, dam of Harry Wilkes, were Kentucky bred, and neither of them was owned by either of the Simmons brothers. Nelly, the dam of Tom Rogers, came from Ohio; Lady Dunn, the dam of Joe Bunker, is from the loins of a horse who did much for the Hambletonians in Orango county, Seely's American Star; May Bird, out of the Steirs mare, was got before George Wilkes went to Kentucky; Yonug Wilkes was bred in New York, and Lumps is out of a mare which the Messrs. Simmons shipped over the Alleghanies. Had the owuers of George Wilkes pnrchased their broodmares in Kentucky instead of sending them from the East, they would have had thouaands of dollars added to their bank accouut. The brown son of Hambletonian aud Dolly Spanker wanted not only the climatic outcross, but the courage and nerve force imparting foundation which is always abundant in a racehorse region like that of which Lexington is the center.—*Turf, Field and Farm.*

Bertha Von Hillern, the pedestrienne, says that with a year's training she could bring 90 out of 100 delicate women into a healthy and vigorous condition.

Perry Belmont, the Congressman, is said to be the best amateur swordsman in New York.

The Gun Club contemplates giving a picnic on Decoration Day at San Rafael.

POULTRY.

Modern Artificial Hatching and Hatching Apparatus.

Part IV.—General Remarks.

I am frequently asked the following question: Are chickens hatched in an incubator as strong as those hatched by hens? My reply is that those which are *properly* batched artificially are not only as strong, but, if separated from older fowls, are not nearly so liable to disease, and may be kept till far beyond marketable size *entirely without vermin*—a thing which, in California, is almost unknown among hen-hatched birds. If vigorous eggs are hatched with too little moisture or too much heat, weak chickens and poor hens may be counted upon every time; the same results could be looked for from an incubator varying greatly in heat, one portion with another (if eggs are changed about) or one time with another over the whole; such would also result from the hatching of chickens in an incubator supplied with too little fresh air. Among the thousands of broilers that I have raised for market I have never had a contagious disease. I have invariably kept my chickens from all chance of contact with hens in any manner, and not a blemish or trace of vermin has ever been seen among them. I believe that these things originate spontaneously among fowls after passing a certain stage of their development only. This season I am hatching almost exclusively from eggs laid by hens which were hatched from my incubators last spring, and I verily believe that in all California no more clean, hardy or vigorous fowls or better layers could be found. They are of mixed breeds—Plymouth Rock, Light Brahmas and Dominiques predominating. Their progeny, hatched in my incubators, have long been going to market at the ratio of 90 out of every hundred hatched. If any raisers of chickens by the natural way can beat this in midwinter, I may be persuaded to consider whether I have been altogether correct in my statement as to the strength of incubator-hatched birds; until I hear of a better result, extending into the thousands, I may be permitted to differ with any one who questions the results of good artificial incubation.

In the matter of economy, as compared with natural hatching: Exclusive of the little time consumed, and which is scarcely missed, a good incubator will hatch at the rate of about one-half cent per chick. In producing numbers of chickens, the incubator can beat the hen "out of sight;" for a few chicks, I am free to admit that the hen would lead. The care of a small incubator (though well enough if used as a plaything) is as great as that of a sizeable machine, and I do not consider one of any practical value which will not accommodate at least 200 eggs, as a few hens would win every time on small numbers. But when we come to the consideration of the room, care, feed, attention and uncertainty in many respects of, say, twenty sitting hens, the incubator, according to my experience, distances the hen; double the number, and still greater results go to the credit side of the artificial plan. On the other hand, I do not advise the use of very large machines, as I consider medium-sized ones far more convenient in starting or hatching. If a person desires greater capacity, a duplication of such machines is much better. I leave out of the consideration the difficulty of making perfect uniformity of heat in large egg-chambers. An advantage over the hen lies in the fact that the machine is always "broody," and taking advantage of this, we may produce chickens for market at a time of year when hens could scarcely be brought to see the importance of it, and thus secure the best prices when chickens are not raised naturally.

I am also frequently asked: Do you make the business pay? My invariable answer is: I have been engaged in it three seasons nearly, and my plant is not for sale. Next year I shall double my facilities. Draw a very easy inference, please—one which is too palpable for disguise, did I desire concealment.

In closing my imperfectly written papers, I trust I may not be accused of egotism, inferentially, when I say that to intelligent people only will success in the "chicken business," natural or artificial, be generally awarded; for what I may have lacked in natural ability has perhaps been compensated in an effective measure by hard work, hard study, and a very solid "grip," which my friends have seen me exercise under rather disheartening circumstances in life. In candor I would advise all persons without a reasonable amount of patience, sound common sense and fair opportunity to let the business be prosecuted by others more favorably circumstanced; yet it is very clear that what I have done may also be accomplished by others, and, I may add, perhaps much more easily than in my case—the principal results of my study of the first branch of the business, incubation, is very much at their service, at all events. G. E. D.

East Oakland, March, 1883.

The Chinook Wind.

This is a name applied to a wind which occasionally, during the winter, blows over that part of Oregon and Washington Territory lying between the Cascade Range and the Blue Mountains. When the mercury is way down below zero and the ground covered with snow, an inky black cloud is seen on the western horizon; a warm wind begins to blow; the mercury rises immediately above the freezing point and the snow disappears as if by magic. This is the chinook. To the pioneers the chinook was a strange phenomenon believed by some to be the breath of the volcano Mt. Hood; by others to be generated by some chemical action of the atmosphere. There is no doubt, however, that the chinook has its origin in the equatorial regions of the Pacific Ocean.

As all the warm and cloud-bearing winds of Eastern Oregon come from the west, and in the region west of the Cascades warm rains and warm winds are much more frequent, it follows that were the Cascades not in the way there would be much more rain on the table land between them and the Blue Mountains, the climate would be milder in winter and not so intensely hot in summer. The chinook is one of the many warm winds of Western Oregon which get high enough to blow over the top of the Cascade range. Could one stand at times on the summit of the Cascades in mid winter, stretching eastward he would see, far as the eye could reach, a snow-clad country beneath a cold, clear sky; while to the west and far beneath him he would see seas of clouds from which copious showers of rain were falling.

The chinook has its parallel in the Foehn of the Alps, which causes those sudden and dangerous rises in the streams which have their sources in those mountains, and often brings down avalanches destructive to life and property. The Foehn is the Simoon of the African desert blowing across the Mediterranean sea.

TURF AND TRACK.

The Cook Farm.

Beyond question there are finer breeding farms in California than can be found in any other state in the Union. Not alone excelling in natural advantages, as there are many in point of improvements far superior to those of the East and South. Palo Alto is acknowledged by all who have seen it to be the most complete in its appointments of any stud farm in either hemisphere, and elicits encomiums from visitors from all sections. Next to that renowned place, and in some features excelling it, is the rancho that lies at the western base of Mt. Diablo, and although as a breeding farm it is likely to be broken up, it is well worthy of being classed as one of the fairest of this fair clime. The situation is one of the fairest imaginable. Though the mountain, towering above all others in the neighborhood, broken into ravines and worn into deep gulches, at the base there is a gentle slope with undulations as the ascent is made to vary and give character to the scene. The soil is rich, and especially well adapted to rear fine horses upon, the herbage being the native grasses which are so favorable for furnishing just the right sort of nutriment for brood mares and colts. The diversity of surface is another valuable feature, as it is generally admitted that rolling land is the best for stock to graze upon, not only on account of the feed being better, but also bringing the muscles into better action, and the gallops up the grade developing the lungs and expanding the chest. Five thousand acres give large fields, and though there are the usual paddocks and small inclosures, there is also plenty of room for the colts to race upon, and a clear stream winding its silvery course through fields and paddocks. Nature has added another crowning beauty in hundreds of "graud old oaks," the huge trunks supporting the extended, guarled branches so as to give plenty of shade. There is not an inclosure, however small, without trees, enhancing the beauty to the eye of the esthetic, while the utilitarian can see advantages which he values higher than adornment. Monte Diablo standing guard to the north and east, the Contra Costa range protects it from the west, and the trade winds, which come so harshly here, are either deflected entirely or robbed of their asperity before reaching this happy valley. Protected on all sides, the temperature is rarely otherwise than enjoyable, and climatic advantages are great factors in successful horse-breeding.

To perfect this as a stock farm there have been lavish outlays, and to add to the natural beauties there has been correspondingly large expenditure, supplemented with correct taste. The house is a handsome Swiss cottage, the surrounding grounds being embellished in the highest art of the landscape gardener—lauds, shrubbery and flowers, and in the foreground a lake, giving a finish to the whole which makes the picture complete. Nearly all of the buildings are of the same order of architecture as the house, which harmonizes so well with the huge mountain, the glen and the hills, and from the veranda of an additional structure, some distance from the main dwelling, and which is built on an eminence, a view of the whole place is obtained. The barns and stables have an imposing appearance. They were built not merely with an eye to the comfort of the occupants, but also to be in keeping with the idea of general ornamentation, and to come up to the beau ideal of a country home where there would be nothing discordant, nothing to mar the pleasures of a quiet retreat. Library, music-room, billiards, etc., are essentials to those who can afford the luxuries, though in the country outdoor recreations are the kind which contribute the greatest fund of enjoyment. Good roads to drive upon, a gallop over the hills, shooting, fishing and quiet saunters among the fields are all very well, and yet, to a person who has a real fondness for the truly American sport of fast trotting, there is nothing like a track for the cap-sheaf of enticing pleasures. More especially when breeding the fast trotter is the bent to which the possessor's mind inclines. There is a fascination from the outset. In the first place, in selecting the animals from which the anticipated prodigies are to spring. Watching the foals from the time they can just toddle about their dams until they career in high glee over hill and dale, when a few months of the vivifying sun and pure air have toned the muscles into strength and elasticity. There is a good deal of anxiety to see how those which come nearest to the idea of perfection in breeding will deport themselves when they receive the first halter lessons, but the all-absorbing interest is when, fairly broken to harness and hitched to the sulky, they demonstrate their capacity to "show a gait." The timing-watch is brought into use, and the result of each succeeding lesson carefully noted. The interest never flags so long as there is improvement, and since the breeding of trotters has been pursued with something of systematic care, it is rare that the watch does not tell a flattering tale.

On this grand breeding farm, before the colts were ready for their initiatory lessons, a course was built, a mile in circuit, and as carefully constructed as though there were to be races on it for thousands of dollars and in the presence of tens of thousands of spectators. It was built where a seat in an embrasure of a window, or a station on the verandas, would command a view, and thus the ladies of the household could participate in the pleasure without trouble. But the enthusiast is not contented unless he is on "the stretch." He must see how the youngsters handle themselves, and whether the action is in accordance with his ideas or not. Not a moment hangs heavily, and the actors who play well their part are never tiresome. It was to he expected that a man who had the means and the inclination to purchase and beautify such a large estate would also place upon it the best stock he could obtain.

More than the command of large means, and an inclination to invest them, however, is necessary to secure the right sort of animals. There must be a certain amount of experience, and a sort of horse knowledge which is equally indispensable to secure the proper type, and it depends sometimes on there being a share of good luck as well as discrimination. This part, and by far this most essential part of a breeding farm, was also in keeping. The stallion obtained was a member of the family that has completely overshadowed the rivalry of other clans, and not only that for a recommend, as he stood at the head of the list, and still occupies the proud pre-eminence of having the fastest record for two and three-year-old stallions. Then again, he is a horse of fine size and commanding appearance, so that there was a combination of good qualities which were a token of success in the stud. The matrons were selected with the most scrupulous care. Buy the best, were the instructions; invest in only those that are the nearest you can possibly get to perfection and breeding of the most intensely cerulian tint. The orders were strictly obeyed, and the fields and paddocks at the base of Monte Diablo were tenanted with a rare lot of blood mares. There is a sad ending to the history; a dark cloud to settle between the mountain tops which enshrine the happy valley; a pall in place of the sunshine; a mist hanging over the lake; a fog-cloud from which the branches of the old oaks are wringing tear drops, and dark moisture on shrub, grassplat and parterre. The owner sickened and died just as the anxiously looked-for colts began to display their aptitude, and that the study, the waiting and the expectancy were to end in fruition. California was to lose one of her most complete breeding farms. The matrons and blithe foals, the vivacious yearlings and the lissome-limbed two-year-olds are huddled together at the sale-block, and the stentorian voice of the glib-tongued auctioneer is rattling off the phrases which are to precede the dispersement. And so the years of hope, not unmixed with anxiety, come to an end, and this venture, which was of so much promise, is scattered in every direction. Still the State is greatly benefited by the dispersal, and the rich blood will be the nucleus of many breeding farms in different sections.

The Morse Horse and Gen. Taylor.

The following extract from a letter written by J. L. D. Eyclesheimer, who bred Gen. Taylor, is kindly furnished us by George Bement Esq. of Redwood city and will be of interest to the breeders of this coast where the Morse horse and Gen. Taylor figure quite prominently in the pedigrees of the older matrons of the farm:

The gray Norman or, generally known as the Morse horse, was a descendant of the Ogden Messenger on the Dam's side, but was sired by an imported French horse sent as a present to an officer stationed in Canada by the name of Genett and it was claimed that the Morse horse was the only get and he was stolen, as the officer refused under all circumstances to let him serve mares. The dam of the Morse horse I have seen often and she was one of the genuine old Messenger stock, possessing all the strength, gameness and endurance that could possibly be obtained in one beast, and showed a great deal of speed for the education she had had. She lived to the age of twenty-eight years and had many times measured her hundred miles the same day and died sound and without blemish.

The dam of Taylor we know nothing about, never having been able to trace her farther back than as a road mare in New York. She killed two mates and was then considered old and worn out and sure to never breed. She was traded and found her way to Lansinghurgh, N. Y., where we got her in a trade, gave her a run to grass all summer and in the fall she was like a colt and could trot in 40 easy. We then had her served by the Morse horse and caught the first time and raised eight colts in eight years. Taylor was the sixth. All but one beat three minutes before they were four and one-half years old and their training mostly road work. The oldest one was about one size smaller than Taylor but the same form. I drove him to a top buggy in 52 when he was five years old. Taylor was foaled some time in the month of June, 1847. That you can bet on. You can set it down that Taylor was one of the best bred horses that ever left the state of New York and I venture to say that his progeny is stamped with his own peculiarities to a very marked degree, and that is one of the best signs of good breeding and a judicious cross.

I am glad to hear that you have such a promising colt, and still more knowing how well you appreciate a good one, and glad that she is some of the old stock that I thought and still think was A. No. 1, and had I been one of the favored few when a boy the world would now acknowledge the same, for they should have been developed in numbers and otherwise. J. L. D. Eyclesheimer.

Fond-du-Lac, Wis., Dec. 14, 1872.

Two-Year-Old Championship Stake.—Appreciating the fact that the Lorillard stallion stake for three-year-olds to be run this year received no less than eighteen subscriptions, Mr. Pierre Lorillard now proposes a stallion stake for two-year-olds, to be run at Monmouth Park in 1884, which, in view of the coming yearling sales, should attract the attention of every owner of a thoroughbred stallion in this country. The conditions are as follows: "A sweepstakes for two-year-olds (now yearlings), at $250 each for starters, with $5,000 added by the Monmouth Park Association in addition to a subscription of $500 each by owners of stallions the get of which are alone qualified to start. The owner of the second and the subscribing owner of its sire each to receive $1,000; the owner of the third and the subscribing owner of its sire each to receive $500; the winner to receive the entrance money of the starters and one-half of the money remaining after deducting the moneys paid to the second and third; the other half to go to the subscribing owner of the sire of the winner. Distance, six furlongs." The above is certainly a most liberal proposition, and as the death of a subscriber will not disqualify the get of any stallion, there should be at least twenty-five or thirty stallions entered. Certainly breeders who breed for sale will not miss the chance, as the subscription price will no doubt be more than returned by the increased price which they will receive for yearlings qualified to start for such a stake. As an event the race will take rank with the Middle Park Plate run at Newmarket in October both in value and in pointed attention to sires of the first, second and third.—*New York World.*

Trotting at Santa Cruz.

Santa Cruz, Cal., February 24, 1883.—Purse $100; mile heats, best 3 in 5, to harness.

John Soper's Lady Belle	1	1	1
Dick Kirby's Jersey Lily	2	2	2

Time—2:53, 2:52½, 2:52.

Gretchen, the dam of Clingstone, is to be sold at the Kellogg sale in New York next month. She is fourteen years old, and as the sire of Clingstone is still alive the dam should bring a good price, as the union of the two might result in another 2:14 trotter. In any event the produce would be highly prized for breeding purposes.

The quarter race between Sly and Daniel Payne's mare, for $500 a side, came off at Phœnix, Oregon, on the 24th ult., and was won by the Payne Mare by a head. There was a large amount of money laid on this little affair, and the backers of Sly claim that bad riding was what hung them up.

John Howes has sold the trotting mare Nellie Grant, by Fred Low—Lady Grant, to R. G. Head of Napa. She will be bred to Auteco before she is shipped to Mr. Head's farm.

A foot race of five miles against time is to come off at Prescott, Arizona, to-morrow, a man named Eckers undertaking to cover the distance in forty minutes on a wager of $100.

By the burning of the Fashion Stables at Chicago, last week Tim Barnard lost a Buccaneer colt, which he valued at $1,000.

The Champion Stallion Stake.

At 4 p. m. on the 1st instant, Mr. D. D. Withers, at the request of Mr. P. Lorillard and in the presence of Mr. J. H. Bradford, Mr. J. G. K. Lawrence, Mr. James Galway and others, opened in the rooms of the American Jockey Club, New York, the bids made by racing associations for the Lorillard Stallion Stakes, to be run at the Septemher meeting. The condition was that the clnb which added the most money to the stake shonld have the race. Only two hids were received, one from the Coney Island Jockey Club, hy mail, and the other from the Louisville Jockey Club hy telegraph. The former offered $6,000, which was at once admitted to be a very liberal offer, but when Mr. Withers announced that Lonisville offered $10,575 no one had anything further to say except to wish the citizens of Louisville well out of their present troubles, and that the meeting in September should have every element of success, with good weather and plenty of horses. The stake was first anuounced in the spring of 1880 and was made for hreeders to enter their stallions at $500 each, only the progeny of snch stallions to he elegihle to start in the race at $250 each. It will he thus seen that with the eighteen stallions secured for the stake and the added money there is at once $19,575. Presuming that ten start at $250 eacb there is a total of $22,075, to he divided as follows: Two thousand dollars to be dedncted from the subscription money, which shall be divided so as to give the owner of the second horse $1,000 and the nominator of the sire of the second $1,000. The remainder is to be divided between the owner of the winner, who shall receive the post entrance, half of the added money and half of the remainder of the snbscription money, and the nominator of the sire of the winner, who is to rceeive the remaining half of the added and subscription moneys. The eighteen stallions nominated were as follows:

A. Belmont's Ill-Used, by Bredalhane.
A. Belmont's Count D'Orsay, by Kentucky.
J. G. Bethune's Wauderer, by Lexington.
G. W. Bowen & Co.'s Billet, hy Voltigeur.
W. G. Harding's Great Tom, by King Tom.
P. Lorillard's Saxon, by Beadsman.
P. Lorillard's Glenlyon, by Stockwell.
P. Lorillard's Moccasin, hy Macaroni.
H. P. McGrath's Tom Bowliug, by Lexingtou.
F. Morris's Battle Axe, by Monday.
C. Reed's Highlander, by Blair Athol.
J. W. H. Reynolds' Whisper, by Planet.
A. Keene Richards' War Dance, by Lexingtou.
M. H. Sanford's Glenelg, by Citadel.
M. H. Sanford's Monarchist, by Lexington.
M. H. Sanford's Virgil, by Vandal.
A. Welch's Alarm, by Eclipse.
D. D. Withers' King Ernest, by King Tom.

With the stake now a fixture the interest centers ou who and what will start. Of those owning three-years-olds here in the East that are eligible may be mentioned Messrs. Pierre and George Lorillard, the Dwyer Brothers, D. D. Withers, A. Belmont, Appleby & Johnson, J. E. Kelly, L. A. Ehlers, Snedeker & Co., William Lakeland, Mr. Kelso and the Preakness stable. Among the Western owners are Bowen & Co., T. J. Megibben, J. McIntyre, P. C. Fox, J. R. Watts, J. A. Grinstead, W. L. Cassidy and the Fleetwood stables. Of the horses that are eligible to start that ran last year as two-year-olds are the following:

By Alarm—Circassian, Breeze, Soubrette, H. Murray, Lizzie Mac, Nora, Warning and the Beresina and Warwickshire fillies.

By Battle Axe—Etiquette Jr., filly.

By Billet—Barnes, Miss Woodford, Glean, Centerville, Bridlemere and Jennie Bine.

By Count D'Orsay—Adalgisa and Adamantus.

By Glenelg—Little Minch, Heel-and-Toe, Magnate Slocum and Anna Louise.

By Glenlyon—Battledore, Inconstant, Corona, Nimrod, Gift, Gonfalon and Spartacus.

By Great Tom—Ella, Tocsin, Tennyson, Standiford Keller, Tangent, Swift, Tallyrand, Trombone, Tom Boy, Tullahoma and Tea Rose.

By Highlander—Holy Rood.

By Ill-Used—Felicia, Jacobus, Woodflower, Carnation, Barbarian, Marc Antony, Carlisle, Gertie M, Le Petit Duc and Fairwater.

By King Ernest—Kinglike, King Fan, Renegade, Cyril and Retort.

By Monarchist—Caramel and Alma D.

By Moccasin—Disdain and P. Lorillard.

By Saxon—Lytton, Maraquita and Carrie G.

By Tom Bowling—Owen Bowling, Thady and Astnte.

By Virgil—Little Katie, Bellona, Ebony, Belle of Mt. Zoan, Vis-a-Vis and Palmetto.

By War Dance—Blue Grass Belle, Scalper, Joe Weldon, Miss Dance and the Tarantella filly.

By Wanderer—Wandering and Wayward.

By Whisper—Murmur and Chatter.

Of course there are a number of three-year-olds by the above sires that did not run as two-year-olds, among which may be the winner, although some very promising horses will be found among those that have already shown their form. But whichever horse wins there is one thing certain—the city of Louisville will largely benefit by the race. The Great Southern Exhibition will he in full swing during September, and as Mr. Lorillard said yesterday: "If Lewis Clark arrangea a programme for the meeting with liberal stakee and purses, I shall not only send a large stable, but others will certainly go." In the latter lot may be included some of Mr. George L. Lorillard's, the Dwyer Brothers', Appleby & Johnson's, L. A. Ehler's, and possibly some of Mr. D. D. Withers' horses.—*World.*

Death of an English Turfman.

Mr. W. S. Crawfurd, the well-known English turfman and husband of the Duchess of Montrose, died on the 24th ult. He was born in 1819 and was a son of Captain Arthur Stirling, a Scotchman of ancient family, who fought at Waterloo. The young man assumed the name of Crawfurd with an estate before entering Trinity College, Cambridge, where he was prominent in every description of sport and well known with every pack of hounds within reach of the university. In 1841 he was one of the first flight at Mellon and later on at Langton Hall—in fact, until a few years ago there was no keener follower of the hounds in the shires. He took to the turf in 1844 and by his death the English turf loses one of its oldest and stanchest supporters, Mr. Crawfurd having been identified in the past with such well-known turfites as Admiral Rous and General Peel. He was elected a member of the Jockey Club in 1850, and although some efforts were made last year to attack his honor as a sportsman because of the actions of his wife—the Duchess of Montrose, whom he married in 1876—those best in a position to judge of the matter declared that the stable was more sinned against than sinning, and if the rumors which were afloat about the honor of one of its trainers—Sherrard—had been put in the form of charges and laid before the Jockey Club, there is no doubt that not only he, but also several of the largest speculators, would have been warned off Newmarket Heath. Certainly neither Mr. Crawfurd nor his wife lost any influential friends by the affair, as it was well known that in the instances when "racing law" was violated it was the Duchess who—in the absence of Mr. Crawfurd, then an invalid—did it, and that she was fairly pushed into the position by the notorious way that the stable secrets had been exposed. To refer back to the records, Mr. Crawfurd began racing in 1843 or 1844, but the first of the great events found credited to him is the Cesarewitch, won in 1848 with The Cur, and it may be almost said that the last great event he won was the Cesarewitch, last year, with Corrie Roy. In the long stretch of years between the two there are but few of the great events for which the scarlet jacket has not been carried first past the winning-post. Without regard to chronological order it may be said that Mr. Crawfurd's winnings include the Derby, won 1878 with Sefton, which colt had a few weeks before won the City and Suburban. In 1881 he won the Oaks with Thebais and in 1875 the Doncaster St. Leger with Craig Millar. He divided the 2,000 Guineas in 1868 with Moslem after a dead heat with Formosa, and won it in 1873 with Gang Forward, while the 1,000 Guineas he took no less than three times, viz.: with Mayonnaise in 1859, with Thebais in 1881 and last year with St. Marguerite. In 1881, with Buchanan, he won the Lincolnshire and Newmarket Spring Handicap. In fact, Newmarket has been the stable's strong point for the last few years, St. Louis winning the Middle Park Plate in 1880 and Thebais the Criterion Stakes in the same year. In 1881 St. Marguerite won the Chesterfield, while in 1882 Macbeath in turn captured the July, the Criterion and the Middle Park Plate. Singularly enough the stable can claim none of the great honors at Ascot, though at Goodwood both the Stewards' Cup and the Goodwood Stakes have been won. At York and Doncaster the stable was also successful; in fact, so successful was it last year that it was first on the list of winning owners with a credit of £25,797, its credit for the four previous years being as follows: In 1878, £17,480½; in 1879, £8,935; in 1880, £13,087½; and in 1881, £17,919½. As to its prospects for the coming season opinion was much divided. It was generally conceded that Macheath might win the 2,000 Guineas, but that owing to bad legs he would fail for the Derby, although not very recently he was the favorite for both events. Those who have backed him, however, are quickly out of their misery, for with "disqualification by death of the nominator" all the money invested is lost, not only that bet on Macheath, but that bet on Kier and Clairvaux for the Derby, and also whatever may have been bet on Buchanan and Edelweiss for the Lincolnshire and Edelweiss, Martini and Princess Caroline for the City and Suburban. In fact, the disqualifications for stakes to be run at Newmarket, Epsom, Ascot, Goodwood, York, Doncaster, Lincoln and elsewhere would more than fill a column of the largest of the English sporting papers, as will be readily seen by the fact that between Taylor and Arnull Mr. Crawfurd had nearly forty horses in training.

New Rules of the Saratoga Association.

Rule 3. Duties of Judges.—There shall be three judges; a presiding judge and two assistants. The presiding judge shall decide which horse reaches the post first, and shall immediately exhibit his number at the front of the judges' stand; but his final decision as to the winner shall be announced as usual in the placing. He and the assistant judges shall assign their respective places in the race to as many of the beaten horses as they may think proper; except that in races of heats it is necessary to place all the horses. No evidence of foul riding shall be received, except from the racing officials. The presiding judge shall have control and authority over the horses about to start, the jockeys and all assistants attending the horses. Any such person refusing to obey his orders shall be fined, suspended or ruled off the course at his discretion. If the person fined does not pay the same within twenty-four hours from its imposition, he shall be ruled off the course. No person, whatever, whether he be an officer on the course or not, shall be permitted to remain in the judges' stand during the pendency of a race, except the judges and the clerk of the course. If, in the discharge of the duties assigned to the presiding judge, he should be unable to decide any question, he may call for the opinion of his assistants, and a majority shall govern.

If, before the starting of a race or heat, the judges believe or suspect that a fraud is contemplated, it shall be their duty to notify the owner or owners of the horse or horses involved; and they may request such owner or owners to put up a jockey or jockeys not under suspicion. If an owner refuses to comply with such request, they shall notify both owner and jockey that special attention will be given to them, and that they will be held to strict accountability for any improper conduct in the race.

If the race be one of heats, and the judges after any heat shall have good cause to believe that a fraud is about to be perpetrated, and that any horse or horses is or are, as the case may be, not being ridden or managed to win, they shall in such cases have the power to order a change of rider, designating, if they choose so to do, who shall ride, and placing the horse or horses in the charge of a trainer to be by the judges named. Any owner or trainer who refuses to permit rider or trainer to be changed as herein provided, and any rider or trainer who refuses to take charge of or ride a horse on the order of the judges, shall be expelled.

If in any case the judges have sufficient reason to believe that a fraud has been committed, they may exercise extraordinary powers for the administration of justice; may declare all pools and bets off, and may, if the winner of the race is implicated, declare the race void.

If the race so declared void shall be a purse, the amount of the same shall be returned to the association; if a stake, the added money shall be retained by the association, and the entrances returned to the respective nominators.

In all cases of fraud the judges shall have the right not only to expel the jockey, owner, or trainer, but all other persons concerned in the fraud.

A horse so expelled shall not start again in a race, nor be trained over the grounds of this association, until reinstated.

Foals.

At E. J. Baldwin's Santa Anita Ranch, Feb. 25, Maggie Emerson by Baywood—Lag by Loadstone dropped a brown filly, dark points and star in forehead, by Grinstead.

March 4, Mollie McCarty, by Monday—Hennie Farrow, dropped a bay filly, star in forehead, by Rutherford.

March 5, Experiment, by Monarchist—Cornflower, a bay colt, star in forehead, by Grinstead.

March 5, Blossom, by Virgil—Blunder, by Lexington, a bay filly, no marks, by Rutherford.

SPRING MEETING.

Entries to Stakes and Purses Pacific Coast Blood Horse Association.

First Day. Regular Meeting, Saturday, April 21.

No. 1—California Stake, for two-year-olds, $50 each, $25 forfeit, $20 added; to be run on the first day of the spring meeting; second to save stake; dash of a half mile.

No. 4—Hurdle race, purse of $150, of which $25 to second

horse; entrance free. A dasb of a mile and a quarter over five hurdles.

No. 1. Tbeo. Winters names s m Hattie B, four years, by Norfolk—Maggie Dale.

No. 2. W. Boots names b m Mollie H, aged by Wildidle—Mamie Hall.

Extra Day—Wednesday, April 25.

No. 5. Purse $150, of which $25 to second horse; entrance free; for two-year-old fillies. Dasb of five-eighths of a mile.

No. 1. W. L. Pritchard namee ch f by Bazaar—Libbie Dnnbar.

No. 2. E. J. Baldwin names br f by Grinstead—Mollie McCartby.

No. 3. E. A. Baldwin namee b f by Rutherford—Glenita.

No. 4. J. B. Cbase names b f Elizabetb, by Thad Stevens—Electra.

No. 5. Theo. Winters namee ch f Callie Smart, by Norfolk—Mattie A.

No. 6. Hill & Gries name b f Nettie Hill, by Joe. Daniels—Mary Wade.

No. 7. Palo Alto Stock Farm namee b f by Wildile—Robin Girl.

No. 8. Palo Alto names ch f by Monday—Abbie W.

No. 9. Palo Alto names ch f by Norfolk—Frou Frou.

No. 10. Jobn Mackey names b f Militia, by Lever—Malta.

No. 11. John Mackey names b f Lina, by KingAlphoneo—Titania.

No. 12. Jobn Mackey namee b f Faustina, by imported Glenelg—Marmot.

No. 6—Purse $200, of which $50 to second horse; entrance free; for maiden three-year-olds. Dash of a mile and an eighth.

No. I. Caleb Dorsey namee b c Stanislaus, by imported Partizan—Lady Melrose.

No. 2. W. L. Pritchard names e c Ed Smitb, by Leinster—Libbie Dunbar.

No. 3. W. L. Pritchard names Bazaar Colt, by Bazaar—Minerva.

No. 4. Jamee Davis names b c Result by Leinster—Lily Simpeon.

No. 5. J. B. Chase names ch f Laura, by Shannon—Folly.

No. 6. P. Carroll names f Alice by Wheatley—by Cheatbem.

No. 7. W. Boots names br c by Thad Stevens—Gipsey.

No. 8. Palo Alto names b f by Wildidle—Katie Gift.

No. 9. Joseph Cairn Simpson names Lady Viva, by Three Cbeers—Lady Amauda.

No. 7—Purse $200, of which $50 to second horse; entrance free; free for all. Dash of a mile.

No. 1. Densdale & Howson name b h Jim Douglas, five years, by Wildidle—by Norfolk.

No. 2. E. J. Baldwin namee br c Albert C, four years, by Rntherford—Maggie Emerson.

No. 3. E. J. Baldwin names b c Gano, three years, by Grinstead—Santa Anita.

No. 4. J. B. Chase names b f Marion, three years, hy Hubbard—Electra.

No. 5. J. B. Chase names ch f Laura, three years, by Shannon—Folly.

No. 6. Tbeo. Winters names b f Lon Spencer, three years, hy Norfolk—Ballerina.

No. 7. Tbeo. Winters names e m Atalanta, four years, by Norfolk—Lady Jane.

No. 8. W. Boots names e c Inauguration, 4 years, hy Wildidle—Miami.

No. 9. Hill & Gries name b h Wildidler, aged, by Wildidle—Eva Coombs.

No. 10. Stemler & Ayers name b g Joe Howell, aged, by Bonnie Scotland—Eva Shephard.

No. 11. Palo Alto names ch f Satanella, three years, by Leveller—Fron Fron.

No. 12. John Mackey names b g Duke of Monday, four years, by Monday—Demirep.

No. 8—Selling race, purse $175, of which $25 to second horse; entrancc free. Dash one and one-eighth milee. Horses entered to be sold for $1,000 to carry their entitled weight; 2 lbs. allowed for each $100 under that valnation. Horses entered for over $1,000 to carry 3 lbs. over entitled weigbt for each $100 above the valnation.

No. 1. E. S. Paddock names b g Joe Dixon, five years by Norfolk—Nevada; $300.

No. 2. J. & H. C. Jndson name b g Belshaw, five years, hy Wildidle—by Hercules; $400.

No. 3. W. L. Pritchard names ch g, five years, by Leinster Vivian; $300.

No. 4. G. W. Traherns names e g Certiorari, three years by Joe Daniels—hy Norfolk; $500.

No. 5. John Mackey names s m Maria, four years by Leineter—Flush; $600.

Second Day Regular Meeting, Saturday, April 28.

No. 9—Pnrse $150, of wbich $25 to eecond horse; entrance free; for two-year-old colts. Dash of five-eighths of a mile.

No. 1. E. J. Baldwin names h c, by Rutherford—Maggie Emerson.

No. 2. Hill & Gries name b c Bacbelor, by Hock Hocking—Maid of the Mist.

No. 3. Palo Alto names b c, by Wildidle—Montana.

No. 4. Palo Alto names b c, hy Wildidle—Blarney.

No. 5. Palo Alto names b c, hy Monday—Plaything.

No. 6. John Mackey names b c Winnemucca, by imported Billet—Lottie.

No. 10—Handicap Stake, for tbree-year-olde; $25 entrance, $10 declaration; $200 added; $50 to second horse; third to eave etake. Dash of one and tbree-eighths miles. Weigbts to be announced Thursday, April 26, at 8 p. m.; declaration to be made Friday, April 27, at 12 m.

W. L. Pritchard names ch c by Bazaar—Vivian.

No. 2. Howson & Co name b f Augusta E by Monday—by Norfolk.

No. 3. E. J. Baldwin names b c Lucky B by Rutberford—Maggie Emerson.

No. 4. Thco. Winters names b f Lon Spencer by Norfolk—Ballerina.

No. 11—Pacific Cup, handicap of $50 each; $20 declaration; $500 added; second to receive $150; third to save stake. Two and a qnarter miles. Weigbts announced April 21; declaration April 25, at 3 p. m.

No. 1. Lee Shaner names b o Jndge McKinstry, four years, hy Grinstead or Tbad Stevens—Katie Pease.

No. 2. W. L. Pritchard names b h Frank Rboads, five years, hy Leinster—Addie A.

No. 3. J. and H. C. Judson name s m May D, five yeare, by Wildidle—Nettie Brown.

No. 4. Densdale & Howson name b h Tim Donglas, five years, by Wildidle—by Norfolk.

No. 5. E. J. Baldwin names br c Albert C, four yeare, by Rutherfor d—Maggie Emerson.

No. 6. W. Boots names s c Inauguration, four years, by Wildidle—Miami.

No. 7. Hill & Gries name b h Wildidler, aged, by Wildidle—Eva Coombs.

No. 8. Stemler & Ayres name b g Joe Howell, aged, by Bonnie Scotland—Eva Sbepbard.

No. 9. Stemler & Ayree name s g Fred Collier, five years, by Joe Hooker—Puse.

No. 10. Palo Alto names b m Precious, four yeare, by Lever—Frolic.

No. 11. Palo Alto names ch m Fostress, four yeare, by Foster—Planetia.

No. 12. John Mackey names b g Dnke of Monday, four years by Monday—Demirep.

No. 13. Jobn Mackey names e m Maria F, four years, by Leinster—Flush.

No. 12—Hurdle Race, Purse $150, of wbich $25 to eecond borse; entrance free. Dash of a mile and a half over six hurdles.

No. 1. Tbeo. Winters names e m Hattie B, four yeare, by Norfolk—Maggie Dale.

No. 2. W. Boots namee h m Mollie H, aged, by Wildidle—Mamie Hall.

Second Extra Day, Wednesday, May, 2.

No. 13—Purse $150, of which $25 to eecond horse; entrance free; for two-year-olds; winnere at this meeting, excluded; horses running eecond, five lbs. extra. Dash of five-eigbths of a mile.

No. 1. J. & H. C. Judson name bl c by Monday—Lady Clare.

No. 2. E. J. Baldwin names e f by Grinstead—Josie C.

No. 3. E. J. Baldwin names s f by Grinstead—Sister to Clara D.

No. 4. J. B. Cbase names b f Elizabeth by Tbad Stevens—Electra.

No. 5. Theo. Winters names ch c Prince of Norfolk, by Norfolk—Marian.

No. 6. Hill & Gries name h f Nettie Hill by Joe Daniels—Mary Wade.

No. 7. Hill & Greie name b f Bachelor hy Hock Hocking—Maid of the Mist.

No. 8. Palo Alto names b f by Wildidle—Robin Girl.

No. 9. Palo Alto names ch f by Monday—Abbie W.

No. 10. Palo Alto names ch f by Norfolk—Frou Frou.

No. 11. Palo Alto names b c by Wildidle—Montana.

No. 12. Palo Alto names b c by Wildidle—Blarney.

No. 13. Palo Alto namee b c by Monday—Plaything.

No. 14. John Mackey names b f Fanstina, by import ed Glenelg—Marmot.

No. 15. John Mackey names b f Mariposa by Monarchist—Heliotrope.

No. 14—Handicap Stake, Free forall; $25 entrance; $10 declaration; $200 added; $50 to second, third to save stake. Dash of one and one-quarter miles. Weigbts to be announced Monday, April 30, at 8 p. m.; declaration, Tuesday, May 1, at 12 m.

No. 1. Lee Sbaner names b c Judge McKinstry, four years, by Grinstead or Tbad Sevens—Katie Pease.

No. 2. J. & H. C. Judson name e m May D, five years, by Wildidle—Nettie Brown.

No. 3. Theo. Winters namee e m Atalanta, four years, by Norfolk—Lady Jane.

No. 4. Hill & Gries name b h Wildidler, aged, by Wildidle—Eva Coombs.

No. 5. Stemler & Ayers name b g Joe Howell, aged, by Bonnie Scotland—Eva Shephard.

No. 6, Stemler & Ayers name Fred Collier, five years, by Joe Hooker—Pnss.

No. 7. G. W. Trahern names s g Certiorari, three years, by Joe Daniels—by Norfolk.

No. 8. John Mackey names b g Duke of Monday, fonr years, by Monday—Demirep.

No. 9. John Mackey names s m Maria, four years, hy Leineter—Flush.

No. 10. W. L. Pritcbard namee b h Frank Rboads, five years, by Leinster—Addie A.

No. 15—Selling race, purse $175, of which $25 to second horse; entrance free. Dash of one and a quarter miles. Conditions eame as No. 8.

No. 1. E. S. Paddock names b g Joe Dion, five years, hy Norfolk—Nevada, $300.

No. J. & H. C. Judson name h g Belshaw, five yeare, by Wildidle—hy Hercules, $400.

No. 3. John Mackey names ch f Maria F, four years, by Leinster—Flush, $600.

No. 16.—Handicap Stake, for three-year-olds; $25 entrance; $10 declaration; $200 added; eecond to save stake. Three-quarters of a mile and repeat. Weights announced and dcclaration made eame as No. 14.

No. 1. Howson & Co. name b f Augueta E, three years, by Monday—by Norfolk.

No. 2. E. J. Baldwin namee s c Grismer, three years, by Grinstead—Jennie D.

No. 3. Jos. Cairn Simpeon names Lady Viva, by Three Cheers—Lady Amanda.

Third Day. Regular Meeting, Saturday, May 5.

No. 17—Gano Stake, dash of three-quarters of a mile, for two-year-olds; $50 each, $25 forfeit, $250 added; eecond horse to eave etake. When any California two-year-old beats the time of Gano, 1:15 for tbree-quartere of a mile, the stake to be named after the colt which beats it.

No. 1. J. K. Gries namee b f Nettie Hill, by Joe Daniele—Mary Wade.

No. 2. E. J. Baldwin namee h c, by Rutberford—Maggie Emerson.

No. 3. E. J. Baldwin names b f, by Rutherford—Glenita.

No. 4. E. J. Baldwin names ch f, hy Grinstead—Sister to Clara D.

No. 15. Palo Alto namee ch m Fostrese, four years, by Foster—Planetia.

No. 16. John Mackey namee b g Dukc of Monday, four years, hy Monday—Demirep.

No. 17. John Mackey namee s m Maria F, four years, by Leinetor—Flnsb.

No. 20.—Hurdle race, Purse $200, of which $50 to second borse; entrance free. Mile and repeat over four hurdles.

No. 1. Tbeo. Winters names s m Hattie B, four years, by Norfolk—Maggie Dale.

No. 2. W. Boots namee b m Mollie H, aged, by Wildidle—Mamie Hall.

Names Claimed.

By E. Newland, Oakland, Cal., Lady Steinway for chestnut filly, star in forehead, both hind feet wbite; foaled 1883; by Steinway, dam Lady Bud by Belmont.

Steinway Jr. for iron gray colt, botb hind feet white; foaled 1883; by Steinway; first dam Sciatica, by Shilob; ond dam Lady Edgerton, by Ratan; third dam Peg, by [illegible], fourth dam by Voltaire.

ANCIENT AND MODERN ARMS.

How a Difference in the Caliber Influences the Turn of the Rifling—Continued.

BY DR. E. H. PARDEE—NO. 12.

Much more is learned by firing a single shot made expressly for the purpose of ascertaining some particular point and by a thorough examination and careful study of all the circumstances attending its projection than by merely standing by and witnessing the firing of a thousand projectiles upon the target ground by other persons. The results obtained with the latter may be apparent enough; but the train of reasoning (the fruit of personal experience) which produces these results remains altogether unknown; for it may be a man that may communicate the result of his experiments, yet he is not able to furnish another with his personal experience, and without this it is perfectly impossible to effect or even to suggest any very important improvement.

There is scarcely a question, if indeed there be one, in the whole subject of dynamics, or the laws which relates to bodies in motion, which is not involved in the investigation of circumstances attending the flight and trajectory of elongated bullets; these require to be thoroughly investigated and known before any intelligent opinion can be offered as to the best projectile method for constructing the pitch or turn of the rifling, and then to fit the whole paraphernalia to the condition of the rifled gun. A system founded upon cut and try rule can never accomplish a single point in the advancement of the science of gunnery. When once a theory has been established, resting upon a sound philosophical basis, the mechanical improvements follow as a matter of course.

The stride that has been made in the practice of gunnery since the days of Robin's and Hutton's experiments has advanced slowly but surely until the whole world has awakened from a state of lethargy regarding the laws which govern the flight of projectiles coupled with the theory of projecting force. And I find in applying the principles as laid down by these champions failure in some respect, has universally attended all innovations, and to this chiefly must be attributed the failure of Lancaster in his oval bore. A diagram representing the muzzle of his rifle, I have given in some former communications and also the polygonal bore of Mr. Whitworth, the projectile in the former case acting like a wedge; in the latter like a lever in the bore of the gun.

No single invention, as of a projectile, a method of loading at the breech, a peculiar form of the groove or any other mechanical contrivance such as the proper length of the gun, of the turn, the most suitable metal for the gun, etc., is obtained for rendering it effective. If each of these be not adapted to the others, the whole must inevitably fail or will not come up to that high standard of success as when all combined. It is the difficulty of effecting this combination which renders experiments with rifle cannon so complicated and expensive. Well do I remember when I first commenced target practice, how I disliked the attendance of the minutia of fitting up for a day's practice, and whenever I failed, either by a want of greater perseverance or from carelessness, I always went home after my day's practice not satisfied with myself, and oftentimes would show it in my family by a fit of moodishness, seated in some corner of the room, and often by telling my wife that the supper was not well cooked. And as time rolled on and I became more experienced in the manly art, I would never allow myself to repair to my target ground without the most complete outfit for the day's practice.

Before returning to my text you will allow me to relate a little dialogue that took place between a well known disciple of the hair trigger and myself, on the ferry boat a few days ago. Advancing towards me on the lower deck of the steamer Oakland, with a smiling face, and an extended hand, he says: "Doctor, I have read your article in the BREEDER AND SPORTSMAN on the turn of the rifle, with a square root; now I want to know if you think that a gun will shoot better if you turn it in your hand, at the instant of firing, and if so, which way do you turn it? As for me," he continued, "I always hold her against my shoulder as hard as I can and let her go."

I says, "My friend, you did not understand me."

O, yes, he did, "and I want you to answer my questions, will you ?"

"Surely I will, with pleasure."

It being a cold morning we backed up against the smokestack, and I began: "Now, my dear fellow, you must pay attention and take in what I tell you." And with the assurance of his whole attention I began: "Now, as the resistance of the air upon the shot of different diameters, projected with velocity as the square root of their diameters, is in the ratio of their quantities of motion, it must follow that the rotary motion impetus should also be in the same ratio; therefore, consequently, for the quantity of rotary motion to be in ratio of that of the progressive motion—that is, for the large shot to make one revolution in the same space of time, or have the same angular velocity as the small, when fired with the above velocity—the length of the turn must be increased in the same proportion, or as the square root of the diameter of the shot. If, then, the turn be sufficient in one instance by following this method, the angular velocity (whatever the velocity of transtation) will always be in the same ratio to their comparative resistance with shot of all sizes." I says: "Do you see it ?"

"You bet, it is just as plain to me now as a duck's foot in the mud."

Another way of computing the comparative effect of the air upon shot of different sizes is to compare their terminal velocities. A shot descending through the air solely under the influence of gravitation will gradually increase in velocity until it meets with the resistance of the atmosphere equal to its own weight; the impelling force and resistance being then equal, it will continue to descend with the same uniform velocity, which, of course, will differ according to the weight and diameter of the shot, but which is in every instance called its "terminal velocity."

Hutton, in his "Tracts on Gunnery," has laid down a rule that, if closely observed, it will be readily seen, that it cannot vary far from a different result, and I will give it: "If w is the angular velocity, and v the linear velocity of the shot, and l the length of the turn of the grooves $w = \frac{2 \pi v}{l}$, and therefore, $l = v$ when w is constant 11."

From the above, it demonstrates the fact, that the terminal velocity of a three-pound shot is about 290 feet a second, and that of a twenty-four pound shot, which has twice the diameter, about 420 feet per second. Therefore, if these two shots were suspended 1,000 feet from the earth, and were cut loose at the same time, so that the attraction of gravity would act upon both shots simultaneously, until each had attained its terminal velocity, the smaller would continue to descend with a velocity of about one-third less than that of the larger, the retarding force of the air being relatively really so much greater upon it.

I can conceive of no more direct way in more fully elucidating the terminal velocities of shot in weight, their diameters, terminal velocities in feet, range at five degrees deviation and distance in yards, as lain down by Hutton:

Weight in lbs.	Diameter in inches.	Terminal velocity in feet.	Range five deg. elevation in yards.
1	1.928	247	1.100
2	2.423	277	1.210
3	2.773	297	1.300
4	3.053	311	1.400
6	3.494	333	1.520
9	4.000	356	1.650
12	4.403	374	1.700
18	5.40	400	1.780
24	5.546	419	1.850
32	6.106	440	1.950
42	6.684	461	2.050
68	7.95	530	2.240

The reader will hear in mind that at these different ranges and at five degrees elevation these deductions were made, with charges of powder equal to one-third of the weight of the respective shot, producing an initial velocity of about 1,800 feet per second. The above deductions of Dr. Hutton, it will be remembered, were made more than a century ago, so that the weapons then in use were of an inferior quality to those of the present day, therefore the cause of the low initial velocity, for at the present time our sixty-eight pounders produce an initial velocity much greater than that given by Hutton.

This array of experiments made by Hutton was of great importance, for his deductions were so carefully made that no one can doubt their reliability; and they are so classified that the most stupid can easily drink it all in. How often it is stated by men in the purchase of a rifle that they want a small bore, in order that the bullet may not generate so much friction in its passage through the air as one would of larger caliber, and as a consequence, the shot would get there (as they call it) so much quicker than would a larger one.

I had an order from a gentleman who resides at Red Bluff, a short time ago, to purchase him a Ballard rifle, forty caliber, and shells that would hold 90 grs. of powder. I must say that I felt a little mortified to ask of any intelligent dealer in guns for so crude an order; but at last I put on the cheek, and started for a dealer on Kearny street and told the gentlemanly proprietor that I had an order for a Ballard 40 caliber and 90 grains of powder. Without further comment he told me that such an order must be from Red Bluff, as he scarcely ever had such an order from any other part of the State. What a useless expenditure of means, what an inconsistency to all laws and science of gunnery. I will say that if the order was sent me without any restrictions, I should have purchased him a hunting rifle, far more in keeping with a system in all its parts, and one that would have given even the purchaser far better satisfaction after he had became familiar with its use. I should have purchased him a magazine rifle, barrel 30 inches, caliber 45, with 60 grs. of powder. But as the old lady said, "there is no accounting for taste," even in the selection of a gun, in this advanced stage of civilization.

Another order since the above came from the southern part of the state, showing the extreme on the other hand. I will quote from the letter: "I want a large bore rifle, at least .55 caliber and one that does not use such an allfired large charge of powder, for I don't want my shoulder all pounded up, and then the wind does not effect the larger ball as much as it does the smaller. And then when you hit an old "Bar" it makes him think h—l has laid an egg, and he begins to write his last will and testament, and as a rule bequeaths to you all his earthly possessions, and lays down and just naturally dies."

So you see, Mr. Editor, the conflict of opinion existing between men who have used the rifle for over a quarter of a century, and are yet incapable of recognizing the fact that there is anything approaching a fixed principle in the laws of gunnery. The one wanting a small bored rifle with large charges of powder, and the other, large caliber and small charges of powder. "When doctors disagree who shall decide?"

Golden Gate Park.

Random Sketches—No. 7.

[Written for the BREEDER AND SPORTSMAN.]

San Franciscans are not given to hiding their light under a bushel; in fact, are accused of a desire to flash it a trifle too often in other folks' faces. They are not at all backward in sounding the praises of their beautiful city, and point with pride to the fact that in less than a third of a century they have transformed a patch of barren sand into a beautiful city adorned with stately residences and girt with luxurious environs that make it at once the wonder and admiration of Eastern visitors. The lovely bay, the luxurious ocean, the splendid driveway on the beach that stretches out—a broad expanse of firm, hard sand—and makes a promenade beside which London's vaunted Rotten Row, the Parisian boulevards and Berlin's stately avenue under the Linden trees are cramped, cabined and confined, mere commonplace works of the bungler man, and will not compare with the noble work of nature that lies at our entrance gate.

Golden Gate park and the ocean beach are worthy of the pride of any people, and only suffer neglect for the same reason that constant association deadens the perceptions. Such resorts if fenced off and within easy distance of New York or any other large city would daily command the attendance of thousands of visitors. No one who gazes for the first time upon the glories of nature they reveal can suppress an exclamation of admiration, and to one who is a lover of the beauties of landscape and seascape their ever-varying charms present a boundless field of delight. Yet to the shame of San Francisco and her people, to show how hollow are all their boasts of push and enterprise, the fiat has gone forth that Golden Gate Park is to be desolated and ruined and the incomparably magnificent drive on the ocean beach to be rendered inaccessible. Under the plea of economy, and to bridge over a deficiency in the municipal funds, the appropriation for Golden Gate park has been cut down to such a figure that all work had to be instantly suspended and nothing can be done until July, when the new tax levy will relieve the present financial stringency. I do not feel disposed to discuss the need for this sudden curtailment of expenses, nor do I care to press the obvious claim that other branches of expense could have been cut off with less injury to valuable property. I do know, however, that the proposition emanated from a man who once lobbied out of the city treasury $25,000 to which he had neither right nor title and which he never earned, and of whom it is commonly said that his civic patriotism is so slight that he is at present attempting to secure without consideration a valuable piece of city land upon which he has squatted. All I aim to do is to show the effect of this total neglect of Golden Gate park during four of the hottest, driest and dustiest months of the year.

On a lovely spring day last week, sensing the balmy fragrance of the breeze that softly fluttered its health-laden wings from the Golden Gate across the park and through every hot, dusty alley in the street and city, I felt an insatiable longing for a glimpse of old Ocean and a whiff of pure air, and behind a modest team left the city for an afternoon drive. The Market street cobble stones and busy traffic were a sort of penance one always has to undergo to reach the Paradise beyond, and called for no special expression of disgust and no remark except a fervent "Thank Heaven we are off the cobbles" from me and a joyous toss of the head from the horse as Golden Gate avenue was reached. But oh! what a sight there met my sorrowful gaze! Instead of the nice, clean, smooth, well-watered avenue I had expected to see nothing was visible except a continuous river of fine white dust. Dust, dust everywhere. Blinding the eyes, filling nose, mouth and ears, choking every pore of the skin, and in an instant transforming black broadcloth into a garb of nondescript appearance almost indistinguishable from well-worn grain sacking. It blew up from the avenue in clouds solid and thick as the pillar of cloud that hid the Egyptians from the fleeing Hebrews they were pursuing. It lay so thick under foot that the horse's tread could not be heard, and I had to drive at a snail's pace for fear of a collision. The avenue was almost deserted, as well it might be, for no one on pleasure bent would care to toil through such a dusty road. Holes and ruts scarce hidden by the depth of dust made travel dangerous to light vehicles, and such a forlorn, woe-begone appearance as the route presented I never saw since I made a trip along the old Mariposa trail to Bodie when the excitement at that prosperous camp first began.

At last the park was reached, and there I expected relief from the plague of dust and in its lovely verdure and beautiful drives some reward for the toil and danger undergone in reaching them. But alas! again my hopes were dashed and my disappointment and disgust heightened. The broad drive leading from the gate to the lodge was ankle deep in dust. It overspread the road and covered the lawns. The grass-green, eye-resting hue of nature was entirely obscured by a thick coat of red dust, giving to the place the air of a deserted brickfield. The trees looked as if sculptured out of red terra cotta and for want of water the shrubs and flowers drooped and languished. The beautiful lawn in front of the lodge was a half-acre of dust, and even the scrub oaks that Nature had planted on the mound seemed to pine for relief from their suffocating mantle of pulverized rock. As I gazed sadly on the scene of ruined beauty a light buggy drawn by a stylish team passed along. The horse seemed familiar but the all-obscuring dust enveloped the occupants of the carriage in mystery. A close inspection revealed the stately form of General Barnes, clad in what appeared to be a grey frieze coat, but a clean place on the sleeve showed it to be a black garment on which the white dust of Golden Gate avenue and the red stuff of the park had blended into a dull grey.

"Hello! is that you ?" said he. "Confound this dust! I could not tell who it was."

"No more could I," I replied.

Young Spreckels and a beautiful girl passed us as we exchanged notes of disgust, the gentleman looking like a Milpitas potato rancher and the lady like an ancient fishwife, both transformed by the awful power of dust. Burke, the real estate man, who never misses a day in visiting the park, looked like a Bakersfield sheep-herder, and Charles Crocker would have readily passed for a Mussel slough settler. Young Bowie and Dr. Whitney could both have obtained hod-carrying engagements from their apparently labor-stained condition. C. S. Crittenden, Colonel Fry, Sol Pattee, Auditor Edgar, Hiram Cook, Dr. McNulty and all the rest of the regular road drivers looked like the fag end of a forage train retreating through a desert country during the dry season. They were in full keeping with the ruin that surrounded them. The grass, sere and dry, the trees all parched and dying, not a budding flower to charm the eye, and the bare sand hills that hard work has scarce held in check moving on with slow remorseless strides to complete the work of destruction. When the Cliff was reached I compared notes with a few other gentlemen, and one and all declared that if something was not done soon their teams would go to grass and they would give up park riding. Some estimated that the damage already done could not be repaired for $100,000, while the general and probably more correct estimate, put the loss at a quarter of a million.

I well recollect driving through the park one morning early in April, last year. My companions were a gentleman and lady who had just returned from an European tour. The yellow lupins and heather were in full bloom, the grass plots were as green as water and sunshine could make them, the trees were putting on fresh garments of leaves, and all nature seemed to be offering up silent homage and thanks for the joy of being beautiful. As we reached the height from whence the ocean can be seen and where the park spreads out all its beauties to the eye, both my companions remarked that they had never seen such a gorgeous prospect in all their travels.

Last week I stood in the same place and mentally resolved that no San Franciscan who had an atom of self-respect would take a stranger to Golden Gate Park as long as the present state of affairs continues.

LIGHT WEIGHT IN BUTTER.—Whilst the late dairymen's convention were doing a very good thing in adopting measures to force the oleomargarine or bull butter manufacturers to sell their product under its own proper name, and for what it was, when a resolution was presented declaring that a so-called two-pound roll of butter should weigh two pounds, the majority seemed to "fight shy" of it, and did not want it discussed. It looks as if the bull butter men must "toe the mark," and do what was right and fair; but if cow butter men sold 28-ounce rolls of butter for two pounds, nothing must be said about it. Some undertook to prove that an exact two-pound roll was an impossibility—that the same bulk of butter varied in weight at different seasons of the year, and the farmers could not change their molds all the time, but it has since leaked out that the farmer did not get the benefit in the steal in the weight—that the commission merchants weighed the butter and paid the dairyman for the number of pounds, and then sold the rolls for two pounds and made the difference themselves, and that the dairyman, in making light-weight rolls was only aiding and abetting the commission man to cheat the public, without profit to himself. We think that this explanation is probable, as many of the dairymen are under the influence of the commission men from advances of money and other favors, and were obliged to do as they directed, and the others found it less trouble to follow the fashion and probably got a better price for their butter for aiding in the swindle, and the result is that a two-pound roll weighs twenty-eight ounces, or one-quarter of a pound less than two pounds. The consumer has a very simple remedy for this that we are surprised no one has suggested, and that is to buy his butter by weight. This will be a perfect and complete solution of the problem, and it will not matter what the rolls weigh; the consumer will get what he pays for.

THE RIFLE.

At Shell Mound Last Sunday.

The nembers of the Police Rifle Team have recently manifested great interest in rifle shootiug, and since the receipt of their Sharps-Borchard guns have indnlged in considerable practice. Within the past week, the team has been canvassing the advisability of training for a shoot against a team of civilians and the proposition seems to meet with favor. Through the intercession of Sergeant Nash, permission has heen accorded by General Kelton, U. S. A., allowing it to practice at the Presidio range on the reservation. By this means the team is enabled to visit the butts more frequently than when obliged to go to Oakland. General Kelton also expressed a desire to have frequent matches between the Police Pistol Team and the Cavalry. As the contest for the pistol trophy will come off in a comparatively short time, the request of the General offers an excellent opportunity for practice that will not be lost sight off. A number of the rifle team did some good shooting at the Shell Mound range on Sunday last, of which the following scores are examples:

Nash	3 4 4 5 4 5 4 4 5 4 3 5 4 5 5 4 4 5 4 5 4 4 4 5 5 4 5 5 4 3 4 4 4 4 4 5 4 5 5 5	175
McCarthy	4 4 4 3 3 4 4 5 4 4 5 4 4 5 5 5 4 5 4 4 4 4 4 4 4 4 4 5 5 4 4 4 4 5 4 4 5 4 4 5	169
C. A. Carr	3 4 4 4 4 5 4 4 5 5 3 3 3 3 4 5 4 5 4 5 4 4 4 3 4 4 4 5 4 5 4 4 4 4 4 3 5 3 5 4	162
Bailie	4 5 3 4 4 4 5 4 4 4 5 4 3 4 5 4 4 4 5 4 4 4 4 3 4 3 3 4 4 5 5 3 4 4 4 5 4 4 3 4	161
Clark	3 5 4 3 3 3 4 4 4 4 4 4 3 4 4 4 3 3 5 4 3 2 4 4 4 4 3 3 3 3 4 3 4 5 0 0 4 3 4 4 4 4	141

An attempt was made on Sunday last by Fred Kuhnle to beat his record made at Petalnma of 457 points, 100 shots at 200 yards. The wind, which blew for the most part across the line of fire, was variable, and not such as would assist in making a good score, and though Kuhnle did not succeed in beating his record, he nevertheless equaled it. J. E. Kline and Nick Williams shot alternately, assisting the shooter in his trial. The score was witnessed by Col. Kellogg, Capt. Hub. G. Parker, Sergt. Nick Williams and others and is as follows:

Kuhnle	5 4 5 4 4 4 4 5 5 5 4 5 5 5 4 5 4 5 4 4 4 5 5 4 5 5 4 4 5 4 5 5 5 5 4 4 4 5 4 5 5 4 5 5 5 5 5 5 5 5 5 4 4 5 5 4 5 5 4 4 5 4 5 4 4 5 5 5 4 5 4 5 4 5 4 4 5 5 5 4 4 5 4 4 4 4 5 5 5 4 5 5 5 5 5 5 4 5 5 4	5—45 4—45 4—45 5—45 4—48 4—45 5—45 4—45 4—44 4—48
Total		457

Another match was shot at the Shell Mound range on the same day at 200 yards with the following result:

Stothers	4 4 3 4 4 4 4 5 4 4	4—40
Lods	4 4 4 4 4 5 4 5 5 5	4—44
Cummings	4 4 5 4 4 4 5 4 4 5	4—43
Warren	4 5 5 4 4 4 4 4 4 4	4—42

Warren and Lods then shot a match at 500 yards, the former nsing a Sharps-Bochard and the latter a Springfield, in which the annexed score was made:

Warren	4 2 5 5 4 5 5 5 5 4	4—42
Lods	4 5 3 5 5 5 5 4 0 4	4—40

The medal shoot of the California Schuetzen Club resulted in the scores following: James Stanton, champion goblet and first medal, 423 rings; F. Knhls, second medal, 405 rings; Hoz, third medal, 368 rings; Heeth, fourth medal, 358 rings.

The San Francisco Schuetzen Verein made the scores given below at their shoot in Alameda, Sunday: Willism Ehrenpfort 26 points, Waller 24, Krahman 23 points ont of a possible 30.

Some Suggestions to Col. Sontag.

Editor Breeder and Sportsman: All those who are interested in the manly and useful pastime of rifle practice will be, no doubt, pleased to learn, through an article in the morning papers, that the prominent officers of our National Gnard are at last apparently about to take some interest in the subject of teaching our citizen soldiers how to use their weapone.

It would certainly seem, however, that the very first steps taken should be in the alteration of the code which now prescribes that the small and inefficient nnmber of five shots shall be fired annually by each member of the organized militia. Let us hope that the new Inspector-General of Rifle Practice, Col. Sontag, will make such radical changes in the administration of the affairs of his department that our National Guard may stand second to that of no other State in the Union as regards the nse of the rifle, carbine or pistol. With an amended code, there will be ample opportunity for our ten or twelve inspectors to go to work and do something—teach the young and verdant how to shoot instead of, as heretofore, filling the part of graceful supernumeraries on a staff.

The State should encourage and enforce rifle practice in its National Guard, both in theory and practice. It should own its own range, or at least hire one, which should be roomy, safe and easy of access, and of course well selected and laid out. It should divide its troops into classes shooting at different distances, and known as sharpshooters, markemen, etc., and should encourage them by offering trophies for organizations and badges for individual practice and excellence. The New York State system might be adopted with advantage.

As to any member of the National Guard of this State becoming a member of any international team, it would seem to be an impossibility, inasmuch as such as may have the ability to shoot themselves into such a team generally have not the financial ability to take the long and expensive trip to the East, and further, they certainly need not look to the patriotism or enthusiasm of any private citizens for moneyed assistance.

Let us hope that a new leaf will be turned, and that the citizen soldier, eager to perfect himself in the use of his rifle, will not be handicapped in his endeavors by stupid laws and regulations, and a, perhaps, lethargic and consequently useless Department of Rifle Practice.

National Guardsman.

South Vallejo, March 4, 1883.

Chico Marksmen.

At the annual target shoot of the Chico Guard, held on the 22d nlt., the following members of the company made scores of sixteen and over:

W. J. Costar	4 4 5 5	4—22
Sergeant W. Earl	3 5 4 3	4—19
Geo. Wilson	4 4 4 4	3—19
Corporal J. M. Hoyl	3 4 4 4	4—19
N. A. Hall	4 4 3 4	3—18
W. K. Conger	4 3 4 4	2—17
C. H. Walker	4 4 3 3	5—19
Sergeant R. Fletcher	2 4 4 4	2—16
W. Waddams	5 5 4 5	4—23
Chas. Camper	0 5 3 4	4—16
S. P. Dunn	4 4 2 4	5—19
Chas. Swearingen	3 4 3 4	3—17
Albert Allen	4 4 4 5	4—21
John Allen	4 5 4 4	4—21
J. G. Bennett	4 4 4 4	4—20
Geo. Judkins	2 4 4 3	4—17
E. E. Canfield	4 4 4 4	2—18
G. W. Crapo	2 3 4 5	3—17
C. B. Swain	4 5 4 4	4—21
Thos. Finnesse	3 4 4 3	3—17
John McCargar	5 4 2 4	3—18
John Deveny	4 3 4 4	4—19
A. G. Mason	4 4 4 2	3—17
Geo. S. Snook	2 4 2 4	4—16
H. H. Camper	2 3 4 4	4—17
J. S. Stauffer	2 4 3 4	4—17
B. F. True	4 0 4 4	4—16
J. W. Thrasher	4 4 3 3	3—17
Ed. Allen	5 3 3 3	2—16
Lieut. C. N. Johnson	3 3 3 3	4—16
Jesse Wood	3 4 2 3	4—16

Gen. Cadwalader and staff were present and tried their nerve, with the following result:

Gen. Chas. Cadwalader	4 5 3 2	4—18
Major Chas. Faulkner	0 3 0 3	4—10
Major Thos. Ryan	3 3 4 3	4—17
Major C. T. Alvord	4 2 2 5	4—17
Major A. F. Jones	4 4 4 4	4—20
Major John Brady	0 0 0 3	0— 3
Major J. W. B. Montgomery	3 3 3 0	4—13

The honorary members shot, and the following scores of sixteen and over are reported:

J. T. McIntosh	4 3 4 5	4—20
T. H. Barnard	3 4 4 3	4—18
W. H. Earll	4 2 5 3	2—16
Wm. Swearingen	2 4 2 5	3—17
John Burkett	2 5 4 4	5—20
J. H. Williams	3 4 4 4	4—19

The Oakland Guard Shoot.

Last Sunday, Company A., Fifth Infantry Battery, N. G. C., stationed st Oakland, held a practice shoot at Shell Mound Park. The light was good and the wind strong enough to require the marksmen to shift their wind guages over one point. The Oakland Gnard's rifle team can do first-class shooting, as the following scores show:

Lieut. J. S. Green	4 5 3 4 5 4 4 3 4 4 1 4 4 3 5 5 4 5 4 5	4—40 5—43
Total		83
Sergt. Daniels	2 3 3 4 4 4 5 3 4 4 5 3 3 4 3 4 3 4 3 4	4—36 4—35
Total		72
Corp. Crawford	4 4 4 5 3 5 4 4 5 5 3 4 4 4 5 4 5 4 4 4	5—44 4—41

An Offer.—We understand that General Kelton at Fort Point has granted to Sergeant Nash of the police force the privilege of using the military ranges for the practice of the Police Rifle Team. The nearness of the ranges to the city will give the policemen an excellent opportunity to perfect themselves in the use of the rifle. The General has proffered the use of his markers and targets. The several targets at the Presidio range from 30 to 1,000 yards.

There will be a lively time at Shell Mound to-morrow. Besides four or five rifle matches at the range, Capt. Siobe will throw open the park for the first picnic of the season. It is expected that there will be plenty of fun.

There will be a match to-morrow at Shell Mound between H. J. Mangels and C. Scheurer at 200 yards for a small purse. The first named is to handicap the latter four points in twenty shots on a Creedmoor target.

At Shell Mound Park to-morrow Companies C. and G., First Infantry Regiment, will have their regular monthly shoot. Considerable fun can be expected.

Going East.—The Idaho filly Hattie Harris, by Marmaduke—Pirouette, will be taken East this spring and run at some of the great race meetings of the central and Atlantic cities. The Idahoans take a great pride in this homebred racer and from her two-year-old performances last year she can claim a position in the first rank.

Jay Beach has sold a three-year-old filly by Altamont to Thomas Orr of Shasta Valley, Siskiyou county, for $300. Mr. Beach will shortly transfer his stock from the old farm near Linkville to the Rogue River valley, where he finds the climate more congenial.

Consul Griffin, the American representative at Auckland, writes that increased attention is being paid to horse breeding in New Zealand, and that the importation of American horses to that country will, in the near future, prove a most profitable industry.

Mr. C. C. Pettus at the office of the *Sportsman*, 29 Warren street, is duly authorized special representative of the Breeder and Sportsman in New York to receive subscriptions and arrange advertising contracts.

YACHTING.

Yachts Under Twenty Tons.

Last season, says the *Forest and Stream*, a great number of yachts under twenty tons were mulcted by revenue officials acting under erroneous instructions or by a stretch of their own authority. Several over-officious deputies even went so far as to sieze yachts and hold them until the owner had taken out papers and documents, much to the financial enrichment of the zealous guardians of the customs. A system appearing very much like blackmail was inaugurated by underlings, who profited by the ignorance of yacht owners concerning their rights. To forestall this grab game for the future, we recently published the interpretation put upon the laws governing yachts by the Secretary of the Treasury, and we call the attention of collectors and deputies to the same. Yacht owners have now been put upon their guard and advised of their rights, and they are not the people to tamely submit to buccaneering exactions. Officials cannot demand "papers" from yachts under twenty tons, Custom House measurement, nor can such yachts be required to have their names or hailing port displayed, nor is it necessary the tonnage should be carved on the main beam. In short, the government takes no more cognizance of their existence than of rowboats or cathoats. But on the other hand, the government exercises the right of general supervision at all times, which cannot be denied it. Officers of the revenue have an unquestionable right to hoard yachts for the purpose of assuring themselves that they are not engaged in smuggling or trading or carrying passengers for pay. They also have the right to detain a yacht a reasonable length of time for measurement, to determine whether over or under twenty tons; and where the size is fairly open to question, it may save annoyance to submit to the measurement, and transmit the official's arithmetic to posterity in sundry cabalistic scratches on the main beam. Owner of small yachts, who have been really mulcted, can, we think, recover from the collectors the amount illegally exacted. Of course the registration, not being authorized by law, is meaningless.

At the recent dinner of the Yale Alumni in Boston Prof. Cyrus Northrop defended athletic sports as follows: "This year," he said, "there have been eleven students with philosophical orations, a fact never before known in the history of the college. The latest football game was a most enjoyable affair, and the best runner of all the men—Harry Twombly—was one of these eleven."

The deck has been laid on Mr. Tevis' new yacht and the joiners have commenced work. The outside planking will now be put on. Although the yacht has a flush deck she has also a cockpit. She has three large skylights. Stone is making a fine job of the yacht.

The Stockton Yacht Club has consolidated with the Amity Boat Club. The new organization is preparing to receive visitors from this city and is busy refitting club yachts. The Hattie will be put into prime condition, and the Sharpie will be rigged as a schooner.

The grounds of the Pacific Yacht Club at Saucelito are undergoing extensive repairs consequent upon damage done during the winter. The walks are being considerably improved, and a new float will shortly be built.

Solon Williams, formerly treasurer of the S. F. Y. C., who went to sea on a square-rigger a couple of years ago, has come back to San Francisco again. He was over looking at his old yacht, the Lively, the other day.

The plunger Skipper, Capt. Ed. Munfrey, will soon be thoroughly overhauled and put in order. She will be repainted and her halyards will be rove so as to lead aft.

When the Lurline was tried the other day she was five tons short in her ballast. She will soon be ready for regular work.

It was hoped the Lurline would be out last Sunday, when there was a strong breeze, but she did not make her appearance.

The Thetis has been chartered by some young men in Oakland and she will hail from that port the coming season.

The Thetis is undergoing repairs at Oakland creek, and being generally overhauled for the coming season.

Most of the yachts will be overhauled during the month and put in order for the opening of the season.

The Fleur de Lis, now belonging to Capt. White, wants to get a chance to try her speed with the Lurline.

Capt. Chittenden, well known to all yachtsmen and shooters, is back in town again.

Work on the 40-foot schooner at Stone's yard has been discontinued for the present.

New officers will be elected by the San Francisco Yacht Club at its next meeting.

The Chispa was taken up into fresh water last week and left there for a while.

The Fleur de Lis made her appearance on Sunday last after an enforced rest.

At the recent Crystal Palace (London) bench show 1,314 dogs were exhibited.

Mr. Phil Caduc, the new owner of the Annie, had his yacht out last Sunday.

The new periagua-rigged yacht will be launched in a week or two.

The Mist is lying in Oakland creek and will be sold.

Commodore Harrison has gone to Puget Sound.

The Clara has been in commission all winter.

Both Illinois and Iowa are now importing corn for farmers' use to make up the deficiency in their own crop. Much of the Illinois corn was so immature when winter set in that the corn froze on the ear, destroying the germ. It will therefore be worthless for seed.

The export of grain for the season from the port of Montreal is only 8,600,000 bushels for 1882, against an average of 13,000,000 for the ten years previous. One year reached as high as 19,000,000, and another 16,000,000, which are the highest known.

There is talk of a horse fair at San Luis Obispo this

ADVERTISING RATES.—Displayed $1 50 per inch each insertion or pro rata for less pace. Reading Notices set in brevier type and having no foot marks, 30 cents per line each insertion. Lines will average ten words. A discount of 10 per cent. will be allowed on 3 months, 20 per cent. on 6 months and 30 per cent. on 12 months contracts. No extra rate charged for cuts or cutting of column rules. No reading notice take for less than 60 cents each insertion.

San Francisco, Saturday, March 10, 1883.

Mr. C. C. Pettus at the office of the *Sportsman*, 29 Warren street, ia duly authorized special representative of the BREEDER AND SPORTSMAN in New York to receive subscriptiona and arrange advertiaing contracts.

SACRAMENTO AGENCY.

Residents of Sacramento and vicinity, desiring to subscribe, or advertise in the *Breeder and Sportsman*, can do so through our agent, Mr. M. J. Henley, Russ House 1009 J street.

CALIFORNIA TROUT.

Mr. T. S. Van Dyke, author of "Rifle, Rod and Gun in California," and the recently published "Still Hunter," is a charming writer and who hrings to bis task great appreciation, enthusiasm and an exceptional power of expressiou. He is more like the lamented "Frank Forrester" than any other who has entered the field of literature of outdoor sports. His books have attracted great attention to California, and we are all proud to have so skilled and pleasant a writer among us. But we must protest at his taking San Diego county, where he lives, as an index of tbe whole State of California, and writing of it as California. San Diego county is the driest in the State. The average rainfall there is less than anywhere else. It has no streams to speak of, and its largest river, the San Diego, only has water at its lower end once in two or three years, and then for a few days at a time only. Back in the mountains, high up, tbe climate is pure, and in fact the climate of the mountains and coast is good at all times. Tbe writer has enjoyed a couple of years' residence in the mountains there and is familiar with the region. San Bernardino and Los Angeles counties have many of tbe characteristics of San Diego, particularly in tbe dryness.

Mr. Van Dyke has written a pleasant sketch of trout fishing in the southern country, which bas been published in tbe *American Field* and the *American Angler*. In this he takes occasion to comment on the sluggishness of the California trout and its inferiority to the Eastern, both as a game and table fish. Although not very mucb is said, a wrong impression is left, which, coming from a writer of influence, should not remain unnoticed.

Of trout fishing in California, one sbould not judge from an experience in a few streams in tbe soutbern part of the State. We had almost said, of fishing in a part of the State where tbere is no water. There is as much difference in fishing tbere and in a good cool stream in tbe northern counties as there would be in flyfishing in in a swift running creek and fisbing for flounders in a muddy bottom.

The writer has wet his line in streams all over the State, and it must be confessed tbere was great disappointment in southern waters. The fish seem slow or sluggish and not firm or hard as in Purissima creek or any of the Santa Cruz or Mendocino streams. We have not tho apace at the moment to go into this matter in detail but would simply correct the impression given by Mr. Van Dyke's assertions.

What be says is true enough of tbe fish down wbere be is, but the complaint is that tbese fisb can not be considered representative California trout. After some of the northern streams are found and tried, if Mr. Van Dyke will then complain of sluggishness, we shall be mistaken. There are very few good streams south of Monterey county for trout fishing.

Of the California brook trout it may be said that he is hardy, spirited and a thorough game fish. No less an authority than Seth Green speaks of him highly and compares him to the Eastern trout to the latters disadvantage. United States Fish Commissioner Baird says of the rainbow or California mountain trout (*salmo irideus*): "This fish is much esteemed and will no doubt he a valuable acquisition to the food fishes of the Atlantic States, especially to such waters as may be found too warm for the less hardy brook trout native to the Atlantic." The native trout of this State are fine fish but climatic influences seem to have a degenerating influence as one goes soutb. Still, as most of the streams are in middle and northern California, and there are very few south, it would seem proper to take the type where the species is most abundant.

A GOOD PROSPECT.

Local sportsmen have every reason to congratulate themselves upon what gives unmistakable signs of being a most brilliant season. Almost every department of field sports can be readily pursued in California, but it seldom happens that such general enthusiasm is manifested as that which prevails at present. It has been currently remarked that little interest seemed to be taken in sporting matters, and that in this respect we were considerably behind much smaller and less important commercial centers. The advantages which we enjoy for the pursuit of any particular sport are unsurpassed and have always been conceded. For some reason or another, a certain apathy has characterized local sporting organizations in years past, so that without being wholly wanting in exciting events, we have, nevertheless, had little variation from stereotyped programmes. Tbe present season forms a pleasing exception to the rule, and already gives flattering promises of being eventful and exciting. The various clubs have about perfected arrangements and but little preliminary work remains to be done to ensure excellent results. The greatest interest has been manifested in trap shooting, and a series of interesting matches have been decided upon, with special prizes for competition between members of clubs. Individual matches are being rapidly made, and there is every reason to believe that the interior clubs will arrange for an interchange of courtesies with sportsmen of the metropolis. Tbe base hall season opens next month nnder tbe most favorable auspices. Public patronage will be divided between two leagues, one having jurisdiction over clubs playing in this city, and the other over clubs playing in Oakland. Material improvements bave been made on the grounds, and players look forward to some very interesting and well-contested games. Yachting has always occupied a foremost rank in the list of popular sports, and the excitement which invariably characterizes the return of the seasou is already noticeable. Cruises will be shortly made up, and opening day celebrated with the usual festivities. Matters in connection with rifle shooting were never more promising. Tbe California Rifle Association has entered the field with a programme of events such as has not been shot for the past few seasons, and in addition has given a mid-range match. Tbe prizes are liberal enough to call forth active competition. The sport is decidedly on the increase, and the ranges are in consequence kept continually in demand. Cricketing will commence early in April with a match between the Merion and Occident Clubs, to be followed by a match with the Gentlemen's Eleven, at present visiting Australia. A bench show is among the prohabilities in the near future. Rowing circles are quiet, though not unusually so. They are expected to brighten up within a few weeks, and individual matchea are freely spoken about. Athletic spring meetings will be announced within a few days, and in other departments of sport the season gives favorable signs of excitement and interest.

CALIFORNIA RIFLE ASSOCIATION.

A meeting of tbe Directors of the California Rifle Association was held on Wednesday evening at the armory of Company C, First Regiment, for the purpose of arranging a programme for the annual spring tournament. After some discussion as to the best means of providing for a successful meeting it was decided to hold the shoot during the latter portion of April, on a day to be determined upon when definite arrangement could be made with tbe proprietors of the Shell Mound range. No sighting shots will be allowed and all team shooting will commence at the same time.

Tbc programme as far as completed consists of the following matches:

Trophy presented by Governor Perkins, first prize medal, $15, $12 50, $10, $7 50, $5, $4, $4, $3, $3, $1.

Barnes trophy, prizes aame amount.

Mid-range match, seven shots, entrance $1, prizes, $10, $8, $6, $4, $2.

Andrews trophy, ten shots, prizea, $7 50, $5, 2 50.

Matcb for pistol teams, entrance $10, prizes, $10, $6, $3 and $1.

Individual pistol match, five shots at ring target, entrance $1, prizes, $15 $12 50, $10, $7 50, $5, $4, $4, $3, $3, $1.

Arrangements will sbortly be made to organize a team for a trip to Carson, wbere it is proposed to have a matcb for the Pacific Slope trophy. At the last shoot of the California Rifle Association the trophy was won by the Carson team, and since that time local sharpshooters have rested uneasy. In the event of a match being decided upon, tbe visit will partake of the nature of an excursion, and tickets will be sold at a reduced figure.

EDITORIAL NOTES.

The auction sale of trotting stock in Kentucky so far reported this spring are those of Capt. T. E. Moore and Col. R. S. Stoner. Capt. Moore sold forty-five head for $10,890, an average of $242 per head. Col. Stoner disposed of thirty-five head, largely the get of Strathmore, for $12,445 or $355 57 per head. These prices the Eastern breeders call good, and they are good. They leave a profit to the breeder. At the late sale of the stock of the Cook farm sixty-eight head brought $31,926, or an average of $469 50 each. Thia sixty-eight included all the trotting stock, the balance of the sale being composed of roadsters, farm animals and saddle horses used in the business of the establishment. These prices have braced breeders with a new courage, and our breeding interests promise to be on a better footing than heretofore.

The death of W. Stirling Crawfurd will, it is surmised by well-informed people, cause the breaking up of the powerful racing stable which he owned, and Isonomy will be again in the market. When Gov. Stanford returned from England last year, he said that of all the horses he saw Isonomy was the only one he would have desired to transfer to Palo Alto. Mr. Gretton was then living, and no propositions for the purchase of the horse would be entertained. Mr. Crawfurd paid an enormons figure for him at the sale after Mr. Gretton's death. If Isonomy is to be again brought to the block, it may be that biddera will be in attendance around with commissions from American buyers.

A meeting of the Pacific Yacht Club was held on Wednesday night in Parlor A, at the Palace Hotel, for the purpose of holding the annual meeting. The following officers were elected: J. Macdonough, Commodore; Philip Caduc, Vice-Commodore; J. C. Kelly, Measurer; W. R. Melville, Secretary. Commodore Macdonough started on the following day for a trip to Europe. During hia absence Vice-Commodore Philip Caduc will act in his place.

Answers to Correspondents.

Questions answered only through these columns. No replies by mail or telegraph.

Philip K., Concord:

Gen. Taylor, gray horse, sired hy the Morse Horse, dam Flora, the noted Buskirk mare, pedigree not traced.

The Morse Horae, by European son of imported Messenger, first dam Beck, by Harris' Hambletonian, sou of Bishop's Hambletonian; second dam Mozza, by Peacock, son of Messenger.

Harris' Hambletonian, by Bishop's Hambletonian, dam the Munson mare, by imported Messenger.

Bishop's Hambletonian, by imported Messenger, first dam Pheasant by imported Shark; second dam by imported Medley.

The above are the pedigrees as given in the Stud Books. In another column of this issue will be found an extract from a letter from the gentleman who bred Gen. Taylor, in which the breeding of the Morse Horse is given slightly different from the recorded versiou. Taylor was a flea-bitten gray, 14¾ hands high and weighed, when twenty-four years old, 945 pounds. He was foaled in June, 1847, and died at Napa in 1877.

The Virtues of Salt.

EDITOR BREEDER AND SPORTSMAN, *Dear Sir:* Please publish for the beuefit of all sportsmen and lovers of good dogs the following recipe that is a sure cure and never fails if instructions are carried out: For dogs effected with the distemper, when first discovered, take common table salt, about one table spoonful, open the mouth and put it on the roots of the tongue, and repeat the dose every morniug for four or five days. Be sure your dog swallows it. Also a snre cure for dogs poisoned with strychuine: Take a handful of table salt and fill the month, and be sure that yonr dog swallows it; then let him him go and you will quickly see what he has been eating. I have tried this in over one hundred cases and never found it to fail of doing the work quickly.

Pacheco, March 1, 1883. HENRY P. SAGE.

It is a singular fact that steam plowing has been less attempted in this conntry than in England, where it has long been a snccess. One reason, doubtles, is that the cost of horses and their keep is less in America than in Eugland, and the cost for runniug a steam engine, both for fuel and attendance, is greater here than there. The English steam plows all work with stationary engines, one on each side of the field, drawing the plows by ropes and pulleys.

Although the date has not been positively fixed, it now looks as if the Oxford-Cambridge race over Putney-Mortlake course would be rowed late in the afternoon of March 15, instead of at about 7:30 a. m. on the 17th. Advices to the 13th inst. report both crews as doiug strong aud steady work, with the Oxford crew favorite in the little betting that is done.

Mr. E. J. Baldwiu's bay colt by Grinstead—Ophir, foaled Feb. 19th, died March 3d of lockjaw.

COURSING AT MERCED.

Meeting of the Pacific Coast Coursing Club—Callahan's Sierra Wins First Prize.

Last Saturday night the members of the Pacific Coast Conrsing Club, with President Mark Devlin in the chair, held a meeting to receive entries for the club'a open spring conrsiug match. The formal preliminaries were soou finished and twenty-fonr old dogs and six saplings were on the card drawn to run against each other as follows:

P. Cronin's white and black bitch Lily of Killarney against M. Devlin's red and white dog Elmo.

P. K. Jacoby's black and white dog Cassie Mara against J. C. Pennie's red dog Cherokee.

D. L. Levy's fawn and white dog Mardi Gras against Charles Fowler's blue bitch Delebute.

James Kelly's black and white bitch Gypsy Blanche against John Hughes' black dog Speculation Jr.

J. Larkey's fawn and white dog Presidio Boy against J. C. Pennie's hlack and white dog Longfellow.

T. Cronin's brindle and white dog Chicopee against George Bird's brindle and white dog Blue Clond.

M. F. Moran's brindle dog Brindle against M. Devlin's white and brindle dog Chief of the Canyon.

F. Callahan's hrindle and white bitch Sierra against M. F. Moran's brindle bitch Fly.

William Halpin's fawn and white bitch Lady Plaice against George Bird's brindle and white bitch Lady Bird.

James Kelly's black bitch Night Shade against D. L. Levy's fawn bitch Fonnder.

Edward J. Schnrr's fawn and white dog Gentleman Jones Jr. against Wm. Halpin's black and white bitch Culverin.

John. D. Hughes' hlue and white bitch Lsdy Franklin against T. Cronin's fawn and white dog Parnell.

Sapling stakes:

P. K. Jacoby's brindle and white dog Lord Dugan, against S. Fowler's black and white bitch Jersey Lily.

H. Wormington's blue dog Denver against Edward J. Schurr's black dog Schneider.

John. McCormack's brindle biteh Rosy Mack against J. C. Pennie's blue and white dog Spring.

Any casnal observer at Oakland ferry last Tuesday afternoon when the members of the club were getting nnder weigh, so to speak, might have imagined that he had snddenly struck a bursted dog pound for the spectacle of thirty greyhounds together, of all colors and sizes is all too common here and liable to give rise to any kind of suggestions. Pretty soon after the conrsing men had gathered into a group to exchange kennel items, as they always do, the crowd seemed to catch on to the idea that a coursing match was about to take place somewhere, and with that pleasant freedom of manner and great knowledge of the sport that is a characteristic of San Franciscans, commenced to ask, "Where the dog race was going to be?" Now to call a conrsing match a "dog race" is the 2,000-foot level of infamy to a real lover of the sport and it did one's heart good to hear Judge Pennie remark in thunder tones, "Dog race, be bothered, we admit going to race the dogs, it's the dogs are going to chase hares."

"Yon don't suppose I am such a consarned fool as to suppoae the hares are going to chase the dogs, do you?" said the offender indignantly as he moved away and for once in his life the Judge was lost for a reply.

It was a jovial whole-souled party of sportsmen that boarded the special car engaged by the club, at Oakland wharf. Everybody knew every one else and all were on the best of terms with each other. The defeats and crosses of the last match were all forgotten. No one talked about courses that had passed but every one eagerly discoused on the match to come. There's a heap of hnman nature about a crowd going to a coursing match and on such occasions a man's prominent characteristics crop ont. The open frank man who wears his heart on his sleeve proudly draws attention to his dog and remarks "there's the winner of the first prize gentlemen. I have got him in splendid condition and I just think he can heat anybody's dog," occasionally putting in the proviso "barring accidents." The cantious close-mouthed man says little about his dog, or if pressed to talk, remarks in a deprecating way "oh, well the dog's good enough but he aiu't in proper condition. I have not had the time to train him and besides he split a toe nail last week and has done no work since." This gentleman has not the slightest idea of hetting a cent on his dog and would not for the world attempt to deceive any one but habit is so mnch stronger than reason that he natnrally keeps what he thinks a good thing to himself with as mucb care as he would a rich strike of ore in a mine, or a prominent apecnlation. Tben there is the smart man who is np to a thing or two. He has nothing to aay about his own dog but apenda all the time on the trip questioning others about the condition and chances of other dogs with a view to a small, very small investment in the pool box, for at coursing matchea in this State the betting rarely exceeds a dollar or two. The trip np to Merced occnpies about aix honra and a half, but the time passed pleasantly enough and the tedinm of the way was enlivened by all kinds of practical jokes and an occasional burst of harmony from some of the eminent vocalists of ihe club. Tbe presence of several ladies in the car confined the vocal selections to such trifles as "The Harp that Once through Tara'a Halls" and "The Minstrel Boy." A brace of San Francisco Jndges created a aenaation by ainging "For Goodness Sake Don't Say I Told You" as a duet, to wbich a delegate from the Sunny South gave a banjo obligato. When Merced was reached the club waa thrown into confusion by the appearance of ex-assemblyman Sam Braunhardt on the platform eagerly inqniring as to the result of tbe charter election. The committee appointed for his suppreasion made no report, but it is believed that the remains diacovered at Plainsburg last Thursday, badly eaten by coyotes, are those of tho lamented Samuel. About 8 a. m. the whole crowd started from the hotel. Conveyances were plentiful, the Merced folks having laid in an extra crop of buggies and wagons in anticipation of the coming of the Triennial Conclave to visit the Yosemite Valley. Old McClenathan, who has rnn stages to the valley ever since it was opened, was on hand to conduct the procession, and was ably reinforced by Jim Cornwall, one of the pioneer stage drivers of the coast and a contemporary of the celebrated Hank Monk. Jim was a little under the weather, the death of his old partner having saddened him considersbly, but when the sun got np good and strong he thawed out, so to speak, and told many interesting anecdotes about early days in California and the men who transported bullion from the mines to the city.

The coursing gronnds were reached about 9:30 a. m. The place is only a bare plain, and during at least ten months in the year would scarcely support a sheep to each three acres, but on the occasion of the clnb's visit it presented a picture of beauty, the equal of which one wonld have to travel many a weary mile to see. The picture was a unique one, hard to describe and still harder to imagine. Seated on horseback on a slight eminence the valley of the San Joaquin spread ont on every side and seemed gradually to melt out of sight and merge into the two ranges of mountains that border it. Looking east the white-topped Sierra Nevadas loomed np dark and white in patches, for the snow waa about half gone. On the west the Coast range, with Pacheco peak standing out sharp and clear, were in fnll view. Both ranges of mountains are at least seventy-five miles distant from the point of view, but so clear was the atmosphere and bright the day that they looked scarce five miles away, and one almost thought that every mound and house and animal that dotted the broad intervening plain could be compassed by the naked eye. The plain itself, or as mnch of it as one could easily see has a mass of the most gorgeous colors far exceeding in depth and brightness the brightest art of the old masters whose secrets of coloring are said to have died with them. Bnt nature painted the glorions hues that carpet the San Joaquin plain. Here a mass of deep orange poppies, their colors rivaling the most brilliant sunrise, there a mile or so square of a pale blue flower, more cerulean in hue than the beautiful sky overhead. A mile or so away, fields of wheat forced by irrigation formed a green border so intensely green as to appear at a distance alternately blne and black. As far as the eye conld reach, the pasture land was a veritable carpet of wildflowers and the grain fields a sea of waving green except where the irrigation ditches had not reached and there the sparse herbage scarce shaded the dull ochre of the soil. It seemed almost a sin to profane this beautiful scene hy a rough footstep but in a very short time after the party arrived, men, horses, dogs and hares were scampering and driving over it in all directions.

President Devlin soon had the wagons in line to beat the gronnd, Cronin's Lilly of Killarney and Mr. Devlin's Elmo were handed over to Joe Stadfeldt the indefatigable slipper of the club, Sheriff A. J. Meany of Merced, C. Johnson and T. Williams the jndges monnted their horses, McCormack, the field steward gave the word and on the crowd pressed.

Scarce a dozen yards were traveled before a warning cry of "mark right" was heard and a full-grown hare was seen speeding for cover. The slipper was on the alert and had his dogs straightened out almost as soon as the hare was sighted. A good hnndred yards start, for it is the spring of the year and the heavy feed has made the hares slower than in the fall, and away go the dogs at a rate of speed that calls for lots of whipping and spnrring from the judges if they want to catch a sight of the race. Lilly had the most speed and was up to the hare when Elmo was fnll twenty feet in the rear. One startled look as the white dog laid on his flank and round like a flash went the hare throwing Lilly a good fifty feet feet in the rear before she could get aronnd and again pursue her game. The "tnrn" gave Elmo a chance to get np to the hare but before he conld press close enough to score, Lilly was past him like a white ghost and not only scored to her credit a "go bye" bnt took the second tnrn, giving her seven points in all without one to the credit of Elmo. Under the rules he had to score twelve before he could count at all and this settled the reanlt of the race.

After Lilly made the second "turn" Elmo took the hare. A conple of more turns were made and into a hole popped pnss, thereby aettling the race with lots of points to spare in Lilly's favor.

Jacoby'a Cassie Maria and Pennie's Cherokee, the next pair, had a long and trying race, neither showing much dash or vim and lacking ability to kill. Cassie Maria won the race.

D. L. Levy's Mardi Gras was not ou the ground so Delebute, the dog drawn against him, had a walk over, or in coursing parlance, a "bye." None of the courses on the first ties called for special mention, all alike being remarkable for one-sidedness.

John Hughes' Speculation beat J. Kelley's Gipsy Blanche.

J. C. Pennies' Longfellow beat J. Larkin's Presidio Boy.

George Bird's Blue Clond beat T. Cronins' Chicopee.

M. F. Moran's Brindle beat Mark Devlin'a Chief of the Canyon.

F. Callahan's Sierra beat M. F. Moran's Fly.

W. Halpin's Lady Place beat George Bird's Lady Bird.

D. L. Levy's Founder of the Mardi Gras beat J. Kelley's Night Shade.

W. Halpin'a Culverin beat E. J. Schurr's Gentleman Jones Jr.

J. D. Hughes' Lady Franklin beat T. Cronin'a Parnell.

After a hearty lunch the aeeond ties were run off, that is, the winners of the first ties doubled up and ran again.

Lilly of Killarney beat Cassie Maria and then was ao nnfortunate as to start a fresh hare which she ran to death doing much needless work and injuring her chances in the match.

Delebute and Speculation Jr., were so evenly matched that one course could not decide their merits. After a second trial the honors were given to Delebute.

Blue Cloud beat Longfellow. The resnlt migbt have been different had not Longfellow blundered into a hole at the start of the run when he was pointa ahead and looked like a winner.

Brindle and Sierra had a hard, close race, resulting in favor of Sierra much to the auprise of nearly all preaent, for Brindle had made a magnificent course with Chief of the Canyon and Sierra waa an nnknown dog said to be from the heart of the Sierra monntains.

Lady Place beat Founder of the Mardi Graa juat as she placed the animal opposite to her, probably finding his uame a trifle too heavy a handicap for towards the end of the run he gave up in disgust.

Culverin and Lady Franklin had a nice run. Lady Franklin made the first "turn" after which the work was even to the "kill," which was also in Lady Franklin's favor, so she won with points to spare.

The third tie concluded the first day's aport.

Lilly of Killarney beat Delebute after a long, draggiug course.

Sierra beat Blue Cloud with comparative ease.

Lady Franklin had a close run with Lady Place, hut came out winner by a couple of points.

On Thursday, in the finishing of the Old Dog Stakes, Sierra defeated Lily of Killarney, Lady Franklin ran a bye and Sierra heat Lady Franklin. Sierra won first money, $75, Lady Franklin second and Lily of Killarney third.

In the Puppy Stakes Jacoby's Lord Dugan beat Fowler's Jersey Lily, Edward Schuur's Schneider beat Wornington's Denver John, McCormack's Rosy Mack beat Pennie's Spring.

In the second ties Jacoby's Lord Dugan heat Schuur'a Schneider, Spring was to run a bye, but Jacoby and McCormack divided the prizes.

In the Consolation Stakes Lady Bird beat Chicopee, Delebute beat Speculation, Longfellow beat Lady Place, Chief of the Canyon heat Brindle, Cassie Mara beat Cherokee.

In the first ties Lady Bird beat Delebute, Chief of the Canyon beat Longfellow and Cassie Mara rsn a bye.

In the second ties Cassie Mara beat Lady Bird.

In the third ties Chief of the Cnyon heat Cassie Mars.

Chief of the Canyon took first money, Cassie Mara second and Lady Bird third.

There were two special match races, in which Blue Cloud defeated Chicopee after a long race and Parnell defeated Brindle.

California Club Meeting.—The California Coursing Club held its regular meeting at 539 California street last Wednesday evening. The spring conrsing meeting was discussed, and Messrs. Carroll, Murphy and Lane appointed as a committee on laws and printing. The stakes are open to all the dogs in the State, and the drawing will take place Saturday evening, the 24th inst. Entrance fee $5. The meeting will be held at Merced on the 28th and 29th insts.

Mr. J. Leroy Nickel of San Francisco has purchased from E. Leavesley the field trial setter Duke, winner of gold medal in Puppy Stakes at Gilroy field trials. Duke was bred by E. H. Farmer, Gilroy, from his Queen-Belton-Belle, by L. Miller's Joe; is a Blue-Belton very handsomely marked, and perfectly broken in all the technical points necessary in a field trial performer.

BASE BALL.

Flattering Prospects of a Successful Season.

The prospects for a very successful season on the diamond were never more flattering. Various canses have heretofore prevented the national game from attaining that popularity among local sportsmen which invariably marks the hase ball games throughont the Eastern circuit.

The palmiest days of the sport on the Coast date as far back as the organization of the Eagle Base Ball club, when Fisher and other pioneer players, including Si Wade, Pars Miller, and the two Williams, initiated local audiences with the mysteries of daisy cntters and line hits. The natural progress of the game entailed much assiduons practice, and in consequence the regular Sunday matches were patronized by everybody ou the assurance of witnessing an exciting and well-contested series of championship games. Salaried players were unknown and the sport was pursned for its own intrinsic merit, and the amnsement whicb afforded. Gradnally innovations crept in which while they may have rendered the game more scientific were also accompanied by numerous disagreeable features. The history of the old diamond bat, is replete witb incidents of many a hard-fought struggle. The greatest possible rivalry characterized the entire season and at its close the championship waa marked by an outbnrst of good feeling and handshaking seldom witnessed. The glory which attached to winning the trophy incited the nlayers to renewed exertions and was in itself a guarantee that juggling would not be practiced. The veterans of the diamond were soon supplanted by more wary ball tossers, whose ideas of tbe sport though more progressive were nevertheless responsible for much disrepute into which the game snbsequently fell. The championship consisted merely in having won a majority of games and nothing remained to mark the honor of a successfnl struggle.

A few years later the league divided and two factions existed, one in thia city and another in Oakland, and from this time dates the downfall of the sport in public estimation. Eastern professionals, who for one reason or anotber were nnable to secure profitable engagements, flocked into the State, and were nltimately admitted into our clubs, until a rush was insugurated by clnba from the East ou the conclusion of their season. The friendly though desperate contests of yore were forgotten, and in their stead a series of games were announced, in which gate money, and even heavy bets between the competing teams, occasioned certain dubious transactions, which finally shook public confidence in the sport under the new order of things, and naturally the sport was seized with internal convulsions and soon after ingloriously expired. Several attempts were made to revive the waning interest, but with little success. The disagreeable incidents of the past, however, are to he fully provided against during the coming season, and every endeavor will be made to revive the interest in the game. A meeting of tho League will be held shortly, at which it is expected some five clubs will be represented. The Recreation Grounds, on which the League games will he played, will he put in condition, and the diamond prepared so as to insure a smooth inner field. Tbe Oakland League will also hold a meeting in a few days for the purposo of making arrangements for the coming season. The games will probably be played on the Olympic Athletic Club's grounds. Four clubs have already signified their intentiou of participating in the championship games, a schedule of which will he adopted when the League meets. It has heen suggested by a numher of patrons of the sport that the respective Leagues adopt some championship standard, which shall be awarded on the close of the season to the club winning a majority of games. It ia believed that auch a course would increase the excitoment and would eventually be the means of bringing about a desirable change in baseball contests.

Tbe matcb game of base ball between the Intrepids of Marysville aud the True Bluea of Grass Valley, played at the latter place last Sunday afternoon, resulted in a victory for the Intrepids by a score of 12 to 7. The game was witnessed by about two thousand people.

Walter Wallace will manago the California Club during tho coming aeason. He has been identified witb that club for more than aix years, and is one of the most enthusiastic patroua of tbe aport.

The proposed banquet under the auspices of the veteran players has been abandoned. Last year's reunion was the most pleasant affair known in the history of the game on this coast.

Tbe Daisy Clippers of Bigga and tho Red Stock[illegible] Gridley had a game on the 22d. Result, Red St[illegible] 14; Daisy Clippers 8.

HERD AND SWINE.

The Prejudice Against Pork.

An old-time fancy attributes to meu the qualities of the animals of whose flesh they partake. No animal fights with such a desperate disregard of odds as a pig, male or female, old or young. Domesticatiou seems to have hut little effect iu eradicating tbis pugnacious teudency. The soldiers of our war of the rebelliou were fed upou pork; it was the mainstay of both armies duriug a struggle marked for its great feats of endurance and sanguinary battles. Pork has built our railroads, hurrowed in the grouud for iron, coal, gold, silver and oil—has played its part iu tbe struggle for material prosperity all over the coutineut. It furnishes the humau engiue with the grestest force iu the smallest space. The mau who lahors cau eat pork; and because the idle mau cannot, he often occupies his elegant leisure in writing about its evil effects upon the human family. He forgets that the pop-guu requires but little ammunition, aud that of a weak character, while the fliut-rock hlast ueeds giant powder. Pork is tbe giaut powder for muscular human eudeavor, but like all powerfnl ageucies it must be prepared right and haudled carefully. The omniverous character of the pig makes it alike hoth valnable and dangerous; valuable because in all climates and with all sorts of food it can be readily fatteued for human food; dangerous, because all sorts of food that may prove daugerous to humanity are consumed when better food is uot accessible. Iu a state of nature, with ruuning water and a various herbage to feed upou, tbe flesh of the hog is as healthful food as ever was eateu. The flesh of wild swine has been regarded a dainty since the time before history begau. Did any one ever hear of its being poisouous? It is only wheu confined in a manner that uo other animal can endure, fed after the fashion of scieutific executions in Europe, with access to humau excrement, that death lurks iu the meat of the pig. Eveu then tborough aud vigorous cooking averts all dauger. Give a drove of pigs the run of a wood lot or clover pasture where their life will approach a state of nature; do uot try to get them too fat; iu other words, do uot shut them up for the fiuishing process, which is au abomination, and you can eat dainty pork; daiutiest if a Berkshire has beeu selected—sweet, toothsome meat with layers of fat aud lean; not a mass of lard, but the richest, juicest meat that ever went into humau mouth. What spareribs, what hams have I eateu growu iu the wood-lot stretching away in view! With moveable houses haviug high floors and swinging doors, the pigs were always warm, clean and dry, when not hunting mast or delving among the stoues or succulent roots. What an amount of interest a rocky ledge has for a drove of pigs? It mnst have some medicinal property, for no hog that has the run of this lot was ever known to be sick. Stagnaut water full of poisouous germs, sameness of diet, a multitude so great that the grouud loses its verdure aud becomes dry, dusty aud irritating, or in a wet spell, muddy and foul, makes pig flesh require a great degree of heat in cooking to iusure safety. A dirty, stinkiug little pen, with filth and dry corn—this is the usual finishiug process—has the same effect. But it all brings the same price per pound. The maker of daiuty butter has euconragemeut in extra price. The feeder of healthful, sweet pork goes to more trouble and gets a less price thau his ueighbor, who turns off over-fat, diseased animals, coarse grained in fiber, harsh and tough to the palate, where there is auythiug but liquid grease; full of disgusting, rnhhery, scrofulous kernels that with their ghastly, glistening hideousness spoils oue's peace of mind for a week when removed from the mouth. Butter that would rank with such pork in quality could hardly be sold at auy price. Why do not consumers of pork also discriminate?—*M. T. G. in Breeders's Gazette.*

"Color" in Jersey Cattle.

Unfortuuately for Jersey cattle breediug, a great many people seem to think tbe first and most important of all ontward iudications of a well-bred Jersey are solid color, with black points, in-curving horns and dished face.

While everyoue admits that these markiugs are all well enough aud aid iu giviug a herd a uniform appearance, I think all wide-awake breeders of to-day agree that the shape of the cow, eepecially the udder, and the color of the skin are hy far of more importance thau the color of the hair, tongue and switch. A solid-colored animal may be silver gray, light cream or yellow fawn, reddish or dark fawu, brown or eveu black; but if there happens to be a few white hairs ou it, too many couut it a great misfortune. Why should there be auy objectiou to white in a class of cattle hred for richness rather thau fancy?

Jersey Belle of Scituate was about one-third white, but she had a rich yellow skin aud is credited with haviug made twenty-five pounds three ouuces of very yellow hutter in aeven days.

Jersey Queen is about one-third white, but having seen how extremely rich her hide is, no effort is required to believe she made the 851 pounds of hutter claimed for her in one year. Daisy 692, known as the "Paran Steveus" cow, and who died ou Mr. A. B. Darling's place ahont a year ago, is, perhaps, oue of the hest examples of richness ever seen; yet she was liberally marked with white, and although her white markinge are geuerally fouud on her descendants, they also iuherit from her such a richuess of skiu as is seldom seeu. Her daughters, Judy 691 and Miunie Steveus 13,059, were far above the average for richness; and her last son, Yellow Boy, by Duke of Darlington, althongh partly covered with white hairs, ie prouonuced by Mr. Darliug's superiuteudeut the "hest and richest son of Duke of Darlingtou." And as Coloael H. S. Russell recently bought a sou of Yellow Boy and Bomba at more tban twice what has previonsly paid for a bull of the same age, I tbiuk this confirms Mr. Carpenter's judgment.

Siuce Princess 2d and Yonng Garenue (both of whom are marked with white) sold at $4,800 and $3,750 respectively, does it look as if there was uced of breediug for solid color, even for the sale ring?

As Dr. Howe's Gilderoy (another nufortuuate with white markings) is heing used in such a herd as Mr. Havemeyer's, it certainly looks as if the former prejudice against white markings, and especially on a bull, is fast giving way to that much more important consideration, richness of skiu.

While many have foolishly followed the whims of fashion, and perhaps ruined the rich qualities in their herds by breeding for solid color and black points, I am glad the blood of Daisy 692, Jersey Belle of Scituate, and Gilderoy, with that of many others that migbt be named, is in the hands of those who are breeding for richness rather tban color of the bair. If we Jersey breeders acknowledge the color of skin to be of far more importance than the color of the hair and breed, we need have no fear of our Guernsey neighbors on that score. I think solid color and black points should be the last things mentioned in recommending a true Jersey.—*Breeder's Gazette.*

Selection and Care of Sows.

To the careful breeder of swiue, the selection of his breediug stock is a matter of ntmost importauce. Oue of the first aud most important priuciples iu the breeding of our domestic animals is the well-knowu fact that the sire aud dam or their aucestry transmit to their progeuy the characteristics peculiar to themselves, or in other words that like produces like. There are mauy qnestious couuected with the breeding of swiue that are very interestiug, such as some method to regulate the sex of the offspring, the effect of a first impregnatiou on subsequeut oues; the relative effect of sire sire aud dam ou the progeuy; the effect of in aud in breediug, aud so ou. Some of these questious have at least a speculative iuterest, while others have a pecuniary oue, yet uoue of them we think are of such vast importance to the practical breeder as the geueral principle above stated. His success or failnre as a breeder depeuds to a very great extent upon the observance or disregard of this plain, practical law. It is also well knowu that the characteristics of the offspring are uot always dne to either of the aucestors, but usnally show more or less compromise between them. What theu is tbe plain, practical lessoue to be learned from general priuciples? It evidently is that we should select only animals for breeders whose ancestors possess, iu a marked degree, the excellencies we desire in the progeuy. Iu other words, if we would have stroug constitutional vigor, good tendeucy to fatten, broad, deep, square hams and shoulders, straight, hroad backs, deep sides, fiue head aud limbs, or whatever other desirable qualities we want iu the pig, must be possessed by its sire, dam aud their aucestors. The breeding sows may be selected when from three to six mouths old. Haviug made our selection, the youug sow should uow be separated from the maiu herd, aud each system of feeding adopted as is best calculated to develop the muscular and bouy structure. And right here is where we think many breeders make a great mistake in uot usiug the right kind of food for their young hreediug stock. One great difficulty in growing the youug sow is, that the feed which is best calculated to fatten, is deficieut to a great exteut iu muscle aud houe forming elemeuts. Corn, for example, is our great reliauce for the productiou of fat, but is very deficient in these essential elements which are necessary to the prodnctiou of the desired qualities above named. There is no better food for tbe full and complete developement of all parts of the yonng aud growing pig thau the milk of the dam, as it is very rich in bone aud mnscle formiug elemeuts. We fiud that cow's milk is a very good substitute for the mother's milk, and when used iu couuection with grouud corn and oats, with a small portion of wheat middlings, and made into a slop, makes an excelleut food for the young sow. In the absence of milk, a small portion of oat-meal may be used. In summer she should be kept on clover and blue grass pasture, if possible, which is also very necessary for the proper growth. During the winter season she should occasionally be fed cooked potatoes, turnips, heets, artichokes, etc., if they can be had. Charcoal aud wood ashes, with a little salt, should be also given during the winter, about once a week.

The proper age for hreediug the young sow should not be overlooked; I do not think it the best plan to breed young sows before they are ten to twelve months old. Breediug them quite youug has a tendeucy to check their growth and full developmeut. But this is not the ouly disadvantage resultiug from this practice. Usually her flow of milk is scant, her pigs small, puny, aud few in number, and generally do not make as large pigs as those from older sows. I think the practice of many farmers and some professional breeders of disposing of their young sows after raisiug one litter of pigs is, to say the least of it, very unprofitable. Of course, if a young sow shows by her first litter that she is a poor breeder, or if a good breeder and her owuer can dispose of her for more than sbe is worth to him, then the case is quite different, and it would not be to his advantage to keep her louger. After the sow is bred she should immediately be put for a few days in a pen or small lot hy herself, where she would be more quiet, which would be more favorable for her to get in pig than if allowed to run with the rest of the herd. Before she is bred she should not be too fat, but only in moderate condition of flesh. Sows carry their young, on an average, sixteeu weeks. During gestation they should be liberally ted, and gradually increased in flesh till farrowing time. Their food should be similar to that before being bred, except that corn shonld be fed more spariugly near farrowing time, as it is more heating to the system than slop and other feed that may be given. This is also better adapted to promote a good flow of milk thau corn is. If, during the period of carryiug their youug, tbe weather should be cold, wet and disagreeable, they should be well sheltered and protected. Abont two weeks before her time to farrow, put the sow in the breeding pen, with a small lot adjoining in which she can have sufficieut exercise. Put a slat two or three iuches square around the inside of the peu, aud thus often save them from being crnshed to death. Within a few days of her time to farrow, the sow shonld be furnished with heddiug of short, cut straw. She ought to he gentle and accustomed to being handled. If not auy attempt to assist will often result in more harm than good. If she has made her bed againat the slat remove it just hefore she hegins to pig, so that the pigs can get under the slat. Everything should now he very quiet abont the pen, so as not to disturh her. Close atteutiou is now uecessary as to whether assistauce is needed, and if so, how it should he reudered. After the sow is done piggiug, remove the after-hirth, for if left it will cause the sow to move about more among the pigs and probably tramp some of them to death. If there are any dead pigs that have not already beeu taken away, remove them also for the same reason. Allow the sow to remaiu as quiet as possible for the next twenty-four hours, giving her no food dnriug this time, except a little water. After this she may be given a little feed of corn and slop three times a day, gradnally iucreasing each feed for five or six days, after which she should be given all she will eat. Keep the sow iu the pen a week or teu days, so as to give the youthful porkers the best possible chance for a good start.—*Swine Breeder's Journal.*

D. Woodworth of Stony Point is quite a stock fancier and pays especial atteution to the hreeding of cattle. He recently sold twiu calves, at the age of six weeks, the two weighing 245 pounds. He has another cow that has given birth to a calf that weighed 112 pouuda when one day old.

Au English paper cites the remarkable fecundity of a teu-year-old ewe in Pembrokeshire, the auimal having reared four lambs each year for four years, aud three lambs each year for tbe remaiuder of her maternal life—resulting in a total of thirty-four lambs.

A chemist in Germany has introduced a new system of preserviug butter, hy covering it with a layer an inch in thickness of a strong solution of sulphate of lime, which he also used to preserve cider.

Jerseys in Maine.

Maiue is uot behind her sister States in the possession of Jersey cattle. She was amoug the first to know and appreciate their peculiar characteristics, aud her people early saw the adaptability of the Jersey to Maiue soil and climate. This breed has flourished here; desceudants of the early importations are scattered all over the State, aud their excellence is aud has beeu sustaiued by frequent additious from the islaud of Jersey or from the best herds of other States. We find few Maiue farmers who do not have a grade Jersey at least, aud mauy whose eutire stock is thoroughbred. At Wiuthrop the early iuterest was so great aud the cattle so numerous that a herd book was made, which contiuues. Its animals are knowu as Winthrop Jerseys aud as Maiue Jerseys; properly speaking, tbe first is the correct uame. Their blood is pure and the records are well kept up. Mr. Pike, the secretary of the club, is well versed iu the race aud it is to his knowledge aud labor that these animals owe their purity aud staudiug. When the American Jersey cattle club was started, its origiuators predicted it would become the guarantee of purity of the Jersey for the United States, and in fairuess notified all owners of Jerseys of its existence, offeriug its use to them. Many made use of the offer, but most of those iu the Wiuthrop club were satisfied with their owu book; likewise with a club in westeru Massachusetts. The predictious of the origiual members of the A. J. C. C. have come true, aud to-day only those auimals whose pedigrees are fouud in its books are salable throughout the States. Regarding it in this light, it is unfortuuate that the Winthrop meu did not uuite in the work for, to-day, their auimals are sold only in this State and for a very low price, cousideriug their merits. I have uo doubt that many of its animals are equal to the noted oues of other States, but attract only local atteutiou, because of their registry.

It is well said by a noted breeder of borses in Keutucky, that "next to Keutucky the finest horses are to be found in Maiue;" it cau be said also that the best Jerseys are to be found there. The cool, calculatiug Maine-ite is slow to arouse to euthusiasm, but when once so, he does uot stop short of the best aud it is to illustrate this that I ask your readers' attentiou to the following, that those who are uuiuformed may learn aud the careless be remiuded of facts uegiected: There is uo part of Maine which does uot have uear its ceuter some mau who has selected with care, who breeds wisely aud has for sale Jersey cattle.

Mr. J. F. Dureu, Calais, is the fartbest east. He has a small but choice herd of some dozeu head. Its members are all registered A. J. C. C. St. John of Scituate, a descendant of the famous Jersey Belle of Scituate, heads the band, and it would be hard to find a better shaped, handsomer bull anywhere. His presence guarantees fine stock for that section of the country.

Mr. G. F. Shaw, of Hartland, breeds horses and cattle; his horses cauuot he beaten, neither can his Jerseys.

Dr. N. R. Boutelle, of Waterville, is probably the longest in the business, and his herd represeuts the wisdom aud care of years. His judgment cau be relied upon.

B. E. Briggs, Esq., of Auburu has a herd which represents fashion, heauty and utility. He has spared no expense to procure the best aud his selectious have been excellent.

Geo. Blauchard & Brother of Cumberland Center, come next, geographically speaking, although iu numhers they have the second herd in size. Experience has taugbt them the business and the people of Maine should be proud of this band of cattle.

Gen. Mattocks has his stock at Baldwin. The reputation of uot only his Jerseys hnt of his swine, sheep, Colley dogs and poultry is widespread.

The writer may, with propriety, add that his own herd is also established at Baldwin. In numbers it is the largest in tbe state; the brood cows are either of well-known families or were themselves imported from the island of Jersey. Kiug of Scituate and Pierson, a son of Farmer's Glory, head the herd.

The animals of all these breeders are registered iu the American Jersey Cattle Club; their progeny find purchasers in all parts of the United States and Cauada. It is said that young stock from this state bear transportation better aud are easier of acclimation than tbat of any other. That there is truth in this is proved in the increased number of buyers from the Southern statee each year.

Maine is by nature and situatiou adapted to become a dairy state; it is this which turns the eyes of her farmers to tbe Jersey. Butter aud cheese cau bear trausportation to distaut markets; her sweet pasturage and clear crystal spriugs of never failing water furuish the material, aud the Jersey is the machiue to convert the raw material into manufactured butter and cheese. This fact is widely acknowledged and is being adopted each day by our people. Our business centers notice the chauge; tbe express companies first, then the merchants. Our dwellers in town are uo louger satisfied with poor hutter aud milk, aud the hest, which formerly weut to Bostou and New York, now finds a market here. The Jersey has doue this. The increased productiou and hetter quality are due alone, first and last, to the small but mighty Jersey. —*Orestes Pierce in Manchester (N. H.) Mirror and Farmer.*

One-day records of milch cows afford but little satisfaction. One mouth is short time enough in which to make a record, aud six months or a year is hetter still. In the short-time records there are geuerally suspicions of forciug by overfeeding, which is apt to he injurions to the animal, and, even if uot, is seldom profitable.

Iu Great Britain harley is chiefly used for fatteuiug hogs. In Canada all the small grains except wheat, peas and oats largely take the place of corn. In the New Euglaud States a little corn is used in connection with potatoes, apples, pumpkins and mill-feed. A variety of food given to hogs appears to produce meat of fiue flavor.

Iu makiug gilt-edged butter, the housewife should see that the milk is set where it will he free from all contaminating odors. Set in shallow opeu pans, two inches deep, the room to be at a temperature of 60 degrees the year rouud.

Everything points to auother period in Eugland of live stock contagion. Both foot aud mouth disease and pleuropneumonia are appearing in unexpected places.

Successful farmiug is much more complex than any trade, aud demauds more coustant thought than most branches of professional life, together with executive ability equal to the management of auy business.

The wear aud tear, the losses aud defeats, the harassing competition incident to city business or mercantile life, form such au experience as no farmer ueed covet.

Coughs. Brown's Bronchial Troches will allay irritatiou which indnces coughing, giviug relief in Bronchitis, Influenza, Consumptive and Throat troubles.

Berkshires.

Among tbe black breeds, tbe improved Berkshire stands at the head of tbe list, either to breed pure, or to cross with inferior breeds. The standerd characteristics end marks of tbis fevorite breed, as adopted by tbe National Convention of Swine Breeders of the United States and Canada, essembled at Indienapolis, Ind., Nov. 20tb, 1872, are as follows: Color bleck, with white on feet, face, tip of tail, and occasional splesh on tbe arm. While a small spot of white on some other pert of the body does not argue an impurity of blood, yet it is to he discoureged to tbe end that uniformity of color may be attained by breeders. White upon one eer or a bronze or copper spot upon some pert of the body, argues no impnrity, but rather a reappearing of original colors, Markings of white other than those named above are suspicious, end should be rejected. Fece short, fine end well dished; broad between the eyes; ears generally almost erect, but sometimes inclined forward with edvancing age; smell, tbin, soft and showing veins; jowl full; neck short and tbick; sboulder sbort, from neck to middling deep from beck down; beck broad and straight or a very little arcbed; ribs long and well sprung, giving rotundity of body; short ribs of good length, giving breadth and levelness of loin; hips good length from point of hips to rnmp; hams thick, ronnd and deep, holding their tbickness well beck and down to the hocks; tail fine end small, set on high up; legs short end fine, bnt straight and very strong, with hoofs erect and legs set wide epert; size medum; offal very ligbt; hair fine and soft; no bristles, skin plieble." Some of tbe characteristics of this particuler breed ere set fortb, viz.: Tbey ere easy keepers and take on fet repidly et any age, perfectly. They ere said to cut to better advantage then eny other hog, hence their popularity emong pork-packers. They are fine in bone, short in leg, long in body, end well-developed hem, which has more lean meat in proportion to the fat then any otber breed. Statistics from our principel swine merkets show ninety to ninety-seven per cent. of the hogs handled ere bleck, the bulk of which are Berkshires, or have Berkshire blood in them. The advancement end distribution of this breed have been rapid. The first importetion into this country wes in 1823, tbe next ten yeers leter, 1832; these importations continued through 1838, '39 and '41, The excitement in Berkshires commenced in the winter of 1874, when T. S. Cooper, of Coopersburg, Pennsylvania, bought Cochrene's herd, of Ceneda, at a cost of three thousend dollers in gold. In the spring of '75 Cooper imported, at a great cost, a very nice lot of pigs, emong which were the noted enimals, Sallie IX., Sallie X., Salhe XII., Sweet Seventeen's sister and niece. During the winters of '75 end '76, the boar Smitbereen, and leter, Robin Hood, Royal Smitbereen, Smithereen's Model of Perfection, and the sows Sniper V, Sniper VII, Sniper IX, Lady Liverpool, Rachel Sentanelle, Black Rose, Black Diamond, Bleck Josephine, Belladona, Sallie XII, and nnmerous otber pigs of merit and fame. The record of these pigs and their progeny ere a common story to ell; in 1876 Belledona end Lord Smithereen swept tbe board at the Centennial; in '77 their progeny was heard from, on a tonr through the West, when one boer and three sows served by Robin Hood, dam Sallie XXII, owned by W. C. Norton of Aldenville, Pa., cerried snch honors with tbem. it wes in 1876, or the Centennial year, that the first volnme of tbet magnificent work, "Tbe American Berkshire Record," was issued hy that society, which represented such breeders as Carelton, Cooper, Ely, Fulford, Glenn of Ireland, Hnmphrey of Englend, Snell of Canade, and many other noted men, to wbicb the Berkshire hog owes its superiority. It was tbe beginning of an underteking of greet difficulty—tbe systematic registration of tbe pedigrees of Berkshire swine. How well the objects of this society have been cerried out, can be seen hy an examinetion of their five volumee, all of which are models of accuracy and typographical neatness. The following table, showiug the distribution of Berkshires recorded in the different volumes, prove to what extent thie work is petronized:

Alabama	65	Nebraska	55
Arkansas	13	Nevada	3
California	55	New Hampshire	27
Connecticut	24	New Jersey	61
Dakota	2	New York	222
Delaware	2	North Carolina	5
District of Columbia	2	Ohio	493
Florida	2	Oregon	3
Georgia	19	Pennsylvania	425
Illinois	1871	Rhode Island	7
Indiana	285	Tennessee	54
Indian Territory	2	Texas	46
Iowa	395	Vermont	1
Kansas	338	Virginia	69
Kentucky	148	West Virginia	10
Louisiana	7	Wisconsin	107
Maine	144	British Columbia	1
Maryland	145	Central America	2
Massachusetts	51	England	110
Michigan	94	Ireland	8
Minnesota	59	Ontario, Canada	236
Mississippi	23	Quebec, Canada	51
Missouri	503		
Totals			6,246

The great success of tbis noted breed of swine is due in no small degree to the correctnees of the record whichis sucb an assistant to tbe breeder in selecting breeding stock.—*Swine Breeders' Journal.*

In the early days of bog raising in the West tbe opinion wes pretty widely held tbet hogs needed less cere than eny otber kind of live stock, it being a pretty common opinion that any kind of water was good enough for bogs, end tbat anything tbey would eat would increase the growth of tbe animal and make more or less pork. From opinions of this kind a good many intelligent fermers moved forward and when corn became a drug in the markets throughout the country, they adopted or acted on the principle that corn was the best feed tbat bogs, young or old, could have, and it seemed to be the opinion that where hogs could have plenty of corn all the time they needed no otber kind of feed; but thorough investigation coupled with experiments has of late years upset this theory, and it has come to be well known, among at least advanced thinkers over this matter, that hogs need ae much variety in the way of food as does any other kind of farm animals, and it ie very certain that no farmer can make the best attainable result iu hog production unless he nses the strictest care in feeding his pigs and young hoge in a regular way with several articles of food besides corn. Of couree the corn is good in its place and should not be dispensed with wbere it can be bad easily, but in addition to the corn all younq hogs should have a certain amount of grass and roots, potatoes or artichokes, or beets can be fed to young hogs in a eparing way, where they are ahnndant and cheap, and it is also a good plan to mix a certain amount of hran or ground oets in with the feed given to euch hogs. Any of these artiolee can be advantageously used to eaee down the over-feeding with corn. There is no donbt but tbat a large amount of loss has heen incurred by farmers in tbe West during the past tweuty ycars by the lavish use of corn in feeding pigs and young hogs, and a change of opinion is undoubtedly taking place among farmers on this subject.

THE GUN.

Trap and Wing.

Tbe pigeon shooting season has commenced in earnest, and arrangements for club sboots have been ahout concluded. Tbe interest tbat has been manifested in the sport will no doubt be productive of excellent results as every precention hes been taken to insure a prosperous season. Tbe associations have ebout completed contracts for the supply of birds end tbere is every reason to helieve tbat no dearth will be experienced.

Tbe programmes of events bave been arranged and, apart from tbe nsuel club shoots, quite a number of individual matebes heve been made wbich will he sbot in tbe near future. Wish a view of lending additional interest to the seson's fun, tbe various clubs heve contributed medals for competition among the members, which will be ewarded to those making tbe best averege scores. At a recent meeting of tbe California Wing Shooting Club, the executive committee was enthorized to arrenge for three medals, subject to the conditions specified ebove. The Cosmopolitan Club hes already taken action in reference to tbis matter, and will observe the opening of the seeson by a club shoot at San Bruno on Sunday week, the 18th instant. Tbe Gun club was eerly in the field end though it hes erranged no definite programme the members heve done considerable shooting on the Oaklaud grounds.

The Alameda Sportsmen's Club will hold a meeting shortly for the purpose of perfecting arrengements, and no doubt e very interesting series of matches will be shortly forthcoming.

There is some talk of orgenizing enotber sporting club, and es the matter has been freely discussed, it is quite probable tbat some definite conclusions will be arrived at during the eerly portion of next week, when enother meeting will he arranged.

A number of interesting matches were shot et the Oekland racetreck on Sundey last. The weether wes propitious and meterially essisted an unusually fine lot of flyers. Tbe day's sport commenced with a twelve-bird metch, twenty-one yards rise, between Dr. Knowles end Burbank, with the following result:

Knowles	1	0	1	0	1	1	0	1	1	1	1	0	0	—8
Burbank	1	1	0	1	1	1	1	1	1	1	1	1	1	—11

On the conclusion of the ebove match, a sweepstekes followed at six birds, seme rise, with the annexed score:

Tucker	1	1	1	1	1	1	—6
Robinson	1	1	1	1	1	1	—6
Silsby	1	1	1	0	1	1	—5
Knowles	0	1	1	1	1	0	—4

Ties were divided between Robinson and Tucker, and another sweepstakes wes shot, resulting in a tie between Dr. Knowles end Maskey, which was ultimately won, on shooting off, by the former.

The event of the day wes a match between Crittenden, Rohinson end Mr. Tucker, a crack shot from tbe Eest. The match was at fourteen birds, twenty-one yerds rise. Both preserved clean scores until the last round, when Tucker missed, giving tbe shoot to Rohinson hy e score of fourteen to thirteen. The match excited great interest.

A match will be shot at San Bruno to-morrow, under Hurlingham rules, thirty yerds rise, $20 entrence, open to all. A number of creck sbots have already entered.

On Satnrday four members of the Gun Club shot a match at Birds Point, $20 entrance, fifteen birds, thirty yards rise, Hurlingham rules, in which the scores were as follows:

A. Havens	1	1	1	1	1	1	1	1	1	1	1	1	0	1—14
Hopkins	0	1	0	1	1	0	1	1	1	1	1	0	1	0—10
Gordon	1	0	0	1	1	1	1	0	1	1	1	1	1	1—12
Butler	1	1	1	1	1	1	1	1	0	1	1	0	0	1—12

Ties for second money at three single birds.

Gordon	1	1	1	0	1	0	Butler	1	1	1	0	0	0	

At Yreka.

Dr. H. D. Robertson, John Stimmel and W. H. Jackson shot e metch at Yreka last Saturday at 200 yards "off hand." The doctor did not succeed in "keeping up the average" with his usual success. That old musket was probably in bad form. The scores made were:

FIRST SCORE.

Robertson	4	4	3	4	4—19
Stimmel	3	3	3	4	3—16
Jackson	3	5	3	5	4—20

SECOND SCORE.

Robertson	4	0	3	0	4—11
Stimmel	2	3	4	3	3—15
Jackson	5	5	4	4	4—22

THIRD SCORE.

Robertson	4	4	2	4	4—18
Stimmel	4	3	2	2	4—16
Jackson	4	4	4	4	3—19

SPORT AT BIGGS.—Tbe hare shootiug contest came off on the 27tb nlt., between five members of the Biggs and Gridley Gun Clubs, which resulted in a victory for tbe former. Tbe stakes were $40, and tbe proceeds from the sale of rabbits are to go to the winners. Tbe conditions of tbe match were that it should be a four bours' hunt. Judges were selected to see thet everytbing was conducted feirly. The hunting ground wae tbree miles west of Bigge. A number of persons witnessed the match, which resulted in the Biggs Club bringing into camp 128 hares and the Gridley Cluh 91. The hunters were: Biggs Gun Club—Lon Rose, Geo. Ditzlar, P. Crews, H. Weeb, W. Stone. Gridley Gun Club—C. S. Quimhy, H. Quimhy, A. Sliger, H. Biggs, N. Moore.

The Napa *Register* perpetrates the following: "A Napa sportsman recently killed thirteen quail and wounded two at one shot with one barrel of a ehotgun. Tbe only reason why he didn't kill auy more was that tboro was no more in the flock. This is the firet hig story of the season, and is vouched for as indisputably true." Ob well, we oven beat that; we know a man in Yuba City that got 300 ducks at one ehot—they were all the man had in his wagon.

Arrangements have been recently made by the Cosmopolitan Clnh to eecure a number of Virginia quail, commonly known ae hob whites. On their arrival here they will he placed wbere tbey will not he molested, the idea beiug to give them an opportunity of being acclimatized and propagating.

Ben. Rountree of Gilroy ie reported as having killed fourteen ducks at one ehot at a distance of eeventy-tivo yards. Tbe last hunt of the Gun Club at Soap Lake was not a great success, tbe ducks for some reason having left tbe lake.

Trap Shooting at Sacramento.

The attendance, especially of spectators, at the matebes of the Forest Gun Club of Sacramento, held at Agricultursl Park ou the 22d, was very large, and tbere were shooters enough to afford sufficient emusement for all to dispose of all the pigeons ou hand. Tbe first match of the day wes at five birds, twenty-one yards rise, entrance fifty cents, and tbe result was:

E. M. Stevens	1	1	1	1	—5
J. Gerber	1	1	0	1	—4
O. Miller	1	1	1	0	—4
H. Gerber	1	1	1	0	—4
F. M. Sheplar	0	1	0	1	0—2
H. Biedeman	1	0	0	1	0—2
J. W. Todd	0	0	1	1	0—2

Stevens took the purse, and the weight of it did not tax his strength materially to carry it from the field. Next came the reguler contest for the first and second-class medals, end the scores were:

H. Gerber, 31 yards	1	1	1	1	1	1	1	1	0	0—8
O. Miller, 21 yards	1	1	1	1	1	0	1	1	0	1—8
H. Eckhardt, 26 yards	1	1	0	1	1	1	0	1	1	1—8
J. J. Bauer, 21 yards	0	1	1	1	0	1	1	1	1	0—7
J. Gerber, 26 yards	1	1	0	1	1	0	0	1	1	0—6
H. Biedeman, 21 yards	1	1	1	1	1	0	0	1	0	0—6
E. M. Stevens, 21 yards	1	1	1	1	1	0	0	1	0	0—6
J. W. Todd, 29 yards	1	1	1	0	0	1	1	1	0	0—6
J. D. Young, 21 yards	1	1	1	0	1	0	0	1	1	0—6
F. M. Sheplar, 26 yards	1	0	0	0	1	1	0	1	w	

Ties on eigbt shot off for tbe first medal at tbree pairs of double birds, 18 yerds, witb the following result:

Miller	1	1	1	0	1 1—5
Eckhardt	1	1	1	0	1 0—4
Gerber	1	0	1	1	1 0—4

Tbe first medal fell to Otto Miller for the first time, and the second medel was awarded to J. J. Beuer on a score of seven hirds.

The next was a double-hird metch, three peirs, eighteen yerds rise, entrance $1. Following is the score:

Routier	1	1	0	1	1	1—5
Young	1	0	1	1	1	0—4
Biedeman	0	1	1	0	0	1—3
Stevens	0	1	0	1	1	0—3
J. Gerber	1	0	1	0	1	0—3

At this juncture otber members of tbe club arrived on the ground, and it wes decided to bave another shoot for tbe medals, when tbese scores were made:

Stevens	0	1	1	1	1	1	1	1	1—9
Eckhardt	1	1	1	0	1	1	1	1	1—9
Baner	1	1	1	1	1	1	1	0	0—8
Kilgariff	1	1	0	0	1	1	1	1	1—8
M. Odell	1	0	1	1	1	1	0	1	1—8
J. Gerber	1	1	0	0	1	1	1	1	0—7
Ruhstaller	0	0	0	1	1	1	1	1	1—7
H. Gerber	1	0	0	1	1	1	1	0	1—7
Young	1	1	1	0	0	0	1	0	1—6
Sheplar	1	0	1	0	1	1	1	0	0—6
Todd	0	1	0	1	1	0	1	1	1—6
Miller	1	1	1	1	0	1	1	0	0—6
Biedeman	1	1	1	1	0	1	0	1	1—6
Zuver	1	1	1	0	0	0	1	0	w

Stevens and Eckherdt, baving tied on nine birds for the first medal, sbot off at three doubles, with tbis result:

Stevens	1	1	1	0	1 1—5
Eckhardt	0	1	1	0	1 0—3

Thus the handsome badge was taken from tbe breast of its brief owner, Miller, and transferred to that of Stevens, while the second prize this time fell to M. F. Odell.

Tbe day's sport wound up with a freeze-out sweepstakes at 30 yards, tbe scores of which were:

S. A. Tucker (big shoe)	1	1	1	1	1	1	1	1—8
Young	1	1	1	1	1	1	1	—7
Beideman	1	1	1	1	1	1	1	—7
Simons	1	1	1	1	1	0		
Todd	1	1	1	1	1	0		
Ruhstaller	0							
Zuver	0							

Tbe snpply of birds gave ont before tbe match could be decided, and the fnnd was divided. Tbe chances are, however, that tbe geutleman with tbe big shoes would have won it even though he bad to kill 99 out of 100 birds to do it.—*Bee.*

The biggest autbenticeted bag of tbe season wes that of Mr. Titcomb of the Teal Club, wbo brought in 142 birds from a single day's work. Thebeg consisted of seventy-two ceuvasbacks, fifty-two sprigs, six gadwalls, eight teals end four blnebills. Tbe bag of "cans" alone was a hig one. It bad been windy and the bay was' rough, the birds being thus driven in on the ponds. Mr. Titcomb heppened in that region just in the nick of time and captured the higgest bag of the season. Tbe other members shot es follows: Whittier, 72; Miller, 54; Basset, 61, and Teylor 71.

To show wbat a nnmber of ducks are killed each season by sportsmen wbo do not bunt for tbe market, the result of the season's shoot by tbe Teal Shooting Club may be cited: At tbeir preserve in Suisun marsb they killed 4,089 ducke for tbe season up to February 15th. Tbe club averaged 51 birds for each shoot.

The birds have to he baited on tbe ponds in the preservee to make good shooting. As an indication of what our swell clubs do in this line it may he mentioned that the Teal Club fed to the wild ducks at their ponds, as bait, 120 sacks of grain during the past seasou.

Lest Sunday Messrs. Putzman, Roudeau and Wright were down near tbe Mission San Jose and bagged 42 quails. This is a very large bag and takiug into consideratiou how hot the day was tbis was remarkahly good shootiug.

Shooting on tbe lower marshes is so poor now that tbo hunters who have been in the habit of goiug down every Sunday have abandoned these huntiug grounds and now they are taking to trap shooting.

A certain gentleman with a game preserve claims to bave shot 167 hirds in one day this seasou. As the birds went down by an Italiau and were not seen hy the boys, they don't seem to "go down" with the boys.

A match has been arranged between Al Haveus and Honshaw ou one side and Nick Williams and Tuttle on the other at 12 single hirds and three pairs, grouud traps, at thirty and twonty-ouo yards rise.

The biggest bags of the season at the Cordelia preserve were made early, before the ducks got scarce. Mr. Harry Babcock shot eighty-six and Fred Butler sixty-fivo.

The Cordelia Shooting Club are going off in the Lolita some time this month to have a dinner at Saucelito and "fight the battle o'er again."

Nick Williams and Al Haveue will shoot a match Point to-morrow, twenty-five hirds at thirty yards r

Mr. John Stack of dnck hnnting notability has cleaned his breech loader and hnng it on the deer horns until the season opens np again.

Last Sunday the hnnters that went to Alviso returned with very slim bags. Mr. Spencer probably made the largest bag of fonrteen dncks.

Dncks on the lower marshes are beginning to mate.

Carver and Bogardus.

Louisville, Ky., February 22.—Pigeon-shooting match for $1,000 ($500) each, between Dr. Carver and Captain A. H. Bogardus. To shoot at 100 birds each, from five gronnd traps at 30 yards rise, 80 yards bonndary, Hnrlingham rules.

Dr. Carver—11111, 11111, 11110, 01110, 11111, 11111, 111101, 11101, 01111, 11110, 01011, 11111, 00011, 11110, 11101 11011, 11101, 11110, 11111, 11111. Total, 100; killed, 83; missed, 17.

Captain Bogardus—10111, 11111, 11111, 11101, 11111, 11011, 01111, 11101, 01111, 11110, 11111, 11011, 10101, 11111, 01011, 11110, 11010, 11001, 11111, 01111. Total, 100; killed, 82; missed, 18.

Referee—Colonel J. M. Barbour, President Louisville Sportsman's Clnb.
Scorer, Dr. N. W. Rowe of Chicago.
Time of shoot—Two hours and twenty-five minntes.

A second match was shot at Chicago last Saturday, the 3d inst., with the same conditions, Carr winning by a score of eighty-two to seventy-nine.

A third match was made to be shot in St. Lonis yesterday (Friday); 100 birds, 50 donble, 21 yards rise. Illinois State rules.

Tricycling seems to be the coming rage. Lots of people who are afraid to monnt the bicycle will try the "trike," as there is no danger of headers.

Market Report.

FLOUR—We qnote: Best City Extra, $6 25@$6 50; medium grades, $5 50@$575 ; Shipping Snperfine, $4 25@$5.

WHEAT—Strictly prime, offerings are scarce and bnt little effort is made to get rid of the medium grades. Recent sales are No. 1, White, April, $2 03 5-6@$2 10, do seller 1883, $1 79½.

BARLEY—The market is more active of late. Recent sales are No. 1 Feed, spot, $1 32; do. March, $1 29½@$1 30; do. April $1 30@1 32. Ontside qnotations for spot parcels are Feed, $1 37½@$1 42½; Brewing, $1 45 @$1 50.

OATS—Fair Feed, $1 70@$1 75; Good, $1 77½@$1 85; Choice, $1 87½@ $1 97½ ₱ ctl.

RYE—Qnotable at $1 75@$2 for fair to good.

FEED—Gronnd Barley, $31 ₱ ton; Cracked Corn, $36@$37 ₱ ton; Shorts, $18@$19 ₱ ton; Oilcake meal the oilworks sell to the trade at $35 ₱ ton, less the nsual discount; Middlings, $24@$25 ₱ ton for lots at the mill.

HAY—Alfalfa, $18@$19; Wheat, $19 50@$21; Wild Oat, $19@$21; Mixed, $18@$19 50 ₱ ton.

STRAW—90@$1 per bale.

PROVISIONS—Eastern Hams, 16½@16¾c; California Hams, 15@15½c for plain, 15½@16c for sngar-cured canvased; Eastern Breakfast Bacon, 16@16½c; California Smoked Bacon 14@14½c for heavy and medium, and 15@15½c for light and extra light; Clear Sides, 14½@14¾c; Pork, $18@$18 50 for Extra Prime, $20@$20 50 for Prime Mess, $23@24 for Mess, $25@$25 50 for clear and $26@26 50 for extra Clear; Pigs' Feet, $16@$18 ₱ bbl; Mess beef, $15 50 for bbls and $8 75 for hf bbls; Extra Mess Beef, $16 50 for bbls and $8 75 for hf bls; Family Beef, $18@18 50 ₱ bbl; California Smoked Beef, 13@13½c ₱ lb.

FRUIT—We qnote: Apples, 30c@50c for common and $1@$1 50 ₱ box for good to choice; Lemons, $6@$7 per box for Sicily; California Lemons, $1 75@$2 25 per box; Limes, $15@$17 per box for Mexican; Bananas, 1 50@$3 ₱ bnnch; California Oranges, $1 50@$3 per box; Panama do, $25@27 50 per 100; Pineapples, $6@$8 ₱ doz. Western Cranberries are offering at $15@$17 ₱ bbl.

VEGETABLES—We qnote: Marrowfat Squash, $7 to $10 ₱ ton; Carrots, 30c@50c; Turnips, 75c@$1; Cauliflower, 75c@$1 25 ₱ dozen; Cabbage, 75c@$1 ₱ ctl; Garlic, 2@2½c ₱ lb; Celery, 50c ₱ doz; Dried Okra, 20c@25c; Dry Peppers, 10c@12½c ₱ lb; Green Peas, 5@7c; Green Peppers, 5c@6c per lb; Tomatoes, 6c@8c ₱ lb; Cucumbers, 1 25@$1 75 per doz.; Asparagus, 12½@16c ₱ lb.; Spronts, 3c ₱ lb.; Artichokes, 10c@15c ₱ doz.; String Beans, 32c@35c ₱ lb.

POTATOES—River Red, 65@75c; Early Rose, 60@70c; Tomales and Petaluma, 90c@$1 00 ₱ ctl; Humboldt Red, $1 10@$1 15; Kidney and Peachblow, $1 10@$1 15 per ctl; New, 3c@3½c per lb.

ONIONS—Range from 75c to $1 75 according to quality.

BEANS—Bayos $4@$4 50; Butter, $3@$3 25 for small and $3 40 @$3 50 for large; Lima, $3 75@$4; Pea, $3 50@$3 75; Pink, $4; Red, $4; small White, $3 50@$3 75; large White. $2 75@$3 ₱ ctl.

BUTTER—We qnote jobbing lots: Fancy, 23@23½c; choice, 21@22c; fair to good, 18@20c; inferior lots from country stores, 15@17c; firkin, 20@22c for good to choice, and 17@19c for ordinary; pickled roll, 18@20c; Eastern, 15@20c ₱ lb.

CHEESE—Firm. California, 14@15c for choice; 11@13c for fair to good; do, factory, in boxes, 14@16c; Eastern, 16@17c.

EGGS—California, 22@22½c ₱ doz.

POULTRY—Live Turkeys, gobblers, 20@21c; do Hens, 22@23c; do dressed, 22@24c; Roosters, $7@$7 50 for old and $8 50@$10 for yonng; Hens $7 50@$8 50; Broilers, $7@$7 50, according to size; Ducks, $10@$12 ₱ dozen; Geese, $2@$2 50 ₱ pair.

GAME—Prices steady. Quail, $1@$1 25 ₱ doz; Mallard Ducks, $3 50@$4 50; Sprigs, $1 50@$2; Canvasback, $3 50@$4 50; Brandt, 50c @75c; Gray Geese $1 50@$2; White Geese, 50c@75c; Honkers, $2 50@$3; Snipe, $2 25@$2 50 for English and 50@75c for common; Teal, $1@$1 25; Widgeon, $1@$1 25; Hare, $1 50@$2; Rabbits, $1 25 @$1 75.

WOOL—Fair inqniry. We qnote fall: San Joaquin and Coast, 10@12c; San Joaqnin and coast Lamb, good, 10@14c; Northern Fall, free, 15@18c; Northern Fall, defective, 11@14c; Northern Fall, Lamb, 15@17c; Free Mountain, 11@16c; Eastern Oregon, 16@22c; Valley Oregon, 22@28c. We quote spring California ₱ lb 14@20c.

HIDES AND SKINS—Dry hides, nsual selection, 18@18½c ₱ lb; culls one-third less, and Mexican Hides 2c ₱ lb less. WILL CURE CRACKED HEELS, GALLS, SORES, CONTRACTED HOOFS OR ANY SKIN DISEASE.

A. C. DIETZ & CO., Proprietors, 9 Front street, S. F.

STALLIONS.

THOROUGHBRED STALLION

X X,

BY MALCOLM, HIS DAM COLUMBIA, WILL MAKE THE ENsuing season at the Oakland Trotting Park. Terms, $25 the season.

X X (Doublecross) is of as high and fashionable breeding as any stallion in the country. His sire, Malcolm, is by imported Bonnie Scotland, his dam, Colnmbia, also by imported Bonnie Scotland, hence his name. Malcolm was one of the best racehorses of his day, and Columbia was also a fine race mare. For extension of Columbia's pedigree see advertisement of Anteeo. Her dam, Young Fashion, was the dam of Surprise, Scotland, Wauanita, Bonnie Kate (the dam of Bonnie Lizzie), Andes, Hock Hocking, Three Cheers, etc. The dam of Malcolm, Lady Lancaster, was the dam of Sagamore, Ontario (the dam of McWhirter), Regent, Lady Fairfield, Lady Amanda, Lady Middleton, etc., and a reference to the racing calendars will show how distinguished the members of these two families are. This is the only Bonnie Scotland stallion in California, and from his inbreeding has as mnch of the blood as if he were a son of that renowned sire. He is a horse of immense substance, good size, high form, and of the best disposition.

JOS. CAIRN SIMPSON, Oakland, or 508 Montgomery street.

ANTEEO.

DARK BAY COLT, NEAR HIND FOOT WHITE; FOALED MAY 5th, 1879; bred by Joseph Cairn Simpson, Oakland, California.

BY ELECTIONEER.

1st dam—Colnmbins, by A. W. Richmond.
2nd " Colnmbia, by imported Bonnie Scotland.
3rd " Young Fashion, by imported Monarch.
4th " Fashion, by imported Trustee.
5th " Bonnets o' Blne, by Sir Charles.
6th " Reality, by Sir Archy.
7th dam—By imported Medley.
8th " By imported Centinel.
9th " By Mark Anthony.
10th " By imported Janns.
11th " By imported Monkey.
12th " By imported Silvereye.
13th " By Spanker.

See Bruce's American Stud Book, vol. 1, p. 307, and vol. 3, p. 79.

Will make the ensuing season, 1883, from Febrnary 15th to June 15th, at the Oakland Trotting Park. Terms $50 the season.

JOSEPH CAIRN SIMPSON,
Oakland or 508 Montgomery street, San Francisco.

Mares intended for either of the above stallions, and sent by Donahue, Petaluma, Sacramento or Stockton boats consigned to J. W. Morshead, City Front Stables, will be received, good care taken of them and forwarded to Oakland.

STALLIONS.

The Fast Trotting Premium Stallion

ALEXANDER

WILL STAND THE PRESENT SEASON AS FOLLOWS: MONdays, Tuesdays and Wednesdays at Clark's stables, Santa Rosa. Balance of time at Fashion stables, Petaluma.

Alexander is by Geo. M. Patchen Jr., the sire of Sam Purdy (2:20½) Starr King (2:22) and Vanderlynn (2:22). Dam Lady Crein, by a son of Brown's Bellfounder, by imported Bellfounder. For full description see Breeder and Sportsman of Sept. 9, 1882.

Of Alexander's get Tommy Dodd has a record of 2:24, Reliance 2:22¼, Nellie Patchen 2:27¼, Endora 2:34½, Inauguration three miles in 7:29—last mile in 2:26, Sonoma Boy 2:37. Alex. Button proved by his performance in 1880 to be one of the best three-year-olds which have ever appeared in any conntry. He won the stake for three-year-olds at the State fair, beating Belle Echo, Annie Laurie, Len Rose and others, winning the first, third and fifth heats and making a dead heat with Annie Laurie in the fourth; time, 2:34½, 2:30, 2:29, 2:30¾, 2:35. At the fair of the Santa Clara Valley Association at San Jose he won, beating Belle Echo and Len Rose; time, 2:28¾, 2:30¼, 2:33¾, 2:31¾. Belle Echo won the first heat. He won at Stockton, beating Honesty, Len Rose and Upright in straight heats; time, 2:32, 2:33¼, 2:32¼. In 1881, as a four-year-old, Button mdaea record of 2:26¾ over the Santa Rosa track. Dot Craig, by Alexander, has a private record of 2:29.

The Frasier team took first premium at the Sonoma and Marin District fair; also at Oakland for best carriage team.

Mares left at the City Front stables, San Francisco, will be forwarded. For further informatian apply to

T. T. UNKLESS, Petaluma.

THE CELEBRATED TROTTING STALLION

ERWIN DAVIS

WILL MAKE THE SEASON OF 1883 AT OAKLAND TROTTING park.

DESCRIPTION.

Erwin Davis is a beautiful mahogany bay with very black points and one hind foot white; 15 hands high; of superior good disposition and fine trotting action.

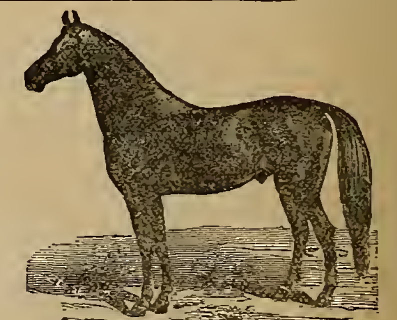
PEDIGREE.

Erwin Davis was sired by Kentucky Hunter (Skenandoah) by brokenlegged Kentucky Hnnter (the sire of Flora Temple) by Ferguson's Kentucky Hunter, by old Kentucky Hunter, by Highlander. Erwin's dam was Lost Diamond, by Vermont Hambletonian.

TERMS.

Twenty-five dollars for the season, payable at the time of service. Good pasturage at $5 per month. No responsibility for accidents or escapes. For particulars apply to

JOHN ROGERS,
Oakland Trotting Park.



THAD STEVENS.

THIS THOROUGHBRED HORSE WILL BE AT AGRICULTURAL Park, Sacramento, for the season commencing Feb. 1 and ending the 1st of July next. Good pasturage for mares will be provided at $3 per month. For terms and particulars apply to or address

W. M. MURRY, Agent,
Sacramento Racetrack.

TROTTING STALLION

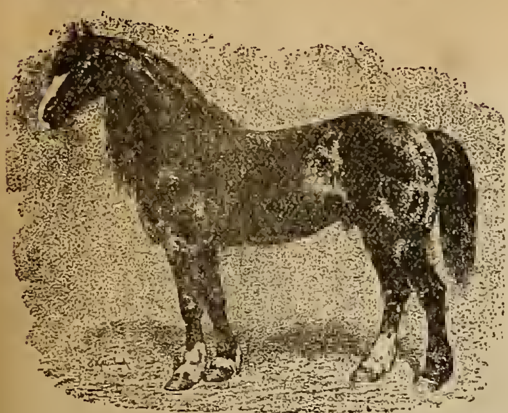
Eugene Casserly.

SIRE OF SWEETBRIAR, 2:26¼; NAPA QUEEN, 2:38½; ROCKwell, 2:39; Bill Woodward, 2:40; Smoothbriar, two-year-old record 2:57; May Day, two-year-old record 2:59¼. Will make the season of 1883 at Oakland on Thursdays, Fridays and Saturdays and at Walnut Creek Sundays, Mondays, Tuesdays and Wednesdays. He was sired by General Taylor, dam Jennie by Lexington. Terms $30 for the season. Good pasturage at reasonable rates. No responsibility for accidents or escapes. Address

THOMAS S. BREMNER,
Seventeenth street and Telegraph Ave.,
Or J. M. Heinold, 1426 San Pablo Avenue, Oakland.

STALLIONS.

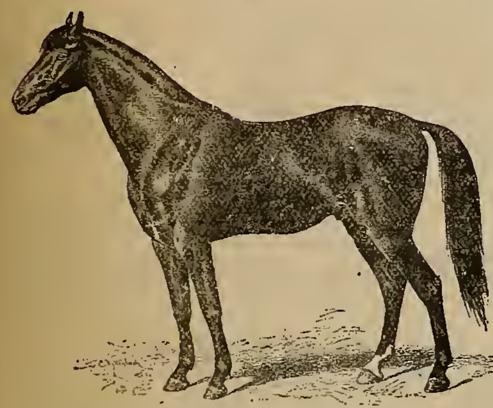
STALLIONS.



OWNERS OF STALLIONS, DESIRING TO PLACE THE MERITS of their stock horses before the breeding public should advertise in the BREEDER AND SPORTSMAN. The fee from one mare will pay the cost of a reasonable advertisement.

Stallion bills printed in first-class style. Call at this office and see samples.

NO. 508 MONTGOMERY ST.



MAMBRINO WILKES.

Black Stallion, sixteen hands in height, by George Wilkes, son of Rysdyk's Hambletonian, bred by B. J. Treacy of Fayette County, Kentucky. Dam Lady Christman by Todhunter's Mambrino or Idol, son of Mambrino Chief. Second dam by Pilot Jr. Third dam by Kentucky Whip. Idol's dam was thoroughbred and was by American Eclipse.

THIS IS THE LARGEST AND ONE OF THE BEST COLTS OF George Wilkes (weighing at this date 1,260 pounds) combining the Hambletonian and Mambrino strains and also several thoroughbred crosses. His colts demonstrate that he possesses in an eminent degree the same faculty of transmitting the family qualities to his offspring which put George Wilkes in the front rank as a sire of trotters.

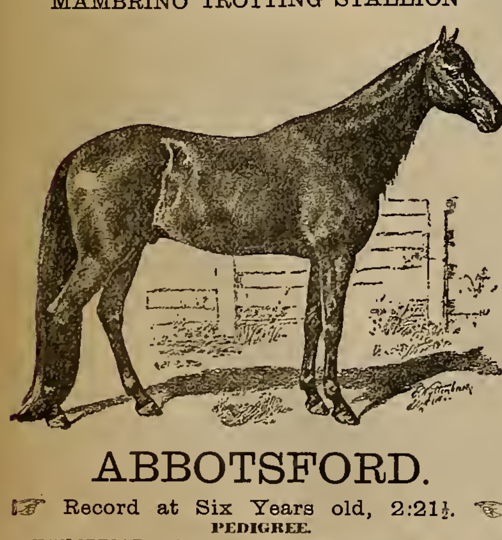
☞ George Wilkes has twenty representatives in the 2:30 list, of which 10 have records of 2:25 or better, 4 of 2:20 or better and 3 of 2:18 or better.

Will make the ensuing season, beginning February 1st, 1883, at STOCKTON.

In putting the price by the season at the low figure of $40 the owner does not acknowledge, thereby, any inferiority on the part of this horse to any other sire of Trotters.

IRVIN AYRES.

MAMBRINO TROTTING STALLION



ABBOTSFORD.

☞ Record at Six Years old, 2:21½. ☜

PEDIGREE.

BY WOODFORD MAMBRINO, HIS DAM COLUMBIA BY YOUNG Columbus. Woodford Mambrino by Mambrino Chief, his dam Woodbine by Woodford, a thoroughbred son of Kosciusko.

Woodford Mambrino is recognized to be the best son of Mambrino Chief. His own record is 2:21¼, and there are a large number of his get in the 2:30 list. Among them: Abbottsford, 2:21¼; Convoy, 2:22¼; Magenta, 2:24¼; Lady McFatridge, 2:29; Dacia, 2:29¼; George A. Ayer, 2:30.

Besides those having public records, he is the sire of the two celebrated mares owned by Robert Bonner—Manetta and Malice. Manetta, with a running mate, and harnessed to a road wagon, trotted two miles in 4:27¼, and Malice trotted a trial, on the same track, a mile in 2:19¼. Woodford Mambrino is also the sire of Princeps, the sire of Trinket, record, 2:14. Woodbine is also the dam of Wedgewood, record, 2:19. Young Columbus, the sire of the dam of Abbottsford, has nine of his get in the 2:30 list, so that on both sides of the house there are notable performers. Abbotsford is a rich rosewood brown, 15¾ hands, and of very high form. His get are very promising, his daughter Jasmine having won the Embryo Stake for yearlings in 1881, and every one which has been put in training has shown good speed.

TERMS.

Seventy-five dollars the season, to be paid before removing the animal. Mares not proving in foal can be returned the following season free of charge. Good pasturage at reasonable rates, and extra pains taken, but no liability for accidents or escapes.

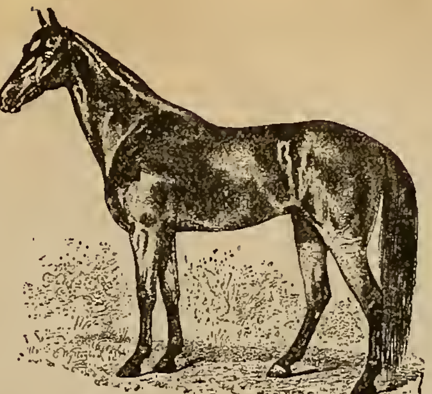
LOCATION.

Abbotsford will make the ensuing season, 1883, on the ranch of S. B. Whipple, Esq., San Mateo, season commencing February 15th and ending June 1st, 1883. For full history see the issue of BREEDER AND SPORTSMAN of August 5th, 1882.

GEORGE BAYLIS, Agent, San Mateo, Cal.

STALLIONS.

HAMBLETONIAN TROTTING STALLION



BOB MASON

By Echo. His dam Belle Mason by Belmont, Thoroughbred.

Echo by Rysdyk's Hambletonian, his dam Fanny Felter by Magnolia (by American Star). Belle Mason by Belmont (Williamson's); First dam Lucy Johnson by the Pony (son of Imported Leviathan); second dam Catalpa, by Frank; third dam by John Richards.

WILL MAKE THE ENSUING SEASON, LIMITED TO TWENTY mares, commencing February 15, 1883, and ending June 15, 1883, at the stables of his owner, Figueroa street, Los Angeles.

DESCRIPTION.

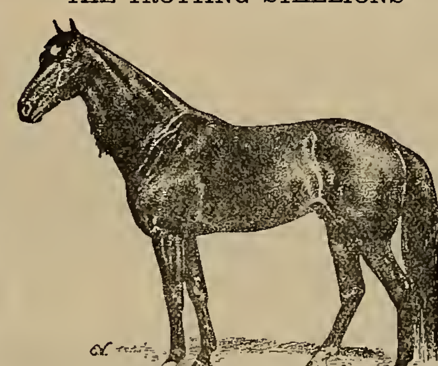
Bob Mason is a mahogany bay, with inside of off hind ankle white and star in forehead; sixteen hands, and weighs 1,100 pounds. Foaled May 10, 1879. He is of fine, kindly disposition, a natural trotter, and has shown great speed, but as yet has no public record. For full history of his sire, Echo, see BREEDER AND SPORTSMAN July 29, 1882. See also, for his full brother, Exile, BREEDER AND SPORTSMAN, issue of September 16, 1882.

TERMS.

One hundred dollars the season, payable at time of service. All mares at risk of owners. Mares not proving in foal can be returned the following season free of charge. Address

CHARLES J. ELLIS,
Post office box 55, Los Angeles, Cal.

THE TROTTING STALLIONS



SINGLETON AND LA HARPE.

SINGLETON WILL MAKE THE COMING SEASON, FROM March 1st to July 15th, 1883, at the farm of the owner, three miles north of Chico, Butte Co., Cal.

PEDIGREE.

Singleton is by Willie Schepper, a son of Rysdyk's Hambletonian, his dam Lightfoot (the dam of Pride) by Flaxtail, a son of Pruden's Blue Bull.

DESCRIPTION.

Singleton is a dark brown horse, tan flanks and muzzle, a little touch of white on hind feet and one fore foot, and star in forehead. He is 15¾ hands high and weighs 1,100 pounds. He was bred by Dr. M. W. Hicks, foaled spring of 1878.

TERMS.

Fifty dollars the season. Mares not proving in foal will be bred the following season free of charge. Mares from a distance will be pastured without charge during the season. Mares shipped to Chico, consigned to me, will be received on arrival of train, and taken to the ranch. Mares kept in any manner their owners desire, at reasonable rates. There is every convenience on the place, boxes, paddocks and plenty of shade and water.

LA HARPE

Will also make a short season at the above place on private terms. La Harpe is by Fame, a son of Alexander's Belmont, his dam Prairie Bird by Flaxtail, the dam of Flight and Prompter. Address

J. T. McINTOSH, Chico, Cal.

STEINWAY.

TWO-YEAR-OLD RECORD 2:31¾; 3-YEAR-OLD RECORD 2:25¾.

TERMS

WILL SERVE MARES THE PRESENT SEASON AND ENDING July 1, 1883, at the stock farm of the late Daniel Cook, Danville, Contra Costa county, Cal., at $100 for the season, payable before the animal is removed. Mares not proving with foal can be returned free the next season. Pasturage at $6 per month, and extra pains taken with mares in attendance, but no liability for accidents or escapes. Mares sent in care of of McCleverty & Noblett, Fashion stable, Oakland, S. J. Bennett, Martinez, or D. S. Smalley, Haywards, will be forwarded immediately to the farm.

DESCRIPTION.

He is a rich bay ; 15¾ hands high ; long, flowing mane and tail ; two white hind ankles ; remarkable style and lofty carriage ; has a good, resolute head, set on a stout neck ; his shoulders are of the Hambletonian form—do not mount very high at the withers ; has great length and capacious middle piece ; plenty of bone and substance, and his gait is big and square.

PEDIGREE.

Steinway was sired by Strathmore.

First dam Abbese by Albion, the sire of Vanity Fair, with record of 2:24.

Second dam by Marshal Ney, by imported Emancipation.

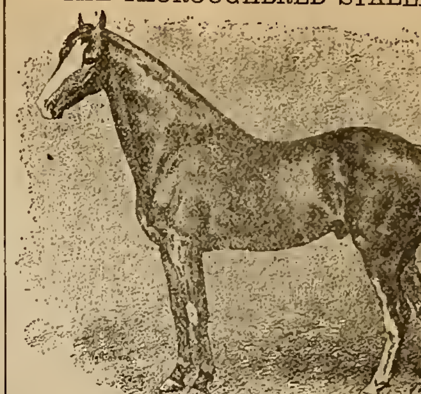
Third dam by Bertrand, by Sir Arcby.

Steinway's dam is the dam of Solo with five-year-old record 2:28¾, and also the dam of W. S. Buckner's colt Currency that trotted as a yearling last fall in 2:46. See N. Y. "Spirit of the Times of November 18, 1882. Strathmore is the sire of Santa Claus 2:17½ ; Chestnut Hill, 2:22½ ; Steinway, 2:25¾ ; Alice Stoner, four years old, 2:24 ; Nannie Talbot, four years old, 2:29 ; Solo, five years old, 2:28¾ ; Monitor, five-year-old record 2:29 ; by Rysdyk's Hambletonian, the sire of 35 in the 2:30 list. Address

SAMUEL GAMBLE,
Danville, Contra Costa Co., Cal.

STALLIONS.

THE THOROUGHBRED STALLION



JOE HOOKER,

BY MONDAY.

First Dam Mayflower, by Imported Eclipse.
Second dam Hennie Farrow, by imported Shamrock.
Third dam Ida, by imported Belshazzar.
Fourth dam Gamma's dam, by Sir Richard.
Fifth dam by imported Eagle.
Sixth dam Bet Bosley, by Wilkes' Wonder.
Seventh dam by Chanticleer.
Eighth dam by imported Stirling.
Ninth dam by Clodius.
Tenth dam by imported Silver Eye.
Eleventh dam by imported Jolly Roger.
Twelfth dam by Partner.
Thirteenth dam by imported Monkey.
Fourteenth dam imported mare from the stud of Harrison of Brandon.

TERMS—$50 THE SEASON, TO A FEW MARES OF APPROVED breeding. Good pasturage for mares from a distance at $4 per month. Care will be taken to avoid accidents and escapes, but the owner must take the risks.

My place, where Joe Hooker will make the coming season, is five miles from Sacramento on the Freeport road.

This young stallion has proved to be one of the most successful racing sires, and every one of his colts that has been trained can run fast. Among them are Fred Collier and Jim Renwick. For history of Joe Hooker see BREEDER AND SPORTSMAN Jan 20, 1883.

THEO WINTERS, Sacramento, Cal.

THE THOROUGHBRED STALLION

WILDIDLE.

BY AUSTRALIAN.

DAM IDLEWILD BY LEXINGTON.

THIS GREAT RACEHORSE AND SUCCESSFUL SIRE WILL make the season 1883, from Feb. 15th to June 15th, at Judson's Wildidle farm, Santa Clara. For terms and particulars apply to or address

JAMES & H. C. JUDSON,
Owners, Santa Clara

Or to Wm. L. Appleby, Supt.

THE THOROUGHBRED STALLION

WHEATLEY

WILL STAND THE ENSUING SEASON, ENDING JULY 1ST, 1883, at the Oakland racetrack.

TERMS—$50, payable at the end of the season. Satisfactory arrangements can be made for pasturage near the track for mares from a distance.

PEDIGREE AND DESCRIPTION.

Wheatley is a golden chestnut, 15 hands 3 inches high, and of fine style and appearance, and is by War Dance.

First dam sister to Pryor, by imported Glencoe.
Second dam Gipsy, full sister to Medoc, by American Eclipse.
Third dam Young Maid of the Oaks, by imported Expedition.
Fourth dam Maid of the Oaks, by imported Spread Eagle.
Fifth dam Annette, by imported Shark.
Sixth dam by Rockingham.
Seventh dam by Baylor's Gallant.
Eighth dam by True Whig.
Ninth dam by imported Regulus.
Tenth dam imported Duchess.
Eleventh dam Grisewood's Lady Thigh by Croft's Partner.
Twelfth dam by Greyhound.
Thirteenth dam Sophonisba's dam by Curwen Bay Barb.
Fourteenth dam D'Arcy's Chestnut Arabian.
Fifteenth dam by Whiteshirt.
Sixteenth dam Montague mare.

War Dance by Lexington.
First dam Reel, by imported Glencoe.
Second dam imported Gallopade, by Catton, the sire of Trustee.
Third dam Camillina, by Camillus.
Fourth dam by Smolensko.
Fifth dam Miss Cannon, by Orville.
Sixth dam by Weathercock.
Seventh dam Cora, by Matchem.
Eighth dam by Turk.
Ninth dam by Cub.
Tenth dam by Allworthy.
Eleventh dam by Starling.
Twelfth dam by Bloody Buttocks.
Thirteenth dam by Greyhound.
Fourteenth dam Brockelsby Betty, by Curwen's Bay Barb.
Fifteenth dam Mr. Leedes' Hobby Mare, by the Lister Turk.

For further particulars apply to
MATT STORNS, at the Oakland [illegible]k

Or to Jas. B. Chase, 900 Front St., San Francisco.

FISH.

The Salmon Interest.

In the year 1849, when emigration was pouring into the State of California, amongst those coming were three young men from Connecticut, whose names were John Ayers, William Shailer and Charles Chase, who probably were the first persons to cast a net into the beautiful waters of the Sacramento, for the purpose of taking salmon. This was in the fall 1849. They brought with them, from the Counecticut river, a shad net, which upon trial was found too weak for so strong a fish as the salmon, so they looked about for something that would be suitable for the purpose. Every kind of twine was tried until shoe thread was used, which, from that time until the present, has superseded everything else. In 1850 other parties commenced fishing for salmon, until perhaps a dozen nets were in use. In 1851 there was quite an increase; about this time parties left California for the East for the purpose of purchasing fishing tackle. Among them I may mention James Booker from Augusta, Maine, and William Fuller of New Haven, Conn., who brought out a large lot of nets which paid them well. In 1852 nets had increased until there were, in and about Sacramento, not less than sixty or seventy. The fishing was nearly all done within twelve miles of the city, although a few parties had ventured as far down the river as old Rio Vista, long before the town was started. Among these I may mention John Scully, William Fuller, George Fuller and Fred Kofstead. These men (most of whom are now cold in death) were probably the first persons who fished at that point. The business did not increase much for a few years. Mr. Wm. Hume, the pioneer in the canning business, commenced this year. In 1853 fishing was carried on all along the river below the city, but the most was done in front of the city, on what was called the Mexican drift at one time.

The fishermen fished for the markets of San Francisco and Sacramento, there being no other market for their produce except when there was a large run; then the surplus was sold to the salters, among whom was George Cooper (now doing business in Sacramento) and Wm. Frisbie, who died some time since. The business did not increase a great deal from this time until about the time of the building of the railroad; as that was advanced there was a greater demand for fish, which demand increased until the road was completed. In 1864 the Hume Bros. started their first cannery in the town of Washton, Yolo county, two blocks from the railroad bridge. Soon after they had started salmon seemed to have given out, as they grew very scarce, and in consequence Wm. Hume started for the Columbia river, and in 1866 moved his business to that point. About a year from that time the salmon appeared again in large numbers, and the run has been at times very heavy. In 1869 they were so plentiful that not one-tenth of the catch could be sold. The run has continued to be very good most of the seasons since. In 1869 there were about 200 boats scattered along the river from Sacramento to Collinsville. The number did not increase much until about 1875, when A. Booth started a cannery at or near Collinsville. Canneries were started from that time until now there are not less than eighteen or twenty which are putting up salmon. Within the last five years the increase in the number of boats has been very great; not less than 900 boats will be in use this year. The amount of salmon canned in the State, from the Sacramento river, in 1882, was 204,376 cases of four dozen cans each. The number of men employed in catching salmon on the Sacramento river this year will amount to over 2,000, not counting the great numbers employed in the canneries. From these figures you can form some idea of the vast importance of the salmon interest to the State of California. —R. H. B., in Yolo Democrat.

Fishing parties from Saucelito are becoming quite popular of late. These fishers take wagons and fish along the coast from Point Diablo to a distance of twelve or fifteen miles up the coast. Last Friday a party composed of Frank Atwood, Chas. Forest, August Schnell, Chas. Dexter, Dan Richards, Fred Borneman, the actor, Reuben Metcalf, and several other gentlemen took conveyances and went over to Horse Shoe Corral, near Point Bonitas. They left Saucelito early in the morning and did not return till late in the evening. They took with them an outfit of cooking utensils, and when noontime came around they had a splendid fish chowder, a mussel chowder, and with what they brought with them in the shape of edibles and drinkables, a dinner fit for a king was partaken of. A great many splendid fish were taken, none of which weighed less than two pounds. Mr. Atwood had the good fortune to take a large eel that weighed ten pounds. The batch was composed of sea trout, cabersones and gold-bar perch. Several other parties are being made up to go on similar excursions.

The spawn on the kelp on the Saucelito shore mentioned last week in this paper is that of herring. This accounts for poor luck had by fishermen in this vicinity, for as long as other fish have this spawn to feed on there will be but few fish caught. The fun will be lively when the spawn is all gone and the fish hungry again.

Last Saturday Frank Denning and J. H. W. Riley were out in a boat fishing near Point Diablo. None of the fish taken weighed less than one and one-half pounds. Mr. Riley caught a cod that weighed seven and one-half pounds.

Capt. Tulloch and a party of friends last Sunday were fishing on the east side of Goat island, and in two hours' time caught over sixty pounds of tomcod. Capt. Tulloch is very successful with hook and line in these waters.

Last Sunday a large fleet of fishing boats were out along the Saucelito shore, but the water was so rough that most of them put back to the landing. The catch in these waters was very poor.

Two hundred and fifty thousand whitefish were transferred from the State hatchery at Lake Chabot to Clear Lake last week. A shipment of 500 carp was also made to Utah.

Last Sunday J. W. Henderson and party were fishing around Alcatraz Island, but the tides were so strong that the catch was rather poor.

There is a species of fish taken in the deep waters of Tulare Lake that resembles the whitefish of Lake Michigan.

Whitefish are the game of the Truckee fishermen this spring.

Large strings of catfish are taken daily in the San Joaquin.

A Useful Article.—Rawson's U. S. Army Suspensory Bandage is, as the cut connected with the advertisement elsewhere clearly shows, a complete relief and support, and should be in general use. It is self-adjusting, and displacement is impossible. It counteracts nervous tension and other ills that mankind is heir to. Sold by all druggists. Can be sent by mail safely. Address S. E. G. Rawson, Patentee, Saratoga Springs, N. Y.

Texas farmers sold last year $59,000,000 worth of cotton, $23,000,000 worth of cattle, $5,000,000 worth of wool and $1,000,000 worth of horses and hides.

BILLIARDS.

Sketches of the Champions.

Maurice Vignaux, the great French billiard player, arrived in New York last Saturday after an absence of about eight years. He comes to take part in the great billiard tournament which begins in Chicago on March 26th and in one to be held in Tammany Hall about May 14th. Vignaux was born in Ismathan, France, and is thirty-eight years old. He is a little over six feet tall, and weighs about 240 pounds, and his large proportions have gained him the name of the "Stalwart Gaul." He began to play billiards about twenty years ago at Toulouse, and had won a local fame before making his appearance at the French capital in 1872. His great reputation as a player dates from the time of his first visit to this country, in November, 1874, when he won the three-ball championship and the highest money prize, $1,351 44, defeating in that tournament Edward Daniels, Slosson, Daly, Cyrille and Joe Dion, Ubassy and Garnier. He was defeated once in the tournament by Rudolphe. After the tournament he met and defeated in matches the following men: Cyrille Dion by a score of 800 to 772, Joe Dion by 800 to 538, and Rudolphe by 600 to 556 and by 600 to 326. Subsequently he defeated Cyrille Dion again by a score of 600 to 543. Joe Dion, however, retrieved his defeat by vanquishing Vignaux for a mythical purse, and Vignaux was also beaten by Ubassy and J. Dion again in the first of a series of tournaments that took place in 1875-6. He subsequently forfeited the championship to Garnier, although the payment of the $250 forfeit money was not insisted on. Garnier, however, subsequently met and defeated Vignaux by 600 to 258. Vignaux's highest run in this game was but 33 and his average only 5 33-45. In the second tournament, which was the last he competed in this country, Vignaux got but second prize, and was deprived of the championship on a technicality. He returned to France in the spring of 1875, and six months later defeated Lucien Flot in a game of 5,000 points, played at Toulouse. Vignaux carried with him the Collender Cup, which Sexton in 1876 tried to recover, but was defeated by a score of 600 to 459. In 1880 Slosson went over to play Vignaux a game of 4,000 points, but was defeated by a score of 4,000 to 3,119. In this match Vignaux made the highest run on record—1,538—and Slosson made the next highest—1,103.

Towards the end of 1880 Slosson met Vignaux at the champion's game for $1,000 a side, the score being 3,000 to 2,961 in favor of Vignaux. Slosson for the first time defeated the French champion in 1881, and the game lasted five nights, the score being 3,000 to 2,553 in favor of the American. Among the experts who are expected to take part in coming games are the following:

Billy Sexton or, as he is known, the Bowery Comanche, was born in Burlington, Vermont, on April 8, 1834. His passion for play was early developed and in 1859 he was playing for the Warwick House in Boston, Mass. He went to New York in 1871. He went to France in 1876, as related above, to compete for the Collender Challenge Cup, and was not very well received. From 1876 to 1878 he was successful in matches made on this side and won six of the eight played. He has defeated Schaefer three times, Slosson three times, Cyrille Dion twice, Joe Dion once and Maurice Daly once. In return Schaefer has defeated him three times, and he has been defeated once each by Vinaux, Daly and Slosson. The matches with the Dions and George Slosson were for the championship and were won by him, while he was also defeated by Vignaux once and by Schaefer twice for the championship.

Sexton's first tournament competition was in 1875 when the Dion brothers tied for first place, the play-off being afterwards won by Joe.

Sexton's first notable match was played in Tammany Hall in 1876, when he defeated Slosson, who was also defeated by Sexton in the return match played in the summer of 1878. In the Centennial tournament in 1876 Sexton won first prize; and this and the tournament at New Orleans are the only ones where he has been better than second, though he has competed in seven. His worst showing was in the cushion carom tourney of 1881, where he was ninth in a field of ten. Sexton's best record is a run of seventy-seven at cushion caroms. His last two games were with Maurice Daly at Tammany Hall. The first was won by Sexton and the last by Daly. Sexton is hard at work practicing and is making good runs in the new style of play.

Jacob Schaefer was born in Chicago and is twenty-eight years old. He is what is termed a fine natural player. Though remarkably brilliant he has not been very successful, and has won but four out of nine matches played since 1879. He has won two tournaments, yet when he afterwards met the two next strongest players in match games he was defeated. In the games played with Sexton Schaefer has an equal number of victories, while his record with Slosson shows three victories out of seven games. Schaefer, who is also entered in the coming tournaments, announces his liking for the new game and is making large runs and good averages in practice.

Maurice Daly was born in New York and is thirty years old. He has been a billiard player for about fifteen years, and has several times won good matches when the odds were decidedly against him. His most prominent public appearances were in the 1874 tournament, which was won by Vignaux, in the Centennial tournament of 1876; in the four-handed three-ball tournament in France, in which Professor Garnier and Vinaux played, and in the cushion-carom tournament of 1881. His last appearance was in Tammany Hall, when he defeated William Sexton in a game at cushion caroms.

Joe Dion is a Canadian about forty-three years old. He is one of the best all-round players in the country, and has figured in nearly all the tournaments. He has been a competitor of Sexton, Daly, Vignaux (whom he once defeated) and others, but his most notable performance was in the tournament in Tammany Hall, in November, 1875, when he tied for first place with his brother Cyrille, whom he afterwards defeated in the play-off. It was the first tournament in which he had got better than third position. In the tournament of 1881 he won the Roche championship emblem, but subsequently forfeited it to W. Sexton. Dion is also entered for the coming tournaments, and in his practice shows fine form.

J. Randolph Heiser was born in Boston and is about twenty-five years old. His first appearance in this city was in the tournament of 1881, and though he defeated William Sexton by nine points in 200, with an average of 3 29-57, he only finished last in a field of ten, Sexton being the next lowest player. He has played no match games of note, having confined himself to teaching. It is, however, his intention to compete in the coming tournaments and he is said to be practicing daily with Joe Dion, under whose care he has greatly improved.

The new game which will be played in coming tournaments is to be known as the "balk line." It is peculiar in some respects, though it is expected to suit the styles of all the players. The balk lines will extend from cushion to cushion at both sides and ends of the table and but two shots will be allowed within the space thus marked out. The third shot must send one of the object balls outside of the balk line under penalty of forfeiture of the succeeding shot. Several modifications have been made in the champion's game rules to adapt them to the new game. The principal one permits the referee to move the gas-fixture to allow a masse shot in the center of the table.

A series of preliminary games to determine the admission or rejection of certain players, candidates for participation in the championship balk line billard tournament, to be held in New York the 26th inst., began in Chicago last Monday.

An exhibition, 300 pionts, straight carom, balk line game, between Vignaux and Sexton, was played in New York last Monday evening. Vignaux won by a score of 300 to 145. His best runs were 24, 33, 35 and 55. Sexton's best run was 49. The Frenchman gave an exhibition of marvelous fancy shots. The players were introduced to a distinguished company by Mark Twain.

Angora Goats in Colusa.

A correspondent of the Willows Journal jumketing in the foothills of Colusa County has this to-day about the Mohair industry in that section:

Mr. Weyand is now extensively engaged in mohair breeding as the industry is called. Several years ago, finding the hills to the west of his ranch were almost worthless as a sheep or cattle range and knowing the facility with which a goat can pick up living where almost any other animal would starve, he purchased a few head, mostly of a common variety, but as his flock increased he added to it a few Angoras, and by thinning out the poorer animals and always breeding up to the highest standard, he now has about 1,000 head, including kids, mostly Angoras. We have never seen so large a number of goats together at any one time, and having an idea that goats generally were a useless sort of animal, fit only for chewing up old boots, tin cans and circus posters, we were rather puzzled to know what Mr. Weyand wanted with so many. It was not long until our host had satisfied our curiosity. He informed us that the manufacture of mohair fabrics was yearly increasing in this country, that already there are two or three mills engaged in producing fabrics requiring mohair exclusively and notwithstanding that but a few years since there was really little or no demand for the hair, that now there is not a sufficient supply to meet the demand, that is of good hair that readily brings from 45 to 50 cents per pound. He says that his goats last year averaged three pounds of fleece per head, and his whole clip for 1882 netted him about $1,300. The goat, he says, after it is two months old is much more hardy than the sheep, and less subject to disease; that it does not require the same care and attention, and will live upon land where a sheep would starve. He is gradually thinning from his flock all but the pure blood Angoras, for, as he says, it is from these only that the most marketable hair is obtained. Mr. Weyand is just commencing to shear and furnished us with several samples, notably two from Angora kids, one year old, which averaged twelve inches in length, of silky fineness and gloss. We are satisfied that mohair growing will be an industry more generally engaged in by farmers in the mountains west of us. There is money in it.

The publishers offer for sale a few copies, neatly bound, in book form, with index.

PRICE $5.00.

Improved Horse Clothing.

Secured by Letters Patent ISSUED MAY 27, 1879. REISSUED MAR. 29, 1881.

The above cut represents the body-piece, the patent also covering the improvements in the hood. The following are the claims granted:

1. An improved blanket or covering, consisting of the body-piece A, flap C, and the extension E, formed or united together, so as to cover the body and legs of the animal, substantially as herein described.

2. The blanket or covering A, having the flap C, and the extensions B, to fit the fore and hind legs of the animal, front fastenings F G, and the permanent straps or bands E, substantially as and for the purpose herein described.

3. The blanket or covering A, with its extensions B, permanent securing-bands E, and the front fastenings F G, in combination with the elastic neck-extension H, substantially as and for the purpose herein described.

4. The blanket A and hood J, in combination with the elastic connecting-strip L, substantially as described, and for the purpose set forth.

5. The close-fitting hood J, having the elastic band L beneath the jaws, so that they may be allowed to move without disturbing the fit, and adapted to be secured to the cover by means of straps, substantially as herein described.

6. The improvement in covering-blankets for animals, consisting of the blanket A, having the flap C, and permanent straps or bands fixed to it to secure it around the body, whereby the use of loose surcingles is avoided, substantially as herein described.

The right to make clothing in the United States will be sold on a royalty. Apply to the patentee,

Thoroughbred Colt for Sale.

CITO. CHESTNUT COLT, FOALED APRIL 5, 1882. By Joe Hooker, his dam Too Soon by Norfolk, grandam Lady Davis (dam of Dashaway) by Red Bill, son of Medoc, etc. This is a highly-formed colt, of good size and a hearty feeder. Being nearly a brother in blood to Fred Collier (Lady Davis being the great Grandam of Fred, and his dam also being by Norfolk) and the Joe Hookers so far as tried all racehorses, this is a good chance to get a colt of great promise for a moderate sum. He has four white legs above knees and hocks, a white face and other white markings. Price $300 if applied for before the 1st of March. For further particulars address this office.

FOR SALE.

A VERY FINE HAMBLETONian stallion, imported from Syracuse, N. Y.; nine years old; mahogany bay; sixteen hands high; perfectly sound; well broken; very stylish; cost over $1,500; property of a banker; full papers; got by Hambletonian Prince, he by Volunteer. Can be seen at Club Stables.

THE

SOUTHERN PACIFIC R. R. CO.

RESPECTFULLY CALLS ATTENTION TO THE

SUPERIOR FACILITIES

AFFORDED BY THEIR LINE FOR REACHING with speed and comfort the best places in the State for

Sea Bathing, Shooting and Fishing.

TRAINS LEAVE SAN FRANCISCO DAILY FOR

MONTEREY,

THE MOST CHARMING

Summer and Winter Resort of the Pacific Coast,

with its beautiful Groves and delightful Drives. Trout in abundance can be obtained from the several streams in the vicinity of Monterey, and the best shooting may be had in season.

THE BAY OF MONTEREY

Is noted for the extent and variety of fish which abound in its waters, notably Salmon, Rock Cod, Barracuda, Pompino, Spanish Mackerel, and Flounder. The above-mentioned attractions, in connection with the low rates of fare, rapid transit, and the superior accommodations furnished at the "HOTEL DEL MONTE," have made Monterey a paradise for sportsmen.

THE BATHING ESTABLISHMENT

OF THE

"HOTEL DEL MONTE,"

IS UNSURPASSED.

A SPACIOUS SWIMMING TANK

(150 x 50 feet)

FOR WARM SALT WATER, PLUNGE AND SWIMMING BATHS.

ELEGANT ROOMS

For Individual Baths with DOUCHE and SHOWER facilities.

MAGNIFICENT BEACH

Of pure white sand for SURF BATHING, Etc., Etc.

THE FAVORITE ROUTE to those well-known Watering Places,

APTOS, SOQUEL AND SANTA CRUZ

IS VIA THE

Southern Pacific Railroad,

(Broad Gauge), and the

SANTA CRUZ RAILROAD.

☞ At PAJARO, the SANTA CRUZ R. R. connects daily with Trains of the S. P. R. R.

The S. P. R. R. runs through the counties of San Mateo, Santa Clara, San Benito, Santa Cruz and Monterey, in each of which game abounds in great variety. Notably

Quail, Pigeon, Snipe, Duck, Geese, Deer and Bear.

Lakes PILARCITOS and SAN ANDREAS are reached by this line. Stages connect with trains daily at San Mateo for those well-known Retreats, PURISIMA, SAN GREGORIO and PESCADERO. We would particularly call attention to the unlimited extent of range at and about SAN BRUNO and McMAHON'S for RIFLE PRACTICE.

These resorts are but a short distance from San Francisco and offer special inducements to the lovers of this manly sport.

SPECIAL NOTICE.

Sportsmen and others presenting Passage Tickets o any description issued by this Company will be entitled to

FREE TRANSPORTATION OF THEIR DOGS

when carried in Baggage Cars and put in charge of Train Baggagemen. Train Baggagemen are instructed to issue CHECKS for all dogs received in Baggage Cars.

☞ In order to guard against accidents to Dogs while in transit, it is necessary that they be provided with COLLAR AND CHAIN. Guns and Fishing Tackle checked and carried free of charge. Guns taken apart and securely packed in wood or leather cases may be taken in Passenger Cars.

TICKET OFFICES.—Passenger Depot, Townsend street, and No. 2 New Montgomery street, Palace Hotel.
A. C. BASSETT, Superintendent. H. R. JUDAH, Asst. Pass. and Tkt Agt,

☞ S. P. Atlantic Express Train via Los Angeles Yuma, etc., leaves San Francisco daily via Oakland Ferry, foot of Market street at 9:30 A. M.

I CURE FITS!

When I say cure I do not mean merely to stop them for a time and then have them return again, I mean a radical cure. I have made the disease of FITS, EPILEPSY or FALLING SICKNESS a life-long study. I warrant my remedy to cure the worst cases. Because others have failed is no reason for not now receiving a cure. Send at once for a treatise and a Free Bottle of my Infallible remedy. Give Express and Post Office. It costs you nothing for a trial, and I will cure you. Address Dr. H. G. ROOT, 183 Pearl St., New York.

CONSUMPTION.

I have a positive remedy for the above disease; by its use thousands of cases of the worst kind and of long standing have been cured. Indeed, so strong is my faith in its efficacy, that I will send TWO BOTTLES FREE, together with a VALUABLE TREATISE on this disease, to any sufferer. Give Express & P. O. address. DR. T. A. SLOCUM, 181 Pearl St., N. Y.

HORSEMEN, ATTENTION.

The Horse's Friend

Prof. W. H. Woodruff,

VETERINARY DENTIST,

LATE FROM BOSTON, CALLS THE ATTENTION of horsemen to the fact that there are hundreds of horses in this city absolutely suffering from sore mouths and other complications directly caused by bad teeth, and they show this by the following bad habits: Bit lugging, driving on one rein, balking, bolting, tossing the head while driving,

PULLING ON THE BIT,

Drooling and foaming at the mouth, and other faults which can be corrected by dental manipulation. The Professor can be consulted at his office at the Fashion stables, 221 Ellis street. Office hours from 8 to 9:30 a.m., 1 to 2:30 and 6:30 to 7:30 p. m., Tuesdays excepted, when he will be at Thirteenth street stables in Oakland. Orders left at the Club stables, Taylor street, and the St. George, Bush street, or by mail, will receive prompt attention. Consultation and examination gratis.

THE POETRY OF MOTION.

Some Horse Observations From an Artistic Standpoint.

One of the most interesting developments in the use of photography is its successful application to delineate the motion of animals in their various forms of progression—walking, running, trotting, leaping, galloping, etc., and to Mr. Eadweard Muybridge, of California, belongs the honor of inventing a method by which these results have been secured.

We lately, at the Academy of Design, had the pleasure of listening to a lecture upon this subject by Mr. Muybridge, and witnessing an exhibition of the Zoopraxiscope, an instrument which not only magnifies and projects figures of horses and animals upon a screen upon the opposite wall, but, by an ingenious method of revolution, produces the action of trotting, pacing, ambling and other gaits, with absolute fidelity to Nature, as, in fact, the pictures are nature's own handiwork.

Mr. Muybridge has reduced his observations to a science by years or constant labor and experiment, and his criticism of the romance and explanation of the reality of animal motion form a part in the study and practice of art, which should be incorporated among the fundamental principles. During his visit to Europe he interested Meissonier, Alma Tadema, and others of the most illustrious artists in his subject, and lectured at their invitation to audiences composed of experienced painters, attentive students, and sagacious art critics, who all expressed their admiration of his genius and patience, and appreciation of the value of his investigation. The great Meissonier frankly stated that, in the light of the revelations of the camera, he found that he had all his life been painting horses incorrectly, but should hereafter model from a new standpoint. He particularly referred to errors in his picture of the "Salute of the Old Guard," now in possession of Mrs. A. T. Stewart, and said that, if accessible, he could and would make in that picture some material and favorable alterations—an admission which only a truly great painter would make. Mr. Muybridge, however, relates an incident in which Meissonier was right, as proved by the camera, and all his critics wrong, which is that of the walking horse of the Emperor, in the picture of "Waterloo," painted many years since, and well known to art lovers all over the world.

But, while we fully recognize the value of Mr. Muybridge's contribution to our knowledge of animal locomotion, we are not prepared to adopt all his conclusions as arbitrary rules in its pictorial illustration. We admit that the first principle of art is to correctly portray a natural object; but we assert for for the artist, as for the poet, a certain license of exaggeration, and that, in order to give force to the idea of speed, he may, while preserving the relative position of the animal's limbs, increase the knee or hock action, project the feet, or seize upon the attitude of extreme tension, however brief in Nature that tension may be. For instance, in the figure of the running horse which Mr. Muybridge exhibited in motion, and in all its phases most lucidly explained, there was an instant when all the limbs seemed to be extended. We say "seemed to he," because the period was so brief, it might also have been an illusion; but its seeming is warrant for its use, as it gives the best idea of speed in depicting a running horse. The figure of the horse in the air with all his legs under him, which Mr. Muybridge recommended artists to take as their model in that class of animal motion, suggests more the idea of cramps than speed, and no stretch of the imagination could make it graceful in a picture. Herring's picture, where ten horses are running all in the same position, is not impossible; but it is mechanical, and in such a picture an artist might introduce an agreeable diversity by a full knowledge of Mr. Muybridge's science and the aid of his photographs.

The action of the horse in trotting first attracted Mr. Muybridge's attention, and to fix that by means of photography was the object of his earliest investigations. He succeeded in producing the series of photographs of the progressive stages of the trot, which have become familiar to horsemen, and which have occasioned any amount of discussion among the horse fraternity as to their correctness or absurdity. Of their correctness there can be no doubt, but it must be remembered they each form but a small part of a single stride, and no one of the number shows the full extension of the limbs as we see it when the horse is trotting before us on the track. There is a supreme moment, so to speak, when a trotter at speed has every joint and muscle in use at its utmost flexion or tension; to depict that moment has been the aim of the most careful artists and painters of trotting horses, and their efforts have been crowned with more or less success. It is now conceded that the trotter at speed has at times all his feet off the ground, and Mr. Muybridge demonstrates the fact by his photographs. We remember a remark made to us by an astute and wealthy horseman who owns and drives one of the best and speediest teams on the road: "A horse must always have one foot on the ground or he would fall down," but when we demonstrated that a man, or any other animal, in leaping forward could be entirely clear of the ground and not fall down, and that a horse at a 2:20 gait could not possibly step the distance he measures in his stride, he changed his opinion. The momentum of the horse as he lifts his feet in a rapid trot must send him over a good deal of ground before they strike it again, his hindquarters being the propellors and his forelegs the pilots or supporters. Mr. Muybridge's observations show that in eight motions the horse is twice, as he terms it, "without support," or all off the ground during a single stride. We have seen some inability to keep their forelegs out of the way of the hind ones, which had a tendency to overtrot their leaders.

A trotting-horse in action is perhaps to an artist the most unsatisfactory subject he can undertake, because his critics have each their own idea of how the horse ought to appear in the picture. They have seen the horse trot, but from different standpoints, and observed his attitude and motion in profile or fore-shortened, as the case may be, and retain the image in their mind as they have seen it, without allowing for the difference in position in which the animal may be delineated by the artist. We remember a case in point which involves a tribute to the artist and the excellence of his pictures. We had upon our walls two pictures by Leighton, the one a famous trotting mare and the other a no less famous horse of the period. The driver of the mare carefully examined both pictures, and while criticising somewhat the correctness of that representing his charge, thought that of the horse perfect and beautiful. Shortly afterward the renowned driver of the horse looked over the same pictures, and he, in turn, somewhat faulted that of his horse, but considered the portrait of the mare in all respects superb and unapproachable. The truth was while each had driven his own horse, he had seen the horse of his competitor, and was more competent to judge of the correctness of the portrait of the other's horse than of his own.

To cover the subject of the horse as an object of art, would require more time, space and learning than we could bring to the task. From the earliest times he has formed one of the grandest factors in both imagery and illustration. He gives dignity to the story of conquest and dominion portrayed in the sculptures of Nineveh and Babylon, romance to the songs of Virgil and Homer, and majesty to the writings of profound philosophers and inspired apostles. Painters through all the ages have made him a chief object of the pencil in subjects of peace and war, of the tourney, the chase, the course and the road, in action and repose, in all varieties and forms. It is only, however, within a comparatively few years that illustration of the horse in trotting action has been made a special study; and such illustration has been, as much as any other, an incentive to the great progress and development of the trotting horse as we see it at the present day. We may be pardoned perhaps for a hasty glance at the artists and pictures which have aided in that development.

Prior to 1844-5 there were few trotting pictures extant. We recall a crude sketch of Lady Suffolk to saddle, the engraving of Ripton and Confidence, published by the old *Spirit*, and a coarse wood cut or two of Sally Miller and Topgallant. About that period R. A. Clark, or, more familiarly, "Bob Clark," made his appearance as a horse painter, and chose trotting horses mostly for his themes. It was said that Bob was the son of a titled sire, and only took up painting when shut off from the parental exchequer. Be that as it may, he was evidently an amateur, but he had a quick eye to catch peculiarities of action in a trotter, and a nervous, energetic method of painting them on canvas. From that fact his pictures were always popular. Whatever they lacked in finish they supplied in force, and in suggestion of speed and action have rarely been excelled. Among his earlier works was Dutchman, ridden by Hiram Woodruff, and Lady Suffolk, with Dave Bryant on the pigskin. It was about this time that Messrs. Currier & Ives inaugurated the publication of their famous series of trotting prints, and they published in print form, from Clark's paintings, the well-known pictures of Daniel D. Tompkins and Blanc Negre, in double harness; Black Hawk and Jenny Lind in their match to wagons, and Tacony to sulky, all of which were spirited representations, and earned for their author much fame and reputation. He was also a clever caricaturist, and made many hits in his satires on the horse mania of his day which were highly appreciated by the fun-loving public.

The feat of Trustee, trotting twenty miles within the hour created a great sensation at the time of its performance. Among the spectators was Samuel Jones, whose uncle kept the well-known "Vauxhall Garden," located in the Bowery, about opposite where the Cooper Institute now stands. Sam did not set up for an artist, but he made of the gelding and his driver a characteristic pencil sketch, which, in outline and proportion, was marvelously correct, and illustrated to the life the peculiar action of that wiry little time-heater. This sketch was published in print form, and its excellence fully recognized in the largeness of its sale to horsemen throughout the country.

The attention of gentlemen interested in horse and sporting matters had now been awakened to an appreciation and desire for pictures of famous trotters, and the publishing firm heretofore mentioned found it necessary to keep up with the popular demand. They had in their employ at the time Louis Maurer, a young artist of much promise, who possessed a keen eye and a hand to obey it. A great match was announced between Flora Temple and Highland Maid, to take place at the Union Course, Long Island, and on the day appointed Mr. Maurer proceeded thither, commissioned to make a picture of the contesting mares. It was his first attempt at horse portraiture, but its success was such as to stamp him at once a genius in that line, and it was the precursor of a series of pictures by his hand that, in some respects, have never been equaled. His works are characterized by fine outlines and minute details of equine peculiarities, combined with correct drawing and great force, energy and style in every animal he represents. Among his best pictures we may name Flora Temple, to sulky, with a portrait of McMann, marvelous in its fidelity; Flora Temple and Hero, in which the horses are represented as coming directly toward the spectator, and of which Hiram Woodruff used often to say to us, pointing to a copy which hung behind his bar, "That picture can never be beat by any artist;" Pocahontas, the famous old pacer to wagon, a picture which many a horse painter has since used as a model; the double-team race between Stella and Alice Gray and Lantern and Whalebone, so true that the sports, when they saw it, would pull out their pocketbooks and offer to bet which team would win; Tacony and Mac, to saddles, which made the Philadelphia boys wild with delight; Geo. M. Patchen, to sulky; Patchen's Brown Dick and Miller's Damsel; Ethan Allen and Mate, and Lantern and mate, with Harry Jones and "Gentleman George" Spicer driving, and numerous others which made Mr. Maurer's fame lasting and perpetual. Although not exactly within the compass of our subject, we may be pardoned, on account of its excellence, for alluding to Maurer's picture of Lexington, the great racehorse, which we believe is the only picture of him extant "in racing condition."

Succeeding Mr. Maurer in the specialty of horse portraiture, came Mr. John Cameron, and here again was an instance of success achieved at the first trial. The subject was that paragon of horseflesh, Dexter, ridden by that paragon of drivers, John Murphy. The picture produced by Mr. Cameron was so unique and striking that it became the model horseback picture, and it was copied in plaster and metal on every side, and was the original of pretty much all the gilded weather-vanes, which we see surmounting expensive barns and stables throughout the country. Mr. Cameron's drawing of Dexter, to sulky, driven by Doble, and that of Goldsmith Maid, with the same skillful handler, have become the standard pictures of both those famous animals; and his illustration of the great race between Dexter, on the one side, and Ethan Allen and running mate on the other, is as well known as the names of the steeds themselves. Another of Mr. Cameron's drawings, the black stallion team, Superb and his three sons, has gained universal favor. He also made striking portraits of Lady Thorn, Geo. Wilkes, American Girl, Geo. Palmer, Gray Eagle, and other horses, besides a large number of racing illustrations in which figure the most prominent horses of the trotting turf of the last dozen or fifteen years.

Among other artists who have essayed the trotting horse in motion, we may mention Edwin Forbes, who painted Mr. Vanderbilt's team, Small Hopes and Lady Mac, driven by their owner—a very artistic and successful picture; Mr. E. Troye, a gentleman and painter of the old school, who departed from his speciality of racehorse portraiture, in at least one instance, to paint the trotters, Mac and Geo. Taylor, in their race at Philadelphia, years and years ago, and who also made the only painting extant of that great sire, Alexander's Abdallah; the late Henry Bispham, and McAuliffe, who painted a capital picture of Billy D and Mate, for Mr. Barnaby of Providence.

At the present time Scott Leighton of Boston occupies a foremost position as a painter of the trotter at speed. His pictures of Maud S and St. Julien, to which we have heretofore alluded, are the standing portraits of those famous flyers, and his picture of France's Alexander would make his name as a horse artist, even if he had not painted the

pictnres of Mill Boy and Blondin, for Mr. Shepard and Edward and Swiveller for Mr. Work. Among his other productions are Hopefnl, to road-wagon, The Sealskin Brigade, for the late Mr. Richmond, The Fearnanght Stallions, for Col. Rnssell, Browu Jng the pacer, Bouesetter, Edwin Thorue, and others, in all of which he shows the strength and perception of a close observer of the traits, gaits and outlines pecnliar to the high-hlooded Americau trotter.

In our recollections of horse artists, we have not forgotten Wright, the painter of Hamhletoniau, the only picture that Rysdyk would ever indorse of that famons stalliou; of Scott, Stull, Manden, or Beard, or Worth, who is inimitabla in catching the "points" of a horse, hut this article is intended to refer especially to painters of trotters "in action," becausa we want to come back to the point made in speakiug of Mr. Muyhridge's photographic illustrations, viz., that an artist is warrauted in a possible exaggeration of tensiou, in order to show speed in a picture of a trotting horse. The pictures of all the artists to whom we have alluded look natural; to ns, and they all seem to have seen tha action of the horse in the sama way, but that action is more intensified than that shown by the camera. We may ask, are their representations exaggerated? or is there a motion beyond that which the camera has thns far secnred, but which may be shown in its fnrther experiments? We nnderstand that Mr. Mnybridge would gladly devote himself to further investigation, could he ohtain the means of meeting the expeuse they invoke, which wonld be very considerable, and would bring to him no remnueration ontsida the sale of a few books of illustrations, and the pleasnre of demonstrating to tbe world whatever new facts the camera might hring to light. If some of onr wealthy horse-owners would associate and snbscribe the means to enable Mr. M. to make further research into the mysteries of animal motion, we think they would perform a gracefnl act, and confer a benefit on mankind.

And, in conclnsion, we would nrge npon horse-owners the advisability of taking an ınterest iu horse portraiture, and adorniug their walls with the portraits of the celehrities of the tnrf, or have pictures made of the trotters they so highly esteem, and hehind whom they delight to travel when the roads are good and the skies are hright. Artistic taste would thns conhine with memory, and, in after years, throngh the medium of a pictnre, they conld re-enjoy their trinmphs of the road and the track, when, perchance, the gont or some other enemy may prevent more active amnsemeut. Whatever the snbject, a picture shonld he cheerful, and we will leave it to the lady of the house if any suhject can he more cheerfnl than a high-toned, high-bred, high-mettled, high-stepping trotter at a twenty gait, except it be a portrait of her own fair self, and with that, of conrse, the proprietor has already adorned his castle halls.—*Apelles in N. Y. Spirit.*

David K. Babhit, of Hiawatha, Kan., read an interesting essay at a recent Farmers' Institnte on the Agricultural horse for Kansas, in which he took the gronnd that "the horse of all work" was a myth, and that no snch class should be recognized at Kansas fairs. He snggested a class for agricnltnral horses in its stead, and gave the following points:

Such a horse shonld be 16 or 16½ hands high, weighing, in fair condition, 1,200 to 1,300 ponnds, of a solid, or nearly solid, color—bay, black or brown—fnll mane und tail, carrying them high, with high knee action, good, strong chest, clear, prominent eyes, a disposition to do any kind of work, und an ability to trot a mile in fonr minntes, or just as mnch faster as he pleases; add to these qnalities good looks, and yon have, in my opinion, the hest possible horse for Kansas farmers to raise. There is not an honr's team work on the Kansas farm hut what snch a pair of horses will do to good advantage and be snitabla at all times to do good service on the road either to a heavy load, family carriage or light bnggy, and will answer fairly well to carry a hoy to the post-office or after the doctor. For fear that I may be misnnderstood as to what constitntes a 1,200 or 1,300-pound horsa, I wish to say that our farmers greatly over-estimate the weight of their horses, and nsnally guess their 1,000-ponnd horses at about 1,200 ponnds.

TURF AND TRACK.

Horse Racing and Betting.

It is, of conrse, possihle that horse racing can be carried to excess, especially in the matter of hetting. That nnlimited facility to risk money on horses is an evil to ha regulated cannot be dispnted. That it shonld be absolntely interdicted, however, is qnite as clearly an evil, and that enactments entirely prohibiting it cannot be enforced is qnite as clear. This should have been nnderstood hy the anthors of recent legislatiou in regard to this matter. There is no doubt that tha primary objects of tests of speed and the rearing of thoroughbreds is improvement in the hreed of horses everywhere. There is no doubt that horse racing, in so far as it condnces to this end, and irrespective of the noble qnality of the sport itself, is a hlessing, aud that such men as the Lorillards and Withers, in their efforts to improve the breed of horses, ara benefactors to their fellow men. It is not to be dispnted that oua of tho results of horse racing for a ceutury has been to improve not only the thoronghhrad, bnt the horse generally, aud that the butcher and baker may drive or ride as fiue a horsa to-day as was only possihle to tha gentlemau of wealth fifty years ago. But the horse cannot he improved without tests of speed, bottom und endurance. That is the coudition precedeut. To induce men to make these tests large rewards in mouey must be offered. It takes time, mouey und toil to breed and improve horses, und the clemeut of lnck always largely pervades the business. Thera must be the test and the indncemeut iu money. To provide these an appeal has always heeu fonnd necessary to the sporting instincts of tho people. Gate money without bettiug wonld never pay tba ouo hundred and odd thousaud dollars paid horse-owners at Brighton Beach and Monmouth Park. Tha proceeda arising from a commission ou mouey risked hy the public ou tests of speed aud enduranca is ahsolutely uecessary, aud if this is an evil when properly regulated, it is an evil that legislation cannot obviate aud which should, under proper regulations, be endnred for the heneficial aud material rosults, aside from the elemeut of sport in which a majority of maukiud have so loug found delight. It is only a lack of commou sense on tho part of code formulators and legislators that absoluta and indiscriminate prohibition should be fouud on tho statute book, euacted never to he enforced, aud only effectiva where, as in the case of Jeroma Park, tba avil was the least aud opposing benefits the greatest. But this matter will, in good time, regulate itself. Within certain limits, bettiug ou horso races at raca courses will be fonnd indispensable, and will he permitted, for tha race track, as an iustitutiou, is a necessary oua for tha welfara of a people in raspects well nuderstood aud admitted by all.—*Brooklyn Eagle.*

Two-twenty and Better.

The following list includes all the horses that have ever trotted in 2:20 or better down to the close of 1882:

Name.	Sire.	Rec'd.
Mand S.	Harold	2:10¾

The Color of Horses.

Considering how important a factor color is in the selling valne of a team, especially if tha bnyer places a high valne npon the general appearance—tha attractiveness of his turnout—it is a little singular that no greater attention is paid to breeding for colors that are especially attractive. It is well known that a team of richly dappled greys, having large, long, well-carried tails, never go begging for a bnyar, even though they may be a little plain in form, have only a medium gait, and feet and limbs that reqnire gentle nsage and frequent aid from the veterinary snrgeon. Such a team does fairly well for service befora the family carriage, if put to light nse, and in the hands of a careful groom will wear pretty well.

Whila selling qnite readily at $500 or $600, for city nse, on acconnt of its show qnalities, if it were stripped of these, by giving it a plain color and the tail of a common plng, snch a team wonld go slow at $250 or so. This is bnt an illustration of what we see in other lines, for instance fnrs, certain shades selling for very high prices as compared to others. What is true of u nice drapple grey, is also true of a rich black or bay team, provided they have the accomplishment of fnll, flowing mane and tails, and fine, stylish appearance. Therefore, when it is considerad that the demand for horses, for the purpose of making up showy eqnipages, is very great in all the larger cities, it is a little singular that no attention is given to hreeding horses throngh what scientists term methodical selection. Throngh adherence to u system, the qualities meutioned conld be secured, whereas now, rich colors and ornamentation only coma occasionally, through chauce.

Regarding tha color of horses, it is interestiug to note the paculiarities of the early progenitors, in the matter of color, as showiug how this, as well as the forms of tha running, the trotting and the cart-horse, have been fixed npon tha offshoots of tha first, or original horse, mouldiug them into our present hreeds. Whila scieuce is at varianca in regard to the origin of the horse, whether from oue parent species or more, it seams qnita clear that whatever the origin, the color was at first u plain one, not dark. Some anthorities think it was a dun, aud Durwin aud soma others conteud that there was for a tima qnite a tendeucy in horses to show stripes npon the shoulder and legs, aud more frequeutly along tha spiue from the maue to tha settiug on of tha tail.

When it is considered how restricted the range of color in tha parent stock of horses must have been, we can the better realize that the great variety of shades in color of our present breads hava been mainly prodr ced by selections in conpling. While the origin of the domestic horse is nnknown, we are entirely at sea as to a progenitor, nnless we look to some oue or more of the wild species. Whether wa look to the early horse as ha was found in Arabia, Central Asia, or ou the banks of the Euphrates, from which latter location some historians believe our present races spring, we are forced to the conclusion that the shades of color prevailing at the ontset were few in nnmher and exceedingly plain.

Historians, at any rate a few of them, qnite persisteutly invite onr attention to the occasional appearance of the spinal stripe occasionally fonnd npon colts, sometimes even remaining npou the grown-up animal. More rarely, it is insisted that horses show a tendeucy to become striped, thns inviting onr attention to tha possible fact that the early horsa may have either originated from eqnines having the spiual stripa and stripes npou tha hody, or else an intermingling of tha hlood of these may have occurred in their wild state. It is not asserted that this occurred, bnt we are left to conclude that the tendency to show the stripes npon shonlder and limbs may be caused in this manner. Darwin suggests that the dapple spots npon onr present breeds may coma throngh variation from the original stripes. This anthor gives an illustration of a Devonshire pony, showing tha spinal stripe, two stripes npon the shonlder and three npon tha legs above the knee. Markings of this kind have occnrred so often that we cannot entirely ignore the idea that the parent stock may have heen of very cnrions and mixed origin, and that tha tendency to dapple has a far-off starting point.

Tha tendency to becoma dappled attaches to nearly all tha colors carried hy the horse, hance we mnst conclnde that this sprung from something very fixed in the parent stock. As the dappling is one of the highest ornamental marks given to the horse, it wonld be interesting to know its origin, bnt as to this we can only surmise. For the pnrpose of showing the great range taken in the matter of color as applied to the horse, we condense from an article by P. Megnin, in the London *Live Stock Journal*. Mr. Megnin mentions three colors as comprisiug all the varions shades, depending upon the combination of these npon the snrface, and in the mane and tail.

These are white, reddish brown or yellowish red and black. These, he says, ara met with alone or in different combinations. The white is described as a dead white, or whita properly so called. Porcelain white, seen npon a skin of a black hne. Dirty white, approaching yellow. Of tha chastnnts he mentions five: Burnt chestnnt, resembling roasted coffee bean; nnt-brown cnestnnt, lighter than the other; cherry chestnnt, a brilliant reddish-hrown color, sometimes with metallic copper-colored reflections; golden chestnnt, a reddish-yellow color, resembling jeweler's red gold, with brilliant metallic reflections; light chestnnt, a light yellow color. Of the black coat he mentions three varieties: The real black, a dull black withont any reflections; jet black, which has brilliant reflections; badly tinted black, which here and there approaches a brown tint.

Of the coats made np of two colors, reference is made to the flea-bitten grey, which ordinarily is made np of an equal distribntion of the two colors white and red. It may be of what is known as the deep variety, the red color predominating. As a rule, horses having coats of this color hava the head and axtremities covered with red hairs, withont any mixture of white. The grey coat is made np of black and white hairs mixed in varying proportions. Tha iron-grey, few white hairs being intermingled with the hlack. Slate color, where the hairs are abont eqnally white and hlack. The head and limhs are usnally darker than the body. Light grey is of conrse cansed hy the white hairs predominating. Dapple-grey is cansed by the white hairs forming spots aronnd which dark hairs are placed in a circle, forming tha dapple spot. The hocks ara nsually dark, as are also the knees and fetlocks. The fore part of the hody is generally lighter than the hind part. Dnn dapple-grey is occasionally met with, and is cansed hy tha white approaching a yellowish color.

Tha bay color is prodnced by a combination of black and red, the black being confined to the mane and tail and lower part of the limhs. A hrown bay gats its color from tha hairs heing very dark, sometimes approaching a black. Then thera ara tha chestnnt-colored bay, the nnt-brown bay, tha deep bay, the light bay, and the liveliest of all is the cherry-colored hay, shining and blood-colored. Then, to close the list, there is the dnn, which is sometimes light and sometimes dark. Dun-colored horses sometimes have white manes with black hairs interspersed, and are considered, according to the taste of a few persons, qnite ornamental. Now, the breeder can select and combine colors in conpling with nearly as mnch certainty as tha artist can, in forming his portrait or his landscape. Not, to be snre, in the first attempt, hnt as has been proved in breeding colts with a view to given shades of color, inter-breeding for a few times persistently and intelligently will, in nina cases ont of ten, bring uniform resnlts.—*Live-Stock Journal.*

Large Stakes.

The Coney Island Jockey Clnh having failed to secnra tha Lorillard Champion Stallion Stakes has annonnced two additional handicaps for September, in which tha added money is $10,000, with the following conditions:

For two-year-olds—Tha Great Eastern Handicap, a sweepstakes for two-year-olds, at $100 each for starters; $30 forfeit for horses entered by April 16th, but only $15 if declared ont by September 1st; horses entered on Angust 15th, when the stake shall close, to pay $50 forfeit; tha association to add $5,000, of which the second shall receive $1,000 and twenty per cent. of the stakes; and the third $500 and ten per ceut. of the stakes; weights to he annonnced two days hefore the race; six furlongs.

For three-year-olds—Great Eastern Handicap, a sweepstakes for three-year-olds, at $100 euch for starters; $30 forfeit for horses entered by April 16th, hut only $15 if declared ont hy September 1st; horses entered on August 15th, whan the stake shall close, to pay $50 forfeit; tha association to add $5,000, of which the second shall receiva $1,000 and twenty per cent. of the stakes, and tha third $500 and ten per cent. of the stakes; weights to be announcad two days before tha race; mile and a half.

Entries for the above stakes should ha addressed to J. G. K. Lawreuce, Secretary of tha Coney Island Jockey Clnb, at the corner of Twenty-sevanth street and Madison avenue, New York.

The great five-year-old, Phil Thompson, was shod last week, and his preparation commencad for the great colt event at the Gentleman's Driving Park in June next. Phil now carries npward of a ponnd shoe forward for road work, but when he trotted in 2:21 as a three-year-old thirteen ounces forward and six behind were snfficient to balanca him. Hopeful wora shoes of similar waight when he mada tha hest time on record, 2:16½ to wagon.

The Side-Wheelers.

Not being filled with that ineffable scorn with which most of the sporting press regard the despised pacer, we give herewith the list of all side-wheelers who have achieved 2:30 or better, corrected down to the close of 1882:

Abe Johnson, gr g	2:29
Ace of Clubs, rn g	2:24¼
Ace of Diamonds, h g	2:28¼
Aggie Downs, b m	2:29
Albany Boy, cb g	2:20
Allie Bell, b m, by Tempest Jr	2:29½
Americus, b g	2:24¼
Andrew J. Polk, cb g	2:26¼
Andy Melion, br g (Davy Crockett)	2:25½
Annie Boyd, b m	1:20½
Badger, b h (Badger Boy), by Kerr's Basbaw	2:29
Bald Hornet, cb h, by Red Buck	2:23
Bay Billy, h g	2:14
Bay Bob, b g	2:25

How is This?

A correspondent in Chicago whose crude orthography and composition we have taken the liberty of revising somewhat makes the following charge of misconduct in office against our contemporaries of the Eastern sporting press:

Emitor Breeder and Sportsman: I am a little astonished but much pleased to see one sporting paper that has acknowledged there was any merit in the Blue Bull family. None of our Eastern papers ever mention the Blue Bulls unless obliged to do so in summing up some race, and never a comment in their favor, no matter how much they deserve it. I am well satisfied that the Blue Bulls will stand at the head of the 2:30 list this fall as against the get of any other stallion, living or dead, and yet none of our Eastern papers will mention a Blue Bull if they can help it. Why is it? I will tell you. Wilson would not pay these papers. You know what kind of a man Wilson was. But he is dead and the borse is dead and I think the colts should have all the credit they are entitled to, and the old horse also. Hoosier.

Chicago, March 4, 1883.

Names Claimed.

By H. M. Johnston, Ela Hills farm, Los Angeles county.

Monica, for chestnut filly foaled 1882, by Grinstead, by Gilroy. First dam Lulu Jackson, by Jack Malone, by Lexington. Second dam Lida, by Epsilon. Third dam Nanny Killam, by The Saddler.

Caddo, for chestnut colt foaled 1882, by Grinstead, by Gilroy. First dam Sespe, by Crichton, by imported Glencoe. Second dam Lulu Jackson, by Jack Malone, as above.

Galgo, for sorrel colt foaled 1882, by Rutherford, by imported Australian. First dam Nina R, by Woodburn, by Lexington. Second dam Lulu Jackson, by Jack Malone, as above.

By the eteamer of last Tuesday, C. C. Bemis of this city ahipped to Oregon the four-year-old stallion Supervisor, by Whipple's Hambletonian—Sally Polk by Marion. He will be used as a stock horse or will be sold if a satisfactory opportunity offers.

The Rohnerville Jockey Club is considering the feasibibty of getting up apring races, with liberal purses for both trotting and running.

An Oregon Wrangle.

Editor Breeder and Sportsman: Last fall a certain society here offered several purses, among which was one for "three-year-olds" (no bar). X wrote to a friend to send him a colt from his stable to start in the race, but to win it must be able to beat 45. He replied that he had none available, but had heard of one for sale that owner would show 42 with. X sent him word to buy it on that showing and shortly received word that trial was satisfactory and colt bougbt. The owner's name or pedigree of the colt was not mentioned, he being simply described as "a bay sixteen hands, no white, stylish and handsome."

X entered him under a name of his choosing, giving color and "pedigree unknown." On the day of the race there was considerable outside talk about his not being eligible: 1. On account of being California bred. 2. Because he was under an assumed name. 3. Because he was represented as being by Magna Charta. This coming to the ears of the judges, they called X into the stand, and in answer to questions, were told about his ownership, and that his pedigree was not known; that he was not hy Magna Charta, and that the written entry did not so state. They were told how he came to be bougbt, and that if he was not eligible or it was not satisfactory, he would be withdrawn. The judges found that no horses, wherever bred, were barred, and there was no evidence that he had ever started in a race, consequently conld be entered by any name, and on asking the secretary, were told that he was entered as stated by X.

On finding there was no advertised bar, they ordered him to start. He won in straight heats, tbe judges so gave their decision and the pools were paid. No protest was entered either before or after the race. But there was dissatisfaction and the horsemen were all put off on one pretext or another. X was told after waiting some three weeks he would have to wait until the reported breeder of the colt was written to (he had meantime written himself and got particulars of his breeding and raising and of which he made no secret). They wrote that they understood that had a record of 2:32, or thereabouts, and if it was so asking his name and breeding. His breeding was given in answer, and that he never was on a track, had no training and was eligible to start in any race.

The society had a meeting soon after, and discussing this purse, each told what he knew or had heard. One point was that the colt had been taken off at Astoria and shipped up on a river boat. Another that the trainer had represented him as being by Magna Charta. Accordingly they declared the purse off.

X claims he acted fairly in every particular. He had the colt taken off at Astoria because he thought it too hard a trip for him to come through without exercise and paid a man to take him off and walk him for two hours and forward him next day. This was exactly the same treatment that he had giveu to another horse three months before, but about which no complaint was made as he only won third money in his race. X supposed he had a perfect right to walk his horse overland if he chose. In regard to the point abont pedigree he claims he gave all the information at hand, and when questioned about it always said he knew nothing abont his breeding. The trainer did tell a good many that he was by Magna Charta and others that he was by Electioneer, A. W. Richmond and Sultan, just as their names occurred to him. This last was the truth, although he didn't know it.

Under the rules of the National Association, under which the races were trotted, has the society a right to withhold the purse? Portland.

Palo Alto Foals for 1883.

At Palo Alto, in the department of trotters, the foals thus far reported are as follows:

Jan. 13th, Lady Ellen by Carr's Mambrino—by Owen Dale, a bay colt by Electioneer.

Jan. 23d, Nellie Walker by Thorndale—by Star Davis, a brown colt by Shannon.

Jan. 23d, Piney Lewis by Longfellow—Lou Lewis by Endorser, a bay colt by Electioneer.

Jan. 25th, Mamie C by imported Hercules—by Langford, a bay filly by Electioneer.

Jan. 27th, Alvaretta by George Lancaster—Melinche, a bay filly by Electioneer.

Feb. 9th, Barnes' Idol by Idol—Ella Morton, a bay filly by Gen. Benton.

Feb. 15th, Illinois Maid by Black Slasher—by the McCartney Horse, a bay filly by Electioneer.

Feb. 22d, Maybell by Electioneer—Mayflower by St. Clair, a chestnut filly by Gen. Benton.

Feb. 23d, Restless by Kentucky Prince—Lady Rysdyk, a bay filly by Electioneer.

March 3d, Sontag Mohawk by Mohawk Chief—Sontag Nellie, a bay filly by Gen. Benton.

March 4th, Jnniata by Fred Low—Maid of Clay, a bay filly by Gen. Benton.

March 5th, Clarabel by Abdallah Star—Fairy, a light bay colt hy Electioneer.

March 6th, Gipsy ——, a bay filly hy Gen. Benton.

In the thoroughbred division the arrivals have been as follows:

Jan. 12th, Robin Girl by Enquirer—Cynthia Sue, a chestnut filly hy Flood.

Jan. 21st, Hattie Hawthorne by Enquirer—Little Girl, a dark bay filly by Flood.

Feb. 27th, Lizzie Whipps by Enquirer—The Grand Dutch S, a bay colt by Flood.

March 1st, Marshra by Planet—Vandalia, a chestnut colt by Shannon.

March 6th, Katbarion by Harry of the West—Kathleen, a bay filly by Flood.

March 6th, Mozelle ——, a bay colt by Flood.

March 6th, Lady Evangeline by Leinster—Tibbie Dunbar, a chestnut filly by Shannon.

A friend from the West relates a very cbaracterstic Jack Splan anecdote. He says he was in a hotel in Chicago some time ago, and witbout eavesdropping overheard portions of a conversation between Commodore Kittson, D. W. Woodmansee and Splan, tbe resnlt of which interview was tbe engagement of the latter as driver of the Midway string. Toward the close of the session Commodore K. was heard to remark, in a eumming-up tone, bnt which still secmed to leave something to be inferred: "Well, John, I will say to you frankly that I have no doubt of your ability." "For Heaven's sake," was Splan's quick retort, "I hope you don't doubt my rascality!" The remark seemed to clinch the b in.—*New York Spirit of the Times.*

Turf Talk in New York.

With the steady approach of spring every item of news relating in any way to the prospects of the coming racing season is eagerly received by the admirers of the sport. Thns during the past week the defeat of one of the pool hills at Albany, the captnre of the Lorillard Stallion Stakes by the Louisville Jockey Clnb and the announcement that the Rockaway Jockey Club was a fixture were in turn topics of discussion. As to the defeat of the Pool bill, many professed to believe that it was a good thing; certainly it was not the bill that the racing associations wanted passed, but a mongrel affair intended to benefit individuals and of no advantage to the racing and trotting associations. The vote against it, however, was so decided that it is donbtful if any bill or any amendment to the present law can be secnred.

As to Lonisville capturing the Lorillard Stallion Stakes, no one was surprised at its going West. The contest for it was always conceded to be between Lonisville, Cincinnati and Chicago, while the liberal offer of $6,000 by the Coney Island Jockey Clnb was a surprise. That neither the Latonia nor the Chicago club made a bid was also a surprise, but there is no doubt whatever that the officers of the clnbs named knew that the President of the Lonisville Jockey Club, M. Lewis Clark, had effectnally canvassed Lonisville, and that he had been guaranteed a large sum of money by business men, especially those in the tobacco trade. Those engaged in the pool-selling and book-making business, it was also known, guaranteed a liberal contribntion. As to the race, it may turn out to be a very great contest and one worthy in every respect the money involved, and again it may be the reverse. Louisville had one such experience in the Ten Broeck-Mollie McCarthy race, and there is no lack of similar experiences in the case of other associations. In fact, eight out of ten races, the contest for which was expected to prodnce one of the best races ever run, have proved ntter fizzles, while the contrary has been the case with many a race for which little or no preparation was made. It is to be hoped, however, that the race will really be a great one in every sense of the word; that the field of starters will he a representative one, and that really the best horse in the race will win. Of course it is too early to even suggest the possible starters, but offers of even money were made on Saturday that the race wonld be won by an Eastern-owned horse. Certainly such seems to be probable if one judges by the form shown by some of the two-year-olds that are eligible for the race. But it is said that there are several three-year-olds about to make their debut this spring that will show form eqnal, if not superior, to, anything shown by a two-year-old. The annonncement that Mr. P. Lorillard would send a detachment of his stable to Louisville, as would also the Dwyer Brothers, and that there is a possibility that Mr. George L. Lorillard, Mr. D. D. Withers and others may have representatives in the race, has caused inquiries to be made as to which horses belonging to the gentlemen named are eligible. In answer to these inquiries it may be said that Mr. P. Lorillard has Breeze, by Alarm; Battledore and Inconstant, hy Glenlyon, and Disdain, by Mocassin; that the Dwyer Bros. have Barnes and Miss Woodford, hy Billet, and Wandering, by Wanderer, and that Mr. Geo. L. Lorillard has Magnate, by Glenelg (a youngster who has been tried so well that his two-year-old running will almost certainly be reversed this year). As to the other possible representatives Mr. Withers owns Kinglike, by King Ernest; Mr. Ehlers, Circassian, by Alarm; Mr. Kelly, Jacobus and Marc Anthony, and Appleby & Johnston, Carnation. There are also several others owned in small stables that are eligible and can be easily secured should they show during the season anything like form good enough to carry the weight—110 pounds for colts and 107 pounds for fillies and geldings. In connection with this matter it may he said that Eastern horses, especially those named above, will have somewhat the best of the Western horses, for in nearly all engagements in the East they will have to carry 118, 115, or 113 pounds, as the case may be, hut the advantage gained in the difference in weights will in a measure be neutralized by the long journey and the possible effects of the change of climate.

As to the Rockaway Jockey Club, if all the promises made hy its recently elected officers are carried out to the letter everything will he very complete and comfortable and the racing there will prove quite an opposition to that of the Brighton Beach Association. Its secretary, Col. S. D. Bruce, has had considerable experience. The best of management, however, can scarcely get the track and all its machinery in running order until the season is well advanced, while even then much of the success will depend npon the transportation facilities to and from Rockaway.

Another subject which has caused considerable talk during the past week is the Champion Two-Year-Old Stakes proposed by Mr. Pierre Lorillard, to be run at Monmouth Park in 1884. Since the conditions were briefly stated in these columns they have been amended and are now supplemented by some conditions which will pave the way for a large entry. The Monmouth Park Association also annouuces that for the Lorillard Stakes for 1885, which in ordinary circumstances will close next August, Mr. Lorillard will increase the added money to $5,000, hut will limit the entry to the progeny of the stallions entered for the Two-Year-Old Stallion Stakes of 1884. This is a coudition somewhat at variance with all precedents in this or any other country, but, as Mr. Lorillard says: "It will in a measure compel breeders—especially those who breed for sale—to contribnte something to the support of racing." This can scarcely be said to have been the case up to the present time. It is expected that the full conditions of both stakes will be made public during the current week. It is to be hoped that the Two-Year-Old Stakes will fill well and that the Kentucky and Tennessee breeders will be well represented. Allnding to the Stake, the New York *Spirit* says: "Mr. Belmont will pnt in The Ill-Used and Kingfisher; General Harding has promised Billet; Mr. Lorillard will pnt in Mortemer and one or two others, and Mr. Withers, Mr. Kittson, Mr. Alexander, Mr. Swigert, Major Thomas and Mr. Megibben are also named as likely to come in.—*World*.

Trotting at Oakland.

Oakland Trotting Park, Saturday, March 10th. Trotting and Pacing, mile heats best 3 in 5 in harness. Inside stake of $25 each, $10 forfeit, $50 added. First horse 60 per cent, second 30, third ten per cent.

L. Shaner's ch g Slippery Dick	4	4	1	1
T. Kennedy's b m Belle W	1	2	2	3
J. Cochran's br g Chicago	2	1	3	2
C. Coward's ch g Long John	3	3	4	2

Time—2:33½, 2:39½, 2:32½, 2:31½, 2:34½.

A draft of trotting colts and fillies, two and three-year-olds, from Sunny Slope, will be offered at auction at the Bay District grounds on April 5th. These colts are the get of Sultan and Del Sur and will he shown in harness. This sale is an experiment on the part of Mr. Rose and will be bona fide in every reapect.

THE CHICAGO COLT STAKES.

Entrees to the Ashland Stake for 1883-4—An Imposing Array of Royal Youngsters.

No 1—The Ashland Trotting Stake, 1883; for colts and fillies (foals of 1880); to be trotted when three years old, during the Summer Trotting Meeting of the Chicago Driving Park for 1883; $100 entrance, of which $15 is forfeit, and must accompany the nomination; $15 payable on May 1, 1883; $20 on June 1, 1883; and the remaining $50 from those who start only at or before 8 o'clock p. m. of the day preceding that named for the race; the Chicago Driving Park to add $1,000.

INCISORS OF SOME ANIMALS.—The incisors of the horse, once worn down or lost, are gone forever, but in many species a provision exists by which the wear and tear of mastication is compensated by the perpetual growth of certain members of the dental series. This very convenient arrangement exists in all the rodents, or gnawers, an order of which the beaver and the rat and the rabbit are familiar examples, and also in the elephant, walrus, wild boar, etc. The incisors of the rodents are the seat of this perpetual growth, and any one who will take the trouble to examine the skull of a rabbit will at once see how admirably they are adapted to the animal's wants. They are of curved shape and occupy sockets extending to the back part of both jaws, the upper pair describing a larger part of a smaller circle, and the lower ones a smaller part of a larger circle. Each tooth consists of a solid column of dentine, with a plate of enamel in its outer surface, and, consequently, diminishes in hardness from front to back. The constant wear produced by the continual collision of the opposing surfaces forms an oblique chisel-like surface, sloping from the hard enamel of the front to the softer dentine of the back part of the tooth. As these teeth are perpetually growing, they require constant exercise to keep their growth within bounds, and the rat and others of this most mischievous family might assign, as an excuse for their ravages, the necessity of finding constant employment for their teeth.

In grading up the small, long-horned native cattle, called Spanish cattle, I find it more desirable to use a grade Shorthorn bull to make the first cross, rather than a thoroughbred Shorthorn. I prefer, however, to use a thoroughbred Devon bull on Spanish cows, to break up the strong characteristics of the latter, and the half-breed Devon heifers to a thoroughbred Shorthorn bull. I find this latter method better than using two crosses of thoroughbred Shorthorn.—*Correspondence Live Stock Journal.*

Governor Stanford's model ranch at Vina is being rapidly developed. An elaborate system of irrigation has been introduced, and this spring 1,500 acres of new vines, making 2,500 acres all together, will be planted. There are 600 acres of alfalfa in fine growth, and other portions of the ranch are devoted to the proprietor's blooded stock.

Mr. C. M. Pearre, of Texas, has just purchased 3,000 improved French Merino ewes from Don Luis Dartigues, of San Juan Capistrano. The sheep are of the finest breed and in excellent condition.

It is announced that Rev. Isaac S. Kalloch intends to engage in the business of raising fine cattle on his ranch near Santa Cruz.

Eight eagles were killed in Tehama county last week. They have been very destructive to sheep in that section this winter.

N. CURRY & BROS., No. 113 SANSOME STREET.—This old established firm will supply sportsmen with every kind of cartridges. Paper and brass shells, etc. Guns and revolvers in any quantity. Winchester repeating rifles. They are agents for the glass balls manufactured by the California Glass Works.

WILL & FINCK—No. 769 Market street, have on hand the finest assortment of dog collars and chains; also sporting goods of every kind.

Mr. R. G. Head of Napa offers to the lovers of thoroughbred poultry 2,000 fowls of the leading varieties to select from. Read his advertisement.

Amended Game Law.

Section 1—Section six hundred and twenty-six of the Penal Code is hereby amended so as to read as follows:

626. Every person who, in the State of California, between the first day of March and the first day of October in each year, hunts, pursues, takes, kills, or destroys quail, partridges, or grouse, or rail, is guilty of a misdemeanor. Every person who, in this State, between the first day of January and the first day of June in each year, hunts, pursues, takes, kills, or destroys doves is guilty of a misdemeanor. Every person who, between the first day of November in each year and the first day of July in the following year, hunts, pursues, takes, kills, or destroys any male deer or buck is guilty of a misdemeanor. Any person in the State of California, who has in his possession any hides or skins of any deer, elk, antelope, or mountain sheep, killed between the first day of November and the first day of July, is guilty of a misdemeanor. Every person who shall at any time in the State of California hunt, pursue, take, kill, or destroy any antelope, elk, mountain sheep, female deer, or doe, shall be guilty of a misdemeanor. Every person who shall at any time hunt, pursue, take, kill, or destroy any spotted fawn is guilty of a misdemeanor. Every person who shall take, kill, or destroy any of the animals mentioned in this section at any time, unless the carcass of such animal is used or preserved by the person taking or slaying it, or is sold for food, is guilty of a misdemeanor. Every person who shall buy, sell, offer, or expose for sale, transport, or have in his possession any deer from which evidence of sex has been removed, or any of the aforesaid game at a time when it is unlawful to kill the same, as provided by this and subsequent sections, is guilty of a misdemeanor.

Section 2—Section number six hundred and thirty-one of the Penal Code of California is hereby amended so as to read as follows:

631. Every person who shall at any time net, pound, weir, cage, or trap any quail, partridge, or grouse, and every person who shall sell, buy, transport, or give away, or offer or expose for sale, or have in his possession any quail, partridge, or grouse that have been snared, captured, or taken in by means of any net, pound, weir, cage, or trap, is guilty of a misdemeanor. Proof of possession of any quail, partridge, or grouse which shall not show evidence of having been taken by means other than a net, pound, weir, cage, or trap, shall be prima facie evidence in any prosecution for a violation of the provisions of this section, that the person in whose possession such quail, partridge, or grouse is found, took, killed, or destroyed the same by means of a net, pound, weir, cage, or trap.

Section 3—Section six hundred and thirty-two of the Penal Code of California is hereby amended so as to read as follows:

632. Every person who, in the State of California, at any time, takes or catches any trout, except with hook and line, is guilty of a misdemeanor. Any person or persons who shall, at any time, take, procure, or destroy any fish of any kind by means of explosives, is guilty of a misdemeanor.

Section 4—Section six hundred and thirty-four of said Code is hereby amended as follows:

634. Every person who, between the thirty-first day of July and the first day of September of each year, takes or catches, buys, sells, or has in his possession any fresh salmon, is guilty of a misdemeanor. Every person who shall set or draw, or assist in setting or drawing, any net or seine for the purpose of taking or catching salmon or shad in any of the public waters of this State, at any time between sunrise of each Saturday and twelve o'clock noon of the following Sunday, is guilty of a misdemeanor. Every person who shall, for the purpose of catching salmon or shad in any of the navigable rivers, streams, or sloughs of this State, fish with or use any seine, or net, the meshes of which are, when drawn close together and measured longitudinally, less than seven and one-half inches in length, is guilty of a misdemeanor.

Section 5—Section six hundred and thirty-six of the Penal Code of California is hereby amended so as to read as follows:

636. Every person who shall set, use, or continue, or shall assist in setting, using, or continuing any pound, weir, set-net, trap, or any other fixed or permanent contrivance for catching fish in the waters of this State, is guilty of a misdemeanor. Every person who shall cast, extend, or set any seine or net of any kind for the catching of fish in any river, stream, or slough of this State which shall extend more than one-third across the width of said river, stream, or slough, at the time and place of such fishing, is guilty of a misdemeanor. Every person who, by seine or any other means, shall catch the young fish of any species, and who shall not return the same to the water immediately and alive, or who shall sell, or offer for sale any such fish, fresh or dried, is guilty of a misdemeanor. Every person convicted of a violation of any of the provisions of this chapter shall be punished by fine of not less than fifty dollars and not more than three hundred dollars, or imprisonment in the county jail of the county where the offense was committed for not less than thirty days nor more than six months, or by both such fine and imprisonment. One-half of all moneys collected for fines for violation of the provisions of this chapter shall be paid to the informers and one-half to the District Attorney of the county in which the action is prosecuted; all other costs shall be charged against the county in which the action is prosecuted. Nothing in this chapter shall be construed to prohibit the United States Fish Commissioners or the Fish Commissioners of the State of California from taking such fish as they shall deem necessary for the purpose of artificial hatching, nor at any time. It shall not be lawful for any person to buy or sell, or offer or expose for sale within this State, any kind of trout (except brook trout) less than eight inches in length. Any person violating the provisions of this section is guilty of a misdemeanor.

Section 6—Section number six hundred and twenty-seven of the Penal Code of California is hereby repealed.

Section 7—Section number six hundred and twenty-eight of the Penal Code of California is hereby repealed.

Section 8—Section number six hundred and twenty-nine of the Penal Code of California is hereby repealed.

Section 9—This Act to take effect on the first day of July, eighteen hundred and eighty-three.

A 50-mile race has been arranged between Chas. J. Anderson and Jose Figure Figueroa, the champion long distance rider of the world, for $500 a side, the race to come off at Agricultural Park, Los Angeles, March 26th, each to ride ten horses. Mr. Figueroa will be supplied from the famous Machado stables, and Anderson will have the best horses that can be obtained. The race is certain to come off as the money—$1,000—has already been deposited with E. T. [illegible] the only proviso being a good day and good tra[illegible]

HERD AND SWINE.

Selecting Stock in Breeding for Beef.

The model which the thoughtful and wise breeder for beef sets before himself is a symmetrical animal of good size, vigorous constitution, excellent digestive and assimilating power, quiet disposition, early maturity; giving the largest attainable percentage of meat of a high quality, the offal and comparatively valueless parts being reduced to the smallest practicable percentage. He sees in his mind's eye—although he may fail to find his ideal in material form—an animal with long, broad, deep, well-rounded body; top and bottom lines nearly straight; the bony structure everywhere covered with a thick coating of firm, yet yielding flesh, protected by a soft skin of medium thickness, this carrying an abundant coat of soft, bright, waving hair; the carcass supported on short legs, the strength of the bones of which comes from firmness of texture rather than from great size; the head short, broad at the eyes—the fullness, mildness and beauty of which brings to his mind the phrase "ox-eyed Juno"—the muzzle fine; this head joined to a short neck, fine at throat but gradually swelling until it is lost in the broad, smooth shoulders. Whether this ideal of his fancy have long or short, thick or slender, or no borns, will depend upon his preference for this or that breed, and is a matter of minor importance. This animal he will think of as possessing perfect health and vigor; a quiet, yet reasonably active disposition; the best of appetites and digestion and a ready disposition to carry and accumulate flesh at any age, becoming well matured, at the latest, before it is three years old.

Bearing in mind the rule that great excellence in one point is usually accompanied by comparative weakness in some other, and that this ideal animal must needs be modified by its environment—by the climate, food and protection—the breeder will endeavor to select for his breeding stock animals which as nearly approach the ideal as the conditions of life under which he must place them make advisable. In a vigorous climate, subject to severe storms, hardiness—the ability to withstand cold, drouth, excess of rain or snow—must be counted the first requisite, even though it be secured at sacrifice of early maturity. When the pasturage is sparse activity is essential, even though the legs increase in length and muscle be developed rather than fat.

We define a breed as a collection of animals of common origin, possessing distinctive characteristics, which they uniformly transmit to their offspring.

It will be wise, then, to select animals which are well bred, the test and proof being that they not only possess the qualities and adaptation desired, but also inherit these from a line of ancestors possessing them.

Usually "like produces like," "the offspring resembles the parent," but experience abundantly establishes the law that not the immediate but some more remote ancestor may give character to the stock we rear. The best possible security, short of the actual test, that an animal will reproduce its characteristics in its offspring, is that these characteristics are known to have belonged to a long line of ancestors. Individual merit and adaption to our needs should be the first and most important points in our selection. Next, the character of the ancestors should be considered. As we go back each generation becomes less and less important. We need trouble ourselves very little in the endeavor to determine the character of any one of the 1,024 different animals in the tenth generation back, if we know that the bull or cow which we think of buying is good in itself—can see that its parents are equally good, and have credible testimony that their ancestors, for even three or four generations, were of like character.

I believe in the very great value of practical purity of blood. In this I find the best safeguard against disappointments in breeding. I have no sympathy with the egotism which claims that personal inspection of an animal is all that is needed in selecting for breeding purposes. But great harm has been done by sticklers for imaginary and unattainable absolute purity. The general farmer and many of the beef producers underestimate the value of good breeding, but this is partly because of the extravagant claims made by the "purists." A long pedigree, tracing back to famous, remote ancestors, has value if the good qualities which made those ancestors famous have descended to the present time; not otherwise. It is absurd to ask a breeder for beef to reject cattle, however excellent in themselves—however uniform in their good quality—because of an unfashionable cross a half-dozen generations back. It is one of the strongest claims to be made for the improved breeds that, by persistent use of males of these breeds, common or inferior stock may be, in a few generations, made equally valuable with the pure bred. The truth of this claim has been proven in thousands of cases. We do what we can to disprove it when we depreciate the value of animals or families because of supposed flaws in their pedigrees a half-century back; or, when we insist that not even a dozen or a score of crosses by pure-bred sires can so far remove the plebian stain from the original common cow as to permit her descendants to be worthy of record in the books into which we proudly copy the pedigrees of recently ennobled cattle families fortunate enough not to be American horn and bred. The wise breeder for beef will not undervalue pedigree, but he will test its value by the merit of the animals possessing it, rather than by its length or the fame of the animals at its commencement.—*From a paper by Prof. G. E. Morrow, read at the Washington Agricultural Convention, Jan.* 26.

Swine Cough.

An address delivered to the Swine Breeders' Convention at Indianapolis, Ind., by D. L. Thomas of Rushville, Ind.: This is the common ailment among swine, and the least understood by hog producers. Farmers and practical breeders are prone to class all swine diseases under the general term, cholera. When some of them hear their pigs coughing they say it is a sure forerunner of cholera. And if they use any remedy it is some patent nostrum called "cholera remedy." Cough is not a symptom of the so-called cholera. Sometimes it appears in connection with it, but is only incidental. A second class say it is caused by hogs laying in dust, about barns and sheds—that they inhale the dust. This may be the case to some extent. Occasionally it may cause coughing. A third class say cough is caused by lung worms. This may be true in a few cases only. I once had a fine litter of pigs that commenced coughing, and the coughing grew worse. I did not understand it. I happened to notice an article in a newspaper from a western farmer, who said that the cough is caused by lung-worms, and that turpentine would expel the worms. I accepted the theory, and proceeded to give them turpentine in slop as directed. Several days' treatment did no good. I put the one that coughed the worst in a pen, and increased the dose in milk for several days and the pig died. That is, the cough and my treatment killed it. The remedy was worse than the disease. A *post mortem* examination revealed the entire absence of lung-worms. The internal organs were too much inflamed and saturated with medicine to discover the trouble. This led me to enter upon a close investigation of the whole matter, to learn, if possible, the nature and the remedy; and, too, with the most gratifying results. In December, 1881, I examined the lungs and bronchial tubes of a pig that was slaughtered. It had coughed for three or four months at intervals, sometimes whooping. Otherwise the pig seemed all right and had a nice coat of hair. The lungs and tubes seemed perfectly healthy, not even the appearance of inflammation. But in a few places in the tubes were small collections of mucus, resembling the nasal discharge when a person has been working about a thrashing machine. This was the only thing unusual. Another shoat was slaughtered that had been coughing some for ten days. (These pigs had not slept in dust.) The lungs and pipes appeared to be in excellent condition—not even a sign of mucus secretion. But the nasal lining was inflamed. Evidently these cases failed to confirm either of the three prevailing theories, but rather proved them to be incorrect. From these circumstances, and careful study of the subject, I was fully convinced that, in a vast majority of cases, cough is the result of cold. Why can't a hog catch cold as easily as a human? Their vital organs are quite similar; likewise the system of circulation. Hence, both are subject to the same influences which produce similar results. Why did we not think of this long ago? When we hear people coughing, we conclude at once they have contracted cold. When we hear brutes cough we are puzzled to understand it. Allow me to mention some of the principal causes of swine cough, viz.: 1. Sudden changes in the atmosphere, chilly winds and cold rains are prolific causes. Improved hogs have finer suits of hair than formerly, hence less protection. 2. Change in sleeping places is another frequent cause. Hogs may contract cold by being changed from very poor to extra good beds. During the war, soldiers used to camping out returned on furloughs and were put in warm feather beds, and contracted the worst colds they had during their term of service. If swine sleep too warm, coughing is sure to follow. The extreme heat of midsummer often gives pigs severe colds, and hogs do not have the ranges they formerly had. Breeders and shippers are not unfrequently called upon by customer to explain why their pigs have a cough. Perhaps the former can truthfully say, there was no cough when the pig was shipped. Why, then, the cough? The pig had several chances to contract cold. The shipper put it in a box and hauled it in an open wagon to the express office; then it was put out on the sidewalk till train time, then hauled to the depot and exposed awhile; and at the other end of the line it gets similar treatment—is hauled home by the buyer in open vehicle and put in a new bed. Now if the weather was chilly or cold the pig could not help contracting cold. It was exposed, and had no chance to stir about and exercise. Think of the result if a man were put through such an ordeal with no overcoat or extra wraps. A horse blanket placed over the pig's crate makes a wonderful change. From severe exposure a pig may contract a violent cold, and the lining of the bronchial tubes and lungs become inflamed. Death may result in a few hours. That is pleuro-pneumonia. Having discovered the cause and nature of swine cough, it remains now for me to give a cure. In all ordinary cases the cough will disappear without treatment. Nature throws off the disease. In more obstinate cases hog powders often have proven efficacious, in my treatment, and also in that of other breeders who have tried them upon my recommendation. So I do not come before this association with a theory or a medicine once tried—do not jump at a conclusion. But I come with a remedy sufficiently tested, I think, to warrant me in recommending it to all hog raisers. From studying the uses of medicines and their effects, I evolved this formula and demonstrated its utility by experimenting with it. This is the formula: Pulverized licorice, one pound; elecampane, one pound; black antimony, three-quarters of a pound; sulphur, one-half pound; pulverized resin, one-quarter pound; copperas, one-quarter pound; asafœtida, one-quarter pound. For one pig one teaspoonful in slop twice a day. Pine tar in trough is also a valuable addition. After killing the fine pig mentioned above, by doctoring it for lung-worm, I tried this remedy on the remainder of the litter, and cured their cough in one week. And in no case where I have used it has it made a failure.

The Traveling Qualities of Herefords.

A dinner was given on Saturday, January 20th, to Mr. Price of Court House, Pembridge, the winner of the Elkington Challenge Cup. After ten years' competition this cup was finally won in 1882 with his Hereford steer, the best animal two successive years at the Birmingham cattle show. Among the communications laid before this representative assemblage of noted breeders was one from a breeder at Brisbane, in Queensland, who gave his experience of the qualities of Herefords. He writes: "Circumstances have placed me in a position for the last twenty-three weeks to observe the traveling qualities of Herefords, and compare them with Shorthorns over good and bad country, the contrast having deeply interested me. I had charge of 1,900 female cattle, the property of Mr. C. B. Fisher, from Noondoo, on the Balone, to the Flinders river, and among them were 300 to 400 head of Herefords. On the Marano, Hoganthula and Warrego, I passed over some very poor country; in places there was not the sign of a blade of grass. There I particularly noticed their grand propensities to forsick out a bit of tucker—dead leaves, bushes, nothing came amiss to them; while the Shorthorns stood under a tree, sulked, and kept up a continual bellow. On the Upper Marano and Hoganthula there was plenty of coarse feed. Here they again scored a point; they filled themselves well, while the Shorthorns, after the fiery edge was off, poked in all directions for titbits, or camped. In this stony country and rough ground they would travel and feed all day, showing no distress, while many of the Shorthorns were very foot-sore. On getting into the good country—the Barcoo Westlands, the Thompson, all the finest country I ever traveled a mob of cattle over—though all were thriving fast, they were a long way in advance, both in condition and appearance. They had their new silky coats on, while the Shorthorns were only scratching off the old in patches. For long journeys over good and bad country, they have no equal. In conclusion, I would suggest to breeders long distances from market to give them a trial, when they will find, on delivery at the sale yards, less wasted cattle and bigger averages. With such testimony ringing in our ears, coupled with the recent victory at Birmingham, we ought to feel proud of our Herefords. There is a great future in store for them and for the breeders, and this constitutes a silver lining to the cloud that has for so long overspread the agricultural horizon of the country."—*Agricultural Gazette, London, Eng.*

The Escutcheon, or Milk Mirror.

Escutcheon, or milk mirror, are names used to describe the up or outward-turned hair on, at sides of and above the udders of cows. Standing behind some cows one will notice a broad band of hair differing in appearance, perhaps in color, from that at either side, extending from the udder to the vulva; in other cows this band will be narrow or short. On closer examination it will be found that, on some cows, the hair on part of the thigh lies in a different direction from that surrounding this part, often ending in a little curl. Similar curls are sometimes found on the back of the udder. Many years ago Guenon, a French peasant, claimed to have discovered that there was a close connection between this upgrowing hair and the milk-giving capacity of cows—both in quantity and length of flow of milk. He carefully elaborated a system by which he judged cows, and gained reputation and a national grant of money for success in this work.

Guenon's system was a complicated one. It has been somewhat simplified, but is still formidable enough to the inexperienced, with its orders, classes, etc. In general terms it may be said the greater the extent of the up-turned or outward-growing hair the better the cow is believed to be. The broadness or height of the band above the udder is thought of less importance than the part on the udder and extending on the thighs.

A similar but smaller formation is found in front of the udder; and the escutcheon is also found on the bull, and much importance is attached to it here.

There is much difference of opinion as to the value of the escutcheon in determining dairy qualities. The natural impulse is to declare there is, and can be, no connection between it and milk giving. On the other hand, many experienced dairymen and cattle breeders have implicit faith in its value. Perhaps most take the view that it is simply one of many helps in deciding the value of a cow. The most plausible explanation given is that, like the milk veins, this peculiar turning of the hair is affected by the greater or less quantity of blood carried to the region of the udder.—*Breeder's Gazette.*

The *Inter-Ocean* gives the following account of a butter factory in Wisconsin: The milk upon arrival is examined with a good lactometer, for the purpose of knowing whether it has been tampered with or watered by the seller; then it is weighed and strained through a double cloth steamer and run into deep coolers eighteen inches by nine, and set into a large pool twenty by twenty, holding about 9,000 pounds of milk. The quantity of milk is allowed to stand until the cream gets a little sour, then the cream is taken off with a cone dipper and put into tin setters, and then they are set into a tank of warm water having a temperature of 100 degrees. The butter maker holds a thermometer in the cream with one hand and stirs it with the other until the cream is gradually raised to sixty-two degrees. Then he takes the setters out of the water, so the cream will not get too high a temperature. The barrel churn, made of solid oak, is thoroughly scalded out with boiling water, then rinsed out with cold spring water, to give the churn a good flavor. The cream is now emptied into the churn, filling it half full, the churn having a capacity of 400 gallons. The quantity of cream is now colored with butter coloring, at the rate of one spoonful to five gallons of cream. The churn is propelled one minute by an eight-horse-power engine; then stopped and the cover taken off for the purpose of letting a small quantity of "foul gas" escape. The cover is now fastened on perfectly tight, and the churn kept revolving for one hour, making forty revolutions a minute. The butter will generally come the size of shot in that length of agitation. To have perfect butter, it must come in the granulated form, so all the buttermilk can be thoroughly washed out of the butter with cold spring water. When the buttermilk is all taken out completely with brine, the butter is salted, three-quarters of an ounce to one pound of butter, then left to stand till next day, so the salt can work through it. The butter is again reworked till the brine runs perfectly clear, and all the streaks removed; then it is packed in fifty-six-pound tubs made of ash and a thin piece of white bandage spread on the top, then a little salt wet with water to make a brine, then the covers are fastened on tight and the tubs set into an "ice-house," having a temperature of forty degrees Fahr.

Mr. Wm. Niles of Los Angelea shipped last week a Holstein bull to D. C. Stewart of Forest Grove, Oregon, an Ayrshire bull to T. H. Tongue of Hillsboro, Oregon, four head of Jersey calves to this city, and a lot of high bred poultry to Honolulu.

The Apple Maggot.

Professor Comstock, in his report on insects, gives the following: "The codling moth is the most destructive enemy of the apple, and next in order comes the apple maggot. This is a small, white 'worm' without legs, that bores in all directions through the substance of the fruit. A number of these larvæ may infest the same apple, and honeycomb it until it is worthless. This maggot is native to America, and is frequently found upon various species of hawthorn; crab apples are also infested with it. This pest is more fastidious than the codling moth in its choice of food, and has been found only in a few varieties of the cultivated apple. It is much more apt to infest early than late apples. The larvæ or 'worms' leave the fruit when it falls, and enter the ground, where they change into the inactive or pupa state. The adult fly comes out in early summer, and is about one-fifth of an inch long, marked with black bands on its wings and a white spot on the middle of the body." Professor Comstock suggests as the remedy the destruction of all infested fruit promptly after it falls and before the maggots have time to enter the ground. It may be necessary where the pest is abundant to graft the trees with varieties less subject to attacks. Where this is the case it is well to leave a few trees to serve as props. The value of pigs in the orchard to pick up the fruit as it drops is seen in the light of the above facts. Associated with the apple maggot are two species of more slender maggots, called pomace flies, which, so far as observed, feed only on decaying apples. They are quite common about cider vats and pomace at cider mills, hence the name. They may be found in rotting apples in many orchards. They propagate rapidly and produce several generations in a single season. The larvæ of one kind, called the vine-loving pomace fly, eats out the inside of grapes, passing from one grape to another in the bunch. This is one of the most serious features of these flies. The remedy consists in preventing an undue increase of these insects in cider mills, wine vats and other places where decaying fruit is found, by keeping everything neat and clean. In the vineyards their inroads can probably only be prevented by inclosing the clusters of grapes in paper bags.

Messenger Duroc and Volunteer.

After many invitations from Messrs. Backman and Goldsmith, to visit their respective farms, your correspondent has been ahle to avail himself of the same, enjoying the many hospitalitics of the two places. I give a brief description of the same, for the benefit of the many readers of the *Spirit*, and the numerous friends each sire has.

I left Newburg, Feh. 15, on the 9:30 a. m. train, aud arrived at Goshen ahout 11, heing met in the village hy the charming hostess of Stouy Ford, Mr. Backman not having received my letter announcing my coming in time, and, after a sleigh-ride of four miles we reached Stouy Ford, there heing met hy the proprietor, with a hearty hand-shake, exclaiming: "There is none more welcome than the *Spirit* here, so we will try to make it pleasant for you as long as you will stay." After lunch we went out to the stahles to inspect the stock of which I will give a mention of the few most prominent ones.

The first I had pleasure of seeing was Messenger Duroc, heading the list, followed hy Kentucky Prince. Of him I will say that he has developed into a much grander horse, weighing over two hundred and fifty pounds more than he did when first purchased to share the honors of Stony Ford. Next, Lcland, a grand yonng horse; Meredith, also Mansfield, hy Duroc, from Green Mountain Maid, full hrother to Dame Trot, Prospcro, and Elaine; Walkill Prince, though not in service, hut own hrother to Wilkins Micawber.

Broodmares: I speak of Green Mountain Maid, in foal to Duroc; Alma, own sister to Dexter, in foal to Kentucky Prince; Lady Dexter, hy Duroc, stinted to Kentucky Prince; Hattie Hogan, dam of Hogarth, stinted to Kentucky Prince.

The young stock of which my limited space will allow mentioning is a hay filly, Helena, hy Meredith, owned hy President Mali, of the Breeders' Association, and entered in the Breeders' Stakes. She is a filly that anyone would he proud of, and if nothing happens to her I look for fast heats in that race, as I saw her move, without any urging, a very fast clip. Elite, hy Duroc, dam Green Mountain Maid, is a filly at the same age, can trot a much faster gait than either of her faster sisters or hrother, Dame Trot, Elaine, or Prospero could; also a full hrother of Hogarth, that was a very rapid mover. The total number of stock at Stony Farm is about 250, and I must say they are, all in all, ahout the finest lot I bave had the pleasure of seeing this season, as they are all healthy and the weanlings are of good size.

After spending the night with Mr. B., he drove me to the home of Volunteer, a distance of nine miles, hehind a pair of Duroc mares that never seemed to tire, and when I said good hy, receiving in return a hearty invitation to come again at any time, it was with a feeling of regret, for it was a day long to he remembered as one of the most pleasant your correspondent has spent. The first that I was anxious to inspect was my old friend Volunteer, and when stripped he came to greet us as proud as a young horse, much less the aged veteran he is for the twenty-nine years that he has passed rest verv lightly on his head. His great age is only shown hy the hollow hack, which for years past he has had, as his coat is as loose as a seven-year-old and his teeth are all sound. Next was Barrett, in fine condition, heing worked this winter on the snow, showing quarters very fast. Tracy, hy Volunteer, four years old, has shown quarters in thirty-nine seconds on the snow this winter. Walnut, hy Florida, who trotted so well last season, has heen castrated, having fully recovered so that he is getting some fast quarters, and I look for him to come home at the end of the season with a fast record in the teens. Powers, 2:21, has fully recovered his old form, and has trotted very fast in the snow. Mr. G. thinks of sending him and a number of promising youngsters to Kellogg's sale, one in particular that ought to be sought after, as his hreeding merits the same. He is called Nevins, hy Volunteer, 1st dam hy Wilson's Abdallah; 2d dam hy American Clay; 3d dam hy Alexander's Abdallah; 4th dam hy Taylor's Messenger. He stands 15.1 high, with plenty of hone and muscle, and not two years old until June 20 next. Unolala, 2:22¼, and Una, 2:27½; two miles, 4:54¼, are hoth in good condition, and they hoth show indications of lowering their records. Also Lady Bright, hy John Bright, an own hrother to Goldsmith's Abdallah, a filly that took my eye, as she looks a facsimilie to Goldsmith'e Maid. Mr. Goldsmith says she can trot a good deal faster than the Maid did at the same age.

Driver, 2:19½, and Alley, 2:19, are hoth in excellent condition, heing worked every day, and they have trotted very fast, as your correspondent can vouch for. I expressed a desire to see them hitched double, hut thought nothing more of it. After dinner was over, and James Goldsmith said he would give me a sleigh ride hefore he took me to the depot, it was with a feeling of pleasure when we went to the lane to see none other than Driver and Ally hitched to a light sleigh, for the first time together. I will say that there are hut few teams that can beat them, for, after jogging them ahout three miles, he gave them a fast mile without a break, in 2:25¼, as I held the watch over them myself. Each one seemed to try to beat the other. They will make a fast team for some one, for, if nothing happens them next season, it will take a good one to heat either of them in their class. —*N. Y. Spirit.*

Alfalfa for Sheep.—A Contra Costa granger makes the following statement of expense and profit: One acre of alfalfa will feed twelve sheep; twelve sheep will shear $36 worth of wool per year, will raise ten lambe which at four months old will hring $20, making a gross income of $56. From this deduct expense for taking care of sheep, $12; cutting and stacking two crops, $6; rent for land, $6; total, $24, balance beiug net profit per acre, $32.

They are evideutly well off for horses in the Pajaro Valley. The last issue of the Watsonville *Pajaronian* saya: Several more stallions arrived this week. Only about fifty here uow.

Trotting Action.

The type of trotting action especially pleasing to the amateur reiusman is a delusion. Wheu the horse steps high and lofty in front, with a majestic stateliness, that in horse parlauce is called "dwelling," and widens very greatly behind with a strong, bold, elevated hock-and-stifle actiou, the young horseman thinks he has secured an animal that combines all the elemeuts of a first-class performer in embryo. But the indications are directly to the contrary. Such horses make magnificent "lot trotters," but awkward and unsuccessful performers on the track. The causes of their signal failure can he very easily exulained. Trotting speed, like celerity at every other gait, is the mechanical result of muscular eeouomy. It is an approximation to a straight line. The straight line is the shortest distance between two points. All muscular action at variance with the straight lines, not absolutely uecessary to sustein the carcass, and to work the machinery so as to avoid interferance of the limhs and feet, therefore, is absolute waste, aud, in proportion to ite excess, retards the speed aud lesseus the staying capacity of the horse. The high knee-action in front, generally attended with a pausing habit just before the descent of the feet, is directly in opposition to the straight line, and the wide, straddling action behind at an angle of at least forty-five degrees at variance from the straight line.

The fast trotter may have either one of these forms of defective action, and etill have wonderful speed. Thus, Dexter had that high, lofty knee-action that aftewards distinguished the gallant gelding Judge Fullerton, and yet had incomparable speed. When Dexter eame down the stretch at full speed, his knees seemed to be working extremely high. But he economized thie hind stroke to a remarkable degree. He worked his hind limbs very close to his body.

Lady Thorne, on the contrary, had the opposite defect of movement. Her front action was so low that she was called the "daisy cutter." Before the front feet were fairly out of the way, her hind feet and limbs were often in contact with them, causing that painful, demoralizing interference called "speedy cutting." But her hind stroke wae so low to the ground, so even in its operation, and so long reaching in its sweep, that the defect of her frout actiou was largely counterbalanced. Aside from too high action in front and too wide hehind, there are other eerious defects that retard the speed of the trotting movement. For instance, the horse may be too much extended, in horse parlance. He may stride too far in front aud drag his hind legs too far behind him, so that the body is insufficieutly supported, and the strain of maintaining the carcass and of sustaining the speed is too great a tax upon the muscular system. The light-barreled, long muscled horse of great nerve power alone can show great speed and endurance under these adverse circumstances. Rarus is a case in point. No horse upon the turf had the peculiar, straightforward, long reachiug action of that splendid trotter. His body was slender and lengthy, his muscles of locomotion exceedingly long drawn out, and when at full speed hie body and limbs were extended nearer to a straight line than any horse that ever trotted a full mile in less time than 2:20.

When there are no defects of actiou to be overcome by mechanical contrivances, the questiou has often been raised by practical horsemen as to what is the most perfect trotting gait for all the purposes of speed, weight pulling and endurance combined. The answer has been adverse to the long sweeping gait for trotting, on heavy courses, or keeping up the pace for great distances, or pulliug great weight. The long strider is invariably an indifferent trotter on a muddy track. He requires a smooth, hard course, the former being almost as essential as the latter is a necessity.

While the short-gaited horse, on the contrary, cau draw weight and approximate more nearly to his greatest speed in the mud, yet his quick drum-beat revolutions call into requisition such a rapid repetition of his muscular action, that he becomes more tired ou a well-prepared course than the long strider. The medium gait, therefore, is the most desirable, because it avoids the exhaustive efforts of the long strider in the mud, or to the wagon, and is equally free from the wearying effect, when loug continued, of the rapid stroke of the short-gaited horse.

Maud S is a model of trottiug action. Her movement approximates to the medium gait. Her frout action is rather hold, but only high enough to keep out of the way of the stroke of her hind propellers. Like all pure, easy-gaited horses, her limbs are kept well under her body, so that there is no strain from over-extension. The faster she speeds the easier she seems to move, which is the best evidence possible that there is no straiu.—*Live Stock Journal.*

The Goslin.—The goslin is the goose's yung child. They are mostly yeller all over, and az soft az a ball of worsted. Their foot is wove whole, and they kan swim az easy az a drop of kaster oil on water. They are born annually about the 15th of May, and never waz known tew die uatrally. If a man should tell me he had saw a goose die a natral and square deth, I wouldu't believe him under oath after that, not even if he swore he had lied about seeing a goose die. The goose are different in one respekt from the human family, who are sed tew grow weaker, but wizer; whereaz a goslin alwuz grows tuffer and more phoolish. I have seen a goose that they sed waz ninty-three years old last June, and he didn't look an hour older than one that wuz seventeen. The goslin waddles when he walks and paddles when he swime, hut never dives, like a duck, out of sight in the water, but only changes ends. The food of the goslin is rye, corn, oats and barley, sweet apples, hasty puddiug aud biled kabbage, cooked potatoze, raw meat and turnips, stale bred, kold hash and the buckwheat cakes that are left over. They ain't so partiklar az some pholks what they eat, and won't git mad and quit if they kan't have wet toast and lamb chops every morning for breakfast. If i was going to keep boarders i wouldn't want enny better feeders than an old she goose and twelve goslins. If i kouldn't suit them i should konklude i had mistaken mi kalling. Roast goslin iz good nourishment, if you kan git enuff ov it, but there ain't much waste meat on a goelin after yu have got rid ov thefr feathers aud dug them out inside. I hav alwas notissed when yu pas yure plate up for sum more baked goslin at a hotel the colored brother cums bakwith plate empty aud tells you: "Mister, the roast goslin iz no more."—*Josh Billings.*

Cy Mulkey is reputed as saying that Flying Cloud, the dam of Premium, ran a quarter in twenty-one seconde. If Cy expects to preserve any character for veracity he should revise that statement and get the speed of that mare within tho bounds of belief.

Sulphur mixed with salt will be found a useful condiment for sheep all the year around. We, however, would use less sulphur in the variable weather of winter. In summer they form a simple appetizer, an excellent vermifuge, and one of the best health-preseving agents we have.

Sheep Dipping.

As practice is better then theory an account of some extensive sheep dippings carried on at the end of last fall, on the Duke of Sutherland's reclamations, at Kinhrace, in the north of Scotland, will he the hest and most iustructive manner of giving the information.

The Duke of Sutherland has eome very extensive flocks, and has been so far in the habit of dipping the eheep, hoth in spring and autumn, with various sheep dips purchased for the purpose, in order to clear away the ticke and lice, and also eradicate scah. There is a large amount of waste grease on the estate, owing to the fact that the fat sheep intended for the English market are not seut to their destination as live stock, but are slaughtered on the spot; and the carcasses, after being dressed, are sent to the wholesale meat market. It occurred to Mr. Greig, the very active and intelligent ageut of the duke, that to buy a dip largely consisting of soap when so much waste fet and grease was on hand, was a very unecouomical proceeding; that the proper course would be, to make the uecessary soap on the spot, from the grease on hand, by saponifying it with caustic potash, and afterwards using the soap for dipping purposes, in conjuuctiou with carbolic acid or tar oils. This course was therefore adopted. In the first place, the soap was made with caustic potash, in batches of 120 pounds of couceutrated potash soap at a time, hy the use of the convenient twenty-pound cans of pure caustic potash put up for the purpose of soap making on a small scale hy the Greenbank Alkali Co., at St. Helens.

The process of saponification followed was the simple mixing process, without hoiling, described by me in your September number; that is to say, the twenty-pound can of pure caustic potash was dissolved in two gallons of water, and mixed with eighty pouuds of melted grease; the mixture then being covered up and allowed to saponify by standing for two or three days. Forty pounds of this couceutrated potash soap was then dissolved by boiiug in ten gallons of water, with half to three-quarters of genuine carbolic acid. This dip was then added to the dipping tank, in the proportiou of one gallon of dip to each ten gallons of water used.

The dipping tank was of simple construction, merely a wooden tank, about twelve feet long by four feet broad, by three feet deep. The sheep were driven into the pen, formed of hurdles, leading to the tank, and so arranged that they were delivered one at a time. Each sheep, on passing through the tank, was thoroughly well ducked over head three times; and as they followed, one after another, three sheep were in the tank at one time. On being released from the tauk, the sheep walked up an inclined plane, which allowed the drippings from the fleeces to run back into the dripping tank, which was replenishod from time to time with fresh additious of the dip and water, as required.

About 1,200 sheep were dipped in a day, and the total number operated upon was about 20,000 head. This dipping thoroughly destroys all ticks and lice, and the fleeces were prouounced by the shepherde to be in very fiue condition. Any sheep that was found to he affected with scab was reserved for further treatment, by thoroughly rubbing in the carbolic dip, without dilution with water. Some of the sheep were also rubbed with a mixture of thirty pounds of the potash soap, made as described, dissolved in six gallons of water, with three gallons of light pitch oil added. This mixture also answered well for the purpose.

The whole arrangements were under the superintendence of Mr. Trotter, the chief shepherd, and most effectively carried out. This being the autumn dip, no attempt was made at scouring the fleece. It is the intention, however, before sheariug, next summer, to thoroughly fleece-wash and cleanse the wool on the sheep, before shearing, with the potash soap made from the grease on the spot, aud after shearing to pass the sheep through the dipping tank containing the dipping mixture of soap and carholic acid. The cost of the soap and dip for these purposes will be very trifling, as it will be eutirely made from the waste obtained from the slaughtered sheep. The wool, therefore, when fleece-washed in this manner, will be considerably enhanced in valne, at a very small cost, so that there will he a decided gain on the operation.—*Live Stock Journal.*

Breeding up the Bronchos.

Born iu this State (California), and haviug grown up in the business of improviug the native cattle and horses of the conntry, my experience and observatious may interest eome of your mauy readers.

My first recollections were in the year 1856, when my father located himself on a ranch, and with the increase of ahout six cows that, in the years 1847 and 1848, crossed the little stretch of country from Illinois to California, under the yoke, began improving a band of wild cattle. He soou after got horses, and has coutinued in the business up to the preseut day.

The name broncho now has a wide range, aud includes nearly all the scrubby mongrels that are wild and vicious. In early days we had good bronchos, horses of iron, that could go 120 miles hetweeu sun and sun (12 hours), not on a prepared track, but over hills aud valleys and sandy deserts without roads. Those were bronchos that required but little improvement, unless to fit them for other purposes. The old Californians had, however, a custom of their own for improviug their stock of horses; it might seem extravagant, or even barbarous, at this date, still it was effectual.

The country was alive with horses; large *recogidos* were annually made, and the culls, regardlese of ownership, separated and driven from rauch to ranch, and accumulated till large bands were formed, which were driven to the coast, and rushed at full speed over a mighty precipice into the roaring waters below. Thus the ancient Californian improved his bronchos, and the finny tribes of the mighty Pacific were annually feasted on horseflesh.

The old brouchos weighed, as a rule, from 800 pounds to 1,000 pounds when reared on good feed, aud when bred to horses weighiug 1,500 pounds or more, the result was anythiug hut satisfactory.

Since the Americans became owners of ranches, aud hegan improving the broncho, they have been starved, and crossed aud re-crossed with grades upon grades almost ad infinitum. To-day we have a hreed of mongrels, some of which have considerable merit, but, as a breed, quite inferior to the old native stock. The characteristics of the geuuine broncho are stubborn, and his hlood is strong.

Breed mares under 900 pouuds to a well-hred horse of good form and dispositiou, and solid color, weighing from 1,150 to 1,200 pounds; theu all the fillies that take to the horse can be hred to a large horse of compact form, and those that take to the dams should be bred back to the same sire, or to a horso similar in blood and form; then proceed as hefore, and the results will be equal to the most sanguine expectations. Dame can be selected from mongrel bands that show or carry some good blood; hence, occasionally, some breeders report favorable results from breeding to large horses.—*Live Stock Journal.*

THE
Breeder and Sportsman.
PUBLISHED WEEKLY BY THE
BREEDER AND SPORTSMAN PUBLISHING CO.
THE TURF AND SPORTING AUTHORITY OF THE PACIFIC COAST.
OFFICE, 508 MONTGOMERY STREET
P. O. Box 2603

NEW YORK AGENCY.

Mr. C. C. Pettus at the office of the "Sportsman," 29 Warren street, is duly authorized special representative of the BREEDER AND SPORTSMAN in New York to receive subscriptions and arrange advertising contracts.

SACRAMENTO AGENCY.

Residents of Sacramento and vicinity, desiring to subscribe or advertise in the BREEDER AND SPORTSMAN, can do so through our agent, Mr. M. J. Henley, Russ House, 1,009 J street.

ADVERTISING RATES.—Displayed $1 50 per inch each insertion or pro rata for less pace. Reading Notices set in brevier type and having no foot marks, 30 cents per line each insertion. Lines will average ten words. A discount of 10 per cent. will be allowed on 3 months, 20 per cent. on 6 months and 30 per cent. on 12 months contracts. No extra rate charged for cuts or cutting of column rules. No reading notice take for less than 60 cents each insertion.

San Francisco, Saturday, March 17, 1883.

WILD DUCKS.

The principal change which has been made in the game laws of this State by their recent revision by the Legislature is that which removes from the provisions of the law the wild ducks. Hereafter they may be shot all the year round without fear of law.

Sportsmen in other parts of the world will think this a very strange provision, and will infer that this class of wild game must be very abundant with us. The reason the ducks are no longer protected is that the farmers say they eat their grain and that they are a nuisance. It was due to the efforts of the farming community that the law was changed, making the open season for ducks perpetual.

Those who are fond of duck shooting—and there are hundreds among us—feel quite aggrieved at this change in the law. They contend that the ducks do very little harm indeed, and that their inroads, such as they are, in the grain fields, can be prevented by the use of lanterns, as done on the upper Sacramento with success; that wild duck shooting is the principal hunting that people in this city can indulge in, as the grounds are near by and accessible, and that the indiscriminate slaughter of ducks that will ensue will soon make the birds very scarce. Already the market reports quote wild ducks as "scarce, high, and in demand."

There is this to be considered, however: The laws of nature are somewhat stronger than the laws of the Legislature, and they are more apt to be enforced. The ducks fly away north when their instincts direct them, and do not return for many months. They are, during those months, out of the jurisdiction of the California laws, and their instincts unwittingly preserve them. Even now nearly all the ducks are gone but the canvasbacks. The only varieties which stay with us all summer and breed in the marshes are a few of the mallards, sprig and teal, and they keep in the quiet creeks and ponds out of the way of people. When the great flights of ducks come back from the north they come at a time when the law, as it was, admitted of their being shot, and they usually go before the close season begins.

So, after all, there is not so great a hardship worked as might be the case. The farmers would shoot them anyhow if they came on their land, since, while we have plenty of laws, we have no one to enforce them. At the time the birds are plentiful all the shooters indulge in the sport. The law, therefore, which leaves the ducks at the mercy of everybody all the year round practically makes little difference, as the birds are up around the North Pole somewhere the greater part of the time, and it is not probable anyone will try for that part of the world for some time to come.

The birds that do the most damage are the widgeon, and they are the first to come from the north. As soon as the rains begin they leave the marshes for the fields. They may be on the marshes in great numbers, but they fly to the fields as soon as the rains start the young grain. All shooters recognize this habit of the "baldies." The most harm that can result by the change in the law is in the killing of young mallards in July and August before they have learned to fly properly. Still, the number of teal, mallard and sprig that breed in our tule lands and marshes is very small compared with the number of birds that come from the north, and which the law will not affect.

THE COMING RACE MEETING.

It does not require an over due share of optimertical tendencies to warrant the prediction that that the coming race meeting of the Pacific Blood Horse Association is likely as good as has ever been held in California. The large number of nominations and entries in stakes and purses insure plenty of starters, and the character of the colts that have made a public appearance is of the highest class. Those which still rank as "maidens" are very well spoken of by those who have seen them exercise, and unless there should turn out to a great deal of the worst kind of luck between now and the time of running the meeting must be a thorough success.

There is not a failure in any case as every stake has filled, and generally with more than have been known previous to this.

The Pacific Cup shows thirteen, and as this is regarded as the grand event of the spring gathering, there is sure to be a great crowd of spectators on that. But every day shows such attractive features that there will be no lack, and the score of races on the card is as brilliant a programme as any one can desire, no matter how exacting. It is too early yet to record prophesies; in fact, we never thought very highly of the predictions of newspaper scribes. "The best tip" for those who like to bet is to base their judgment on what they can see for themselves, and only wager an amount they can afford to lose with equinimity.

The regular tipster is placed in a better position than he who has to point his lucubrations. "The point" can be changed in the case of every one of his patrons, and in this way he can make an absolutely correct vaticination, having every horse in the race to aid him.

Then he comes out in advertisements calling attention to his wonderful sagacity as shown by the past, and on that ground rears a flattering hope of what he will accomplish in the future.

When the horses are all trained on public grounds there is a better chance of estimating their relative capacity.

It would be a cheeky thing to haunt private tracks in order to know what was going on with the racing colts, and the cheek would not sustain him after the first exhibition, and, a majority of the trainers would not leave him long in doubt of the course they would take. This is only in relation to touts or those who were to make public that which was given to be secret.

There is an exciting interest attached to the watching of the gallops and fast runs of the racing colts which does not follow any other kind of outdoor sports. With the harness division the watch must be brought into play to give proper relish to witnessing the work. The more graceful pace of the fast gallop (for a large proportion of race horses are graceful when going at their nearly best rate) tends to the more general appreciation, and though from a business outlook there is more money in trotters, the aristocratic colts, born in the purple, bring a feeling, harmonizing better, more in accordance with the higher form.

Four full columns of the wide measure of the *Breeder and Sportsman*, occupied with the names of those which have a right to start in the twenty races is the best possible guarantee of the meeting being all that we claim, and the races of a class which no one with the least fondness for the sport can afford to miss. And many of them are worn by horses of national celebrity. Gano, admitted to be the peer of the East, the flying Palo Alto filly Satanella, Lucky B, Grismer, Lou Spencer, etc., among the three-year-olds with so many others of the same age though not so well known, but likely to be troublesome. The two-year-olds are, of course, yet to show their mettle, but if there is anything in blood and form they can be rated as the best lot ever reared in California. Among the thirty-two nominations in the California Stake are the Prince of Norfolk, a brother to the unfortunate Duchess, and probably of about the same stamp. Santa Anita has five representatives, a daughter of Mollie McCarthy, by Grinstead, two more of his get being named and the Rutherfords. The chestnut filly Callie Smart is appropriately named if the reports are correct, as it is said she is wonderfully smart and her lineage—by Norfolk from Mattie A endorses the estimate. Palo Alto has eight representatives with pedigrees that are of the best shade in the stud book. Rancho del Paso has nine, those which were purchased in Kentucky last summer, but if we stop to analyze the pedigrees this article will be far beyond the contemplated length. Before the meeting comes off, time will be taken to show what a quantity of the best blood there is now in California and this one stake will fully corroborate the statement. W. L. Pritchard has four in, C. Van Buren two, the six all of good pedigree, and J. K. Gries has one by Joe Daniels from Mary Wade.

Even in this short sketch it will not do to overlook some of those which are free to all ages. As has been stated the Pacific Cup is considered the great race of the meeting. The distance is the longest of any two and a quarter miles and the most is added. It is a handicap the allotment of weight to be announced on the first day of the meeting. It could scarcely be otherwise than a close contest if the "race was to rule," and yet there will be a necessity for concessions which will bring the thirteen engaged into a close neck at the finish. Joe Howell, Jim Douglas, Albert C, Fred Cellier, Precious, Fortress, Duke of Monday, Maria F, Wildidler, Inaugaration, May D, Frank Rhoads and Judge McKinstry are the ones to be brought together, and though there is always a share of good luck in fixing the apportionment so as to equalize the "man from Yakima" who may be the selection is both a good judge of the capacity of horses, and has luck enough at the game to make it nearly certain that it will be another grand success.

There is altogether too much in these four columns to treat in this off-hand way, and the plan will be to take up each day's races for future comments.

This will give an essay for each one of the five weeks from now until the twenty-first of the next month, and there is plenty of material on hand for the disquisitions.

OUTDOOR SPORTS IN WINTER.

Lovers of outdoor sports in California perhaps seldom stop to think what great advantages they enjoy in many respects over their friends in the East by reason of the great climatic differences of the Atlantic and Pacific Coasts. The winter months there put a stop to all outdoor sports except those peculiarly adapted to cold weather and dependent on it, such as skating, sleighing and ice yachting. Here we cannot indulge in these, but we can indulge in all others and keep up to a certain extent the amusements we follow in summer. Baseball, cricket, bicycling, boating, sailing, rifle shooting and kindred sports can all be indulged in during the winter just as well as in summer. In fact some of them are more heartily enjoyed in the winter months. Our strong winds die out, the fogs are gone, and, while the days are short, the sun shines brightly and the weather induces activity and outdoor recreation.

For baseball and cricket the cool winter days are excellent. For rifle shooting the stillness of the atmosphere is advantageous. For boating the smoothness of the water owing to an absence of wind offers better facilities than in summer. For bicycling, riding and driving the absence of dust on the roads is a blessing. For yachting, handling light sails may be practiced, and, if one has plenty of time, winter sailing up the rivers on smooth waters where the summer mosquitoes are gone may be indulged in with pleasure. So with many other sports. There is no such thing here as a large hall where people try to do in winter what they amuse themselves with in summer.

Taken all together we ought to congratulate ourselves on our opportunities to indulge in outdoor sports. We are more fortunate than our neighbors, a fact we only appreciate when a chance for comparison is afforded. Reading in the dispatches of late of the cold weather and storms elsewhere, and experiencing here such a fine climate, ought to make all lovers of outdoor sports satisfied with their place of residence.

NEURALGIA.

We remember seeing a picture many years ago, that, at the time, gave the idea that the artist was possessed of a super-vivid imagination—something akin to that of Gustave Dore, and with a fondness for depicting the horrible that Dante could so forcibly portray with words. It represented the portrait of a man, and though the features were good there were such fearful distortions that not a lineament was left in repose, agony more than possibly could arise from physical suffering, the acme of mental anguish, induced by the prospect of an eternity of despair. Imps were torturing him in every conceivable manner, drilling into his skull with corrugated augers, running red-hot corkscrews into his eyes, tearing away masses of quivering flesh with saw-toothed pincers, and all this with a self-satisfied, mocking, fiendish air that gave the whole a still greater intensity of meaning. We have a better understanding now. The picture was to represent a man suffering from neuralgia, but as it was part of a scheme for advertising some sure-cure nostrum, the overdrawing was apparent. Last Saturday Mr. A. C. Dietz drove to the door, reminding us of a promise to see Professor Tapp subject a wild and vicious horse to his system of breaking. In the hurry no protection was used, though in a profuse perspiration, and the pagoda which he uses as a schoolroom had a chilly breeze coming through the portion allotted to spectators. We became quite interested in his manipulations, which proved he was a master of the art, and by and by will give an account of the methods and manner of handling. The horse was hot enough, though at

the end of two hours an overcoat and neck wrapper would have been a valuable adjunct to restore the abstracted caloric. Still we had not sense enough to wait for extra clothing. Mr. Dietz driving rapidly to the track in time to see Slippery Dick win the last three heats there was also time to become still more frigid. It was late when dinner was done, and an hour'e work in a cold room completed the job. Not long after going to bed the little imps began, confining the first attentions to twisting gimlets and corkscrews between the teeth. A bottle of St. Jacob's oil was brought from the barn, using it on a bowed tendon of Sir Thad. The test has not gone far enough to decide how successful the cure of suspensory will be, though the chances appear favorable, but the demons were not so easily conquered. There was some relief, however, and though confined to bed Sunday the pain was nothing like so severe. The sunshine came into the room, and with the shutters thrown wide open, and every turn or so calling on St. Jacob, the day was got through in tolerable comfort. The brigade was only getting ready for a more vigorous charge. Two hours after the sun had slipped behind Mt. Tamalpais they had all the weapons represented in the picture, and they were adepts at using them. In half an hour after commencing the fight there was a lump on the jaw as big as a lemon, and then on the same side of the face—the left—they had the eye trying to pop out of the socket. The left ear was the next point of attack, and the only weak place in their strategy was in making the whole fight on that side. But there was no discrimination, and from the top of the head to the quarters it came hot and hot. The warfare was kept up the whole of the night, daylight coming to the relief, and that suggested a remedy. Many a battle we fought on the banks of the Mississippi, and with an auxiliary in the shape of quinine came out victorious after a three-years' campaign. Pshaw! ague was feeble in comparison and fifteen grains were powerless. Again there was another grand row from dark until daylight, making three nights, when our folks insisted on sending for a physician. Dr. Bradway proved to be the better general, and though somewhat demoralized, we managed to get to the barns on Thursday. We have written this for a double purpose, one being to credit the artist with being as apt a delineator of neuralgia as Wyttenbach is of the form of a horse, and the other to account for absence from the office for the whole of the week.

EDITORIAL NOTES.

Lieut. F. Kuhnle, the celebrated rifle shot being about to depart for Europe, announces an auction sale of his trotting stock, a well-bred and promising lot of colts. The sale will take place at Petalnma, on the 7th proximo and will be conducted by Messrs. Killip & Co. A reference to the catalogue in our advertising columns will disclose the breeding of the animals offered, and they are of the strains of which Sonoma county takes a just pride. Whippleton, the sire of most of these colts, is by Whipple's Hambletonian, dam Lady Livingston by Gen. Taylor.

"The Turfmen's Directory" containing the names and addresses of all known breeders, owners, trainers and drivers of trotting horses in the United States, compiled by Secretary Vail of the National Association, a handy book of reference for horsemen and others, may be had by application to this office. Price, $2.

The State Agricultural Society having corrected the error in the propoaed trotting atake for two-year-olds, the revised announcement will be found in our advertising columns. With the $500 added this will be a valuable stake and from the indications it will fill with a strong showing of nominations.

The Famine in trotting rules that has prevailed on this Coast for some months is ended. We have received a supply and will fill all orders at regular rates, 25 cents in paper, 50 cents for the pocket edition.

Messrs. Payne and Pyle of the Gilroy Rod and Gun Club have been busy for the past few days searching for violators of the game laws. They recently received information that certain parties were constructing a brush dam on the Pajaro river, so as to obstruct the passage of fish to and from the spawning grounds. They immediately left for the scene of the obstruction, intending to bring the parties to justice.

To-morrow The Boss Fishing Club will make a pleasure and fishing excursion to Raccoon Straits and a jolly time is anticipated. They will go in the yacht Restless escorted by the Annie Hart, so that they will not be dependent on either wind or tide.

On or about the 25th of this month there will be a pigeon match at the Oakland Trotting Park in which Mr. John Muller and Z. Taylor will shoot against W. Conn and N. Edwards. The conditions are 15 birds at 21 yards rise.

A match will take place to-day at Birds Point between Messrs. Havens, Woodworth, Gordon and Nagle. The conditions of the match are fifteen single birds, twenty-one yards rise, ground traps.

The California Wing Shooting Club will shoot at San Bruno to-morrow week, the 25th inst.

The Cosmopolitan Club will hold its first shoot of the season at San Bruno to-morrow.

BASE BALL.

Eastern League Clubs.

The following is the list of players in the Eastern League clubs as arranged for the season of 1883:

Boston club—The regular battery will be Whitney, pitcher, and Brown, catcher, with Buffington and Hackett as a change battery. On the bases there will be Morrell, Burdock and Sutton, with Wise at short-field and Hornung, Radford and one or other of the change battery players in the right field. This is not as strong a team as that of last year.

Buffalo club—This club's regular battery will be Derby and Rowe, with Galvin and Kennedy as their relief. Brouthers, Richardson and White will play on the bases, Force at short-field and O'Rourke, Foley and Schaeffer in the out-field. This team is stronger than that of last year, Derby being a very good pitcher.

Chicago club—The main battery will be Corcoran and Flint, with Goldsmith and Kelly as their reserve. On the bases Anson, Burne and Williamson will play, with Pfeffer at short-field and Dalrymple, Gore and Kelly in the out-field. The club has an extra player in young Stockwell. Base-running is the forte of this team.

Cleveland club—The regular battery will be McCormick and Bushong, with Bradley and Briody as a change and Daily as an extra pitcher. On the bases there will be Phillips, Dunlap and Muldoon, with Glasscock at short-field and York, Hotaling and Evans in the out-field. This is the strongest team Cleveland has ever placed in the field, and it will give the Chicago nine the greatest trouble to retain the championship.

Detroit club—Bennett and Weldman are the battery of this club, with Burns and Trott as a change. Powell, Quest and Farrell will play on the bases, Hauck at short-field and Wood, Hanlon and T. Mansell in the out-field. This is a weaker team than that of 1882. It has little chance of the championship.

New York club—This is the new League club, and its regular battery will be Ward and Ewing, with O'Neil and Clapp and Welsh and M. Dorgan as reserve batteries. The bases will be played by Connor, Troy and Hankinson, with Caskins as short-field and Gillespie, Humphries and Dorgan in the out-field. Humphries is also a change catcher. This is the strongest professional team New York has ever had. When Ewing is not catching he will play second base. The infield support will be specially strong, but it is the four catchers and three excellent pitchers, all differing in their method of delivery, that constitutes the strength of this club.

Philadelphia club—This is another new League club, and its regular battery will be Neagle and Gross, with Henderson and Coleman as change pitchers and Ringa as change catcher. It has another pitcher in Purcell. The base players will be Manning, Ferguson and Gaunt, with McClellan at short-field and Lewis, Roberts and Purcell in the out-field. This is entirely an experimental team. It bids fair to be the last in the pennant race.

Providence club—This club will not be as strong as last year. The regular battery will be Radbourne and Nana, with Richmond and Gilligan as one change and Smith and Robinson as another. On the bases there will be Start, Farrell and Denny, with Irwin at short-field and Carroll, Hines and Cassidy in the out-field.

The championship season begins May 1 and ends October 1. Before this the League clubs will have an exhibition campaign during April, when they will play with the American clubs. The New York Club team will take the field in April. Before this the players will practice at Prospect Park.

The McDonald Benefit.

The benefit tendered to James McDonald at the Recreation Grounds on Sunday was fairly attended. The grounds were in excellent condition, and the game closely contested. The team captained by the beneficiary, after having been whitewashed for four consecutive innings, managed to make seven runs in the fifth turn at the bat by dint of heavy batting. The fielding on both sides was good and the throwing decidedly above the average. The score is as follows:

DENNY NINE.

	TB.	R.	B.H.	P.O.	A.	E.
Denny, 3 b	5	2	1	2	5	2
Lawton, a a and c f	5	1	0	1	1	3
Carroll, p	5	2	3	0	5	0
Sheridan, 1 b	5	1	1	12	1	0
Gagus, 2 b	4	0	0	2	1	1
Donahue, c f and s s	4	2	2	1	1	1
Creegan, c	4	1	1	7	1	1
Levy, l f	4	0	0	2	0	0
Brown, r f	4	0	1	0	0	0
Total	40	9	9	27	15	8

MCDONALD NINE.

	TB.	R.	B.H.	P.O.	A.	E.
McDonald, 3 b	4	1	0	1	1	2
Sweeney, p	4	0	0	2	8	0
Irwin, c	4	1	1	8	3	0
Boyle, 2 h	4	0	0	5	0	0
Lake, c f	4	1	0	1	0	0
Smith, a a	4	1	1	0	3	1
Rice, l f	4	1	0	0	0	0
Pope, r f	4	1	0	0	1	0
Fogarty, 1 b	4	1	1	1	10	2
Totals	36	7	3	27	16	5

Innings	1	2	3	4	5	6	7	8	9
Denny nine	1	0	0	0	0	3	0	2	3—9
McDonald nine	0	0	0	0	7	0	0	0	0—7

Earned runs—Sheridan. Three base hits—Irwin, Sheridan. Two base hits—Smith, Fogarty. Left on bases—McDonald'a, 0; Denny'a, 4. First on errors—McDonald'a, 5; Denny'a, 4. Struck out—McDonald'e, 2; Denny'e, 3. Double play—Irwin and McDonald. Bases on balls—McDonald'a, 0; Denny's, 5. Passed balls, Creegan, 1; Irwin, 1. Wild pitch—Sweeney. Time—2 hours. Umpire—Ed. Morria.

Baseball has taken a hold on the public fancy in the East, and many of those who believe in stimulating the efforts of those who play upon the diamond field have promised to give prizes for base running, long throwing, long hits and the like. Richard K. Fox of New York offers to the League club winning the most games during the coming season a handsome banner, valued by him at $500. He will also give a medal to the man who makes the highest batting average, one to the man making most runs and one to the man with the highest average. The amateur club winning the most games during the season will be presented with a gold ball, emblematic of the amateur championship.

A meeting of the California Baseball League was held on Tuesday evening at Verein Hall, for the purpose of entering into arrangements for the season's play. Five clubs were represented, as follows: Haverly B. B. C.—Harrie, Morrie, Pratt; Niantic—Mone, Sweeney, Finn; Reno—Hennessy, Corrigan, Cadogan; California—Piercy, McDonald, Crawford; Underwriters—Mullen, McElroy, Ellonore. A resolution was adopted which provided that a club connected with any other League shall not be eligible for admission. A committee on credentials was appointed, composed of one delegate from each League, and it reported favorably on the credentials presented. Considerable discussion ensued as to the number of clubs to be represented in the League, and on being submitted to a vote, it resulted in the rejection of the Reno Club. A committee was appointed, consisting of Morris, Piercy, Finn and Moran, to report on a schedule of games and to draft a set of rules. The following permanent officers were elected: J. J. Mone, President; H. Harris, Vice-President; W. L. Crawford, Secretary; August Pratt, Treasurer.

It is expected that definite arrangements will be made today, in connection with a series of games at the Oakland grounds. In all probability a League will be formed and a schedule of games adopted, in which at least three clubs will participate. The League will include the Howards, managed by Percy Jacobus, the Olympics, by Dave Rich, and a club not yet organized, which will be under the management of John Hammersmith.

Denny and Irwin leave for the East on Monday to join the Providence Club. Both made good records last season.

Blakiston, formerly of the Californias, has acquired quite a reputation as an infielder.

Cleveland Bays.

The Cleveland Bays were at one time recognized as a distinct breed of horses in England, and were highly prized as coach horses. Modern English writers, however, quite generally agree in treating the breed as extinct. The editor of the *Gazette* has within the past year made a special effort to get at the exact facts in regard to the present status of the so-called Cleveland Bay breed in England, which, so far as he can learn, is about as follows: But little attention has been paid to these horses for many years past as a breed in the country where they were once so popular, but there is still much stock remaining in that region possessing the old Cleveland Bay characteristics, and perhaps much of the blood that formerly belonged to this breed. We never see it mentioned, however, in the reports of English horse shows, and very seldom is its existence recognized by a reference to it in any of the English agricultural papers. The so-called Cleveland Bay of to-day is created, as was the breed, when it was considered a breed, by a mingling of the blood of the thoroughbred racehorse with that of the large bay mares of Yorkshire; and while we adhere to the opinion heretofore expressed in these columns, that, properly speaking, there is no longer any such breed in existence, yet we are free to admit that many most excellent horses, possessing much good blood, have been imported to this country as Cleveland Bays; and that the same course of breeding which originally formed the breed might speedily restore it from the material now remaining in that country, as well as in this, viz., the use of stout, strong and stylish thoroughbred sires upon large, active and stylish bay mares.

The *Mark Lane Express*, of February 5th, has the following, which will give some additional light upon the subject: "In reply to a question from a correspondent in the United States as to the present status of the Cleveland breed of horses in this country, we are of opinion that there is material enough left, especially in Yorkshire, to form the basis of a herd book and a very profitable breeders' industry. The railway locomotive drove the old Cleveland bay horse off the road, but the more modern type of Cleveland horse, or at all events Yorkshire-bred horse of the Cleveland stamp, with rather more of the thoroughbred stallion's influence apparent, are precisely the cattle that are to be seen in the use of railway companies for their lighter work, especially the newly-appointed omnibuses which have been started by the railway companies in London, for which the cheaper French horses hitherto used are neither strong enough nor fast enough. It is remarkable that the railway companies, which took the old Cleveland horse's occupation away, should be among the first to give it back again in a different form; but it is plain enough to any one who will give the necessary attention to the subject that the light van work and the new heavy omnibus work of the metropolis is bringing to London a lot of very superior and valuable horses from the northern breeding districts, which to all appearances have the old Cleveland blood for their basis, and which retain their speed and style from the judicious use of the blood of the thoroughbred stallion.—*Breeder's Gazette.*

The Ottowa Dog Show.

The following special prizes have been donated to the Ottowa bench show:

KK.—The Marquis of Lorne donates $25 for the best St. Bernard, dog or bitch, exhibited at the show.

OO.—The publishers of *Turf, Field and Farm* offer one year's subscription to the paper for the best clumber spaniel regardless of sex, that has never won a prize.

PP.—Messrs. Greener & Son, of Birmingham, England, have donated twelve copies of Greener's "Gun and its Development," value $90, one copy of which will be given with the second prize in classes, 3, 4, 5, 6, 13, 14, 18, 19, 25, 26, 27 and 28.

QQ.—The Marquis of Lorne donates $25 for the best colley, dog or bitch, exhibited at the show.

RR.—The Marquis of Lorne donates $25 for the best beagle, dog or bitch exhibited at the show.

SS.—Hon. E. Dewendy donates $25 for the best Newfoundland, dog or bitch, exhibited at the show.

DEEP PLOWING.—Messrs. George and Chas. Cadwalader, capitalists, who own a large tract of land about five miles south of Willowe, east of the railroad, have recently put in operation on their farm a plow that seems to do pretty good work. It plows about a foot deep. Some of this land is tinctured with alkali, but the deep plowing has developed the fact that the alkali does not extend much beyond the surface, first-class loamy soil being thrown up by the plow. It is the opinion of some that the alkali can be worked out of this land with the plow. At least it can be so mixed in with the good soil that it will not prove such an obstacle to the growth of vegetation upon it as it has heretofore proved to be.—*Willows Journal.*

The Oregon State Agricultural Society propose to fall a stallion-trotting stake, free to all Oregon, Wa[illegible] Montana and Idaho horses, except Dexter and Mil[illegible]um. It will be trotted on the last day of the fair, Sep[illegible]

THE GUN.

At San Bruno.

The largest gathering that has yet assembled at a pigeon shoot this season was present at San Bruno last Sunday on the occasion of a fifteen-bird match, thirty yards rise, $20 entrance, Hurlingham rules. During the week the match caused considerable discussiou as to the probable outcome, and iu consequence, speculation rau high. While the match was being contested the spectators manifested no small amouut of interest, and bets were freely laid ou the outcome of the shoot and ou individual scores. Unfortunately for clean scores not a breath of air stirred, so that the use of the second barrel was practically impossible owing to the fact that the smoke of the first rarely lifted in time to allow a good shot. Later in the day sufficient breeze sprang up to make the freeze-outs at least more interesting and accounted for somewhat better scores. The birds were an unusually fine lot though scarce, owing to a misunderstanding. The day's sport was opened by a gentleman under the assumed name of Slade who missed a swift tailer with his first and tumbling him with his second barrel; Robinson who followed missing a left quarter; Tucker taking a close flyer in excellent style and Roche missing an easy incomer. Burnett's first bird though hard hit succeeded in escaping, the others maintaining clean scores on the first round, with the exception of Weeks, whose tailer died out of bounds. The difficulty of sighting birds on the second barrel in consequence of the fog caused some of the lesser lights to be prematurely extinguished, and with the exception of Lambert the crack shots failed to preserve clean scores up to the thirteenth bird, when it was conceded that Lambert would take first money, Tucker second, Robinsou and Maskey dividing third money. Unfortunately for Lambert, however, he missed his fourteeuth bird, an easy left quarterer, and in the very next rouud allowed a tailer to get away, tbus making it a tie between Tucker and himself on thirteen birds. Following are the scores:

Slade	1 1 1 1 1 0 0 0 1 0 0 w
C. Robinson	0 1 1 0 1 1 1 1 1 1 1 1 1 1 0—12
S. A. Tucker	1 1 1 1 0 1 1 1 1 0 1 1 1 1 1—13
D. W. W. Roche	0 0 1 1 0 1 1 0 w
J. Sharp	1 1 1 1 0 0 0 1 0 w
H. Silsby	1 0 1 1 1 0 1 1 0 1 0 w
J. H. Burnett	0 0 0 0 w
J. A. Lambert	1 1 1 1 1 1 1 1 1 1 1 1 1 0 0—13
P. D. Weeks	0 1 1 0 0 0 w
P. D. Linville	1 1 0 0 1 1 0 1 0 1 0 w
F. Maskey	1 1 1 0 1 0 0 0 w
F. Taylor	1 0 1 0 1 1 1 1 1 1 0 1 1 1 1—12

Tucker and Lambert divided first and second money, Robiuson and Taylor shooting off ties of twelve at four birds for tbird mouey, which was won by Robiuson. A three-bird match, twenty one yards rise, plunge-traps, followed, which resulted in tbe annexed score:

Silsby	1 1 0—2
Linville	1 1 0—2
Burnett	1 1 0—2
Robinson	1 1 1—3
Hansen	1 1 1—3
Spencer	1 1 1—3
Golcher	1 1 1—3
Locan	1 0 0—1
Gillette	1 1 1—3
Roche	1 0 0—1
Rencotter	1 1 1—3
Pierson	1 0 —1
Knowles	0 —0
Maskey	1 1 1—3
Lambert	0 —0
Weeks	0 —0
Brodan	1 0 —1
Precht	1 0 —1

Ties on clean scores were shot off, Robinson and Hansen again tying and dividing first aud second money, Gillette taking third money.

Shooting at Birds Point.

Last Saturday at Birds Point a number of interesting matches were sbot, the first heing hetween Nick Williams and M. Hopkins, tweuty-five birds, thirty yards rise, Hurlingham rules. Excellent sbooting was done by the contestants at tbe long range, as the annexed score will show:

Hopkins	1 1 1 1 1 1 0 0 0 1 1 1 1 1 1 1 0 0 1 1 1 0 1—19
Williams	1 1 1 1 1 1 1 1 1 1 1 1 1 1 1 0 0 1 1 1 1 1 1—23

On the conclusiou of the above match, Al. Havens and Heushaw on the one side and Nick Williams and Tuttle on the other shot at twelve birds, thirty yards rise, Hurlingham rules, in which the score made was as follows:

Havens	1 1 0 0 0 0 0 1 1 1 0 1— 6
Henshaw	0 0 1 1 1 0 1 1 1 1 1 1— 9
Tuttle	1 1 1 1 0 0 0 1 1 1 1 1— 9
Williams	1 1 1 1 1 1 0 1 1 1 1 1—11

Another match betweeu the same parties at three pairs of double birds was shot, which was won by Tuttle and Williams hy the following score:

Havens	1 1 0 0 1 1—4
Henshaw	1 0 1 0 0 0—2
Tuttle	1 0 1 0 1 0—3
Williams	1 0 1 1 0 0—3

The match between Crittenden Rohinson and Lamhert is the topic of couversation among shooting men. Robinson seems to be the favorite, aud cousiderable money is beiug staked upon him. The deposit ou the stakes will be iucreased to-morrow by putting up $200, or forfeit of the $50 already staked. The remainder will he forthcoming ou tbe day of the sboot, which is set down for the first Sunday in April. Tbe match will be sbot under Hurliugham rules at the San Bruno gronnds.

Al Joues did some good shooting at the race track Sunday. A match had been arranged betweeu him and Johnny Behan to shoot at five birds each, twenty-five yards rise, but Behan beiug abseut iu Tucson, Joues concluded to shoot the match alone. He first shot for Behan, makiug a clean score, and tben for himself, with the same result, making the match a tie.—*Tombstone (Arizona) Epitaph.*

The Sportsmen's club of Alameda has appointed a committee to wait upon Sheriff McCleverty with a view of obtaining tbe appoiutment of a member to act as Deputy Sheriff iu order that be may be empowered to arrest violators of the game laws. All shooting matches will be held at Oaklaud Trotting Park.

Sauta Ana is soou to have a regularly organized sportsmen's club. Nine persons have signed the roll. The club already have a monarch glass-ball trap, and the members practice shooting ou Saturday afteruoon near the railroad depot.

The Mouterey Trap and Gun Club have disbanded and donated the funds in the treasury, $15 95, to the city trustees for the benefit of the street fund.

THE RIFLE.

Handicap Match.

Last Sunday the handicap match between Lieut. H. J. Mangels and Chas. Sheurer came off at Shell Mound range. Mangels was to allow Sheurer four points in tweuty shots in the 200-yard target. The sky was cloudy but the light was very good and at the time of the shooting the wind was steady. The following are the scores:

Lieut. H. J. Mangels	4 4 4 4 3 4 4 4 4 4—39	
	4 4 4 4 4 4 4 4 4 5—41	
Total		80
Chas. Sheurer	4 4 3 4 0 4 3 4 5 0—31	
	4 3 4 3 4 4 3 4 0 4—33	
Handicap		4
Total		68

As seen by the above Mangels was the winner of purse and match by twelve points. Wbeu this was finished auother string of teu shots was fired and Mangles again allowed Mr. Sheurer three points on the same rauge with these results:

Mangels	4 3 4 5 4 5 4 4 5 4—42
Sheurer	3 5 3 4 4 2 3 4 4 5—37

The three points given Mr. S. made him 40 points against Mangels' 42.

Overmatched.

The Los Angeles Rifle team visited San Bernardino last Tuesday for the purpose of gettiug satisfaction for their defeat on the 22d ult., hut were again defeated. From the improved scores it is evident that both teams have been taking some healthful practice. The scores made were as follows:

LOS ANGELES SCORE.		SAN BERNARDINO SCORE.	
W. A. Fink	42	T. Carter	42
F. Holbrook	42	O. Carson	45
G. W. Williamson	42	G. Craig	38
R. W. Prideham	41	Dr. Dickey	39
B. Strauss	42	Geo. Miller	41
G. H. Wilson	37	E. H. Morse	39
R. Dowd	39	T. McFarlane	40
Chas. Vincent	39	B. Souther	45
J. Smith	42	N. M. Strong	41
J. Lockwood	40	G. Yager	42
Total	406	Total	413

C and G's Monthly Shoot.

March 11th, Companies C and G, First Inft. Reg., N. G. C., held their monthly shoot at Shell Mound Range. All day the sky was cloudy and dark but the light was good and the atmosphere clear. About noon a strong wiud sprang up from the West and blew steady the remainder of the day, obliging those who shot on the 500-yard target to set their windgauge over as far as it would go in order to offset the force of the wind. The attendance was small, far smaller than it should have been considering the number of members on the rolls of the companies. In all probability it will not be long before medals and badges will be offered to the best marksmeu of the several classes as au inducement for them to perfect themselves in the use of the rifle. Such a movement would have good results, as many of the boys would practice if there was a reward in the prospective who would not waste ammuuition for bare honors. The scores made were very good. The first class shot at 200 yards and 500 yards:

	200 YARDS.	500 YARDS.	Grand Total.
Cummings	4 4 4 3 4 5 5 4 5 4—43	5 5 5 5 3 5 5 5 5 4—47	90
Sime	4 5 5 5 3 4 4 4 4 4—42	5 5 4 4 5 5 4 4 4 4—44	86
Templeton	3 4 4 4 5 5 4 4 4 4—41	5 3 4 5 5 4 4 5 5 4—44	85
Klein	4 4 4 5 4 4 5 4 5 4—43	4 5 3 3 4 5 4 4 5 5—42	85

Tbe secoud class also shot ou the 200 and 500-yard targets:

	200 YARDS.	500 YARDS.	Grand Total.
Klose	4 4 5 4 4 5 4 4 3 4—41	4 5 3 5 5 3 5 5 5 3—43	84
Brown	4 5 3 4 4 4 5 5 2 5—41	5 3 5 3 2 2 4 4 2 3—33	74
Manning	4 4 3 3 3 4 3 4 4 4—36	3 5 4 3 3 4 4 0 3 4—33	69
Sherman	4 5 4 4 4 4 4 4 4 3—40	5 4 4 0 0 4 0 2 3 4—26	66
Sumner	5 0 4 4 5 4 4 0 3 4—33	0 4 3 3 3 5 5 5 4 3—35	68
Thompson	3 3 4 4 4 4 4 0 4 4—34	3 4 0 4 3 5 3 3 0 4—29	63
Elder	2 2 4 4 4 3 2 2 3 0—26	0 4 3 2 4 2 0 0 0 0—15	41

Tbe recorded scores of the third class are made ou tbe 200-yard target though many practice on the longer rauge:

200 YARDS.			
Palmer	35	English	33
White	33	Davis	29
Ruddock	33		

The fourth class generally shoot over the 100-yard target but on this occasion they shot over the 200-yard range with this result:

Savage	32	Campbell	21

The shooting began early in the forenoon and after tbe practice scores were made the marksmen shot small matches among themselves till late in the afternoon.

ATHLETICS.

Contention vs. Toughnut.

At Tomhstone, Arizoua, last Saturday, the 9th inst., a wrestling match took place between two stalwart Cornish miuers, which is thus reported in the *Epitaph* of the 10th:

The wrestling match at Schieffelin hall last evening, betweu Wm. Johnsou, of the Ceutention miue, aud Peter Schumaker, of the Toughnut, for $100 a side and the gate mouey, was one of the most hotly contested matches that has ever takeu place on the Pacific Coast, if not in the United States, the time consumed being uearly five hours. The exhibition was opened by the selection of James Chatam as referee and Sam McLaren as stake-holder. Shortly after 8 o'clock the contestants appeared in the ring, and, after paying their respects to the large audience in attendance, took their seats and awaited the word to open battle. Johnson was ueatly and tastefully dressed in red pants, blue stockings and brown flannel shirt, while Schumaker was attired in blue pants, white stockings and blue shirt.

The referee announced that the first round would he side holds and the wrestlers came smilingly forward and soon were locked in a deadly embrace, which, however, was soon broken by the Toughnut champion, who threw Johnson heavily to the gronnd, hut as he struck on his side the referee decided that it was not a fall. In the next round Schumaker got in his work early, and in a very pretty and scientific mauer threw Johuson on his hack amidst the cheers of his friends aud backers aud the dismay of the Contention crowd, who were totally unprepared for such a result.

The uext round was in the catch-as-catch-can style, and from the start it was evideut that Johnson would have the best of it, as he showed by every look and movement that he was a thorough master of that particular branch of the business, while Schumaker was very cautious in all his movements and acted upon the defensive throughout. After some preliminary sparring for a hold, Johnson caught the Toughnut favorite around the waist and lifting him bodily threw him with tremendous force to the ground. Schumaker lay as if stuuued, and his attendants rushed to him, picked him up and carried him to his chair, where after a liberal allowance of whisky had been administered and a thorough rubbing down had been done, he came to, and when time was called for the third and final round they stepped into the riug as smiling and chipper as ever.

The third round was in the Græco-Roman style and was the most hotly contested round of the evening, and although Johnson showed his superiority over his antagonist he was unable to throw him on his back. Johnson threw him about tweuty times, hut Schumacker was too quick for him and landed on his kuees or breast every time, where he lay despite the almost superhuman efforts of Johnson to turn him. The friends of the wrestlers were quick to take advantage of any technicality and loud and freqnent were the cries of "foul" when either of the contestants overstepped the rules laid down. Referee Chatam endeavored to fulfill his part of tbe programme to the letter, aud, consideriug the awkward positions he was at times placed in, acquited himself very creditably and to the satisfaction of tbe majority of those present. After wrestling for over three hours it became evident that Johnson and Schnmaker were too evenly matched, and that no decision could be arrived at; the referee decided the match a draw.

Neither man was satisfied with the result, and another match is probable. A large amonnt of money was staked.

Harriman Last.

C. A. Harriman gave a pedestrian exhibition at Downieville on the evening of the 6th inst. iu which he undertook to run ten miles against five amateurs, who ran two miles each. A track 154 feet in length was constructed iu Armory Hall, and the run was witnessed by quite a gathering of spectators. When the flag fell at the finish Harriman was 308 feet behind. The following is the record of the amateurs:

Noonan, first mile	6:52	13:58
" second "	7:06	
Farley, first mile	9:00	15:00
" second "	6:00	
Brilliant, first mile	7:52	15:02
" second "	7:10	
Orear, first mile	7:10	14:30
" second "	7:20	
Calkins, first mile	7:30	14:30
" second "	7:00	
Grand total, 10 miles		1:13:00

The Olympic Athletic Club will hold a spriug meeting at the Oakland grounds on Decoration Day, for which a large number of entries are promised. Invitations will shortly be issned to the various amateur clubs in this city and vicinity with a view of insuring the complete success of the meeting. All the events will he open, and a special race between Masterson and Haley is uuder consideratiou. Medals will be offered for competition for first and second prizes in each event. It is the intentiou of the club to make the meeting a feature of the season, and au excellent programme is promised. Team contests will also be iucluded, as well a number of long distance bicycle races. The grounds are beiug placed in condition and when the work is complete the outer field as well as the running track will answer all the requirements of a first-class traiuiug and exhibition ground. The field has been plowed, preparatory to leveling, and the buucb grass thoroughly scraped. It is proposed, as soon as the work will have sufficiently progressed, to sow Australian rye seed throughout the space inclosed hy the running track, so that the gronnds will present a much handsomer appearance, aud at the same time he better adapted for base hall or cricket matches, in which the memhers have lately takeu considerable interest. The alterations iu the club rooms will be completed in about two weeks, wben a uumber of minor events will be arrauged.

It is worthy of note that much preliminary practice has been indulged in recently aud local athletes seem to be well disposed for an exciting season. Tbe number of clubs in this city should be a guarantee against any dearth of interesting contests. A few open meetings would do much to dispel the apathy which has for a long time pervaded athletics and bring about a very salutary change.

The interest which formerly characterized athletic eveuts has for some time past been allowed to wane, in consequence of the few interesting field meetings announced. Arrangements have recently been made to iufuse new life into the sport, and it may be safely counted npon that within the next two months athletic circles will be unusually active.

The tie between Brown and Slater in the running high jump at the receut meeting of the Meriou Cricket Club will be decided to-morrow at Oakland. They tied over five feet, three inches.

Tbe Occident Cricket Club contemplates giving an athletic meeting some time iu June. Such events as jumping and throwiug a cricket hall will probably be excluded.

A foot race at Galt between C. T. Gibhons of this city and Charles Stevens of Galt, distance 125 yards, was won by the latter, time given; 11½ secouds.

McIntyre is training at long distances, with a view of eutering when opportunity offers itself.

Haley and Masterson bave done much quiet work recently.

The Langshan.

There has been a dispute goiug ou for several years past iu regard to this fowl, some contending that it is a pure and distiuct breed; others declaring with equal positiveness, that it is only a variety of the Cochin, or other Eastern sort. But it seems to be nearly settled now that the Langshan is a distiuct hreed, and that it will soon be recognized as such in the "Standard of Excelleuce," and be admitted to all future exhibitions thus classed. Langshan chickens feather much earlier than those of all other large Eastern fowls, which renders them hardier, and easier to raise; broods can consequently come out more safely earlier in spring. This is a great advantage to the poulterer, because the early chickens briug twice to thrice the price of later oues, in the market.

An 800-pound elk was killed in Del Norte county one day last week.

THE KENNEL.

The Coming Dog Show.

San Francisco is to have another dog show, the third in the history of this State. The first show held here was in November, 1877, under the management of Messrs. Pond, Andoe and Locke, three theatrical managers, who came to this coast to run a musical festival. The superintendent of the show was a gentleman named Dawkins Appleby, whose experience in such matters was limited to a thorough knowledge of how to arrange and decorate a building. The judges were selected by the exhibitors and questions of friendship had greater weight in determining the choice than did a knowledge of the breed to be judged. As a natural consequence the show was pretty generally condemned and utterly failed of its object, for as the dogs awarded first prizes were not the best of their class in many cases, and in some instances did not actually belong to the class in which they took prizes, no impetus was given to correct breeding, and erroneous ideas were disseminated as to the requisite standard of certain breeds. Spectators were divided into two classes—those who knew and ridiculed the judges, and those who did not know, and therefore accepted the judges' decisions as correct, and consequently added to their ignorance of breeding a mass of false notions. Exhibitors whose dogs worthy of prizes were passed over for inferior animals naturally felt indignant and vowed that dog shows in general and this one in particular were frauds of the worst kind. To add to the general disgust at the show the managers humbugged the public and degraded the business in which they had engaged by advertising a huge rat-killing match, to take place on the last nights of the show. The police were seen and squared, a huge pit was built, rats were advertised for, dogs were matched and all preparations made. This was so direct an invitation to the rough and brutal element to attend the show that decent people stayed away disgusted. At the last moment the managers found that they could not procure rats enough and the match was abandoned. This disgusted the roughs and made all classes a unit in denouncing dog shows. Dog shows received an unmerited condemnation, dog fanciers were classed in the same low category as dog fighters, and no one profited by the show in any way except the three theatrical speculators who ran it, and the proprietor of a paper devoted to the competitive ruffianism of the lower orders and miscalled a sporting paper.

The second dog show was held here in 1881. It was gotten up by gentlemen who were not only lovers of the dog but also good judges of the different breeds. A kennel club was organized and composed of gentlemen worthy of public confidence. They intended to have a dog show if only a dozen dogs competed, and further made up their minds to have fair and intelligent judging. To that end they took upon themselves an unprofitable and unpleasant responsibility and selected all the judges at a club meeting. The names of the judges were given to the public before a single entry was accepted and every one who entered a dog did so well knowing who would have to pass on its merits. This was an honest and proper course to pursue, yet it gave offense to many people who cried that the show was to be run in the interest of a small club. A more groundless charge was never made of any set of gentlemen, for the club had unanimously agreed that no dogs owned by its members should be given prizes. Yet the charge had some effect and many owners of dogs held aloof, refusing to exhibit. They saw their mistake and regretted it before the judging was half over and ere the show closed fully fifty applications were made for permission to enter dogs. These requests were properly denied. There were some few soreheads who claimed that the judges had not shown proper discrimination but no one was heard to allege improper motives. To offset the few complaints heard dozens of gentlemen came forward to testify that their dogs had been awarded prizes by men they did not know and had never spoken to, the best possible proof that no favoritism was shown. There was some little soreness about the award "to the best dog of any class in the show," a prize that should never have been offered. In its place a prize for the most unique dog, or the most unguessable mongrel, might be substituted and give satisfaction, but in the other case the greyhound men who showed a fine class thought they should have had the award, and a similar idea seemed to strike the exhibitors in all the other classes. On the whole the show of 1881 may be classed as a canine success and certainly gave a great stimulus to the purchase and breeding of fine stock. It was enough of a success to inspire the kennel club with the idea of holding another show this year and already the initial steps have been taken to do the work. Clem Dixon has consented again to act as President, Sheriff A. J. Meany of Merced is to be the honorary secretary and a superintendent is yet to be selected. An office will soon be opened for the acceptance of entries and the transaction of all business and in the meantime the kennel editor of the BREEDER AND SPORTSMAN will be pleased to furnish all inquirers with such information about the show as it is in his power to give. The forming of classes and the value of prizes will depend, in a great measure, on the number of dogs entered. It is hoped that country breeders will freely exhibit their dogs. They need have no fear but that they will be as fairly treated as if residents of San Francisco. Any suspicion to the contrary is unjust. It is a suspicion that has often kept country coursing men from entering their dogs with the San Francisco clubs, yet at the last match of the Pacific Coast Coursing Club the dog that carried off first prize was a friendless animal from Sierra county that had not even the advantage of a known pedigree. If the dog fanciers of Oroville, Sacramento, San Jose, or any other part of the State exhibit better dogs than can be found in San Francisco, they will get the prizes and honors. The dogs will be judged on their merits. The gentlemen who have the affair in charge cannot and will not endure the reproach of favoritism, and will see that no cause of offense is given. Should anything happen that savors the least of unfairness the BREEDER AND SPORTSMAN will not hesitate to state the facts plainly, no matter who is hurt, but there is every reason to believe that this admonition is totally unnecessary.

A Canine Joker.

It is considered the correct thing to say that the lower animals, like savage man, have no sense of humor. That may be true of goats and hogs and such, but it is not true of dogs. Mr. Frank Gassaway, better known as Derrick Dodd, has a fine Irish setter, a half brother to Dr. Toland's celebrated dog Whiskey, who is an inveterate practical joker. Flash, as he is called, is allowed the freedom of his master's rooms. The other day Frank was entertaining some lady callers when to show Flash's skill he called out to him: "go fetch my slippers." Flash started off with alacrity and in a few moments returned from an inner room with a tiny satin slipper highly suggestive of opera bouffe and late suppers at Marchand's. Frank casually remarked that the thing had come in a prize package; the ladies tried to look as if they believed him while Flash exposed the knowledge of his sin by first going off into a corner and enjoying a hearty laugh and then crawling in a most contrite way to ask his master's forgiveness. Frank, who is a humorist himself, readily forgave the offense.

THE CALIFORNIA COURSING CLUB.—In another column will be found the advertisement of the California Coursing Club's open meeting, to take place at Merced on March 28th and 29th. The match is open to all dogs in the State with an entrance fee of $5, which sum goes with a sweepstake, and a handsome purse is also added from the funds of the club. This is a young club, but the members are all old coursing men and take a pride in doing things in good style. The club hope to be able to run off at least a thirty-two-dog stake. When this cup has been won three times by one nominator, it becomes his personal property. It was first run for at the fall meeting last year when it was won by J. F. Carroll with Monarch and Paul Jones. It is only competed for at the autumn meetings of the club when only the dogs of members are eligible to enter.

THE DOG SHOW.—A special meeting of the San Francisco Kennel Club was held in the Occidental Hotel last Wednesday. The following officers were elected: President, Clem Dixon; Vice-President, J. W. Shaeffer; Secretary, A. J. Meany of Merced; Treasurer, the Nevada Bank; Superintendent, John Stack; Business Manager, J. L. Levy. It was decided to hold a dog show in Union Hall, commencing on April 27th and closing May 2d. The propriety of holding a poultry show and an exhibition of sportmen's arms was discussed, but was not decided.

THE GOLD CUP.—The magnificent solid gold cup manufactured for the California Coursing Club is on exhibition at the jewelry store of Tucker & Co., on Kearney, corner of Geary. This is the most valuable trophy ever offered in America for competition between dogs. The cup is about ten inches high. The body is richly embossed and engraved and the foot and pedestal are richly ornamented with dead gold figures. On the body of the cup are engraved the figures of a brace of greyhounds in full chase after a hare.

YACHTING.

The New York *Spirit* says: The large fleet of cutters promised last season by some enthusiasts have not been built, and the only real bona fide cutter at present under construction is the 30-tonner that is being built by Messrs. George Lawley & Sons for Mr. Franklin Dexter, and to be called the Mednsa. There are exactly two more, called cutters by courtsey, but which in point of fact are simply keel sloops of about 3½ to 4 beams to their length. All others are in the minds of the builders. The boats of this season are to be schooners or small centerboard sloops with cabins.

The Annie will be the flag ship of the Pacific Yacht Club this season, as Vice-Commodore Phil Caduc will fly his flag from her mast head.

They seem to be building more catamarans in the East. So this type of sailing machines has not gone out of fashion as was predicted.

Some of our rich San Franciscans ought to build a regular English cutter here and try her with the centerboard boats.

The joiners are working on the cabin of Mr. Tevis' yacht. The rigging is being made and the sails have been ordered.

Commodore Macdonough of the Pacific Yacht Club has gone to Europe, and the Aggie will not be out this season.

The Stockton Yacht Club will soon adopt the same signal code as the S. F. Y. C. in all probability.

The Casco is still in winter quarters and no move has been made to put her in commission yet.

No move has yet been made by the clubs towards celebrating the opening of the season.

The great want in the yachting fleet is good men to take care of the yachts.

It is said work will soon go on again on Stone's forty-foot schooner.

The Eastern yacht fleet will be in commission next month.

The Thetis is being put in fine order in Oakland creek.

The Chispa will carry less ballast this season than last.

Farmer will launch his forty-foot schooner very soon.

A good many of the yachts in this bay are for sale.

Capt. White now owns the Fleur de Lis entirely.

FISH.

G. W. Delawder, Fish Commissioner of Maryland, has invented a spawning box. The model consists of a cylinder-shaped apparatus resembling two cheese boxes joined in the center. Over the top a coarse screen is drawn, and the bottom is covered by a fine gauze wire sieve. When used, the instrument is submerged anywhere in water; fine gravel is placed upon the coarse or top wire screen, where fish will deposit their eggs. The deposit, by the natural force of the water's action, is driven through the gravel to the lower sieve, where they are hatched. The contrivance has been frequently tried by Mr. Delawder and found to work admirably. Prof. Baird, United States Fish Commissioner, will exhibit the model in London, England, at the coming International Fisheries Exhibition.

During the last week there has been very good tomcod fishing along the city front especially at the old Meiggs wharf. These fish congregate around the rotton piles and bite quite lively at about 8 o'clock in the morning.

Santa Rosa *Republican:* Certain parties living on Mark West Creek have built fish traps, contrary to law, on said stream, and as a consequence, salmon are not able to run up to the headwaters.

Small trout are being sent into town by hatcheries in Sonoma County, for the purpose of stocking private ponds along the Southern Pacific railroad.

Anglers say that catfish are abundant in the Sacramento river, and biting well. They are in fine condition now, and itching for the pan.

BICYCLING.

The San Francisco Club Takes a Run.

One of those well-attended early runs of the season was called for last Sunday by Captain London of the San Francisco Bicycle Club, in which eighteen wheels were represented. The run extended through the suburbs into adjoining counties along the Southern Pacific railroad. After impatiently waiting for the heavy fog which prevailed to disappear, a start was made from the corner of Fourteenth and Howard streets. The run to Sierra Point was, as it usually is in dry weather, rather dusty in some places. Shortly after leaving the point the riders were intercepted by an individual with an undue share of official bile, which he attempted to work off at the expense of the sportsmen by denying their right to move along the road to their proposed destination. His objections were promptly overruled by the cavalcade, which sped rapidly on its way. In passing San Bruno a round of cheers from the pigeon shooters there assembled was responded to with a wave of hats. After several stops on the road the party reached San Mateo. A light lunch was partaken of, and after wheeling in the vicinity, the bugle was sounded by Mr. Gibson for a remount. Belmont was passed and Redwood City reached at 1 o'clock. The early afternoon train was boarded by the cyclers, on the return trip, thus ending one of the most enjoyable runs which have taken place this year.

On Tuesday, the 27th, a twenty-five-mile road race from this city to Belmont will take place. As an inducement to insure its success, the Knights of Pythias will offer prizes to all of the participants. The event is something novel on this coast, and is to be limited to amateurs. Should it meet with the sanction of the racing board of the League of American Wheelmen, the entries will no doubt be sufficient to warrant a large start, in which case the contest will be interesting, particularly to the picnickers, as the finish is to be at the grounds.

Our wheelmen are becoming somewhat interested in the pleasures of their many admiring friends, and intend having some indoor amusement. A committee of five was appointed at the regular meeting of the San Francisco Bicycle Club, held on last Thursday evening. The undertaking is in good hands, and if it does not prove a social success none can be blamed but the members themselves.

TAGGING SHEEP.—The attention that sheep get when their products are high is thought by many to be labor thrown away when such products are low. This is wrong. The lower the price, the greater the necessity for placing a good article before the market. I have found tagging the sheep at this time of the year a paying operation. I tag all of them. Tags taken in February and March sell for more than half price. Taken after the sheep have been on grass, they won't sell for anything. Taken off now there will be quite an equal clip as if left on, as the sheep will do enough better to add that much to the weight of the wool. Two hands can make light work of it. My plan is to turn a box, or make a platform, about two and a half inches high, and large enough for a sheep to lie on. Lay the sheep on its back, and let one hand hold the hind legs, while the other shears where the manure would collect, and the bags of the ewes, and a little from the belly of the wethers. Ewes with lamb must be handled carefully; and all sheep ought to be. In a full-blood Merino flock I find it sometimes necessary to shear around the eyes of the ewes to enable them to see their lambs. Neglecting this tagging job often leads to serious results. Worms will get on to many of them before shearing time, and in large flocks I have known many lost.

Over one hundred orange trees arrived at Martinez Thursday from Los Angeles for the Cook ranch. They are fine specimens, being from eight to fourteen feet in height.

S. A. Tucker, who has been in this city for about two months, in the interest of an Eastern business house, will probably leave for the East Monday.

BUSINESS NOTICES.

REMINGTON'S DOUBLE GUN.—Of all the different manufacturers in the market there is no better sporting arm than Remington's new model, breech-loading double gun. It has rebounding locks, pistol grip, extension rib patent fore-end, solid head strikers, and is choke-bore. It is claimed to be the cheapest and best gun yet produced, and we do not hesitate to recommend it to sportsmen. For prices, etc., see advertisement.

FASHION STABLES.—This favorite establishment offers every accommodation for the boarding of horses—large stalls, good ventilation, and a well-selected corps of grooms and attendants. The location, 221 Ellis street, is especially desirable for those who desire to reach the Park without driving over cables and car tracks.

McCUE'S CARRIAGE FACTORY—No. 1,317 and 1,319 Market, street, manufactures carriages, buggies, wagons and sulkies. Mr. McCue gives his personal attention to all orders and has established a high reputation for turning out good, reliable work.

Brown's Bronchial Troches for Coughs and Colds: "I cannot very well do without them. There is nothing to be compared with them."—*Rev. O. D. Watkins, Walton, Ind.* Price 25 cents a box.

HARNESS, SADDLES, BLANKETS, ETC.—R. Stone, corner of Battery and Washington streets, imports and manufactures the above articles, and offers to the public a large stock of first-class goods at low prices.

Col. Anson Mills' woven cartridge belt for shot, shells or rifle cartridges is indorsed by sportsmen as being the most durable, pliable and comfortable in use.

THOROUGHBRED POULTRY.—The Big Hedge p[illegible] at San Mateo have for sale a few of all the choic[illegible] of poultry. Send for their price list.

Market Report.

FLOUR—We quote: Best City Extra, $5 25@$6 50; medium grades, $5 50@$5 75; Shipping Superfine, $4 25@$5.

WHEAT—Market is inclined to be dull and inactive. The range is $2@$2 05 for good to choice quantities. Neither shippers nor millers are buying very extensively. There has not been so dull a time in this grain since the 20th of last month.

BARLEY—In this grain the market has a healthy and strong appearance. For No. 1 Feed, $1 40 is the general figure. Brewing of the best qualities is held at $1 47@$1 50. Recent sales No. 1 Feed, April, $1 38@$1 38¾; May, $1 38@$1 38¾.

OATS—Fair Feed, $1 75@$1 80; Good, $1 85@$1 90; Choice,$1 90@$2 ₱ ctl.

RYE—Quotable at $1 75@$2 for fair to good.

FEED—Ground Barley, $31 ₱ ton; Cracked Corn, $36@$37 ₱ ton; Shorts, $18@$19 ₱ ton; Oilcake meal the oilworks sell to the trade at $35 ₱ ton, less the usual discount; Middlings, $24@$25 ₱ ton for lots at the mill.

HAY—Alfalfa, $16@$18; Wheat, $21 50@$21; Wild Oat, $18@$20; Mixed, $18@$19 ₱ ton.

STRAW—90@$1 per bale.

PROVISIONS—Eastern Hams, 16½@16¾c; CaliforniaHams, 15@15½c for plain, 15½@16c for sugar-cured canvased; Eastern Breakfast Bacon, 15@15½c; California Smoked Bacon 14@14½c for heavy and medium, and 15@15½c for light and extra light; Clear Sides,14½@14¾c; Pork, $18@$18 50 for Extra Prime, $20@$20 60 for Prime Mess, $23@24 for Mess, $25@$25 50 for clear and $25@26 50 for extra Clear; Pigs' Feet, $16@$18 ₱ bbl; Mess beef, $15 50 for bbls and $8 75 for hf bbls; Extra Mess Beef, $16 50 for bbls and $8 75 for hf bls; Family Beef, $18@18 50 ₱ bbl; California Smoked Beef, 13@13½c ₱ lb.

FRUIT—We quote: Apples, 25c@40c for common and 75c@$1 60 ₱ box for good to choice; Lemons, $5@$6 per box for Sicily; California Lemons, $1 75@$2 25 per box; Limes, $15@$13 per box for Mexican; Bananas, 1 50@$3 ₱ bunch; California Oranges, $1 15@$2 for common and $2 25@3 for good to choice ₱ box; Panama do, $27 50@30 per 100; Pineapples, $6@$3 ₱ doz. Western Cranberries are offering at $15@$17 ₱ bbl.

STALLIONS.

THOROUGHBRED STALLION

X X,

BY MALCOLM, HIS DAM COLUMBIA, WILL MAKE THE ENsuing season at the Oakland Trotting Park. Terms, $25 the season.

X X (Doublecross) is of as high and fashionable breeding as any stallion in the country. His sire, Malcolm, is by imported Bonnie Scotland, his dam, Columbia, also by imported Bonnie Scotland, hence his name. Malcolm was one of the best racehorses of his day, and Columbia was also a fine race mare. For extension of Columbia's pedigree see advertisement of Anteeo. Her dam, Young Fashion, was the dam of Surprise, Scotland, Wauanita, Bonnie Kate (the dam of Bonnie Lizzie), Audes, Hock Hocking, Three Cheers, etc. The dam of Malcolm, Lady Lancaster, was the dam of Sagamore, Ontario (the dam of McWhirter), Regent, Lady Fairfield, Lady Amanda, Lady Middleton. etc., and a reference to the racing calendars will show how distinguished the members of these two families are. This is the only Bonnie Scotland stallion in California, and from his inbreeding has as much of the blood as if he were a son of that renowned sire. He is a horse of immense substance, good size, high form, and of the best disposition.

JOS. CAIRN SIMPSON, Oakland,
or 508 Montgomery street.

ANTEEO.

DARK BAY COLT, NEAR HIND FOOT WHITE; FOALED MAY 5th, 1879; bred by Joseph Cairn Simpson, Oakland, California.

BY ELECTIONEER.

1st dam—Columbine, by A. W. Richmond.
2nd " Columbia, by imported Bonnie Scotland.
3rd " Young Fashion, by imported Monarch.
4th " Fashion, by imported Trustee.
5th " Bonnets o' Blue, by Sir Charles.
6th " Reality, by Sir Archy.
7th dam—By imported Medley.
8th " By imported Centinel.
9th " By Mark Anthony.
10th " By imported Janus.
11th " By imported Monkey.
12th " By imported Silvereye.
13th " By Spanker.

See Bruce's American Stud Book, vol. 1, p. 307, and vol. 3, p. 79.

Will make the ensuing season, 1883, from February 15th to June 15th, at the Oakland Trotting Park. Terms $50 the season.

JOSEPH CAIRN SIMPSON,
Oakland or 508 Montgomery street, San Francisco.

Mares intended for either of the above stallions, and sent by Donahue, Petaluma, Sacramento or Stockton boats consigned to J. W. Morshead, City Front Stables, will be received, good care taken of them and forwarded to Oakland.

STALLIONS.

The Fast Trotting Premium Stallion

ALEXANDER

WILL STAND THE PRESENT SEASON AS FOLLOWS: MONdays, Tuesdays and Wednesdays at Clark's stables, Santa Rosa. Balance of time at Fashion stables, Petaluma.

Alexander is by Geo. M. Patchen Jr., the sire of Sam Purdy (2:20½) Starr King (2:22) and Vanderlynn (2:22). Dam Lady Creiin, by a son of Brown's Bellfounder, by imported Bellfounder. For full description see BREEDER AND SPORTSMAN of Sept. 9, 1882.

Of Alexander's get Tommy Dodd has a record of 2:24, Reliance 2:22¼, Nellie Patchen 2:27¼, Eudora 2:34½, Inauguration three miles in 7:29—last mile in 2:26, Sonoma Boy 2:37. Alex. Button proved by his performance in 1880 to be one of the best three-year-olds which have ever appeared in any country. He won the stake for three-year-olds at the State fair, beating Belle Echo, Annie Laurie, Len Rose and others, winning the first, third and fifth heats and making a dead heat with Annie Laurie in the fourth; time, 2:34½, 2:30, 2:29, 2:30¾, 2:35. At the fair of the Santa Clara Valley Association at San Jose he won, beating Belle Echo and Len Rose; time, 2:28¾, 2:30¼, 2:33¾, 2:31¾. Belle Echo won the first heat. He won at Stockton, beating Honesty, Len Rose and Upright in straight heats; time, 2:32, 2:33½, 2:32½. In 1881, as a four-year-old, Button mdaea record of 2:26¾ over the Santa Rosa track. Dot Craig, by Alexander, has a private record of 2:29.

The Frasier team took first premium at the Sonoma and Marin District fair; also at Oakland for best carriage team.

Mares left at the City Front stables, San Francisco, will be forwarded. For further informatian apply to

T. T. UNKLESS, Petaluma.

THE CELEBRATED TROTTING STALLION

ERWIN DAVIS

WILL MAKE THE SEASON OF 1883 AT OAKLAND TROTTING park.

DESCRIPTION.

Erwin Davis is a beautiful mahogany bay with very black points and one hind foot white; 15 hands high; of superior good disposition and fine trotting action.

PEDIGREE.

Erwin Davis was sired by Kentucky Hunter (Skenandoah) by broken-legged Kentucky Hunter (the sire of Flora Temple) by Ferguson's Kentucky Hunter, by old Kentucky Hunter, by Highlander. Erwin's dam was Lost Diamond, by Vermont Hambletonian.

TERMS.

Twenty-five dollars for the season, payable at the time of service. Good pasturage at $5 per month. No responsibility for accidents or escapes. For particulars apply to

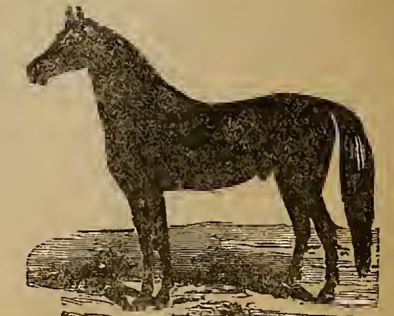
JOHN ROGERS,
Oakland Trotting Park.

THAD STEVENS.

THIS THOROUGHBRED HORSE WILL BE AT AGRICULTURAL Park, Sacramento, for the season commencing Feb. 1 and ending the 1st of July next. Good pasturage for mares will be provided at $3 per month. For terms and particulars apply to or address

W. M. MURRY, Agent,
Sacramento Racetrack.

TROTTING STALLION



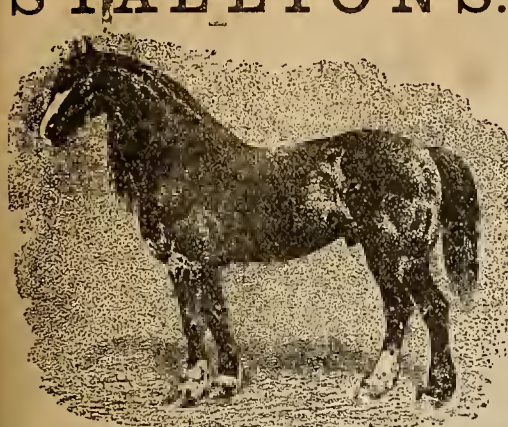
Eugene Casserly.

SIRE OF SWEETBRIAR, 2:26¼; NAPA QUEEN, 2:38¼; ROCKwell, 2:39; Bill Woodward, 2:40; Smoothbriar, two-year-old record 2:57; May Day, two-year-old record 2:59¼. Will make the season of 1883 at Oakland on Thursdays, Fridays and Saturdays and at Walnut Creek Sundays, Mondays, Tuesdays and Wednesdays. He was sired by General Taylor, dam Jennie by Lexington. Terms $30 for the season. Good pasturage at reasonable rates. No responsibility for accidents or escapes. Address

THOMAS S. BREMNER.
Seventeenth street and Telegraph Ave.,
Or J. M. Heinold, 1426 San Pablo Avenue, Oakland.

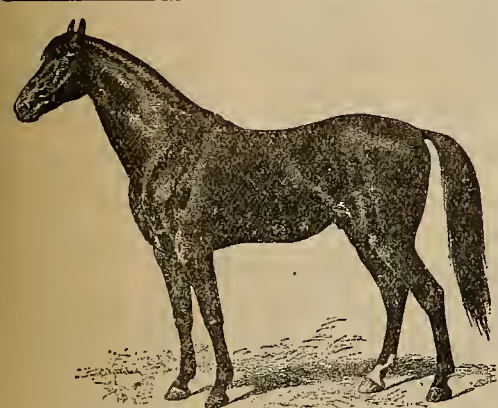
STALLIONS.

STALLIONS.



OWNERS OF STALLIONS, DESIRING TO PLACE THE MERITS of their stock horses before the breeding public should advertise in the BREEDER AND SPORTSMAN. The fee from one mare will pay the cost of a reasonable advertisement.
Stallion bills printed in first-class style. Call at this office and see samples.

NO. 508 MONTGOMERY ST.



MAMBRINO WILKES.

Black Stallion, sixteen hands in height, by George Wilkes, son of Rysdyk's Hambletonian, bred by B. J. Treacy of Fayette County, Kentucky. Dam Lady Christman by Todhunter's Mambrino or Idol, son of Mambrino Chief. Second dam by Pilot Jr. Third dam by Kentucky Whip. Idol's dam was thoroughbred and was by American Eclipse.

THIS IS THE LARGEST AND ONE OF THE BEST COLTS OF George Wilkes (weighing at this date 1,260 pounds) combining the Hambletonian and Mambrino strains and also several thoroughbred crosses. His colts demonstrate that he possesses in an eminent degree the same faculty of transmitting the family qualities to his offspring which put George Wilkes in the front rank as a sire of trotters.

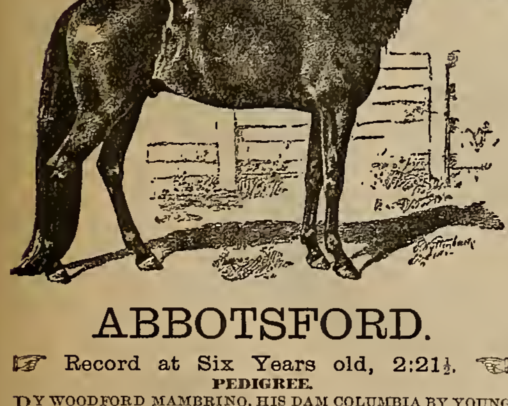
☞ George Wilkes has twenty representatives in the 2:30 list, of which 10 have records of 2:25 or better, 4 of 2:20 or better and 3 of 2:18 or better.

Will make the ensuing season, beginning February 1st, 1883, at STOCKTON.

In putting the price by the season at the low figure of $40 the owner does not acknowledge, thereby, any inferiority on the part of this horse to any other sire of Trotters.

IRVIN AYRES.

MAMBRINO TROTTING STALLION



ABBOTSFORD.

☞ Record at Six Years old, 2:21½. ☜

PEDIGREE.

BY WOODFORD MAMBRINO, HIS DAM COLUMBIA BY YOUNG Columbus. Woodford Mambrino by Mambrino Chief, his dam Woodbine by Woodford, a thoroughbred son of Kosciusko.

Woodford Mambrino is recognized to be the best son of Mambrino Chief. His own record is 2:21½, and there are a large number of his get in the 2:30 list. Among them: Abbottsford, 2:21½; Convoy, 2:22½; Magenta, 2:24½; Lady McFatridge, 2:29; Dacia, 2:20½; George A. Ayer, 2:30.

Besides those having public records, he is the sire of the two celebrated mares owned by Robert Bonner—Manetta and Malice. Manetta, with a running mate, and harnessed to a road wagon, trotted two miles in 4:27½, and Malice trotted a trial, on the same track, a mile in 2:19½. Woodford Mambrino is also the sire of Princeps, the sire of Trinket; record, 2:14. Woodbine is also the dam of Wedgewood, record, 2:19. Young Columbus, the sire of the dam of Abbottsford, has nine of his get in the 2:30 list, so that on both sides of the house there are notable performers. Abbotsford is a rich rosewood brown, 15¾ hands, and of very high form. His get are very promising, his daughter Jasmine having won the Embryo Stake for yearlings in 1881, and every one which has been put in training has shown good speed.

TERMS.

Seventy-five dollars the season, to be paid before removing the animal. Mares not proving in foal can be returned the following season free of charge. Good pasturage at reasonable rates, and extra pains taken, but no liability for accidents or escapes.

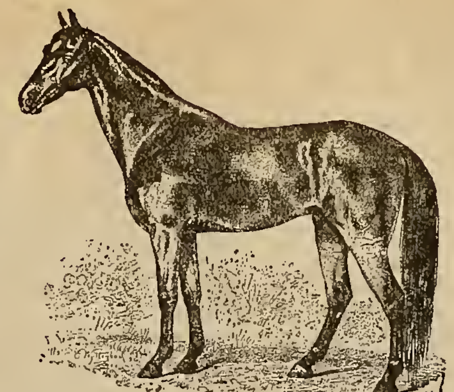
LOCATION.

Abbotsford will make the ensuing season, 1883, on the ranch of S. B. Whipple, Esq., San Mateo, season commencing February 15th and ending June 1st, 1883. For full history see the issue of BREEDER AND SPORTSMAN of August 5th, 1882.

GEORGE BAYLIS, Agent, San Mateo, Cal.

STALLIONS.

HAMBLETONIAN TROTTING STALLION



BOB MASON

By Echo. His dam Belle Mason by Belmont. Thoroughbred.

Echo by Rysdyk's Hambletonian, his dam Fanny Felter by Magnolia (by American Star). Belle Mason by Belmont (Williamson's); First dam Lucy Johnson by the Pony (son of Imported Leviathan); second dam Catalpa, by Frank; third dam by John Richards.

WILL MAKE THE ENSUING SEASON, LIMITED TO TWENTY mares, commencing February 15, 1883, and ending June 15, 1883, at the stables of his owner, Figueroa street, Los Angeles.

DESCRIPTION.

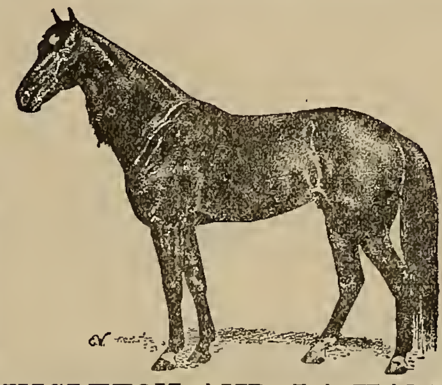
Bob Mason is a mahogany bay, with inside of off hind ankle white and star in forehead; sixteen hands, and weighs 1,100 pounds. Foaled May 10, 1879. He is of fine, kindly disposition, a natural trotter, and has shown great speed, but as yet has no public record. For full history of his sire, Echo, see BREEDER AND SPORTSMAN July 29, 1882. See also, for his full brother, Exile, BREEDER AND SPORTSMAN, issue of September 16, 1882.

TERMS.

One hundred dollars the season, payable at time of service. All mares at risk of owners. Mares not proving in foal can be returned the following season free of charge. Address

CHARLES J. ELLIS,
Post office box 55, Los Angeles, Cal.

THE TROTTING STALLIONS



SINGLETON AND LA HARPE.

SINGLETON WILL MAKE THE COMING SEASON, FROM Mach 1st to July 15th, 1883, at the farm of the owner, three miles north of Chico, Butte Co., Cal.

PEDIGREE.

Singleton is by Willie Schepper, a son of Rysdyk's Hambletonian, his dam Lightfoot (the dam of Pride) by Flaxtail, a son of Pruden's Blue Bull.

DESCRIPTION.

Singleton is a dark brown horse, tan flanks and muzzle, a little touch of white on hind feet and one fore foot, and star in forehead. He is 15¾ hands high and weighs 1,100 pounds. He was bred by Dr. M. W. Hicks, foaled spring of 1878.

TERMS.

Fifty dollars the season. Mares not proving in foal will be bred the following season free of charge. Mares from a distance will be pastured without charge during the season. Mares shipped to Chico, consigned to me, will be received on arrival of train, and taken to the ranch. Mares kept in any manner their owners desire, at reasonable rates. There is every convenience on the place, boxes, paddocks and plenty of shade and water.

LA HARPE

Will also make a short season at the above place on private terms. La Harpe is by Fame, a son of Alexander's Belmont, his dam Prairie Bird by Flaxtail, the dam of Flight and Prompter. Address

J. T. McINTOSH, Chico, Cal.

STEINWAY.

TWO-YEAR-OLD RECORD 2:31¾; 3-YEAR-OLD RECORD 2:25¾.

TERMS

WILL SERVE MARES THE PRESENT SEASON AND ENDING July 1, 1883, at the stock farm of the late Daniel Cook, Danville, Contra Costa county, Cal., at $100 for the season, payable before the animal is removed. Mares not proving with foal can be returned free the next season. Pasturage at $6 per month, and extra pains taken with mares in attendance, but no liability for accidents or escapes. Mares sent in care of of McCleverty & Noblett, Fashion stable, Oakland, S. J. Bennett, Martinez, or D. S. Smalley, Haywards, will be forwarded immediately to the farm.

DESCRIPTION.

He is a rich bay; 15¾ hands high; long, flowing mane and tail; two white hind ankles; remarkable style and lofty carriage; has a good, resolute head, set on a stout neck; his shoulders are of the Hambletonian form—do not mount very high at the withers; has great length and capacious middle piece; plenty of bone and substance, and his gait is big and square.

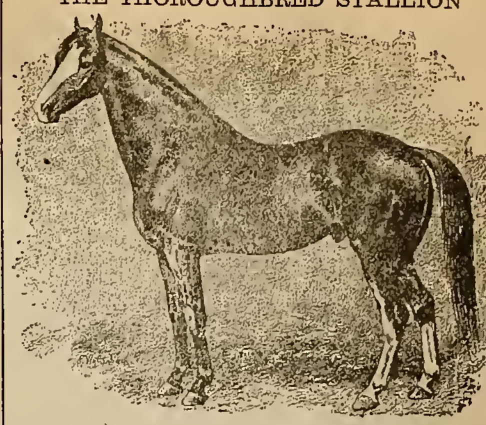
PEDIGREE.

Steinway was sired by Strathmore.
First dam Abbess by Albion, the sire of Vanity Fair, with record of 2:24.
Second dam by Marshal Ney, by imported Emancipation.
Third dam by Bertrand, by Sir Archy.
Steinway's dam is the dam of Solo with five-year-old record 2:28¼, and also the dam of W. S. Buckner's colt Currency that trotted as a yearling last fall in 2:46. See N. Y. "Spirit of the Times of November 18, 1882. Strathmore is the sire of Santa Claus 2:17½; Chestnut Hill, 2:22½; Steinway, 2:25¾; Alice Stoner, four years old, 2:24; Nannie Talbot, four years old, 2:29; Solo, five years old, 2:28¼; Monitor, five-year-old record 2:29; by Rysdyk's Hambletonian, the sire of 35 in the 2:30 list. Address

SAMUEL GAMBLE,
Danville, Contra Costa Co., Cal.

STALLIONS.

THE THOROUGHBRED STALLION



JOE HOOKER,

BY MONDAY.

First Dam Mayflower, by imported Eclipse.
Second dam Hennie Farrow, by imported Shamrock.
Third dam Ida, by Imported Belshazzar.
Fourth dam Gamma's dam, by Sir Richard.
Fifth dam by imported Eagle.
Sixth dam Bet Bosley, by Wilkes' Wonder.
Seventh dam by Chanticleer.
Eighth dam by imported Stirling.
Ninth dam by Clodius.
Tenth dam by imported Silver Eye.
Eleventh dam by imported Jolly Roger.
Twelfth dam by Partner.
Thirteenth dam by imported Monkey.
Fourteenth dam imported mare from the stud of Harrison of Brandon.

TERMS—$50 THE SEASON, TO A FEW MARES OF APPROVED breeding. Good pasturage for mares from a distance at $4 per month. Care will be taken to avoid accidents and escapes, but the owner must take the risks.

My place, where Joe Hooker will make the coming season, is five miles from Sacramento on the Freeport road.

This young stallion has proved to be one of the most successful racing sires, and every one of his colts that has been trained can run fast. Among them are Fred Collier and Jim Renwick. For history of Joe Hooker see BREEDER AND SPORTSMAN Jan 20, 1883.

THEO WINTERS, Sacramento, Cal.

THE THOROUGHBRED STALLION

WILDIDLE.

BY AUSTRALIAN.

DAM IDLEWILD BY LEXINGTON.

THIS GREAT RACEHORSE AND SUCCESSFUL SIRE WILL make the season 1883, from Feb. 15th to June 15th, at Judson's Wildidle farm, Santa Clara. For terms and particulars apply to or address

Thoroughbred Colt for Sale.

CITO. CHESTNUT COLT, FOALED APRIL 5, 1882. By Joe Hooker, his dam Too Soon by Norfolk, grandam Lady Davis (dam of Dashaway) by Red Bill, son of Medoc, etc. This is a highly-formed colt, of good size and a hearty feeder. Belug nearly a brother in blood to Fred Collier (Lady Davis being the great Grandam of Fred, and his dam also being by Norfolk) and the Joe Hookers so far as tried all racehorses, this is a good chance to get a colt of great promise for a moderate sum. He has four white legs above knees and hocks, a white face and other white markings. Price $500 if applied for before the 20th of March. For further particnlars address this office.

FOR SALE.

AVERY FINE HAMBLETOnian stallion, imported from Syracuse, N. Y.; nine years old; mahogany bay; sixteen hands high; perfectly sound; well broken; very stylish; cost over $1,500; property of a banker; full papers; got by Hambletonian Prince, he by Volunteer. Can be seen at Club Stables.

[From the Jewelers' Circular.]

"The Centennial chronograph (fly-back) or horse-timer, recently introduced by Messrs. Cross & Beguelin, is, regardless of price, one of the most substantial and accurate pieces of timing mechanism we have seen. This timer is constructed on scientific mechanical principles that must excite the admiration of every intelligent watchmaker, and it will doubtless become universally popular."

TICKET OFFICES.—Passenger Depot, Townsend street, and No. 2 New Montgomery street, Palace Hotel.
A. C. BASSETT, H. R. JUDAH,
Superintendent. Asst. Pass. & Tkt. Agt.

☞ S. P. Atlantic Express Train via Los Angeles, Yuma, etc., leaves San Francisco daily via Oakland ferry, foot of Market street, at 9:30 A. M.

TO

Sportsm n & Pleasure-Seekers,

THE

SOUTHERN PACIFIC R R. CO,

RESPECTFULLY CALLS ATTENTION TO THE

SUPERIOR FACILITIES

AFFORDED BY THEIR LINE FOR REACHING with speed and comfort the best places in the State for

Sea Bathing, Shooting and Fishing.

TRAINS LEAVE SAN FRANCISCO DAILY FOR

MONTEREY,

THE MOST CHARMING

Summer and Winter Resort of the Pacific Coast,

with its beautiful Groves and delightful Drives. Front in abundance can be obtained from the several streams in the vicinity of Monterey, and the best shooting may be had in season.

THE BAY OF MONTEREY

Is noted for the extent and variety of fish which abound in its waters, notably Salmon, Rock Cod, Barracuda, Pompino, Spanish Mackerel, and Flounder. The above-mentioned attractions, in connection with the low rates of fare, rapid transit, and the superior accommodations furnished at the "HOTEL DEL MONTE," have made Monterey a paradise for sportsmen.

THE BATHING ESTABLISHMENT

OF THE

"HOTEL DEL MONTE,"

IS UNSURPASSED.

A SPACIOUS SWIMMING TANK

(150 x 50 feet)

FOR WARM SALT WATER, PLUNGE AND SWIMMING BATHS.

ELEGANT ROOMS

For Individnal Baths with DOUCHE and SHOWER facilities.

MAGNIFICENT BEACH

Of pure white sand for SURF BATHING, Etc., Etc.

THE FAVORITE ROUTE to those well-known Watering Places,

APTOS, SOQUEL AND SANTA CRUZ,

IS VIA THE

Southern Pacific Railroad,

(Broad Gauge), and the

SANTA CRUZ RAILROAD.

☞ At PAJARO, the SANTA CRUZ R. R. connects daily with Trains of the S. P. R. R.

The S. P. R. R. runs through the counties of San Mateo, Santa Clara, San Benito, Santa Cruz and Monterey, in each of which game abounds in great variety. Notably

Quail, Pigeon, Snipe, Duck, Geese, Deer and Bear.

Lakes PILARCITOS and SAN ANDREAS are reached by this line. Stages connect with trains daily at San Mateo for those well-known Retreats, PURISSIMA, SAN GREGORIO and PESCADERO. We would particularly call attention to the unlimited extent of range at and about SAN BRUNO and McMAHON'S for RIFLE PRACTICE.

These resorts are but a short distance from San Francisco and offer special inducements to the lovers of this manly sport.

SPECIAL NOTICE.

Sportsmen and others presenting Passage Tickets o any description issned by this Company will be entitled to

FREE TRANSPORTATION OF THEIR DOGS

when carried in Baggage Cars and put in charge of Train Baggagemen. Train Baggagemen are instructed to issue CHECKS for all doga received in Baggage Cars.

☞ In order to guard against accidents to Dogs while in transit, it is necessary that they be provided with COLLAR AND CHAIN. Gnns and Fishing Tackle checked and carried free of charge. Guns taken apart and securely packed in wood or leather cases may be taken in Passenger Cars.

TICKET OFFICES.—Passenger Depot, Townsend street, and No. 2 New Montgomery street, Palace Hotel.
A. C. BASSETT, H. R. JUDAH,
Superintendent Asst. Pass. and Tkt Agt,

☞ S. P. Atlantic Express Train via Los Angeles Yuma, etc., leaves San Francisco daily via Oakland Ferry, foot of Market Street at 9:30 A. M.

I CURE FITS!

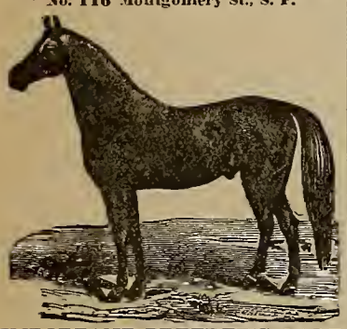
When I say cure I do not mean merely to stop them for a time and then have them return again. I mean a radical cure. I have made the disease of FITS, EPILEPSY or FALLING SICKNESS a life-long study. I warrant my remedy to cure the worst cases. Because others have failed is no reason for not now receiving a cure. Send at once for a treatise and a Free Bottle of my infallible remedy. Give Express and Post Office. It costs you nothing for a trial, and I will cure you. Address Dr. H. G. ROOT, 183 Pearl St., New York.

CONSUMPTION.

I have a positive remedy for the above disease; by its use thousands of cases of the worst kind and of long standing have been cured. Indeed, so strong is my faith in its efficacy, that I will send TWO BOTTLES FREE, together with a VALUABLE TREATISE on this disease, to any sufferer. Give Express & P. O. address. DR. T. A. SLOCUM, 181 Pearl St., N. Y.

KILLIP & CO.,

LIVE STOCK & GENERAL AUCTIONEERS
No. 116 Montgomery St., S. F.



IMPORTANT BREEDER'S SALE

BY DIRECTION OF L. J. ROSE, ESQ., OF SAN Gabriel, Los Angeles county, we will offer at public sale at the

BAY DISTRICT TRACK

AT 11 P. M. ON

THURSDAY, APRIL 5TH.

Twelve head of fillies and geldings, two and three years old, sired by the well-known stallions

SULTAN AND DEL SUR.

The young horses to be offered are closely related in blood to the famous mares Sweetheart and Eva, and their style of going and breeding warrant the belief that they will develop into trotters. They are broken and will be driven to harness the day of sale, that buyers may have an opportunity of judging of their merits. Though handled but a few months, they can trot as fast as many road horses. Mr. Rose's instructions are positive and peremptory, as the expense of transportation makes this absolutely necessary.

The sale will be bona fide, without limit or reserve and will determine whether a market can be had in California for fine-bred colts or owners will be compelled to ship East.

The colts may be seen at the track on Tuesday, April 3d. Full pedigrees and description day of sale.

KILLIP & CO., Auctioneers.

Two-Year-Old Trotting Stake for 1883

for 1883

A TROTTING STAKE FOR COLTS AND FILLIES (foals of 1881), to be trotted at the California State fair of 1883; $50 entrance, of which $25 must accompany nomination, and the remaining $25 to be paid August 1, 1883; $500 to be added by the society.

Conditions.

The above stake to be mile heats, in harness, and to rules of National Trotting Association. Entrance money to be divided as follows: Fifty per cent of stakes to first colt, 25 per cent to second, 15 per cent to third and 10 per cent to fourth. Five to fill.

The $500 added money to be divided as follows: One hundred dollars each to winners of money and $100 to the stallion whose get wins first money, if the stallion is owned in California. Entries close April 7, 1883, with the Secretary. A colt winning by a walk-over is entitled to all the stakes but none of the added money; a colt distancing the field is entitled to first money and all the stakes.

P. A. FINIGAN, President.

EDWIN F. SMITH, Secretary.
Sacramento, March 12, 1883.

P. S.—This is the same stake that was advertised to close, March 15, 1883, but was withdrawn on account of an error. The time for closing has been extended to April 7, 1883.

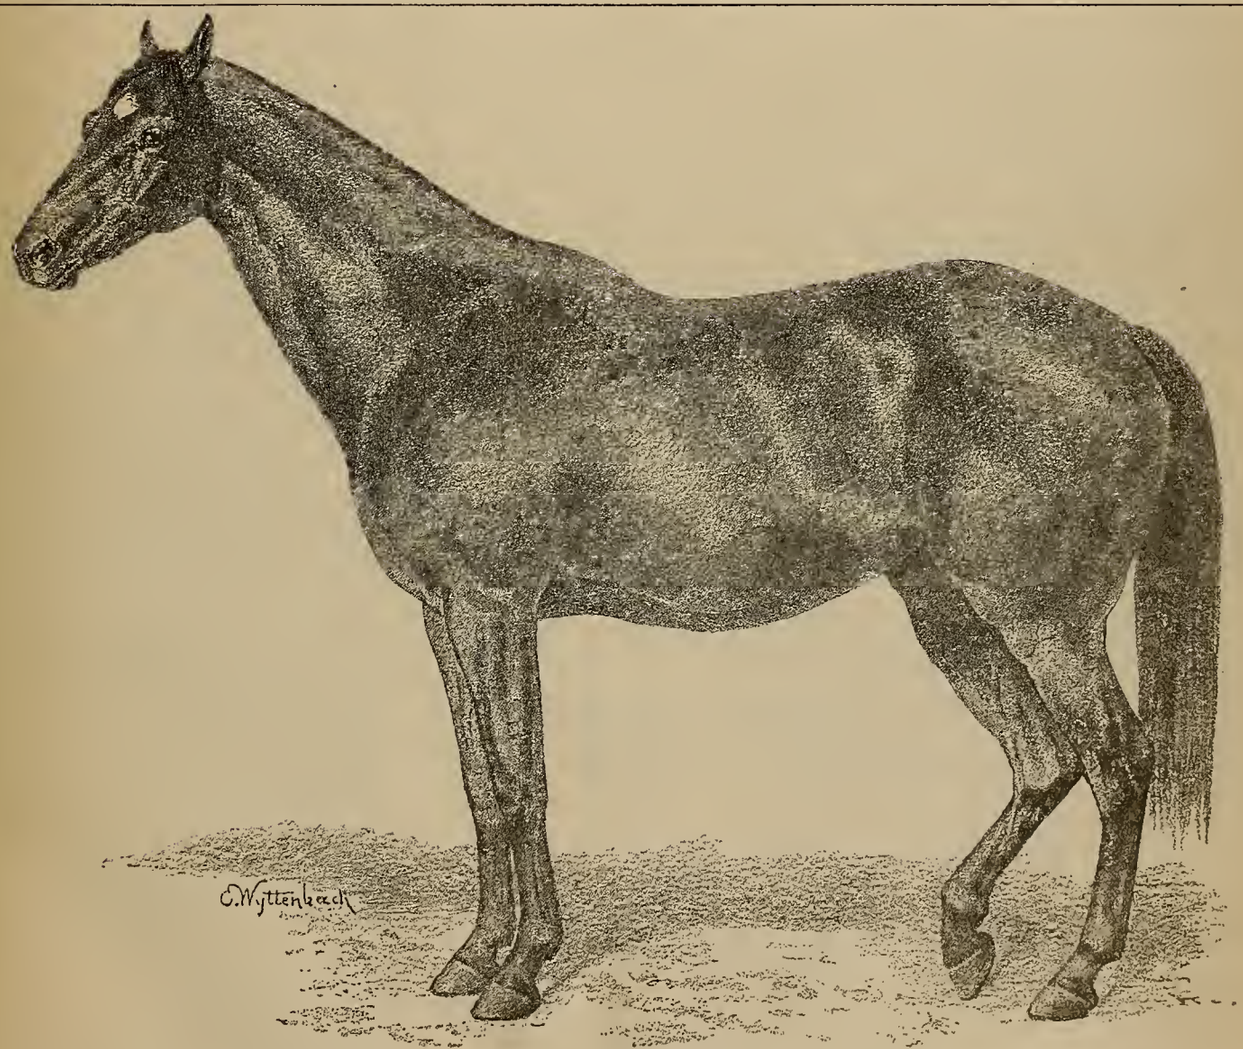
BREEDER AND SPORTSMAN

Vol. II. No. 12.
NO 508 MONTGOMERY STREET.

SAN FRANCISCO, SATURDAY, MARCH 24, 1883.

SUBSCRIPTION
FIVE DOLLARSA YEAR.



MARION, by Malcolm. Owned by Theo. Winters.

The 13th of May, 1871, was a beautiful day even for the "merry month." There was sunshine and a southwestern breeze driving back the cold current which had become refrigerated by passing over the surface of Lake Michigan, scarcely yet relieved of the ice that had coated it for so many months.

Ten miles to the west of the Court House in Chicago is what is called the Ridge. The elevation is some eighteen feet above the high-water mark, but in that section that is quite an altitude—sufficient to turn the water which fell on the eastern side into the Gulf of St. Lawrence; that on the west ran into the Gulf of Mexico.

The Ridge was crowned with big black and white oaks, and was conspicuous from a long distance on account of the tree-clad summit. On either side was the green prairie, and at the highest point of elevation was a huge barn surrounded by boxes and paddocks. A mile racecourse was one of the main features, though from the absence of stands, save a judges' box formed after the pattern of an Oriental pagoda, and a structure that would seat, perhaps, a hundred spectators, it was evident that it was merely an adjunct to a large stud farm, and not intended for public use. A hundred yards from the big barn and completely embowered among the trees was a handsome cottage, and the whole made a pleasing picture. This was "Atwood Place" and on the day above written, as the lawyers say, the subject of the sketch was foaled.

At 5 p. m. on that day is the record in the journal, and though this is scarcely as soon as Sterne commences one of his histories it is sufficiently exact.

There are circumstances connected with it which are forcibly brought back to memory by the record in the journal. That memorandum briefly states that at that time "Maggie Mitchell had filly foal by Malcolm; bay, star in forehead, no other white, large and very fine." For some time we had been receiving letters from W. R. Scott Lewis of White Sulphur, Kentucky, who wanted to trade other horses for Malcolm. That afternoon when the boy brought the mail from Riverside there was a letter containing a still better offer than he had previously made. Two thoroughbred mares by Melbourne Jr. (which he owned), an Endorser gelding from Sue Lewis, which he claimed could run a half mile in 48½ seconds, and a colt or two was the bid, according to our recollections. We were cogitating over the matter, feeling that the offer was liberal, when one of the boys came from the stable stating that the first Malcolm foaled at Atwood Place had come.

The mare had two colts by Bonnie Scotland, fine, strapping colts, but to our eyes this was an improvement, and that evening a reply was sent back to Kentucky that Malcolm was not for trade or sale.

The filly grew apace, and when straightened up was [illegible] as nearly a model as often is seen. At the same time

(CONTINUED ON PAGE 189.)

TURF AND TRACK.

COMING EASTERN EVENTS.

Entries for Running Meetings Beyond the Rockies.

The past week was a busy one for Captain J. H. Coster, Secretary of the American Jockey Club and of the Monmouth Park Association, and for Mr. Wheatley, of the Saratoga Association, as they had to open and record the entries made for the stakes which closed on March 1. So far only the stakes to be run at Jerome Park and the number of entries made for the events to he run at Saratoga and Monmouth Park have been published. As a whole there is a falling off in the number of subscribers to the several stakes, but in view of the great number of stakes opened, both in the East and West, the total number of subscriptions obtained is certainly very encouraging. One of the most salient features is the fact that there are but few subscribers or horses in the lists that may be called unknown in character or capacity, and consequently the number of starters will no doubt average about the same as last year and the stakes will be of about the same value. Of course the conflict in dates between the Monmouth Park and Saratoga associations is conspicuously shown in the entries made for the two places, one element making entries for only the up-country association, while the others favor the racecourse by the sea and ignore the advantages of "horse haven." Some few others will, however, run at both places, which they can very readily do, as it is understood that the Pennsylvania, the Central Railroad of New Jersey and the New York Central Railroad are prepared to put on first-class "horse" cars and run them through by express without delay. Should they do so horses can run both at Monmouth and Saratoga in the same week, as the horses belonging to the Dwyer Brothers and Mr. Reed have done on several occasions.

American Jockey Club.

The most conspicuous reduction in the number of entries for the several stakes is seen in the entries opened by the American Jockey Club for stakes to be run at Jerome Park from May 30 to June 9. This is not at all surprising considering the privilege of betting accorded to owners at all other race tracks in the State is taken away from them at Jerome Park by the action of the authorities in enforcing a law which from the date of its passage has been a dead letter elsewhere. The character of the entries obtained for the several stakes, however, warrants the belief that such old favorite events as the Fordham and Jockey Club handicaps and that more modern but less popular race, the Great Metropolitan Handicap, will bring out the same excellent fields for which they have been noted. For each of these three handicaps the well-known stables of Applehy & Co., Dwyer Brothers, J. E. Kelly, Mr. Kelso, G. L. & P. Lorillard, E. V. Snedeker & Co., Mr. Somerville, D. D. Withers and the Preakness and Yonkers stables have made nominations, as they have also for the Juvenile Stakes. It is for the last named event, however, that the most important falling off has taken place, as will be seen by the following table showing the number of entries for the several stakes in 1882 and 1883:

	1882.	1883.
Juvenile Stakes, half mile	57	25
Fordham Handicap, mile and a quarter	58	42
Great Metropolitan Handicap, mile and a half	41	29
Jockey Club Handicap, two miles	24	15
Westchester Cup, two miles and a quarter	9	9

The entries for the cup, if one from each of the stables represented starts, will assuredly make a good race. Certainly in any circumstances the race cannot well be worse than last year. The entries are Applehy & Johnson's Forester and Tnrco, F. Gebhard's Eole, G. L. Lorillard's Greenland and Monitor, P. Lorillard's Herbert and Parole, E. V. Snedeker & Co.'s Miss Lumley and the Yonkers Stable's General Monroe.

The Monmouth Park Association.

Although the total number of the entries received hy the Monmouth Park Association is larger than the total last year, it is only by the addition of two new stakes that an increase is shown. The reduced number of entries, especially for the midenmmer races (to which the association adds in nearly all cases $1,500, taking the entrance money) will materially increase the expenses of the meeting, but not sufficiently so to warrant the belief that the association will in any way suffer, and its officers confidently expect that with increased accommodations at Monmouth Park and improved transportation there will he a decided increase in the receipts over last year. The meeting will begin on Wednesday, July 1, and continue tri-weekly until August 23. The total number of entries received for the stakes which closed on March 1 is as follows:

TWO-YEAR-OLDS.

	1882.	1883.
Atlantic, six furlongs	51	67
Optional, six furlongs	51	44
Camden, six furlongs	69	57
Seabright, six furlongs	60	60
Red Blank, six furlongs	69	62
Moet & Chandon, six furlongs	38	45
THREE-YEAR-OLDS.		
Trenton, mile and a quarter	34	29
Newark, one mile	42	40
Barnegat, mile and a half	34	29
Raritan, mile and a quarter	35	40
Elizabeth, mile and a quarter	28	32
Palisade, mile and a furlong	—	40
ALL AGES.		
Ocean, mile and a furlong	26	30
Monmouth Cup, two miles and a quarter	16	13
*Eatontown, one mile	43	26
Freehold, mile and a half	40	35
†Passaic, six furlongs	—	36
Champion, mile and a half	26	31
Long Branch Handicap, mile and a quarter	69	57
Shrewsbury Handicap, mile and three-quarters	25	35
Midsummer Handicap, one mile	63	57
Harvest Handicap, mile and a quarter	60	62
Navesink Handicap, mile and a half	37	34

* For two-year-olds and upwards.
† For three-year-olds and upwards.

Saratoga Association.

That the nominations received by the Saratoga Association will represent a majority of the Western owners is certain. The meetings, which will begin at New Orleans and follow in turn at Memphis, Nashville, Lexington, Louisville, Covington, Cincinnati and St. Louis, will end at Chicago on July 4th, and from there nearly all the owners will take their stables through to Saratoga, where their horses will be able to rest and to receive the benefit of the reviving elements in the Saratoga air and water until the beginning of the meeting on July 21st. As has been the case during the last few years, the meeting will continue daily—Sundays excepted—until the end of August. The racing will take place, as usual, at midday. There will be an average of four races, and as the programmes for the extra days are invariably made up only two days in advance, the conditions of the several races are often specially arranged in such a way that owners may run their horses so as to fit them for important stakes for which they may be engaged, thus making the training—so very often unproductive—remunerative to at least the winners. The number of entries received for the stakes is as follows:

TWO-YEAR-OLDS.

	1882.	1883.
Flash—half a mile	35	35
Spinaway—five furlongs	27	30
Virginia—five furlongs	41	51
Tennessee—six furlongs	64	52
Misses'—six furlongs	37	36
Equity—six furlongs	61	49
THREE-YEAR-OLDS.		
Pocahontas—mile and 500 yards	34	27
Sequel—mile and five furlongs	22	35
U. S. Hotel—mile and a half	31	39
Clarendon Hotel—mile and a quarter	37	37
Relief—mile and five furlongs	40	38
ALL AGES.		
Excelsior—mile and a quarter	22	35
Saratoga Cup—two miles and a quarter	15	15
Welter—one mile	30	14
Congress Hall—six-furlong heats	43	37
Cash Handicap—mile and a furlong	50	38
Summer Handicap—mile and a half	51	40
Grand Prize Handicap—mile and three-quarters	54	41
Morissey Handicap—two miles	45	30
Baden-Baden—three miles	37	25
STEEPLECHASES.		
Tronble Handicap—two miles and three-quarters	29	30
North American Handicap—two miles and three-quarters	37	26

Louisville Jockey Club.

In connection with the securing of the Lorillard Stallion Stakes hy the Louisville Jockey Cluh, and the fact that neither the Latonia nor Chicago Jockey Cluh made any hid for it, the *World* a week ago contained the following, based on the statement of a gentleman who was present when the hids were opened hy Mr. Withers in the rooms of the American Jockey Cluh:

That neither the Latonia nor the Chicago Club made a hid was also a surprise, hut there is no douht whatever that the officers of the cluhs named knew that the President of the Louisville Jockey Cluh, M. Lewis Clark, had effectnally canvassed Louisville and that he had heen guaranteed a large sum of money hy husinese men, especially those in the tobacco trade. Those engeged in the pool-selling and bookmaking business, it was also knowu, guaranteed a liberal contribntion.

Colonel Clark in reply telegraphs as follows:

Tbe Louisville Jockey Cluh neither asked nor received any guaranty from merchants or hookmakers, as stated in *World* of Monday. It is certainly not in good taete to endeavor to excnse the want of liherality and enterprise of other cluhe by helittling that of our cluh. We had hoped that friendly rivalry in bidding for what the press had conceded to he the racing event of the year would have resulted in harmony and good feeling and deplore any other result. We shall offer an attractive programme and helieve the Eastern owners will respond to the cluh's liberality and desire to promote the breeding and racing interests of America.

M. Lewis Clark, President L. J. C.

Louisville, March 10th.

Louisiana Jockey Club.

Although the winter racing at New Orleans has scarcely heen as successful as its promoters hoped, there is no doubt of the snccess of the spring meeting of tbe Lonisana Jockey Cluh, which begina on Satnrday, the 31st and continues on April 3, 4, 5, 6 and 7. The following programme will he presented:

FIRST DAY—MARCH 31.

Purse $200, a handicap for all ages; mile and a quarter, over five hurdles.

Pickwick Stakes, for three-year-olds, $500 added; mile and a quarter; closed with 19 subscribers.

Purse $250, for all ages; mile and three furlongs.

Bush Stakes, for all ages, $500 added, selling allowances; mile heats.

SECOND DAY—APRIL 3.

Withers Stakes, for two-year-olds, $360 added; half a mile. Closed with 10 subscribers.

Purse, $250, for all ages; three-qnarter mile heats.

Cotton Exchange Handicap, for all ages, $1,000 added; mile and a half; 23 entries, viz.:

	Lb.		Lb.
Saunterer, 5	114	Katie Creel, 4	104
Appollo, 4	114	Ballast, 5	102
Fair Count, aged	114	Aliunde, aged	100
Wedding Day, 5	112	Wallensee, 4	100
Frankie B, 4	110	J. Sullivan, 4	100
Aleck Ament, 5	110	L. McWhirter, 4	98
Boulevard, 6	110	Athlone, 5	98
Callao, aged	105	Tilford, 3	90
Pope Leo, 5	105	Exeter, 3	88
Baton Rouge, aged	105	J. Foster, 4	87
Lute Fogie, 4	105	Warrington, 4	87
Duke of Montalban, 4	105		

Purse $200, for all ages, selling allowances; one mile.

THIRD DAY—APRIL 4.

Purse $250, a handicap for all ages; mile and a quarter.

Purse $250, owners' handicap for all ages; mile and a furlong.

Purse $300, a handicap for all ages; mile heats.

Purse $250, a handicap Steeplechase; short course.

FOURTH DAY—APRIL 5.

Boston Club Stakes, for two-year-olds, with $350 added; five furlongs. Closed with 10 subscribers.

Purse $300, for all ages, selling allowances; heats mile and a sixteenth.

Howard Cup, for all ages, $750 added; two miles and a quarter.

Purse $250, for three-year-olds; one mile.

FIFTH DAY—APRIL 6.

Purse $200, a handicap for two-year-olds; five furlongs.

Purse $250, for all ages, welter weights; one mile.

Purse $300, a handicap for all ages; heats seven furlongs.

Purse $250, for beaten horses; mile and a furlong.

SIXTH DAY—APRIL 7.

Cottrill Stakes, for three-year-olds, $500 added; mile and a half. Closed with 13 subscribers.

Purse $250, for beaten horses, with allowances; one mile.

Purse $500, a handicap for all ages; four miles.

Purse $250, a handicap steeplechase; full course.

Queen City Jockey Club.

The Queen City Jockey Cluh hae decided not to be driven out of the field hy ita new and rich rival, the Latonia Jockey Cluh, of Covington, Ky., which will race from June 9 to 15, inclusive. The cluh through its president, Edgar M. Johnson, announcee a meetiug to begin June 19 and continue on the 20th, 21st, 22d, and 23d, duriug which $4,350 will be raced for in pursea and added money to the following stakes, which will close on April 2: Ohio Derby, for three-year-olds, a mile and a half; Ladiee' Stakes, for two-year-olds, three-quarters of a mile; Merchants' Stakes, for three-year-olds, mile heats; Jockey Cluh Stakes, for two-year-olds (winner of the Ladies' Stakes to carry 5 lbs. extra), three-quarters of a mile, and the Cincinnati Cup, for all ages, at two miles and a quarter. There will he three racea each day with purses averaging from $150 to $300 each. Entries and communications should he addressed to Chas. F. McLean, Secretary, hox 491, Post-Office, Cincinnati, O.—*New York World.*

The Trotting Horse.

At the Minnesota Agricultural College, Wednesday, Jan. 31, Prof. W. H. Brewer, of Yale College, completed his course of lectnres on the principles of breeding, his subject heing "The American Trotting Horse."

The lecture was very interesting and full of facts and figures. The trotting horse, said the lecturer, as we now know him, is a very modern creation. Our grandfathers did not have him. They did not know him—they did not even want him. The horse of previous ages was first considered; what he was, why he did not trot and why people did not want him to trot, and then why we want trotters, and the historical line along which we have traveled in getting them.

Among all the older nations, the Hebrews, Assyrians, Egyptians, the sheep, the ox, the ass, the camel appeared long before the horse did. He first appears in history on the Egyptian monuments, about 2,200 years before Christ. This was more than 500 years before the first allusion to him occurs in the Old Testament. Horses were not common among the Hebrews until Solomon's time, and it was still 300 years before the Greeks had any cavalry. From that time down his history is pretty well defined—better, perhaps, than that of any other domestic animal. The horse of antiquity was a small, strong, wiry, tough beast, but not a swift one in the modern sense of the word. The fleetness of a horse may be judged in a general way by the angles which the bones of the legs form with the bones of the trunk. In those breede noted for their draft rather than their speed, the humerus forms a more obtuse angle with the shoulder blade and the femur with the pelvis, than with the swift breeds; and this gives them a heavier neck and shoulder and more rounded buttocks. The horse of the ancients was the horse of art, and has been the horse of art in all ages. It is the horse of strength that gives us the forms and shape, broad chest and shoulder, very thick, arching neck and rounding buttocks, that artists so love to put in their horses, and which we still see before our dreys, but not before our sulkies. The lecturer said that Sheridan couldn't possibly have performed his famous ride to "Wincheeter, twenty miles away," as he did on the horse that is shown in the picture of him.

In the art school of Yale College there are bas-reliefs from the Parthenon representing twenty-eight horses of a date earlier than 300 B. C., the best of them by Phidias.

They all represent small though wiry breeds, all dish faced, all roached, for it was the fashion in ancient times to roach horses. Twenty are on the gallop, eight are standing still, but not one is on the trot. A large portion of the Parthenon frieze is in England, known as the Elgin marbles, and out of over 200 representations of horses, only four are described as trotting. All the others are on the canter or gallop or standing still.

Of all the domestic species the horse is the most susceptible to the influence of surrounding conditions. There is no such great difference in either cows or sheep or swine as there is between different breeds of horses. It is not difficult to pick out horses 16 or 17 times as heavy as other horses. Man's wants change with time. Fashions change, and new breeds come up to satisfy new fashions. The trotting horse is by far the most interesting example of this kind of evolution which is now going on. The American trotting horse is a most instructive example of a breed just in the process of formation. Fast trotting has not heretofore been natural to horses. We are now making it natural. Professor Brewer said that he had no doubt that the next century will show a breed of two-minute horses.

For over 4,000 years the horse has been applied to all the principal purposes we now use it for, except one, and to meet that one use the modern trotter is in process of evolution. The greatest use of the horse down to within 100 years was as an implement of war or ceremony; next to this, as a beast of burden. For this purpose the horse must not be too large; he must have strength, endnrance, intelligence, courage and a variety of other gaits. This last item is of no importance to us. It is a disadvantage. It was everything in all previous ages. The horse of antiquity was a ridiug horse. Mohammed and his followers swept wherever the Arabian horse and his armed rider could tread, and no further. When the Moors went into Spain they went on their Barh and when they were driven out after being there 400 years, that blood made the Spanish horse what it became, and what part it played in the wars of Europe is told in many an old Spanish hallad. When the Spanish horse was at its best, then the Spanish nation was at its height. This horse was brought to America and became the progenitor of the wild horses of North and South America. With the use of heavy armor in European warfare a heavier animal was needed, but he was still the charger, a prancing, galloping steed. Imagine a crusader of old, or a knight clad in steel, rattling to the charge on a trotter!

In times of peace the horse figured in the ceremonies as an index of rank. As a beast of burden in agriculture he played a very minor part until within 100 years. The social relations of the horse have been an important factor in the formation of breeds. Numerous laws on the use of horses have been made in nearly all countries in the past. In all ages the use of the horse has been an emblem of social position, in the Pagan, Mohammedan and Christian world alike, and is an item even in this day and land. Many humorous illustrations of this were cited. Up till recently the trotting horse has been held in contempt.

The lecturer then spoke of the introduction of wheeled vehicles, showing the influence which wheels and the trotter have had upon each other. Buggies, he said, as we now know them, were rare until after 1845. He then proceeded to narrate the progress that has been made in reducing the time of trotting horses. Some English travelers in this country from 1840 to 1842 said they saw the "bloods" of New York driving their fast trotters in wagons, trotters "which they claim can go a mile in 2:30, but such trotters have not yet been shown." The New Haven *Journal* in 1806 spoke of a horse trotting a mile in 2:59, "a rate of speed, it is believed, never before equaled in this country." During the last few years the prizes offered for fast trotting have run from $800,000 to $1,400,000 per annum, and this forms but a very small part of the cost of the "institution." Prof. Brewer said that the turf had an exceedingly carefully considered code of laws, much more so than the laws of the nation, and in which there is more care taken to get the men of the best ability in the ranks to form them.

The English thoroughbred is a running horse. The American trotting horse, though not a thoroughbred, has thoroughbred blood in him, but there is no English thoroughbred that is a fast trotter in the modern sense of the word. The horses of the Eastern United States are of a very mixed origin. The common horses were brought from England, but the best class came from Holland; some came from Sweden and some from Denmark. An important importation of French horses was made into the province of Quebec in 1665, which was the foundation of the American pony. Before the revolution all writers on the subject spoke of the deterioration of the American horse. Between 1815 and 1830 a tremendous reac-

tion set in against horse-racing and nearly every State passed stringent laws against it. But the average American likes to see a horse go fast, so divers ways were devised of "whipping the devil around the stump." A race is a "striving between two or more things. So trotting "against time" was not racing. Records then began to be kept, and Frank Forester says that the first race for money was in 1818, when a bet of $1,000 was made that a mule could not be trotted inside of three minutes, and the bet was lost. The lecturer traced the modern slang, "2:40 time," to the feats of Topgallant, about 1830. In 1832 Old Buster made a little better time, 2:32. Then came Edwin Forest in 1834 with 2:31½. That was tremendously strong. It took nine years to lower that record. In 1843 a horse went in 2:28, which in 1849 was reduced to 2:26½. The lecturer then read some tables showing the still further improvement in the speed of trotters and the number of horses in the various classes, which he did not wish to have published, as the list is not quite complete, and made the prediction that the record will be reduced to two minutes.

We understand that owners of a large number of the fastest horses intend making the road their driving ground this season. The real reason for this, we are reliably informed, is a compromise offered by the dissatisfied, that "no person now or heretofore an officer of the Gentlemen's Driving Association should be a candidate or accept office this year." This, it was supposed, would have harmonized all dissensions, but it was not acquiesced in by those in power, and a ticket, including most of the old and some new members quite as obnoxious, was elected by a vote of 63 against 47. Those representing the minority and a large number of others propose the present season to drive on the road, where, if they furnish a large proportion of the sport, they will at least have the benefit of many unprejudiced observers. Central avenue is 100 feet wide, and the hotels by which it is lined are all in good position for sight-seeing. Arrangements have heen made for keeping it in fine order from Macomb's Dam Bridge to the foot of the hill beyond Sibbern's—a distance in a straight line of over two miles. We also hear that the Vanderbilts, Eastman, Dutcher, Trumbull, Dewey, Cornell, Harbecks and a host of others have already engaged sheds at Sibbern's, Judge Smith's, Case's and other places, and will let their speed be seen daily by those who use Central avenue. The roads are fast becoming good, and in a few days more we shall hear of some of these fast trotters coming down a 2:20 gait. Very few people will go to the track and pay for membership when the principal flyers are not to be seen there. By granting a reasonable request all of this could have been avoided. The public will now be able to witness the sport as well as the owners of fast horses.—*New York World.*

One of Justin Morgan's best colts was Sherman Morgan, foaled in 1809, the property of James Sherman, of Lyndon, Vt.; dam a chestnut mare brought from Rhode Island. Sherman Morgan was a dark chestnut horse in color, but showing in a marked degree the general characteristics of his sire. He was about 13¾ hands in height, and weighed 925 pounds. The best colt ever sired by Sherman Morgan was when he was twenty-two years old, and was Black Hawk; his dam was a beautiful black mare raised in New Brunswick, and said to be half thoroughbred, which was undoubtedly the case. Black Hawk was a little under fifteen hands high, and weighed 1,000 pounds; of compact, symmetrical and muscular form, nervous, elastic style of action, and possessed of great speed and endurance, as shown on the turf and road. His most noted son was Ethan Allen, sired by him when fifteen years of age. Ethan Allen was a bay, with little white on three of his feet, and a star. He was a most wonderful horse, fifteen hands high, and weighed 1,000 pounds. The most noted son of Ethan Allen is Daniel Lambert, who as a trotting sire (the quality of mares of which his harem has been composed taken into consideration), has no peer in America, or the world, either living or dead. The prevailing color of the Morgans is and ever has been bay, brown, chestnut and black, with size, build and general characteristics of the "Old Horse."

Late English papers furnish the following items of news: Foxhall's feet are worse than ever, and he will scarcely stand training again. The breeding paddocks of the late Sir Joseph Hawley have heen let for the ensuing year at $35 per acre, which is considered a high price, even for such a perfect establishment. Bruce, the winner of last year's Prix de Paris, will not stand training, and has been relegated to the stud. The death of Mr. Crawfurd, and the consequent disqualification of Macheath for the Derby, has made Beau Brummel a strong favorite for that classic event, in which, by the way, the American colts entered this year are thought by the critics to have no chance. During the recent festivities at Newmarket on the occasion of Archer's wedding, a balloon was sent up representing the great jockey mounted on Beau Brummel. The success of the aerial equine was not all that could have heen desired. The baloon ascended to a considerable altitude, and then was seen floating through the air with the hosre's tail where his head ought to have been. This was regarded by the superstitious as an omen, and those who had backed Beau Brummel for the Derby forwith hedged their money.

It has been shown in several cases that a trotter can bear active campaigning for ten or twelve, or even a greater number of years, yet 104, nearly one-half of the horses that have won ten thousand dollars each were not, successful in races for a period greater than five years. The b g Tom Keeler, 2:25, under the name of Cayuga Chief, won his first race in 1867 and his thirty-seventh in 1882. This is a remarkable instance of endurance, he having been in winning form of sixteen years. Lady Suffolk was on the turf for fifteen years; Chicago, alias Jim Rockey, stood nineteen seasons of hard campaigning, his last race being at the Oakland Trotting Park in 1883. Other notable "lasters" among the trotters are: Brother Jonathan, Byron, Confidence, Cozette, Derby, Ethan Allen, Flora Temple, George Wilkes, Goldsmith Maid, Hotspur, Huntress, John H, John Stewart, Lady Franklin, Lady Moscow, Lady Star, Pilot Temple, Silas Rich and Thomas Jefferson.

The Ukiah Park Association are progressing finely with their arrangements. The tract of land which the association proposes to improve comprises twenty-two and two-thirds acres, nearly level, and quite accessible to town. A half-mile track has been laid out to the best advantage by Wm. Van Allen, who made the survey. The stretches are 200 yards in length, and the turns 360 yards. It is intended to build a track forty-five feet wide, with turns well thrown up. The usual adjuncts of fencing, stands, stables, etc., will be provided, and the first meeting will be held next fall. After that two race meetings will be held each year, spring and fall.

Daniel Cole of Portland, Oregon, has purchased the b h Magna Charta, by Old Magna Charta, dam by Vermont Hero, and has placed him in the stud. The price paid was $1,000.

Belmont.

EDITOR BREEDER AND SPORTSMAN: I frequently receive letters containing questions about Belmont and have concluded to answer them by writing you a brief memoir for publication:

Belmont was a very pretty bay without white, fifteen hands two and one-half inches high barefooted. He was foaled in the spring of 1847, bred by Garret Williamson at Springdale, Hamilton county, Ohio.

Belmont was by American Boy, first dam imported Prunella, by Comus, second dam by Partizan (son of Walton), third dam Pawn (sister to Penelope, dam of Whalebone, Whiskey, Wire, Webb, Woful, Wildfire, Wamba, etc.), by Trumpeter, fourth dam Prunella, by Highflyer—Promise, by Snap—Julia, by Blank, etc.

American Boy was by Van Mater's Seagull, first dam (sister to the great racehorse Wilkinson Boxer and dam of Count Piper, Lady Duroc and others) by imported Expedition, second dam by imported Royalist, third dam by imported Magnetic Needle, fourth dam by imported Bajazette, fifth dam Selima by Galloway, Selim, etc.

Seagull was by imported Expedition; first dam by imported Sourkrout; second dam Matchless, by imported Slender; third dam Fair America, by Lloyd's Traveler; fourth dam Slamerkin, by imported Wildair; fifth dam the imported Cub mare, by Cub. Expedition was by Pegasus (son of Eclipse); first dam Active, by Woodpecker (son of Herod); second dam Laura, by Whistle Jacket; third dam Pretty Polly, by Sterling. This is one of the best pedigrees in the books; in fact, there are but few horses that are so full of the blood of Herod and Eclipse. Belmont's sire, American Boy, was by Seagull, by Expedition, by Pegasus, by Eclipse. Expedition's dam was Active, by Woodpecker, son of Herod, and Seagull's dam was by imported Sourkrout, by Highflyer, best son of Herod, and his second dam was by imported Slender, son of Herod; third dam Fair America by Lloyd's Traveler; fourth dam was Slamerkin, by imported Wildair, by Eclipse. The dam of American Boy was by imported Expedition (son of Pegssus, by Eclipse and Active, by Woodpecker, by Herod); his first dam was by Royalist, by Saltram, by Eclipse, and the dam of Royalist was by Herod, and the dam of Saltram was Virago, by Snap; her second dam was by imported Magnetic Needle, by Magnet (son of Herod). The dam of Belmont was one of the most fashionably bred mares ever imported. Her sire, Comus, was one of the most popular sires of his day, being by Sorcerer, by Trumpeter, by Conductor, son of Matchem; second dam by Partizan (son of Walton) that got Queen Mary, the dam of Bonnie Scotland; third dam Pawn, by Trumpeter (son of Conductor and Brunet, by Squirrel); fourth dam the great Prunella, by Highflyer (son of Herod). This is the very essence of the best English and American racing blood.

Highflyer was the best race horse of his day, and never beaten nor paid a forfeit. King Herod was considered the equal of any horse that ever lived. He is said to have sired more celebrated horses and brood mares than any other stallion of ancient or modern times. In nineteen years he sired 497 winners of $1,007,525. Belmont was never regularly trained; in fact, he was not bridle wise when he was started across the plains in the spring of 1853 when six years old. He was kept two years on Stony Creek in Colusa county and taken to San Jose in 1856 and stayed there until the spring of 1860, when he was moved to the rancho between Oakland and San Pablo where he died on the 4th of July, 1865. Belmont was one of the handsomest horses that ever lived. His head, neck, eye and ear were faultless, shoulders were magnificent and well covered with muscle; extraordinary fine middle piece with quarters and back scarcely to be excelled. He was a horse of remarkable action and had the best natural trotting gait of any horse I ever saw, but in his day it was hard to make people believe that a blood horse could get trotters.

For the chance he had he was a very succesful horse in the stud, having got such horses as Owen Dale, Miami and Revielle from Maria Downing and Bonnie Belle, Langford and Pele from Liz Givens—the only two thoroughbred mares he had an opportunity to get racehorses from. But besides these he got Dashaway, Ida May, Musidora, Charlotte Cushman, Ben Lippencott and other good horses that were out of mares of very doubtful breeding and some of them were good racehorses in any kind of a crowd. He had more uniformly fine colts than any other horse I ever saw, except, perhaps, it was his sire, American Boy, who had more fine bay carriage and road horses than any other horse in the country and had horses been trained to trot in those days as they are now he would have been very celebrated as the sire of trotters. As an illustration of the impress the sire of Belmont made on his colts, he lived to die with old age and was said to have never got a sorrel colt. Whether this is true or not, I don't know, but I do know for the last ten years of his life, a good deal of which time my father owned him, I never knew of a sorrel colt and had there been one it would doubtless have been reported as a matter of curiosity. WM. WILLIAMSON.

San Jose, March 20.

Errors Corrected.

In our list of 2:30 pacers published last week the black stallion Washington, by a typographical error, was credited with a record of 2:27¾. It should be 2:21¼. Dr. M. W. Hicks also calls our attention to the omission of Prairie Bird, by Flaxtail, and claims a place in the list for the mare. The Doctor's statement is that during the week of the Chicago fire in 1871 she paced in a race at Canton, Ill., distancing all but Advent in a field of nine starters in 2:28½. We can find no account of any such race in the published records, and knew nothing of it until we received the Doctor's letter. That is how Prairie Bird was omitted. Probably no account was ever published from which the compilers of records could obtain the necessary information. If Dr. Hicks has the data and will forward it to us we will print the summary and place Prairie Bird right in the comparative prominence of the "list."

M. D. McKinney of Janesville, Wis., famous as "Mambrino," and one of the scribblers who can drive, is jogging sixteen trotters. Among them is Farmer's Maid, pretty as a picture and fast; good judges think her better than ever before. Howe is a ghost, according to reports, and has been able all winter to down everything he has met, pacer or trotter. There are others in the string that can trot in 2:30 or better.

The first trot of the season in Sonoma county came off last Thursday, when Wolf Rosenberg, a merchant of Healdsburg, drove his road mare from that place to Santa Rosa, sixteen miles, against time. Jonas Bloom bet Mr. Rosenberg that the mare could not make the trip in an hour and fifteen minutes, but she landed the stake handily with nine minutes to spare.

There is nothing injurious about good sound rye, and as food for a stallion we have tried it, with good results, both ground and unground. We have often fed rye, barley and wheat, alternately, mixed with oats, to stallions during the season, and never noticed any bad results.—*Breeder's Gazette.*

Oregon as a Horse Breeding Country.

It is a very common thing here in Oregon of late years to hear the remark made: "O, it is no use for the people in Oregon to try to compete with California in the production of fast horses!" Now I think this is all wrong, and the fact won't justify any such conclusion. If we view the thing in a proper light why was it that in the early days of the settling of this coast Oregon produced faster horses than California did, in fact, faster ones than any country, considering the great infusion of "cold blood" in their veins? There was the Oldham mare, Amanda Fortune, Big Gun and Humboldt; they were all Oregon-bred horses, which went to California and ran a great many races against horses bred in that State, and fully demonstrated the fact that they were very much superior in speed to horses of like breeding that were bred in California. Comet, or the Oldham mare, traveled all over the United States and ran against all of the noted short distance horses, and never was beaten except at a great disadvantage in weight. I know that the Big Gun ran a well-authenticated trial at Boise City, I. T., (on a rather poor track) in which she ran a half mile in the marvelous time of 46 seconds, which I think demonstrated pretty thoroughly that Oregon can produce speed at the running gait.

Now we will see how the facts compare when considering the trotting gait. Milliman's Bellfounder did service in California in the stud before he came to Oregon and got one colt there that trotted better than 2:30. He sired three here with records of that or better. And I know almost a dozen others of his get that could have trotted that fast on such tracks as they have in California. Old Vermont, who did a good many more years of service in the stud in California than here, never sired a 2:30 horse there; but he sired three here with records better than that. Paul Jones, Emigrant, Comet and, I believe, Pathfinder all stood in California, and I never heard of their getting any trotters of merit whatever while there, but they all got meritorious trotters here.

Now for the life of me I can't see why Oregon can't produce speed that would be the equal of that of any other country, providing her people make use of the methods in vogue in other States to procure it; and I have full confidence that she will when our breeders awake to the importance of securing speed and good blood in the dams that is the equal of that in a great many sires owned in the State; and also to the importance of providing suitable tracks to develop and exhibit speed upon. Oregon is very deficient in the latter particular. There has been a good many fast horses, both trotters and runners, brought here from California, and none of the trotters have been able here to equal their records before coming, within five or six seconds, and the runners would fall short from two three seconds, which I think proves conclusively that we are at a great disadvantage in that particular. When on a visit to California a short time ago I took some pains to try and satisfy myself as to why that State was so much ahead of us in the speed of young trotters, and I came to the conclusion that the superior tracks, and the class of dams bred from, were the principal ones. I saw a great many very fast colts on Gov. Stanford's and Mr. Wm. Corbit's farms, and on inquiring found that they were most invariably from fast and highly-bred dams. Judging from what I saw going on at Mr. Corbit's ranch, I would not be surprised to hear of some new "Richmond being in the field" in California this year. I took a ride out to the Bay District track with Mr. Orrin Hickok behind a big bay mare belonging to Mr. Robert Morrow that I think can out-trot anything in the United States and haul two men in a buggy; saw the great horses St. Julien and Overman; both appeared in the finest of condition; also two fillies in Mr. H.'s charge by Sultan, owned by John W. Mackey (they are two years old and entered in stakes in the East, and if they are not good ones I never saw any); paid a visit to Mr. J. C. Simpson's training stables at the Oakland track, and don't think I ever saw a finer formed or handsomer colt than Anteeo, by Electioneer, owned by Mr. S.; also saw Mr. Johnny Goldsmith's stable there, consisting of Director, Romero, Sweetness, and some other good young ones. Mr. G. is going East this year with his stable, and if he gets "throwed down" it will be in fast time.

Hoping we will some day equal our sister State of California in the production of fast trotters, I am yours, etc.—*L. B. Lindsey, in Rural Spirit.*

The Pacers of 1883.

Peter V. Johnson's stable for the coming season will contain a pair of pacers. One of them is Winder, that obtained a record of 2:21 at the Chicago meeting last year, and the other a green pacer that was at the Chicago track a good part of the season of 1882, and that paced a mile at the Central Park matinee one afternoon in 2:18½. He showed faster than that in his work, however, going a mile one morning in 2:15¾, and in Johnson's hands will be apt to make a good race in any class where he is placed. The other noted side-wheelers are all reported to be doing well. Buffalo Girl, who was the fastest of the lot last year, and so unfortunate as to not win any of the races from Chicago to Hartford, is being jogged daily at her Indiana home, and has more substance than when last seen in public. Little Brown Jug is at Cincinnati with the rest of Commodore Kittson's horses, and advices from there state that he is going sound on the leg that troubled him so much last season. Should Brown Jug stand a preparation, there is no pacer now on the turf that has any chance to beat him in an even race, but in the past his driving has not been of the most skillful or kindly style. Gem, who was second to Buffalo Girl when the latter paced a heat in 2:12½, and who is also owned by Commodore Kittson, was also handicapped last season by too much driving in the early part of her races, but Splan will adopt a different course with her. Flora Belle has recovered from her lameness, and will be ready for the fray; and the same may be said of Lucy, who has spent the winter in Philadelphia, where W. H. Doble has given her the benefit of his long experience and good care. She will probably be shipped to Lexington about April 1st, at which time Hickok is expected to arrive from California and take her in charge. Whether Mattie Hunter will pace next season has not been decided. For four years the handsome little chestnut has been in the thick of the fray, and at the close of last season she was pretty well worn out. The race at Chicago, where she was the contending horse in every one of six heats, took a good deal out of her, and as Splan, who has driven her ever since she became the property of Mr. Emery, is now in charge of the Kittsondale string, and therefore not accessible, it is probable that the daughter of Prince Pulaski will be put to breeding. The early spring circuits will, as usual, bring to the front some new pacers, capable of going in the best company, so that there will be no lack of material.

Mr. Michael Lynn of Salinas has added another [illegible] to his stud, having purchased from Dr. Hicks the [illegible] old brown stallion Pirate, by Buccaneer—Prair[illegible] by Flaxtail.

Trotting in Australia.

SANDHURST COURSE, Ersom, Jan. 24.—Purse $250; for three minute class; mile beats, best three in five.

Mr. P. Pitman's g g Dick, by Young Australian, 3 years (Milsom)	1	1	1
Mr. T. Wilkins' ch g Dick Goldsbrough, aged.....(Grimwood)	2	2	2
Mr. J. R. Robinson's g g Hector, aged.....(Starr)	0	dist.	
Mr. J. Charlton's g g Frederick the Great, aged.....(owner)	0	dist.	
Mr. R. D. Moorehead's bl g B B, aged.....(Pearce)	dist.		

Time—2:49, 2:44, 2:49.

First beat—Hector was first to score, but Dick passed him directly, and kept in front without a break to the finish, Dick Goldsbrough keeping second, but being several lengths off at the end, and the others nowhere. B B was distanced.

Second beat—Dick dashed away at once, followed by Dick Goldsbrough as before, and with the same result at the finish. Hector and Frederick the Great were both distanced.

Third beat—Dick again made play, the chestnut having a try to live with him for a while, but dropping back until the turn into the straight, where he challenged. A short struggle, however, resulted in Dick just winning by the length of the sulky.

Same day—Walter Scott Stake, for mares, at $10 each, to trot one mile in 3:10 or better.

Mr. R. M'Conachie's g m Dinah, pedigree unknown.....(Starr)	1
Mr. T. Hamlyn's b m Flora.....(Fetherston)	2
Mr. A. Munson's br m Lubra.....(owner)	3
Mr. J. Dillon's bl m Black Bess.....(owner)	0
Mr. J. Pierce's b m Waverley.....(owner)	0
Mr. C. H. Read's g m Etty.....(owner)	0
Mr. G. F. Pickles' b m Dolly.....(owner)	0
Mr. F. E. Hunter's ro m Kentish Mare.....(owner)	0

Time—3:30.

Flora set the pace, with Lubra next (the latter breaking badly), and Dinah third, until the opposite side, where Dinah joined the leader. The two then kept locked together till within three lengths of the chair, where Dinah got the best of it by fair gameness, and just won by a length, Lubra a moderate third.

Same day—Sweepstake of $12 50 each; for local horses; two miles.

Mr. S. Lazarus' g g Dick, pedigree unknown aged.....(Starr)	1
Mr. J. Gray's g g Ranger, aged.....(Grimwood)	2
Mr. T. P. Pickles' bl m Kate, aged.....(owner)	3
Mr. T. Balderson's c g Billy, aged.....(owner)	0
Mr. W. Watson's b g Toothpick, aged.....(Craike)	0
Mr. Fetherston's b g Little King, aged.....(owner)	0

Time—6:37

Dick established a long lead in the first few seconds, Ranger being the only horse to keep within decent distance of him; and the old gray won by some fifty yards, while Ranger (also a gray) was as far in front of the black mare Kate.

Trotting at Oakland.

OAKLAND TROTTING PARK, Saturday, March 17, 1883; purse and stake, $125; trotting, mile beats, best three in five, in harness.

John A. Goldsmith's br m Flight, by Buccaneer, five years	1	1	1
P. Williams' br g Colonel	2	1	3
James —— dun g Buck	3	2	2

Time—2:33¾, 2:32, 2:29, 2:29¼.

Foals.

At J. T. McIntosh's Bay Stock Farm, Chico, March 17, Bessie, by Reavis' Black Bird, dropped a brown colt, three white feet and star, by Siugleton. Mr. McIntosh claims the name of St. Patrick for this colt.

The telegraph reports the sale in Chicago of the trotting stallion Jerome Eddy, record 2:16½, at the long price of $25,000. With the exception of Smuggler and Piedmont, this is the largest price ever realized for a trotting stallion. He was sired by Lonis Napoleon, a son of Volunteer, and had been put in P. V. Johnson's hands, to be trained for the campaign this season, but the purchasers, J. C. Jewett & Co. of Buffalo, N. Y., purpose devoting him to the stud. He will probably not appear on the turf again.

The entries for the great $2,500 trot closed at Melbourne on Feb. 21, at 4 p. m., too late to get a list of the nominations by the steamer which sailed on the 22d. It was expected that from twelve to fifteen trotters would be named. The conditions were five per cent entrance and $50 each additional from starters, five to enter and three to start. The winner to receive $2,500, second horse two-thirds of entrance fees and stakes, third horse the balance. The race was to come off on the 17th inst.

George Metzger of Buffalo, N. Y., died last week, at the advanced age of seventy-five years. He was an old-time horseman, and well known on the turf years ago. He was one of the owners of the famone trotter Chautauqua Chief, of the pacer Empire, and of many other horses of note, and frequently drove and rode in races on the old Buffalo and Western tracks.

The Chicago Driving Park Association annonnces that its running meeting will begin on Saturday, June 23d, and end on Wednesday, July 4th, instead of beginning on Wednesday, June 27th, and ending on July 6th, as originally announced. The full programme for the meeting will be published about the 1st prox.

During the season of 1882 Fred Archer had 564 mounts and 210 wins, eight of which were walkovers. In 1878 he had 229 wins. Including his first success on Athol Daisy in 1870, he had ridden 1,858 winners to date. During his career George Fordham has passed the poet first 2,510 times.

Frank Van Nese, who first camointo prominence as driver of St. James, has a stable inll of trotters at Lexington, Ky., viz., Alexander, 2:19; London, 2:20½; Bob Davis, The King, Toledo, Jay Bird, Lexington Wilkee, S. T. H., Favonins, Early Dawn, by George Wilkes and six others.

The famone old mare Mollie McCarthy died at the Santa Anita ranch on Thursday, the 15th, the supposed cause of her taking off being hotts. On the 4th she dropped a filly foal by Rutherford, which is alive and doing well, and will probably be named for its illustrious dam.

Cy Mulkey has leased the Idaho Park track at Boise City for five or six days' races during the week of the 4th of July. A match between Jo Kinney's horse Policy and Eastman's horse Warwick, three-quarter mile heats, for $1,500 a side, will be run during the meeting.

Jay Beach has transferred most of his stock to the Rogue river valley, and Altamont, Graduate and Wilburn will make the season at Jacksonville.

There are intimations that the Australian drivers have already acquired the art of "pulling" horses at the trotting meetings.

The Gridley *Herald* says that good stock horses are scarce about there and a bonanza awaits the coming of the right animal.

O'Connor, the gallant but unfortunate son of Norfolk, is doing stud service this season at Paisley, Oregon.

(CONTINUED FROM PAGE 177.)

was at Atwood Place a chestnut mare belonging to a Scotch friend which had gained a great deal of celebrity on the race-courses of Kentucky and Ohio. This was Phœnix Belle, a sister of Joe Daniels, and the first to give Dolly Carter a promiuent place among the dams of racehorses. She had foaled a filly on the 1st of April, and the Scotch council over the nomenclature decided on "April Gowk" as the proper title. It was also a good-looking foal, not so haudsome or rangy as the other, but with racing points which the owner and his friends took delight in pointing out and discussing. She was by Tricotrin, a son of Lexington and Kate Clark, and therefore the breeding was all right. It could not be otherwise than that there should be a good deal of argument regardiug the youngsters, and these controversies came to the usual end, viz., a friondly match for $200 a side, to be run when they were two years old.

Everything progressed favorably with our heroine. She was as docile as a kitten, took kiudly to work and galloped like an old racehorse from the first. Her companion was Three Cheers, of the same age, and Billy Johneon, who has since degenerated or advanced, whichever way the reader may see fit to term it, into a trainer and driver of trotters, was her mentor. He had others iu the string, and there was to be a race meeting in Chicago in July. We had charge of the track, ten miles from home, and, conseqnently, saw very little of the preparation. There was a turn in the good luck, however, aud a short time before the races were to come off, in leading her past Nonrmahal, the filly got a severe kick on the inside of the thigh just above the hock. Ofcourse, she had to be tbrown out of work, and we little thought that she would be able to run in a two-year-old stake in which she and Three Cheers were engaged. This was provokiug, as the owner of April Gowk had agreed to let the match be decided by the placiug in this stake, in which she was aleo named. A grand final trial Three Cheers ran, and the anticipations were rnby-red that he would win. The filly was only walked and it was more for company for Three Cheers than any expectation of ruuuing her that she was "carried" from Atwood Place to Dexter Park. The Phœnix Belle filly had not been doing well, so that it seemed as neither wonld come to the post, but on the day of the race it was decided all aronnd that they should start. The running was on the inside track, the onter being graveled, and rains bad made it very heavy. The distance was half a mile, and there were nine starters. Captain Moore's nomination was a big favorite in the poole, and there was a smart filly in by imported Billet, which the central Illinois folks thought well enough of to back freely. Luck favored them. A worse start was scarcely ever seen. The Billet filly was at least sixty yards in advance of all the others when the flag dropped; Three Cheers about the middle of the track, Marion the very last one to get off. The race was ended there, though Three Cheers ran second and Marion third. The following is the

SUMMARY:

July 4—Running race for the Browns' Stake, for colts and fillies two years old; $100 each, half forfeit; $300 added by Messrs. Wentworth & Woolworth, proprietors of "The Browns;" second horse to save its stake; dash of half a mile.

S. Powers' b f Carrie P, by imported Billet, out of Miss Foote	1
J. C. Simpson's b c Three Cheers, by imported Hurrah, dam Young Fashion	2
J. C. Simpson's b f Marion, by Malcolm, dam Maggie Mitchell	3
R. & J. Rowett's ch c Uncle Hark, by Uncle Vic, dam Ada Kennett	0
R. & J. Rowett's ch f Mary Rowett, by Uncle Vic, dam Mammona	0
W. M. Barron's b f Viva, by Tricotrin, out of Phœnix Belle	0
J. M. Harvey's b f, by Pat Malloy, out of Kate Leonard	0
T. G. Moore's b c, by Lightning, dam sister to Jerome Edgar	0
Ed Gray's ch c Dan O'Hara, by Woodstock, out of Waxy	0
D. McDaniel's b c, by Asteroid, out of Sue Washington	p f

There were the nsual uewspaper comments, one reporter claiming that all three of the placed colts got the best of the start. General R. Rowett had a colt and filly in the race by Uncle Vic, the filly being from the celebrated mare Mamona, who, for so long a time, had the fastest record for a mile. We told the General that it was an easy matter for us to decide which had the best colts, and that a match between the colts, and one between the fillies, was a better test than long arguments. He coincided in this view and the two matches for $500 each were made. We were without a jockey. The boy who rode the colt in the stake had never seen a race before, and though he had done well nnder Billy's tuition it was not to be expected that he would be a match for a practical hand in a race of this kind. Billy Donahno was then riding for Jenniugs and in ten minutes after the match was made his services were secured. The only stipulation that General Rowett made was that Captain Moore should start them which was perfectly satisfactory to us. The track was still heavy, the center being the firmest.

Donahue was instructed to make running from the start as we felt confident that he could beat the other forty yards, and with the warm feelings on both sides, we desired that the gap should be as long as possible. At the opening of the pool sales Three Cheers was largely the favorite, but as the race drew near he declined until the rates were even.

Never was a more even start. Captain Moore sent them off so that it was impossible to tell which had the best of it. In place of coming away as we expected they ran "yoked" all the way until within forty yards of the judge's stand there was a "carom" and Three Cheers crossed the score three parts of a length in the lead. From where we stood it was difficult to tell which was in fault; a complaint was entered, Donahue called into the stand when he admitted riding foul, but claimed that he could not keep the colt from swerving and very properly the judges gave the race to the other colt. We were hot, very hot. We proposed to run the race over again, betting $1,000 against $750, General Rowett's colt to carry Billy Johneon's weight, 130 pounds, and as he was the largest this seemed to be in his favor. All proffers were "respectfully declined" and there was no help for it. The description of the race at Sheepshead bay when Duchess of Norfolk was beaten in much the same way recalled the other so vividly that every minute detail is brought back so vividly that we can see them as plainly as on the day of the race. We were in a quandary. It was the first time a race had been lost for us in that manuer, and is one of the few sore spots that still rankle in our Eastern racing. There have been many since. Again there was a "pow-wow." The offer was made to double the stakes and go to Springfield to run, but a flat refusal to go outside the letter of the contract was the response. We could not find fault with this resolve of the General. Marion was limping back and forwards in front of the stand, the race before having aggravated the lameness, and it is a maxim in racing as well as war when you have the advantage keep it. All our friends advised not to run, but this did not tally with our resolves. "For choice of track," we said as a half dollar was spun in the air, and throwing up our own green boy the colts were dispatched to the starting point. Again Captain Moore gave them a capital start. They come whirling around the turn, fly down the stretch. "Keep a steady pull on your mare, Henry, and let her stride along," and her ears were pricked as she galloped under the wire an easy winner, bringing back the dollars so far as the match went.

The next spring we brought her to California with ten others. The trip was severe as the boys did not take them out of the car from the time they left Omaha until they landed in Oakland. As they came by freight train, this was a trying ordeal. When they left Chicago, everything was dreary, not a bud swelling on the trees. It was about the middle of April and California never wore a more glorious dress. There were flowers within a few miles of the snow-banks on the summit, the grain was waving its bearded heads in the valley. There was "grass up to their eyes" at the Oakland Trotting Park, and we were amazed to see them turn away from the luxurions clover, and eagerly devour what appeared to be weeds. The alfillerilla and green wild-oats soon overcame the effects of the long journey and it was not long until they were gaily cantering around the track.

Hock-Hocking and Marion were the first to put to work, and in good time they were ready for a "breeze" of a mile and repeat. The first mile was 1:54, the next the boys were told to go about the same pace or rather slower, and move through the last stretch. The track was far harder than we imagined; there was a coating of loose dirt; beneath it an adamantine pavement of adobe. This was long before the thousands of loads of sand, manure and sediment were applied and which have so completely overcome the adobe.

Hock-Hocking shattered his feet, springing quarter-cracks from coronet half way to the ground. The filly did not show the ill-effects at the time, but the next gallop she was so lame that it was all she could do to get back to the stall. We were at a loss to locate the lameness for some time, though from the showing afterwards it is probable that she broke off a portion of the wing of the coffin bone, which worked its way out at the junction of hair and hoof. Although divergent from the subject of this sketch, these accidents were the cause of the study how to counteract the effects of concussion arising from the hard roads and tracks of California, and from the rubber-strata between plates to the natural guard has been the sequence.

Once more the endeavor was made to get her to a race. There was to be one of three miles on the Bay District Course and she was moving well aud sound for quite a time. As in the former case, she came to a stand-still when she did give way, without an enlarged tendou or swollen limb. Then she was sold to Mr. Winters and taken to El Arroyo. There is little necessity for recounting the deede of her sou and daughter, though it will not be out of place to recall their great qualities, and before doing this show that their qualities came from a line of illnstrious ancestors. The dam of Marion never ran. She was engaged in the stakes in the Southern States, but going lame when in training at Mobile, was thrown out of work. She was by imported Yorkshire and her dam Charmer by imported Glencoe was one of the truly great race mares of her day. She won more races than any other of the get of her celebrated sire, the most salient point in her career never having been beaten at three miles or heats of three miles, winning sixteen at that distance. Her dam, Betsey Malone, by Stockholder, ran twenty-two races from heats of two miles to those at double that distance, the only race she lost being one in which she fell down.

On the side of the sire there is an unusnal degree of excellence. We always regarded Malcolm as being one of the very best sons of Bonnie Scotland, and had he been subjected to the same system of training and run in the same kind of races, he would have been the equal of Luke Blackburn or Bramble. As it was, he ran more fast heats than any horse up to his day, and we have seen him so sore from over training that he had to be whipped about his box before he could raise his feet high enough to step over the board of about a foot in height at the bottom of the doorway. A short time after we got him, "poor as a snake," and so bitten up with flies that his belly was a scab, he was traveled across the country from Chicago to Iowa, and in the journey he picked up some flesh. In this condition he ran against Sorrel Dan, a noted short horse, in Lyons, Iowa, half a mile and beat him in 50½ seconds. Taken out of the stud, high in flesh, and after a few gallops, he beat Alice Ward, and others in Chicago, three-quarters of a mile in 1:18, carrying 130 pounds. With his shoes on and the same rider, Billy Johnson, who could not ride less than 130 without reducing, he ran through the stretch at Atwood Place in 23 seconds. Albert S. Gage saw the run and he made the time 22¾ seconds. But the printer says that if more room is taken, "something important will be crowded out," and therefore the balance of the story will be "coutinued in the next number."

BASE BALL.

California League Rules.

The California Base Ball League has formulated a series of rules governing the season's play, which is calculated to do away with many of the disagreeable features of past seasons. The complaint against selecting umpires from among the spectators bas much to recommend it to the careful consideration of clubs, and the league is to be congratulated upon having made a new departure by introducing the feature of a board of umpires whose individnal dnty it is to officiate at alternate games. The old system, so long in vogue in California, is susceptible of much abuse, and at the same time it is frequently productive of unfair decisions, consequent upon lack of knowledge of base ball rules. The present board consists of tbree umpires, non-members of clubs, whose duties, in addition to the decisions rendered during the games, have been increased so as to include jurisdiction over the grounds on days upon which league games are played. To a certain exteut they control the practice of the competing clubs, and are expected to see that the clubs are on the grounds some considerable time before a game is called. Each team is required to put in an appearance at least an hour and to practice for at least fifteen minutes before play commences, each team to be in uniform by schedule time. Any failure to observe tbe rule is subject to a fine, which must be paid by the club to which the delinqnent member belongs, on pain of forfeiture of the right to conclude th championship season. Tbe umpires are also empowered to impose fines during the progress of the game for open violations of the rules and for disrespectful conduct. The proprietors of the grounds are obliged to keep tbings in proper condition and to provide suitable accommodatione for spectators. Another good feature which bas been introduced is a board of official scorers consisting of two non-members of clubs who are expected to be present at all league games and to attend to the scoring in person, it being contrary to the rules to delegate that power. A number of other rules have been introduced which will exert an influence for the better upon base ball contests.

League Games for 1883.

Schedule of games to be played by the clubs composing the California League of baseball players during the season of 1883.

The Executive Committee of the California League consists of John J. Mone, Chairman; W. J. Egan, Niantic; J. McDonald, California; A. Dugan, Redington; G. Pratt, Haverlys.

ATHLETICS.

Preparations for Spring Meetings.

Athletic circles are considerably surprised over the telegram recently published in tbe daily press announcing tbe intended visit of L. E. Myers, the Manhattan Club flyer, to this coast. No official communication has been received by the Olympic Athletic Club in this city to that effect, though it is quite probable that if the press dispatch be true some notification will be forthcoming in a few daya. A communication on the subject will be sent East in the course of next week, inquiring into the matter, and shonld an affirmative answer be received, a large meeting will be arranged as a compliment to the distinguished visitor. The probability, however, is that tbe telegram was not authorized, as Myers will undonbtedly take part in the association games in June, and be has already signified his intention to go to Europe during the month of September. Tbe announcement wired to this city states that be contemplates a visit bere during tbe fall witb a view of trying conclusions witb Haley and Masterson, but as the fall is supposed to commence early in September, it would he extremely difficult for Myers to bo in England and California at the same time.

Dan O'Leary is matched with William Edwarda for a six-day walk, heel and toe, for $1,000 a aide, to come off at Sydney. The date had not been fixed when the steamer sailed, as there was delay in securing a suitable hall. O'Leary was being trained by Professor Miller.

Athletics are unusually quiet at tbe present time, though quiet work in connection witb proposed meetings is steadily going on.

The Oakland grounds have already been plowed, seeded and rolled, and give promise of being very successful.

Tbe Golden Gate Athletic Clnb contemplates giving another exhibition, which will be followed by a field day.

The programme of events of the Olympic Club meeting will be reported in a few daye.

It is stated that five Oakland bicyclers will shortly send to England for new machines.

Rumor bas it that a member of a promiuent Eastern club is in town.

A six-daya go-as-you-please match is among the probabilities.

Citizens of Santa Rosa are taking steps to secure the headquarters of the agricultural diatrict, of which Sonoma county forms a part, for that city in connection with their agricultural park.

THE KENNEL.

The Bench Show.

The Pacific Coast Kennel Clnb have issued their programme and list of prize classes for the forthcoming dog ebow. The rules are much the same as usually prevail at such shows and the classification is eminently satisfactory. We think, however, that it would be well to have left ont the epe cial class for Laveracks and in its place made a class for field trial dogs or a class for English setters not born in this state and imported from the East or England. There are but one or two Laveracks in tbis state of the pure strain and the mixture of Laverack and Llewellyn always leads to trouble and bas caused more ink to be shed and more hard words to be spoken than any other kennel topic. In place of the class for smooth-coated Newfonndlands should he a class for tbe mixed breed, black and white Landseer dogs so called, which are tbe common idea of a Newfonndland dog, huge, shaggy, good-natured animals tbat take the bearts of women and children on first sight and are so popular tbat woe betide tbe judge who ventures to assert that they are not Newfoundlands at all and cannot take a prize so long as there is a representative of the true all black Labrador dog on the bench. Tbe popular idea of tbe Newfoundland is a big black and white dog and trying to convince people to the contrary makes judges prematurely gray and founders of bench shows anxious to escape witb tbeir lives the instant a Newfoundland exhibitor heaves in sigbt. Landseer has painted a black and white dog as the representative of this race, and to get an ordinary person to believe that Landseer migbt he wrong is next door to impossible. While making suggestions we may as well say all that is on our mind. We think it would he a good place to make a special champion class for greyhounds, tbat is for greyhonnds tbat have taken a first or second prize at any regular coursing match in tbis State. That would in a measure separate the dogs which have acbieved fame in tbe stud from those which have made their record in the field, and wonld award an extra prize or two to the largest class of dogs exhibited, for we venture to say that there will he donble as many greyhounds on the bench as of any other class. We also miss the familiar prize for trick dogs, which always calls forth an interesting exbibition. Tbe ladies and children like to see dogs go through their almost human performances, and for tbat matter many a member of the sterner sex can get a good deal of fnn and instructiou out of trick dogs also.

The Great Danes will probably he a fine class. They were in the last show, and we think it would be a good plan to offer more than one prize. Tbe shepherd dogs onght to be divided into two classes, Scotch and English. The breeds are very different in eize, appearance and color and cannot well be judged together. The show of ponltry will be a great success, and one of the most interesting features of the exhibition. One gentleman writes to us to say that he will show ten coops of fine fowls and many others have signified tbeir intention of competing. The poultry men want to educate the public in the difference between a common fowl and a fine bred bird, and they will eagerly seize upon the opportunity offered to them by this show. Tbe prospectus of the poultry show is not yet out but will be given to the public in a few days. We are glad to be able to report that already 103 entries have been made to the dog show and that the managers have been literally overwhelmed witb requests for information. We are sure tbat every dog will be judged on its merits and that town and country alike will have a fair show.

Anent the Dog Show.

EDITOR BREEDER AND SPORTSMAN: I notice in your last issne an article in regard to tbe coming bench show and read it carefully and fully indorsed that portion respecting the bench show held here in 1877, but cannot approve all of that portion in relation to the show of 1881.

The Pacific Coast Kennel Club deserves great credit for establishing a bench show in this city and endeavoring to improve the breed of doge on this Coast, bnt I claim that at the last show, beld April, 1881, tbere was favoritism shown in eeveral cases, also that the judging was done in a very loose manner; the judges were not restricted to any standard, and awarded prizes according to their own ideas.

I therefore suggest that the clnb request the judges to make their decisions in conformity with tbe scales of points given in the third edition of the "Dogs of the British Islands." This has been done hy the Westminster Kennel Clnb of New York, who hold the largest bench shows in the United States. At the Bench show of 1881, a Laverack class was made and at that time there was not a pure Laverack on tbis Coast; still this class received a large number of entries and prizes were distribnted to the winners; I nnderstand that the coming show will include a Laverack class, at present there is only two Laveracks on this Coast and they will have a walk-over for firet prize. The Laverack setter is an English setter and I tbink that they should be classed as each in all ahows, and suggeat that the Kennel Club do away with this class.

I hope that money prizes will he offered in the place of medals and cups; exhibitors are put to some expense in preparing their dogs for ehow, the entrance fee is $3, and in case a pereon from tbe interior wishes to exbibit the cost of aending a dog is quite heavy; all the Eastern clnbs offer money prizes and all their ehows are very successful.

The gentlemen wbo have to judge tbe different breeds ahould he aelected immediately and their names announced to the public.

I am glad to eee the BREEDER AND SPORTSMAN taking this interest in the coming bench show and bope that it will continue to so. M. B. J.

San Francisco, March 22, 1883.

The Sacramento Valley Coursing Club will hold a coursing match at Carpenter's Ranch on the line of the Placerville railroad on April 1. This match ie open to all dogs in the State, with an entrance fee of $5. Mr. M. A. Howard of Sacramento will accept entries on and before March 27, when the drawing will take place and judges will he elected. The excursion train leaves Sacramento depot at 8 a. m. April 1. Tbe Sacramento men are very anxious to receive some entries from San Francisco and promise a fair ehow all arouud.

Thie (Saturday) evening at 8 o'clock the California Coursing Club will meet at 539 California atreet to receive entries for the match to come off at Merced on March 28 and 29. This match is open to all dogs in the State, with au entrance fee of $5. The excursions of this club are generally very enjoyable affairs and we look forward to a large gathering at the Oakland wharf next Tueeday at 4 p. m.

The great annual English courning event, for tbo Waterloo Cup, took place February 21, 22, and 23. The number of entries was large, and tbe sport exciting; sixty-four greyhounds, the best in the Uuited Kingdom, competed for the grand prize. At tbe close of the sixth series of heats, G. J. Alexander's fleet bitch Wild Mint (by Haddo ex Orla) was declared tbe winner, D. Deightou's black bitch Snowflight (Botbal Park ex Curiosity), last year's winner, being second. The first prize is £500, and second £200. After the race for the cup, the Waterloo Purse, for dogs beaten in the first round of the former, was competed for by thirty-two subscribers. R. B. Carruther's dog Markbam won first prize (£75) and J. Shelton's Maid Mariou took second money, £30. The Waterloo Plate, for dogs beaten in the first ties of the cup, reeulted in a victory for H. Haywood's bitch Rota, winning first prize of £75, and H. G. Miller's dog, Manager, took eecond prize, £30

Eintracht Schuetzen Section.

Last Sunday the Eintracht Schuetzen held a shooting at Harbor View range for compauy medals. Tbe Champion medal was won hy Fred Kuhls with 413 rings:

First-class medal, A. Stamer	355 rings
Second-class medal, G. Beckert	347 "
Third-clas medal, L. Klotz	286 "

Last Monday the ahove named rifle company held an election of officers. Following are the namee of those elected: Captain, Fred. Kuhls; First Lieutenant, L. H. Kauffung; Second Lieutenaut, H. Schnhert; Field Sergeant, C. Schwartz; First Sergeant (Capt. d'Arms), A. Wertner; Second Sergeant, H. Brockenwager; First Corporal, Wm. Schebn; Second Corporal, G. Beckert; Third Corporal, H. Voll; Fourth Corporal, S. Vock; First Sbooting Master, H. Bergmann; Second Shooting Master, L. Klotz.

The Chicago Jockey Clnb announce five etakee to close April 2. They are the Illinoie Derby, Illinois Oaks, Chicago Stakes, and the Northwestern Stallion Stakee for 1885. The Illinoie Derby is for tbree-year-olds, foals of 1881, $50, half forfeit, $1,000, of which $200 to secoud. Tbe Illinois Oaks is for tbree-year-old fillies, with $800 added. The Derby is a mile and a quarter. Tbe Chicago Stakes is for three-year-olds also, one mile and a quarter; and the Northwestern Stallion Stakes. This last event is for three-year-olds, wbo, to render eligible, their sire must first he nominated by hia owner or otbers at the price of hie last season. Of the amount tbus subscribed $300 goes to the nominator of the winning stallion, and $200 to the nominator of the second, balance to go to the amount added by the club. Nominations for sires will close April 2, and for colts and fillies Aug. 15. The Northwestern Stallion Stakes for 1885 is also opened, conditions tbe same as 1884. Nominations to the ahove stakes close April 2, addressed to D. L. Hall, Sec'y, 116 Monroe street, Chicago, Ill.

Mr. Swigert has been unfortunate in losing two of hie Lexington mares—Lark, who died on tbe 7th, and Kentucky Belle, on the 1st. Lark was not tbe most successful hut her son, Harry Hill, has been represented as one of the best colts Virgil ever got, and his brother, Crown Point, which Mr. Keene sent to England last season, was a rare looking one. Kentucky Belle was not a brilliant brood mare, either, tbrowing only Pride; but tbe deaths of these mares remiuds us that the Lexington daughters are growing old. Tbey have succeeded the Glencoe mares in popularity, and will soon be succeeded by what strain it would be difficult to say.

John Golding, of West Bradford, Chester county, cut down a tree recently thinking it a "coon tree," which he still thinks it was, as the inner portion of it gave sufficient evidence of the fact, but tbe "coons" were absent. In their stead he found snugly ensconced a screecb owl and five fish. The latter, to all appearance, had not been out of the water a great while. Mr. Golding says that he knows that coons do catch fish, but the query witb him is whether they were caught by coons or by the owl. He would like to know from some of our naturalists whether owls ever do prey upon fish. —*Reading (Pa.) Times.*

E. N. Carvalho, who has heen for eighteen years one of the editors of the *Turf, Field and Farm*, died of pneumonia, in New York, March 12. He was horn in Charleston, S. C., in 1817, and was a dramatic writer and cugaged in editorial pursuits from a boy. He had a laboring oar on the *Turf, Field and Farm*, botb in the thoronghbred and trotting departments, and was well posted on pedigrees and performances. Much of his time was devoted to the preparation of "Bruce's Stud-book." Racing interests lose an earnest worker in the deatb of E. N. Carvalho.

In Vermont the dairy interest has been more intelligently conducted than in most otber sections. The result is that the butter yield of cows has increased in the last fourteen years an average of fifty pounds per cow. This increase is nearly all clear profit, as the cost of keeping a good cow is no more than that of keeping a poor specimen. Some of the gain is due to better feeding; bnt by soiling and ensilage the greater amount of atock may be kept, and, if butter and milk be produced, at less expense than under the old method of pasture hay, and grain.

The balk-line billiard tournament will begin at Central Music Hall, Chicago, on the 26th inst., continuing two weeks. Vignaux, Sexton, Schaefer, Daly, Dion, Wallace, Morris and Gallagher will compete, the latter three having won places hy defeating Heiser, Carter and Maggioli in the preliminary tournament.

BUSINESS NOTICES.

McCUE'S CARRIAGE FACTORY—No. 1,317 and 1,319 Market, street, manufactures carriages, buggies, wagons and sulkies. Mr. McCue gives his personal attention to all orders and has established a high reputation for turning out good, reliable work.

BARRY & Co.'s HORSE LOTION—For sore backs, cuts, wounds, etc., and Barry & Co.'s Horse Salve for cracked heels and angry sores, have been highly recommended. See advertisement on another page,

HARNESS, SADDLES, BLANKETS, ETC.—R. Stone, corner of Battery and Washington streets, importe and manufactures the above articles, and offers to the public a large stock of first-class goods at low prices.

HERD AND SWINE.

Cheese.

The farmers' lecture course at the Minnesota State University, which recently closed, comprised several lectures by Prof. L. B. Arnold upon dairy subjects. The last one was upon cheese. We give a brief abtract of it:

The cheese product of the United States is small, compared with that of butter. We make annually over $00,000,000 ponnds of hutter and 270,000,000 pounds of cheese. The manufacture of cheese has never flourished and never will flonrish until a process different from that employed in our factories is employed. It is possihle, however, to make a cheese both healthful and agreeable. One of the first things in the manufacture of cheese is the rennet. It is the hasis of all cheese making. It is not, as is supposed, used merely to coagulate the milk. The process of cheese-making is a process of digestion, and it is for the latter purpose the rennet is mainly nsed. The cheese in the curing room is gradually rendered soluhle by the influence of the gastric juice from the rennet. The modes of making cheese are largely empiric. The average maker can give no reason for his processes. He does not know how or why the rennet acts. He is not philosophical but follows traditionary processes. The rennet is used to control the rapidity of curing. The more used the faster the cheese will cure, other things heing equal. The process, as stated, is not a chemical one, hut one of digestion. The latter is most active at hlood heat. Practically the milk ought to he set at 90 degrees, as at hlood heat the process of coagulation is too rapid for a workman. The process gets ahead of him. After cutting the curd aud allowing some whey to escape, it will do to raise to blood heat, when the action is accelerated. The curd should not be left in the whey until the latter becomes sour. Many make that serious error. Lactic acid of the whey sets free the phosphoric acid, forms lactate of lime and the phosphoric acid runs off in the whey.

Cheese made hy souring process is indigestihle hy the pepsin from even a hog's stomach. Take the curd out of the whey when sweet and mature it afterwards. Besides rennet, other agents are requisite to the proper curing. The curing is not only a digestive but also an oxidizing process and the oxogen of the air is one element in the process. From the latter comes the "cheese flavor." Cured in the ordinary methods, the cheese is first greased, thus largely shutting of the oxogen of the air and retarding development of flavor. Before putting the curd to press it shonld be dry, separated and exposed some time to the air. In that case it may he as well cured and ripened for the table in forty-eight hours as in forty-eight days hy the ordinary process of hurrying the putting of the cheese to press and greasing it. Another good method for handling the curd is to take it from the whey, atir it fifteen or twenty minutes, then let it lie in a heap in the vat until the changes occnr so rapidly that the curd hegins to "raise" almost like yeast. The cheese hy this rapid process is ready to ship the moment it leaves the press, especially in warm weather. I have directed makers to air the curd three hours, in which case the cheese will he ready to ship in about ten days. When cheese comes to he made hy the airing process, hy the use of rennet for digesting, and by the non-souring process, we will have a cheese that will dissolve on the tongue like a pear and he perfectly digestihle, and thus valuable as food. Skimmed cheese, as usually made, is almost valueless as a food hecause the stomach does not digest it. Recently an improvement has heen devised in making "skimmed cheese," hy not making the curd so dry as is customary. One of the most marked improvements in the making of skimmed cheese has come from the discovery that any other fat will have the same effect in curing and ripening the cheese as the butter fat, so if the fat is ohtained from any other source it will answer the same as the butter fats. Now, lard is used to represent the butter fats, and with very gratifying results. With prejudice among makers overcome, this plan would he general, and it is highly commendahle, fine wholesome cheese resulting from the nse of lard. With this plan cheese-making would also he much more profitahle.

Polled Angus Cattle at Ela Hills.

A reporter of the Los Angeles *Herald* records his impressions of a visit to the Ela Hills stock farm and an inspection of the recent importation of Polled Angus cattle:

East Los Angeles is to Los Angeles what Oakland is to San Francisco; or, if the more ambitious simile may he tolerated, what Brooklyn is to New York. We have often heen exercised as to the meaning of the word Ela. It is a quite euphemistic name for a farm or a residence, and is simply a combination of the initial letters of East Los Angeles, where it is located, a little heyond the temporary terminus of the street railway which runs from the city across the river, on Downey avenue. Mr. Johnston's present residence is just at the base of the line of hills, which are heing pierced for a continuation of Downey avenue.

Dismissing the marked improvement which is everywhere observable in this charming suhurb of onr city, we may remark that Mr. Johnston has lately associated himself with Mr. C. A. Paige, a gentleman of capital and of kindred tastes in stock farming. Before forming this connection Mr. Johnston had signalized himself as a very energetic improver of both our breeds of horses and cattle. Prior to the departure which we are about to note, he had made four separate importations of thoroughbred bulls and cows of the most famous and approved thoroughbred imported varieties.

Mr. Johnston has always had a theory that the common scrub stock of California afforded an excellent basis for breeding graded cattle, but was worthless in itself. He acted on this idea; and he found, as the result of repeated experiments, that by crossing the hardy stock of the country he attained two results: 1. The acclimatization of the imported stock. 2. A common country cow acquitted herself of a graded stock which, at two years old, yielded steers which weighed as much as common country stock steers would at eight years. For all purposes of breeding steers to furnish heef for the market, the graded stock is worth four to one of the common country stock. When it is borne in mind that California is suffering from a beef famine just now; that choice steaks in San Francisco have reached panic prices; that all the old "cow counties," like Los Angeles, San Bernardino and San Diego, are almost denuded of horned cattle, this is a very important proposition. We are through with our unlimited sheep and cattle pastures, and with inferior representatives of both sheep aud cattle, and have entered into the era of sensible farming, in which Hancock M. Johnston, and a few other gentlemen in southern California, have led the way.

Mr. Johnston having, as we have said, associated with himself Mr. C. A. Paige, in the management of the Ela Hills Stock Farms, these gentlemen concluded to make what is practically the fifth importation of thoroughbred cattle which has taken place under the auspices of Mr. Johnston. During the past three or four years the Polled Angusshire hovine hreed have demonstrated their superiority to all other kinds of heef cattle, including the Durham Shorthorns. About a month ago Mr. Paige started for the central depot, in Missouri, of the famous imported Polled Angus hreed of cattle, to make judicious purchases. After a careful inspection of the stock, and a verification of the records hy the herd hook, he hought a hull, three cows and a calf, for the sum of $5,400, which by the time they arrived in Los Angeles stood the Messrs. Johnston & Paige in about six thousand dollars.

The hull, Black Commodore, a yearling, has his appointed place in McDonald's "History of Polled Angus Cattle." He is a perfect heauty and weighs about thirteen hundred pounds. The term "polled," in Scotch cattle nomenclature, means what in American parlance is known as "muley." These cattle are without horns and as hlack as jet. Amongst the cows is Miss Fyfye, a three-year-old whose dam was one of a group of five which took the premium at the Paris Exposition. She is a gem of a cow and as gentle as a kitten, cultivating a stranger's acquaintance without any hesitancy whatever.

The marked peculiarity of this hreed, which are all as black as coals, is that they are without horns, with small hones; and the cows, unless they are fattened for market, like the Durham Shorthorns, are good milkers. While the curved line may be the line of heauty in art, the clear, straight line of the hack and stomach, the low-lying and full brisket, the slender shanks and diminutive feet, of this famous hreed of cattle, mark them out for the admiration of the man who aims to furnish heef for the market. The calf does not give much evideuce of growth until it is about fifteen months old. In fact, if put up at auction in its younger days, a Polled Angus calf would hring almost nothing from a Los Angeles hntcher who was ignorant of its pedigree and market value. Then, presto, change! While still a technical yearling, its weight, like that of the Black Commodore, frequently runs up to twelve or thirteen hundred pounds; while, at the acme of its growth and fattening, it runs from twenty-two to twenty-five hundred weight, quite equaling the Durham in avoirdupois, and surpassing it in the quality of beef.

One of the most valuahle peculiarities of this Angus hreed is that the fat, instead of being hunched around the kidneys and at other usual points of the steer, as in even famous breeds of other imported cattle, is marhled, imparting to the heef a delicious flavor—something equivalent to that triumph of the art of the cuisine known as larding a roast tenderloin. This peculiarity causes the heef yielded hy these cattle to command two or three cents a pound more than that of the most favored hreeds of cattle, not excepting even the Shorthorn Durhams. When it is horne in mind that there are only a few thousand genuine Angus cattle in existence, with an undoubted register in the Herd Book, the enterprise of the Messrs. Johnston & Paige, in importing such undoubted representatives of the precious stock into Los Angeles county, will be the better appreciated. It gives our farmers an opportunity of raising graded cattle, of an unsurpassed hreed, which they certainly will not he foolish enough to neglect.

Fancy Prices for Stock.

Most of us have been generons in our censure of fancy prices for stock, and there have heen good grounds for our feelings of indignation. There is a limit to the honest worth of an animal, and that limit has been frequently exceeded. Of course all sensihle men recognize the right of a hreeder who has heen at extra trouble and expense in producing something conspicuously ahove the average, to charge not only for his time, trouhle and outlay, but also for his enterprise. Any man who will go from a community in which there are no improved hreeds of cattle, purchase hlooded stock, and produce good Shorthorns, Herefords, Holsteins, or other excellent hreed, has the undoubted moral conrage to charge his neighhors who purchase that stock a price which, nnder ordinary circumstances, would he regarded as exorhitant. And then it mnst be remembered that what would seem to he an exorhitant price, jndged from the value of our common cows, is not always of that character. At perfectly fair prices the thoughtless cannot see anything hut extortion. Even $500 or $1,000 for a hull appears to snch people an nnacconntahle price. Yet a good hull of one of our improved hreeds will return that money over and over again in absolute value. His offspring will pay the price paid for their sire in milk and heef, and an enormous percentage of profit hesides. And that would he true if he cost several timea the amount named.

It must not he forgotten that with the dairy breeds there are more pounds of hutter, and that with the heef-producing hreeds there is a larger number of pounds of heef. There is more to sell to start with; and then what there is to sell is worth a good deal more. It has heen demonstrated hy actual and careful experiment that the nutritious elements in most of the improved breeds are largely in excess of those in the meats of our common cattle. Indeed, Dr. Sprague claims that there is scarcely any nourishment at all in the heef of common cattle, and he conducted some very careful experiments to satisfy himself of that. But the practical results of eating heef would not sustain that conclusion. The world is living upon heef of the character which is said to contain little or no nourishment, and it does nonrish and nourish well. But it will not and cannot furnish the same amount of nourishment that the heef of a Shorthorn or Hereford will.

But heyond the figures that mark the actual worth of the animal—that is heyond the figures that make the animal and its offspring worth so much as a producer of dairy products and heef, together with a reasonable compensation for the breeder's enterprise—the price becomes absolutely of a fancy character, and injurious to the interests of the hreed to which the animal for which it is asked helongs. Breeders have learned this fact to a considerable extent, although some of them did not learn it until they were financially ruined. But those of us who were never enticed into the payment of such prices have nothing to complain of. Indeed we have been benefited, for those fancy prices have raised the prices for even common stock, and all hands have been profited. Looking the whole matter over, there is cause for sincere gratitude that with all the folly that has attended the introduction of the improved hreeds, they have been introduced; and we can all join in this feeling of gratitnde whether we have been directly profited or not.

But the time has come when we should he sharers in the direct profits, and we can only be that when we begin to breed from this class of stock. There is no longer the excuse of too high prices to he offered for our pursuing the ways of a century ago. Good animals of any of the breeds can be had at a moderate price, and our advice is to procure them. No farmer can do a hetter thing for himself than to breed up.

Good blood is as necessary to the highest financial success in the herd as in the the stud.

Watering Stock.

There is one thing in reference to the the interests of stock that will hear a little study. I refer to the method of watering farm stock. The practice with a great many farmers is to water at stated periods. In summer hut few farms have pasture lots supplied with running water, and cattle kept in pastures that are not supplied with water hy natural means are very often dependent upon the whims of their owners. A great many farmers have wells in their pasture-lots and a pump and water tank; and this is a most excellent provision for the comfort of stock. But where pumping is done hy hand there are very often days when the tank is allowed to go dry, and the stock suffer accordingly. I think the time is coming when every farm of respectable size will have every pasture on the farm supplied with a good well and a windmill. Stock are more sensitive to heing deprived of a sufficient supply of good water than to a like deficiency in their rations of food. Stock will run down much quicker if deprived of the necessary supply of water than from any like shortage of food. They are also very susceptible to the bad qualities of the water with which they are supplied. Owners of fancy flocks of sheep, of high-priced Jerseys and of wellhred horses can not afford to deprive their stock of an abundant supply of pure, fresh water. The manufacturers of "gilt edge" butter can not afford to have impurities enter into the composition of their dairy goods hy reason of furnishing impure and unwholesome water for their stock.

I recently saw an illustration of the injurious effects of compelling stock to use impure water. A neighhor has a well in the lower corner of his harn yard which is nothing more than a receptacle for the drainage from the yard. During the first thaw the water in the well became impure, and the horses, for a time, refused to drink it. In a few days the impure water had all heen pumped out and the most of the stock drank it as usual. There was one colt, however, which had heen led to the trough when the water was at the worst. This colt could not he induced to taste the water from this well for more than two weeks after it was as pure as ever, and in the meantime quenched his thirst with nothing but snow; he became thin in flesh and spring-poor in mid winter. The damage to this colt is something serious, and it could all have heen prevented by not draining the harn-yard into the well. Cows are not near so sensitive in the matter of taste as horses, yet this should not he an excuse for negligence in the quality of water furnished them. The stock hreeder and the dairyman owe it to themselves to supply their stock with the purest and freshest of water. How often should animals he allowed to drink? I presume were stock allowed free access to water in summer that each individual would drink at least a dozen times during the day. If they are not allowed free access to water, hut compelled to drink at stated periods, they are quite liahle to drink too much. This is one of the greatest advantages of having water in the pasture. In winter I am aware that the practice is to water horses perhaps twice a day, morning and night. With cows the practice is to turn them into the yard and allow them to drink what they want during two or three hours. Perhaps an improvement upon this plan would he to turn them out for an hour at a time morning and night. All those who own horses should have some way arranged for taking the chill off water for horses during winter. It will pay to do so.—*Breeder's Gazette.*

Heifer Calves.

D. E. C., Merrimac Co., N. H., says: "I wish to raise several heifer calves for the dairy, and want to know how to feed them so as to make the hest hutter cows? What should I add to skim-milk, and how much and how shall I feed them the first winter? At what age shonld they come in? Would half-hlood Jerseys be hetter than our common stock?" These questions are short, hut might form the text for a treatise on butter dairying.

First, there is no food that will make the "hest butter cows" out of heifer calves not inheriting good hutter-producing qualities. Proper feeding will develop a first-rate animal of its kind, hut it must follow out mainly its inheritance. If the calf is from a dam, grandam, great-grandam, etc., of inferior hntter yielding qualities, and from a like sire, graudsire, etc., no food will create these lacking qualities in the calf; hut the best feeding will improve the milk and hutter yielding qualities of the dam, if she has been poorly fed. Good feeding stimulates all the secretions, and it will improve the milk secretion, and hy feeding properly for several generations, may effect an improvement of considerable importance.

In developing heifers for the dairy, the food needs to he of such a character as to stimulate the growth of the muscles and frame, rather than the deposit of fat. Food containing a large proportion of oil or starch is likely to canse too free a deposit of fat. In feeding well for the development of muscular and osseous systems, there will be quite snfficient deposit of fat to line the muscles and cushion to the joint. The heifer needs a muscular, rangy frame, a strong, active digestive system, and to this end she must have a good appetite. A heifer calf that is a persistently dainty eater should be disposed of, as a profitable cow must he a good eater and digester. It is the digested food that makes the milk and butter.

Skim-milk is an excellent food upon which to raise a good heifer calf. It is deficient in oil, and therefore sometimes produces constipation. The hest antidote to this is to mix a small quantity of hoiled flaxseed with the milk. This is rich in oil, and one-half gill per day will keep the bowels in good condition, and increase the growth of the calf. This would only require one peck of flaxseed to last a calf four months. The flaxseed, in this case, is only used to counteract the tendency to constipation, hut it will he well paid for in the growth of the calf. If, after the calf is fifty days old, the feeder wishes to further improve this ration let him add one pound per day of wheat middlings or shorts. This will supply the extra food required hy the calf at this age; and at eighty days old another pound of middlings may he added. Continue giving skim-milk, if you have it, till the calf is at least six months old.

The first winter the heifer calf may be fed on early-cut clover hay, and two pounds of middlings, or two pounds of oats and corn ground together. If one is located where ground feed is not easily ohtained, unground oats may he very safely fed to a calf six months olds. Two qnarts of oats with good hay will produce a very good growth with good shelter. Corn is too heating to be fed alone to so young an animal. Another very good ration for a heifer calf the first winter ia one aud one-half to two pounds of middlings, with one-half pound of linseed oil meal with hay. The feeder may give a great variety of rations, such as corn and peas, corn and oats, corn and huckwheat, corn and rye, corn and millet, or auy two of these, hut they shonld he ground.

The proper time for the heifer to come in is at two years old. She may couple at thirteen or fifteen months. If the heifer is well kept she will be in heat so as to come in at two

years. The best opinion among dairymen now is, that the heifer is likely to make the best cow to come in at two instead of three years. The milk secretions should be developed early, but the second calf should not come in in less than fifteen months after the first, but the first milking season should be twelve months. This long milking period for the first, is thought to give the heifer the habit of holding out her milk well.

The answer to the question as to which is better, grade Jersey or common stock, depends upon selection. A selected common cow is better than a poor Jersey. But a well selected Jersey is much better than a selected common cow, because the Jersey has been bred for milk and butter for a great many generations, and is much more likely to breed like herself than a common cow.

In breeding graded Jerseys, a pure-bred Jersey bull is used upon common cows. Now, if this Jersey bull is from a large butter-yielding dam, grandam, great grandam, etc., his grade Jersey heifer calves will be likely to be a great improvement on their dams, even if these are considered good butter-yielding common cows. The writer of this has bred ten such grade Jersey heifers, and found their average product of butter to he 1 pound of butter from 16½ pounds of milk, while the average of the dams was 25 pounds of milk to 1 pound of butter. Here was a gain of 34 per cent on the first crose. And we found these grade heifers much more uniform than we expected. They ranged from 14½ pounds to 18½ pounde of milk to 1 of butter, and the lowest amount of milk, 14½ pounds, is probably a better yield than is averaged hy pure hred Jerseys.—*Live Stock Journal.*

International Dairy Exhibition.

The Board of Managers of the International Dairy Fair Association met at the office of the *Agricultural Review* in the *World* Building, New York, on the 13th inst., Mr. Francis D. Moulton presiding. This association has been in a prosperous condition for some years past, but has heretofore conducted all its exhibitions and other business without a charter. It was recently decided to apply for a State charter, and the Secretary, Mr. Joseph H. Reall, was ordered to draw up a document of incorporatiou. This document was adopted yesterday, and the by-laws of the association were so changed as to suit the charter.

Mr. N. F. Sprague made a report on the proposed exhibition of the American Agricultural Association, and advocated that the International Association combine with the other in order to insure success. A resolution to that effect was afterwards adopted.

The proposed exhibition is intended to be the largest ever given in the United States and dairy and agricultural products from all countries will he exhibited. It is not decided as yet in what part of the country the exhibition will he held.

Mr. Sprague reported that an excellent site for buildings was offered hy the people of Utica, and as that city is situated among the agricultural and dairy districts of the country the committee was much in favor of securing the site.

The exhibition will probably take place early in Octoher and continue until late in Jannary. The followiug gentlemen were elected a Board of Managers of the International Associatiou for the ensning year: M. Folsom, D. E. Manton, M. B. Miller, Daniel H. Burrell, W. I. Young, T. M. Seaver, J. M. Sheldon, Robert McAdam, George Merry, A. W. Ingraham, all of New York; C. W. Wolcott, of Massachnsetts; Chester Hazen, Minnesota; N. F. Sprague, Vermont, and C. W. Mills, New Jersey.

Texas stock men are said to be in grand council at Fort Worth. Over $20,000,000 is represented. They propose to make such arrangements that they will control the California cattle trade. Should they succeed in doing so it would interfere very largely with the great Nevada indnstry. Our State contains considerable grazing land, and the only use that can be made of it is to raise cattle. If Texas comes in as a rival, the price of beef will he apt to come much lower. —*Reno Gazette.*

Mr. Isaac R. Jewell informs us that the silo he built on his dairy ranch in Marin county last year is a grand success. He wonders that it has not heen more generally adopted before. His cows eat the ensilage readily, and the results are fully up to representations heretofore made ahout it.—*Petaluma Courier.*

The pound weight of the Island of Jersey is heavier than the pound avoirdupois—a trifle over one-thirteenth heavier. Thns thirteen pounds Jersey equals a very small fraction over fourteen ponnds avoirdupois. It is unfortunate that there has often heen a lack of acenracy in stating this difference.

SHEEP.

Spring Management of Ewes.

With flock management, as with all other husiness pursuits, there ie no timo when affairs can be left to the vicissitudes of chance—no time when neglect is not punished by loes, and intelligent snpervision rewarded with fair returns. Though at times the well-provided flock may allow its owner short vacation, while his faithful subordinates enforce the detaile of management, there are occasione when no impulse hut that of actnal necessity should excuse his constant euperviein. The three most important events in the annual rouud of flock mauagement—coupling, lambing and shearing—present occasions when there shonld he ceutered about the fold eleeplees vigilance and ekilled and willing harde as well. In eome respects the lambing season is the most important to the eheep owner—this attrihntahle not alone to the fact that the thrift of the ewee dnring the remainder of the year is so intimately affected thereby, hut to the equally important fact that the most considerahle item of the year's income—that of increase in numbers—ie dependent upon the care and good judgment now extended.

Few localitiee are so invariably exempt from unpropitious weather as to render safe an entire absence of shelter, liherally snpplied with straw or leaves or hay for bedding, and a reserve of artificial feed within easy reach. If these are not required one eeason, they are ready for the emergencies of auother. The chancee are largely in the direction of euch a necessity every year as will return a heavy interest on their first cost and the expense of keeping them ready for occupancy. These ahelters ahould he snug and close, and, hetter than all, dry, with openings for plenty of light and ventilation.

Ewea expected to yean should, when possihle, be separated from the large flock, and permitted all the quiet and comfort that can he eecured to them They ahould not he confiued to ahelter in fair weather, during the day, but ahould not for any length of time he from nnder the eye of the ehepherd. At night, after a liberal ration, they should be provided with a good bed of straw, with plenty of room for moving ahout and lying down—say twelve to sixteen feet of space to each animal. Thus comfortably quartered, there will rarely be found a necessity for disturhing them during the night. With any but the gentlest flock the confusion attending the shepherd's presence will generally offset the effect of work he will be able to perform. The exceptions to this rule will apply in the case of valuahle animals kept in small numhers. The ewe, while in the act of yeaning, seldom requires the shepherd's assistance; ninety-nine in a hundred will be better without him, if he has performed his dnty to that point. His presence may, however, he neceesary to the welfare of the lamb. Occasionally one will be found too weak to get upon his feet. After it has been licked dry by the mother, if it does not stand up and take a supply of milk, the reasonable inference is that something is wrong. In such instances, usually, all that is necessary is for the shepherd to support it while gently holding the ewe. With a hait of milk thus secured it will generally gain strength rapidly and require no further assistance, in the absence of some deformity or imperfection. The experienced shepherd nsnally provides himself with a bottle of milk from a fresh cow, and with this in his pocket, is prepared for the emergency when finding a ewe without a sufficient supply of nourishment for her lamb. Ordinarily, with thie help for a day or two, and a liberal supply of proper food for the dam, the relations of supply and demand will be properly adjusted. If not, a foster mother may he provided from some of those that have lost lambs within a short time. With patience and good management this can commonly be accomplished in one or two daye. A small pen—eay 2½x3 feet square—is provided in eome secluded corner of the shed, into which the two are placed, and occasionally looked after, until a reconciliation is brought ahont. Sometimes a ewe will he found to absolutely refuse to adopt a lamb, despite all the persuasive and deceptive devicee brought to bear; but these are the exceptions, the majority heing found quite tractable after twelve or forty-eight hours' manipulation. If a foster mother can not he had, the lamb must he ahandoned or brought up a "cosset" on cow'e milk. With plenty of milk, and a little patience in teaching the lamb to drink, such a course can be profitably pursued, as lambs will begin to eat at an early age, and help themselves when food is placed within their reach.

The first two or three days of a lamb's life are its most critical ones. Once fairly on its feet, and well filled with its mother's milk, it may be safely accounted ae half raised, so far as the natural riske of life are concerned. Few young animals gain etrength and activity more rapidly than the lamb, despite its weak and helpless condition whenhe'irst meeting the cold comforts of its new existence. As soon as possihle hoth ewes and lambs should have access to green food whenever the condition of the weather will admit of the necessary exposure. By such change of food the flow of milk is materially increased, and the lamb early taught to earn its living hy nihbling such tender hlades of grass or rye as come within its reach.

It will be seen that enccees in spring management of ewes depends very largely upon conditions which must have been arranged in advance. Without euch precantiou, such arrangements ae can be improvised may mitigate disasters but cannot prevent them. "Good luck" in spring is largely the resnlt of wise foresight and liberal preparation in advance; and no management, however intelligent or industrious, can reverse the rule, which will be found as inexorable as the decree that effect mnst follow cause. Of the shepherd, as well as the farmer, it may be truly said: "As he sows, so shall he reap."—*Breeder's Gazette.*

Sales of Sheep.

The following transactions for last week are reported from Los Angeles:

Domiugo Batz of Loe Angeles county to A. G. Andereon, Colorado City, Texas, 600 ewes.

Tarpey & Kirkpatrick of Stanislaus county to same party ten thoroughbred Spanish merino bucks.

W. R. Rowland of La Puente to C. L. Tucker of Coleman county, Texas, 1,600 fine graded sheep.

M. Lanhig of Los Angeles county to same party 600 ewes.

F. Lauzier of Mud Springs, Los Angelee county, to C. H. Hair of El Paso, Texae, 1,200 head of fine graded sheep.

Mr. Etcheverry of Rancho Cuyamaca, San Diego county, to J. P. McCafferty and H. D. Winchester of Colorado City, Texas, 2,400 graded sheep of fine qnality.

D. Bastanchnrie of Los Angeles county to A. G. Miller and C. T. Hall of Round Rock, Texas, 800 fine ewes.

W. H. Toler of Los Angelee county to Amar & Celestin, also of Los Angeles, 1,100 head of graded sheep.

The importance of growing alfalfa is illnstrated in the success met with by John D. Grant of Healdsbnrg. From the hay cut from forty acree he has fed 1,000 wethers for a period of four months, and has enough hay left to feed an equal number of ebeep for six weeks or two mouths longer. Theee sheep were hought at a low figure and are now ready for market. He will net an exceedingly fine profit, and the expense has heen elight.

John Tuohy left Tulare county for Texas last Thureday with 6,000 sheep. Pasturage is good in Texas, and although the cost of taking the sheep there will amount to nearly as much as they would sell for here, the price of sheep in the Lone Star State will more than make up the loss. Good sheep are selling in Texas at $6 per head.

Mr. Sam Johnson of Walla Walla, W. T., has increased hie flocke this spring by the pnrchase of 1,559 head, paying $3 per head for them. A few yeare ago this would he thought a hig price for sheep, but with the winter behind them and present prospects, it is considered a good bargain.

Cattle and sheep men in eome parts of Fresno county are having considerable difficnlty in findiug eufficient feed for their stock.

A considerahle quantity of wool is heing ehipped to San Francieco from Visalia. The spring clip ie early this year.

General Tracy of Marshland Stud saye he hns learned something with regard to feeding. He conjectures that overfeeding of grain is as injurious, because it bakes the system, as underfeeding, which retarda growth through weakness. Hia allowance for weanlinga and yearlinga ia now four quarts per day of corn, rye and wheat hran mixed, or of oats. The change keeps the appetite from growing dnll. Fed in this way, aixteen yearlings gained on an average hy scale test sixteen ponnda each during the month of January. The yearlings of February, 1883, are larger thau the two-year-olds, which, ne weanliugs, were fed six and oight quarts of grain per day.

A Notable Contest.

Some years ago there was a brown gelding on the trotting turf that made coneiderable of a stir. He has been severally known as Chicago, Hardhread, and Jim Rockey. The story of his past career is too well known to the sporting world to require repetition here. In the hands of Jim Rockey, who came to an unfortunate end, Chicago was a dangerous horse in his class, and out of it, too, for that matter. Like old Abdallah and Silas Rich, Chicago led a precarious existence. He was trotted from Dan to Beersheba, got into the hands of all kinds of men, and pulled everything from a dainty sulky to a dirt cart. In 1868 Chicago, then in his ninth year, got a record of 2:24¾ under the name of Jim Rockey, heating Bashaw Jr. in straight heats. Up to 1880 the old horse put in a few heats each year, and then retired from public notice. He was at the time owned in California. Many supposed Chicago dead, but within the last four months he again came to the surface. There has been a good story going the rounds regarding Chicago while in Jim Rockey's hands, and we fancy that inimitable *raconteur*, Col. Dickey, could epin many an interesting yarn concerning him from his budget of "Tales in a Wayside Inn." A few weeks ago the report came to us that Jack Cottrell of California had purchased old Chicago from between the shafts of a juuk wagon for $190. Mr. Cottrell had faith in the veteran, and matched him to trot to wagon againet Sadie and Johnny to harness. The race came off at the Bay District track on Washington's Birthday. The firet heat was taken hy Johnny in slow time, Chicago laying up. The second and third heats went to Sadie, with Chicago well in the second place, finishing close. In the next heat Johnny Goldsmith called on the stout old fellow, and he took the lead in gallant style, winning in 2:31¼. The fifth heat was gamely contested by Chicago and Johnny, the hrown gelding outfooting his competitor before the three-quarter pole wae reached. Sadie then came up, and the race in wae so close that the judges decided it a dead heat. It wae the opinion of the majority that Chicago had a reserve of speed. The sixth heat wae a hard race between Chicago and Johnny, the old horse winning in 2:38¼. It was now too dark to go ou, and the race was postponed. The following day the deciding heat was trotted, Sadie winning in 2:36, Johnny second, and Chicago close up.

A fourth heat to wagon in 2:31¼, hy a horse in his twenty-fourth year, is a remarkable performance.

In point of speed Chicago was never regarded a world-heater. He had, however, the valuable qualities of gameness and endurance. Pitted against horses of superior speed, he was able to outlast the generality of them. This was the secret of his great succese as a campaigner. In breeding he doee not meet the fashionable taste of to-day. His sire was Ole Bull, a son of Old Pilot, a stout strain, and his dam was by the great racehorse American Eclipse. These two strains of sturdy hlood made Chicago a formidable antagonist. He aleo comes of a long-lived race, more than one member of which made his mark after attaining a score of years.—*N. Y. Sportsman.*

Harriman's Tour.

C. A. Harriman continues hie way Eastward across the mountains by easy stages. Last Saturday night he gave an exhibition at Sierra City, his nsual ten mile rnn, challenging any five amateurs, running two miles each. Only three men ran against him, H. Hall, J. Myers and L. Thompson—H. Hall and J. Myers running four miles each, Harriman won the race by two laps and a half. Time 1:15:00. He was then challenged to repeat the performance against a full corps of amateurs and the race came off on Sunday evening. Five men, J. Hayes, D. Thompson, R. Trompetta, L. Thompson aud J. Myers, ran against him, their performancee being ae follows:

J. Hayes, first mile	7:00	13:45
" second mile	6:45	
D. Thompson, first mile	7:00	15:00
" second mile	8:00	
B. Trompetta, first mile	6:00	13:00
" second mile	7:00	
L. Thompson, first mile	8:00	15:00
" second mile	7:00	
J. Myers, first mile	7:00	13:15
" second mile	6:15	
Grand total, 10 miles		1:10:00

At the finish Harriman was three laps behind Myers. He then left for Reno.

Much has been said and written of the great extent and large possibilities of Mexican haciendas. But probably few people in the United States even yet realize the extent of some of these tracts of land, where a million or a million and a half of acres often constitute a single estate in the hands of one owner. There are many estates in Mexico large enough to hide away many a European principality, large enough to awaken the envy of many a land proprietor in the Pacific Coast States of the Union. These are to be found in many of the Central and Northern Statee of Mexico. The famous Salado ranch, for example, containe over 600 square miles of land. It lies partly in the States of Nuevo Leon, Coahuila, Zacatecas and San Luis Potosi, on the way to Mexico, and on the line of the new railroad. It occupies the central tablelande of Mexico at an average elevation of 4,000 feet. Chains of mountains traverse the estate, rich in miueral wealth. The houndariee of the estate extend more than 100 miles from north to south, aud flourishing farms and large mining towns are met at frequent intervals.

It is claimed that horses have been successfully cured of the habit of biting by putting a piece of hard wood an inch and a half equare in the animal's mouth ahout the length of an ordinary snaffle bit. It may he fastened by a thong of leather passed through two holes in the ends of the wood and secured to the hridle. It must be used in addition to the hit, hut in no way to impede the working of the bit. Rarey adopted this plan with the zehra in the zoological gardens, which was a terrible brute at biting. Rarey succeeded, however, in taming and training him to harness, and afterwards drove him through the streets of London. Animals with this vice should be treated kiudly in the stahle, and not abused with pitchfork handles, etc. An apple, crnet of bread, a piece of beet, etc., aud a kind pat, but firm, watchful hand and eye, with the use of the above wooden hit, will eure the most inveterate biter. The fact that he can not shut his mouth or grip anything soon dawna upon him, and then he is conquered.

Fred Gebhardt, the admirer of Mrs. Langtry, has purchased the half interest of Mr. A. Hunter in the well-known race horse Eole, and is now sole proprietor of the animal. Eole was about the best horse in training at the close of last season, and as he is sound aud in good health should prove a dangerous contestant in the cup races this season.

ADVERTISING RATES.—Displayed $1 50 per inch each insertion or pro rata for less pace. Reading Notices set in brevier type and having no foot marks, 30 cents per line each insertion. Lines will average ten words. A discount of 10 per cent. will be allowed on 3 months, 20 per cent. on 6 months and 30 per cent. on 12 months contracts. No extra rate charged for cuts or cutting of column rules. No reading notice taken for less than 60 cents each insertion.

San Francisco, Saturday, March 24, 1883.

TIPS AND THE "TURF, FIELD AND FARM."

Again we have to take to task the *Turf, Field and Farm* for its unfair criticisms on the use of tips, but finding that it reqnires something more than courteons replies to answer the statements will write in terms the articles, especially that which is appended, demand. We scarcely ever saw a more determined and persistent effort to misstate, to garble, to misrepresent, and it can truthfully be written, pettifog, than has been displayed all through. There has not been one candid admission; there have been a dozen misstatements. Part of a paragraph has been copied, given an entirely different meaning from what was clearly shown in the whole, and in some cases it could not be otherwise than that it was done knowingly, perversely and with the intention that deception, at all hazards, was to guide it in the discussion. To mislead its readers it has sedulonsly twisted what were plain facts by only copying snch parts as suited, and even putting a construction on these fragments which was unwarranted. For instance, in a chapter in "Tips and Toe-weights," written several years ago, published lately, in relation to the effects of an unequal distribution of weight on the feet, a note was prefixed that we were in a quandary in relation to tbe cause, and had changed former belief. This was made to appear as though tbe donbt was applied to the use of tips when the meaning of the explanatory note was palpable to the meanest understanding. In the present case tbe commnnication of Mambrino is mntilated, and the only portion quoted or alluded to is his intention to jog his horses in tips until taken to the track and the two objections he raises to their use. His "indorsement" is studiously avoided, and in order that our readers may see how unfair tbe argument, if it can be diguified with that title, we republish a portion of the communication, which appeared in the *Breeder and Sportsman* of February 24tb:

Now, friend Simpson, I am no novice in the use of tips myself; for more than twenty years I have experimented with them and for many conditions of contracted as well as sound feet consider tbem at times indispensable. I have now an old family pet, twenty-three years old; owned him nineteen years; bred in Alabama, and he is more than one-half thoroughbred. For many years he was my favorite roadster; bas trotted, without other preparation than reading, in a race in 2:34. I first wintered him North when eight years old; after the winter's use in the snow, his feet became hard and the horn brittle, and in spite of careful attention he went lame in May. I then took him to the blacksmith, attended personally to applying tips, giving bim a fair frog bearing, and in two weeks he was all right; put on his shoes again in July and had lots of fun with him at the fairs and winter sleighing. The next spring, lame again, and again tips and "Old Mack" was O. K. again. For years he has been my wife's phaeton horse, but his summer wear has been tips, and he is, to-day, like an eight-year-old. Several years ago, returning from a short absence in the spring, my wife remarked to me: "Old Mack has been very lame, but the man has had his tips put on and he is all right."

Three years ago I traded for a very fast mare; her feet were badly contracted, and although her owner was a noted horseman, he had allowed her feet to grow outrageously long, explaining, "If you cut down her heels she will be so tender she can't go a bit." I cut them down, however, applied tips, preserving the proper angle and bearing, drove her all summer and winter in them. I blistered her around coronets three times, and the following spring I had a mare that would pass as sound to even the critical eye. A year or two ago I purchased a handsome black mare in Chicago, cheap, as her owner, although fond of his mare, would not bother with her feet, saying: "One blacksmith would cut too much, another not enough," etc. She was lame when I bought her, the owner said, "because her heels had been cut too much," and they were then more than one-half inch too high. I took her home, put on the tips, cut her heels down. She was going sound inside of two weeks, trotted faster than ever and has not taken a lame step since; in speeding had to add a light toe-weight. As you say, "Tips will do."

Now, if tips bring relief to the horse suffering intense pain from the inflammatory condition of the contracted foot, and in many cases restore the foot to its normal condition, they certainly can work no injury to the sound foot.

The claim that the use of tips causes undue strain upon the flexor tendons and suspensory ligaments, with corresponding tendency to break down, has no force with me, for the same angle can be given to the foot, if tips are properly applied, as if shod with heavy shoes. I have shod a great many colts with tips, and it is my custom to shoe in the early spring with tips all the horses kept up for pleasure and exercise during the winter months. Next spring nine will jog our graveled roads in tips, but when track work begins they will have shoes of various weights, as required by different gaits, nailed to their rested feet.

If this is not a gratifying indorsement we are very much mistaken, and think our readers will agree with us in so considering it. It completely upsets the first position taken by the *Turf, Field and Farm*, that the wearing of tips on Algath should have broken her down, and the only points of difference are the necessity for more weight than can be put in a tip to balance the action, and the necessity for the protection of a shoe to a "low-heeled" horse. More than that would be to agree with us in toto, and we are not egotistical enough to expect that every point of ours will be sustained. When the use of tips was first commenced, and for some time afterwards, these two objections were anticipated, but as every trial has shown to the contrary, as regards the action, and these experiments extending over a period of eight years, we have no fears on that score. In an article published March 3d the reply to these was published, and we have not the least fear that it will "tear each other asunder."

And in this connection we will be much obliged to Mambrino if he will acquaint us whether these two objections are from actual trial or more or less a theoretical conclusion. If from practice, the obligation will be increased by giving a full statement of the experiments, though unless he has followed tbe plan of recording daily or, at least, the length of time given to the test, and how the gait was prejudicially affected, it will be a difficult thing for him to do.

Again we reiterate that we consider Mambrino "a thoroughly competent critic," and his opinions, adverse or favorable, on the action question carry weight far beyond that of all the veterinarians in England. A man of education; better than that, a man of acute intelligence, and still better, one who has studied the effect of weight on the action closely. Should the writer imagine that the "rubbing the ears" has made any difference in the relations between us he has adopted a boyish notion quite as adolescent as his replies. Tbe accusation that Anteeo went repeatedly lame from wearing tips, has not a shadow to sustain the impression desired to be conveyed, viz., that the tips were the cause of it. When that lameness was alluded to the cause of it was clearly given. It came from a wrench which the blacksmith gave him when fifteen months old, and since his recovery from which he has never taken a lame step, never having worn shoes on his fore feet, and for a portion of the time last season "worked" harder than one three-year-old in a thousand is subjected to. More than that, every one who sees him remarks that his feet and legs could not be better. A gentleman looking at him last Monday remarked: "What a grand foot." "He has never worn a shoe" we informed him. "Then you must have taken first-rate care of them," was his reply. In place of that the care is to let them alone, further than to keep the bottom of the wall in proper shape. "No "soaking-out, no bandaging of legs, no ointments, and not a drop of water unless dirt is to be removed, and then only applied with a wet sponge. Then comes tbe question from Moorcroft, a learned professor of the Royal Veterinary College. It would have been very easy to state tbat Mr. Simpson claimed to have done away with that danger by sinking the tip into the wall so that the foot has the same bearing as when properly shod, or a properly pared bare foot.

That would have been a stretch of candor far beyond the intention, as it is palpable to any one that with this precaution it is impossible that the strains on the tendons should be any greater. Tbe only novelty we claim in tbe use of tips is in effecting that bearing by forming a square shoulder for the posterior portion of the tip to rest against, in place of cutting the born on a bevel and "feathering" the tip.

Tbe last paragraph as an argument is rather comical. Quoting the motto was for tbe purpose of demonstrating that when we felt confident in the soundness of position, we "held fast" to it until convinced of error. This was illustrated by tbe tenacity with which we have adhered to tbe value of thoroughbred blood in the trotter for more than twenty-five years, "rock-rooted in the belief," as our good friend, Colonel Colman of the *Rural World*, termed it. This may have given offense, as as the *Turf, Field and Farm* claimed to have "started the discussion" on that topic, whice is jnst as far out of the way as the criticisms on tips. Very many years ago Wm. T. Porter of the old *Spirit of the Times* and Henry W. Herbert wrote in favor of the nse of "blood" in fast trotters. The first copy of the *Turf, Field and Farm* appeared in August, 1865, and the winter of 1862 and 1863 we had a long battle with the accomplished writer "S. T. H.," in the present *Spirit of the Times*, which ran through several articles. We are not aware when Charles J. Foster became associated with that paper but from the first he was a stanch advocate on the side that elicited nearly universal dissent at that time.

This is foreign to tbe subject, but as the motto appears to have awakened the ire of the writer into casting a slur on tbe country, to which, we are proud to say, we owe our nativity, it is either to that connection or feeling the weakness of the position to fortify it with abuse.

We write this without a particle of ill feeling towards the *Turf, Field and Furm*, or any one of its proprietors, towards whom we have the warmest feelings of friendship. We did our best to help them in the nphill fight which always attends the "starting" of a new paper, and no one rejoices more heartily that a well-earned victory bas been won. But we most emphatically denounce the manner in which the controversy has been conducted on the part of that journal. It is contrary to our ideas of fairplay by placing things in a false light wbich cannot be remedied. Those who read both journals can be reached, though that is a small proportion of the whole. In order that the readers of the *Breeder and Sportsman* should have a full understanding of the controversey we have published every line on the subject that has appeared in our contemporary. How this has been met can be seen by a comparison witb Mambrino's letter and the following:

A Queer "Indorsement" of Tips.

Mr. Simpson prints in the BREEDER AND SPORTSMAN a letter from "Mambrino," apparently backing up his theory concerning the use of tips. We say apparently, for "Mambrino," after remarking that "I am no novice in the use of tips myself, for I have experimented with them for more than twenty years," and that next "spring nine horses will jog our graveled roads in tips, bnt when track work begins they will have shoes of various weights, as required by different gaits, nailed to their rested feet," then goes on to make the following extraordinary admission:

"I don't wish to be understood that all feet are suited to their use, as there are many low-heeled horses that need the protection from concussion of a good substantial shoe. There is no danger of tbeir going into general use for fast road or track work, for not one horse in fifty but requires more weight to balance their action than can be put into a tip."

Call you this backing your friend? "Only one horse in fifty can trot in tips!" Is it any wonder that Mr. Simpson is compelled to turn upon his intrusive ally and announce that "these objections we will make the text of future articles, confident that it can be shown by sound reasoning that the contrary is the case," and yet in that very same article he claims that—we quote his exact words—"the indorsement of so thoroughly competent a critic as Mambrino is gratifying." A queer indorsement that to boast of! "Only one horse in fifty can trot in tips!" Bnt really, it grieves us to see two gentlemen likely to tear each other asunder just as they were becoming happy in each other's fellowship.

There is only one additional point in Mambrino's letter that we need notice. He says the trainer ought to know better than the owner whether tips are injurious or not. That is so, and that is one reason why we stated that the trainer of Algath admitted to us that the tips made her sore. We have also shown that while the trainer of Anteeo was using tips on him, that promising colt repeatedly went lame. In addition, we quoted from three of the greatest authorities in all England, who condemned the use of tips. We could quote many more, but will content ourselves by giving the following opinion from the writings of Mr. Moorcroft, one of the professors in the Royal Veterinary College. He says:

"Latterly it has been suggested to shoe the toe only, and let the whole of the back part of the foot bear against the ground, or to make the shoe thick at the toe and thin at the heel. This extreme brings the weight of the body too much on the back part of the limb, strains the hind tendons of the leg and produces other inconveniences."

As we have already stated, we could go on and quote from still other eminent authors who have written in the same tenor concerning the use of tips; but what is the use, since Mr. Simpson's own witness, with whose "indorsement" he is so greatly "gratified," boldly—we had almost written baldly—testifies that "not one horse in fifty but requires more weight to balance their action than can be put into a tip."

Mr. Simpson says that when a young man he was asked to select a motto for a certain society, and that he chose this: "Hand fast"—which we take to be Scotch for bold fast. Probably this is why he holds on tenaciously in this matter, and persistently advocates the use of tips on all horses, for both jogging and speeding. When Mambrino comes to reply to our friend Simpson, he should bear this in mind; nor should he forget what Dr. Johnson said: "Much may be made of a Scotchman if he be caught young."

TIPS AND TOE WEIGHTS.

The sickness of the editor, alluded to in the paper of last week, has delayed tbe publication of the above for some time. We have not quite "rounded to" yet, going about with bandaged jaw and showing a manifest "loss of action." But we are "getting back on our feed," and bope soon to be able to go into "full work."

In this connection it will be well to state that tbe publication of the book will not end the consideration of the question. We consider it one of the most important

there is in horse management, and well worthy of all the space that can be given.

The experiments which we have tried in the past eight years, resulting so satisfactorily in every case, have carried conviction which cannot be overcome until it can be shown that we were favored hy having exceptional subjects. This may be so. It may prove that every one of the horses, subjected to the test, had some peculiarity that brought ahont the favorable results.

Still when these results and theories based on the structures of the foot and the physiology of the limbs harmonize there are good reasons to think that what we have found to be advantageous will be the case with others.

THE BELLE MEADE SALE.

We take pleasure in calling attention to the advertisement of the sale of the Belle Meade yearlings which is to take place on Saturday, April 28.

It is scarcely necessary to mention the position which the colts hred at Belle Meade have taken on the turf for the last six or more years, as nearly every one is familiar with what they have done. It is a rightful inheritance, as on that famous breeding farm are some of the finest mares on the continent. The sires are of great prominence and well worthy of being coupled with the royally hred matrons.

Enquirer "has the right" to he ranked with the great sires of America. McWhirter, Falsetto, Lizzie Whipps, Blue Eyes, Bill Bruce, Goodnight, Harkaway, etc. There are twenty-two colts and fillies, the get of this noted stallion, and there are eighteen by the imported stallion Great Tom. The Great Toms have shown the highest rate of speed and as "stake colts" have already made their mark. It could not well be otherwise, as he is hy King Tom and his dam was Woodcraft, hy Voltigeur. Fellowcraft has one representative, and Bramhle one. Fellowcraft is "tried," and his colts are very fast, as has been instanced by Knight Templar, Blue Lodge, etc., and the first of that honest racehorse Bramhle to be offered is sure to elicit spirited competition. We sincerely trust that some of the fine animals offered will come to California, as they will surely be a valuahle addition to the hlood of this Coast. We shall prohahly have a supply of catalogues hefore long. In the mean time those who think of purchasing can see at this office what are offered for sale, and we venture the assertion that the pedigrees will be found eminently satisfactory. Should it be deemed troublesome to send an agent at the time of sale a commission can be sent. Though not advised of the fact, heretofore Colonel S. D. Bruce of the *Turf, Field and Farm* has attended all of the yearling sales and will prohahly be present at this one, and a more competent man there is not in the country. He is one of the very best judges of form, and can be relied on to execute commissions intelligently.

Belle Meade is six miles from Nashville, Tennessee, and one of the finest places on the continent, well worthy of a visit even from so far-off a country as California.

THE "SUNNY SLOPE" SALE.

As will be learned from an advertisement in the appropriate column, L. J. Rose, proprietor of the famous Sunny Slope hreeding farm, will offer a draft of his stock at puhlic auction, on the Bay District Course, on the 5th of April next.

Sunny Slope has earned fame hy the performances of the stock which have been bred there, and this is the best possible guarantee. It is no fictitious huilding on expectancy, no entire dependence upon pedigree, though when the right kind of hlood and the proper form are combined there are good grounds for high expectations. It is doubtful if there is a hreeder of trotters who has been as short a time engaged in the business, and from the same number of colts can vie with Mr. Rose in actual results. From the time he first trotted colts of his own hreeding he has had a full share of success. With Tommy Gates, Beautiful Bells, Del Sur, Sir Guy and others, there was a proud record for the get of The Moor; with the next generation there has been marked progression, and Sweetheart, Eva, Ruby, Neluska, etc. have given Sultan a send off such as no young stallion ever enjoyed before.

Mr. Rose finds himself overstocked. He has more colts than he desires to train, and the best course he could see to relieve himself of the surplus was to offer them at auction.

It is evident that they will he sold for "what they will hring," as a man of the ability of Mr. Rose will not incur the expense of the return trip.

Should they sell far helow their recognized value, it is better to let them go. Cheap prices now and grand hargains to the huyers, is likely to result in a better appreciation hereafter.

The twelve which will he offered are the get of Sultan and Del Sur, and from the character of the mares at Sunny Slope there must ho excellence on both sides of the house.

THE SPRING RACE MEETING.

The first event on the programme of the Pacific Coast Blood Horse Association is well worthy of an article, and hence this will be devoted to the California Stake, and even with all the space that can be given the "half will not be told." In the first place, there are more nominations than have ever been made in a two-year-old stake in California before, and a reference to the advertisement will show that thirty-two are engaged. The first stake in the spring for colts of this age is always sure to hring out a large field, and therefore we have little hesitancy in predicting that there will be from ten to fifteen starters.

No. 1 is a bay filly, Nettie Hill, hy Joe Daniels, from Mary Wade, the dam being prohably by Ben Wade, that slashing son of Woodhurn, who was thought good enough to give weight to Thad Stevens.

No. 2 is a hrother to Alhert C and Lucky B, and this relationship is sure to make him find plenty of supporters, as the family has shown capacity to go fast at that age, and with size to give sweep enough to cover a lot of ground at every stride.

No. 3 is hy Rutherford, from Glenita, and those who remember seeing the speed his dam was possessed of will not forget him should he he one of those to carry the drah jacket and Maltese cross.

No. 4 is hy Grinstead, from a sister to Clara D, and if that sire could get such a colt as Gano from Santa Anita it is not likely that he has failed on a mare of that hlood.

No. 5 is hy Grinstead from Josie C, so that there is a combination of Lexington and Leamington blood that has proved so potent at the East. These four are of the famous Santa Anita string, though all of them together will not raise the excitement which their stahle companion, No. 6, will awaken. This is a hrown filly from Mollie McCarthy, and if she dons the colors look ont. Report says that she is one of the finest that ever looked through a hridle, and though at times the first foals of celebrated mares have not come up to expectations, we shall be greatly disappointed if she should disappoint.

No. 7 hrings another prospective star in sight, and there is a twinkle preceding the rising from the reflected light of a truly great hrother and sister. This is Prince of Norfolk, brother to the Duke and Duchess of that ilk. He, too, has a stable companion in Callie Smart, hy Norfolk from Mattie A, and if these two do not carry the orange and pink hravely we will never hazard a prediction again. That they will he "thar or tharahouts" is a moral certainty if even Santa Anita comes with the prestige of many a glorious victory emhlazoned on its hanners, and then comes Palo Alto with no less than eight to fight for the renown of victory. Then look at the pedigrees: Norfolk—Boydana, Norfolk—Nova Zemhla, Shannon—Demirep, Monday—Riglin, Norfolk—Glendew, Wildidle—Frolic, Norfolk—Lizzie Whipps, Norfolk—Frou Frou. The five Norfolks are a tower of strength when combined with such famous dams. It seems the height of temerity to pick one hy the same sire to stand the charge. With the Wildidle, Monday and Shannon to hack them it is still more rash, for the Wildidles all can race, Monday is "tried and true," and the rush with which Panama rounded the upper turn gives Shannon a place as a getter of speed.

The next two nominations, Nos. 17 and 18, are in the name of C. Van Buren, and are by Monday from Plaything and Ahhie W. Plaything is of the speedy tribe of Alarms and Abbie W is the dam of Tillie C.

Nos. 19, 20, 21 and 22 are the nominations of W. L. Pritchard, two hy Leinster, one hy Bazaar, and with the douhle paternity. The Bazaar is from Tihhie Dunbar, and heing a filly it may be that another is to rival the fleet Lena Dunhar, and glide along with the rapidity and case of her famous half sister. The Leinsters are from Addie A and Lily Simpson, and the doubtful one from Minerva.

From 23 to 31 inclusive represent Rancho del Paso, and hring the best lines of the hlood into the battle. Imported Billet, King Alfonso, Pat Molloy, Monarchist, Glenelg and Virgil are the sires, and the dams are of the famous Kentucky strains. These are animals purchased at the yearling sales in Kentucky last year, and Mr. Haggin's agent certainly made a judicious selection. And, by the way, this is a good method to ohtain broodmares, provided the breeder can wait for them to mature. As most of those engaged in the business have a few old mares to start with, this is the hest way to replenish until there are enough of home breeding to fill the wants.

In the meantime they can take part in the games, and these foreign-bred youngsters of Mr. Haggin's add greatly to the interest of the California Stake.

BELMONT.

We are much ohliged to Mr. Williamson for the account of California Belmont, which appears in this number. Mr. Williamson also sent a capital illustration, which will be copied hereafter, at which time a full account will be given of his progeny. It is safe to say that he is the patriarch of the California sires, and has left his impress on all grades of horses.

Answers to Correspondents.

Questions answered only through these columns. No replies by mail or telegraph.

EDITOR BREEDER AND SPORTSMAN: There is a raffle in which are two prizes. A throwa 44, B throwa 44 and C 43. Inclosed find ticket of said raffle. How shall the prizes be awarded? L. S.

San Francisco, March 21, 1883.

Answer—A and B throw off for the choice hetween first and second prizes, or dispose of them in any manner they see fit. C has third prize. The ticket does not show any different conditions from those expressed in the ahove query.

YACHTING.

The Chispa has gone on the waya to he cleaned. Brooks, who has charge of the yacht, mixed np some paint for the hottom, made of snlphur, tallow and other ingredients, which was pnt on hot. It has done a great deal better than the copper paint. Where the tallow paint was on no barnacles had grown, while where the copper paint was on the harnacles were plentiful. The yacht was painted last October. Before this was done, however, experiment was made hy painting a board on one side with the tallow composition, and on the other with copper paint. The resnlt was so good that Mr. Gntte decided to try it on the Chispa. She is now to have her whole bottom painted with the new compound. If Brooks has really discovered something to keep off barnacles and grass all the yachtsmen will he glad to nse it.

Some one onght to take hold of the O'Connor this season and keep her up in good style, as a yacht shonld be.

Mr. Tevis' new yacht has been all planked up and is heing canlked. The joiners are working inside now.

The "opening day" will he ahont the third week in April. A sail to Vallejo will be in order.

The Aggie will not be in commission for some time as her owner has gone to Enrope.

Mr. Eckley's little plnnger Fannie has been sent up to Carqninez straits.

The annual meeting of the S. F. Y. C. occnrs on the 3d of April.

Commodore Harrison will soon be back from Victoria, B. C.

No move has yet been made to pnt the Casco in commission.

All the yachtsmen are getting ready for the "season."

The steam yacht Brisk is lying in Brooklyn hasin.

A steam yacht clnb is talked of in the East.

The Emerald will soon come off the ways.

All the local boat builders are very hnsy.

The Lurline was ont last Snnday.

The Fawn is to he overhauled.

ROWING.

A Single Scull Match Arranged.

The apathy which has characterized rowing circles has heen dispelled, and in fntnre some interesting races may he expected. Just at present, the chief topic of conversation is the race between Henry Peterson of the Golden Gates and P. J. McInnerny for a pnrse of $1,000 over a three-miles-with-a turn course, off the railroad bridge from the foot of Channel street to the sugar refinery wharf. Weather permitting, the race will come off at ten o'clock in the morning, Sunday, May 6. The opinion of scnllers appears to be favorable to Peterson's chances of success, thongh comparatively little is known of the Lowell man, who declines to give any statement of past records. Peterson, on the contrary, is well known to local scnllers, who feel confident that with proper training and good handling he will prove a formidable rival. He has already figured in several races, and was an easy winner in the Fonrth of July regatta. A Whitehall race was also spoken of between the men, hnt this was finally declared off. A forfeit of $250 has been pnt up. Peterson is backed by John Condon, and McInnerny by Con Lynch. The officers of the race have not yet been decided upon.

A movement is on foot to organize a hoat clnb among the memhers of the Pacific Yacht Clnb. With this object in view the hath honse at Sancelito will be remodeled and fitted up with stretchers so as to accommodate ordinary boats or shells as the members may become possessed of. A float will be launched in a few days and everything will be in readiness for the sculling fraternity.

A dispatch from Chicago states that the executive board of the Mississippi Valley Rowing Association has decided that the annnal regatta shall be held at Pullman on July 7th and 8th next. Prizes aggregating $2,000 will he offered, and thirty-five clubs will compete.

Clay Cracking at Stockton.

A match at clay pigeons was indulged in by some members of the Stocktou Gun Clnb last Wednesday, at which the following acores were made at twenty-five hirds:

C. J. Haas	1 1 1 1 1 1 1 1 1 1 1 1 1 0 1 1 1 1 1 1 1 1 1	1—24
W. R. Fisher	1 1 1 1 1 1 0 1 1 1 0 1 0 1 1 1 1 1 1 1 0 0 1	1 0—19
W. E. Saunders	1 1 0 1 1 1 1 1 1 1 1 1 0 0 1 1 1 0 1 1 0 0 1	1 0 1—18
M. Barnett	0 1 0 1 0 0 1 0 0 1 0 1 1 0 1 1 1 1 1 1 0 0 0	0 0 0—11
S. N. Cross	1 1 0 0 1 0 1 1 1 1 0 1 0 1 0 1 0 1 0 0 0 0 1	0 0—12
A. O Davenport	1 0 0 0 1 1 0 0 1 1 1 0 0 1 1 1 1 1 0 0 1 1 0	1 1—15
H. H. Moore	0 0 0 0 0 0 1 1 0 0 1 1 1 0 1 1 1 1 1 1 1	—11

A match at five incoming "birds" resnlted as followa:

Fisher	1 0 1 1 1—4
Saunders	1 1 0 1 0—3
Cross	0 1 0 0 0—1
Davenport	1 1 1 0 0 3

The Combination of Ingredients used in making BROWN'S BRONCHIAL TROCHES is such as to give the best possible effect with safety. They are widely known as the best remedy for Coughs, Colds, Throat Diseases, and All Throat Troubles. Price 25 cents a box.

THE GUN.

The Saint of Huntsmen.

Comparatively little is known of Saint Hubert, the hnntsman's patron, among the sportsmen of America, and many regard him as a deity of ancient mytbology. To dispel this illusion, we give space to the following authentic history of St. Hubert, as recorded by an old-time periodical:

St. Hubert was a native of Aquitaine, bnt sprang from the Merovingian race of kings. His grandfather, Charibert, the brother of Dagobert I, was crowned sovereign Duke of Aquitaine in the year 628, and held his court at Toulouse. He married Giselle, the only danghter of Amandus, Duke of Galcony, whose wife was the sister of St. Amand, a saint popular to this day in southwestern France, and a man of such diffusive piety that he is described as *tout rayonnant* with light divine. His neice, Giselle, who married the Duke of Aquitaine, left two sons, named Boggis and Bertrand. Bertrand married Phigeberte, and Boggis, St. Ode, two sisters whose family is unknown. It was, however, from Austrasia.

Bertrand's only son was St. Hubert, who was born abont the year 656. St. Ode became the mother of Eudes, or Euden, famous as the Duke of Aquitaine in the time of Charles Martel. She is said to have been the chief instructor of St. Hubert's boyhood. His education otherwise was chiefly military.

It was in the vicinity of the Pyrenees, where hnnting has always been a passion among the nobility, that he acquired that love for the chase for which he became so noted. Here were to be found the wolf, bear, wild boar and the urus, which used to gather around the mountain chapels and howl nntil the nocturnal offices were sung.

At twenty-four years of age Hubert went to Austrasia, and became a member of the household of Pepin de Heristal, his kinsman, who held his court at Jupille on the Meuse. Pepin induced him to marry Floribaune, daughter of the Connt of Louvain, in order to attach him permanently to his interests. The court of Pepin was by no means a court of virtue, and Hubert soon lost the early religions impressions made by the teachings of his saintly aunt.

Old legends say that one Christmas, or according to others, Good Friday, instead of attending the religions offices of the dsy, he yielded to his love for the chase and set out for the forests of Ardennes. Here he started a white stag of remarkable beauty, which suddenly turned towards him, displaying between its antlers the image of the crucified Redeemer, from which a voice issued: "Hubert! Hubert! how long wilt thou pursue the wild beasts of the forests and neglect the salvation of thy soul?" Hubert was the more struck at this marvelous apparition because the image of Christ on the cross was very rare in the religious representations of the period. The cross was generally covered with ornaments, or had on it some emblem of the great sacrifice, such as the paschal lamb. Hnbert fell from his horse, his face to the ground. He remembered the wondrous legends of the stag that had been told him as he sat on the knees of St. Ode, in his childhood, in several of which that typical animal had received the gift of speech. It was a white stag that led his ancestor Clovis to the ford at Vienne. It was another of unusual size, pursued by St. Julian, that suddenly turned to reproach him and predict that he would one day slay his father and mother. A stag with a crucifix between his horns led to the conversion of St. Eustace in the second century.

Shooting at San Bruno.

The first club shoot of the season at San Bruno last Sunday nnder the auspices of the Cosmopolitan Shooting Club was a most enjoyable affair and was largely attended. The representation of club members was unusually large and insured an excellent day's sport. As previously announced in the colnmns of this paper, the club had donated three medals for competition among the members for the best average scores at the close of the season, with a view of stimulating interest in the club shoots. The birds were an average lot and though the shooting was hardly up to the standard of the club, the match was interesting and resulted in a tie for first medal hetween Frank Maskey and Johnson on a clean score. The conditious of the shoot were twelve birds, twenty-one yards rise, usual boundary, ties to be shot off at three pairs of double birds, nnder which the following scores were made:

C. H. Graham	1	1	1	1	1	1	1	0	1	1	1—11
H. R. Brown	1	1	1	0	1	1	1	1	0	1	1— 9
J. Kelly	1	1	1	1	0	0	1	1	1	1	0— 9
C. P. Funke	1	1	1	1	1	0	1	1	1	1	1—11
J. Brown	1	0	1	0	1	0	0	1	0	1	1— 7
M. Lackman	1	1	1	0	1	1	1	0	1	1	0— 9
E. Buckley	1	1	1	1	0	1	1	0	1	1	1—10
F. Maskey	1	1	1	1	1	1	1	1	1	1	1—12
H. Muller	1	0	0	0	0	0	0	1	0	1	0— 4
R. Liddle	1	1	1	1	0	1	0	0	1	1	1— 9
J. Ferguson	1	1	1	1	1	0	1	1	0	1	1—10
A. Rivers	0	0	1	0	0	1	1	0	0	1	1— 5
A. Young	1	1	1	1	1	0	1	1	1	0	1—10
W. Golcher	0	1	1	0	1	0	1	1	0	1	0— 7
H. Briggs	0	0	0	1	1	0	0	0	0	1	1— 5
Dr. Rover	1	1	0	1	0	1	1	1	0	0	1— 7
Z. Pierce	1	1	0	0	1	0	0	1	1	1	0— 7
B. Brown	1	1	1	1	0	1	1	1	1	0	0— 9
J. Browell	1	1	1	1	0	1	1	1	0	1	0— 8
W. Fulton	1	1	0	0	1	1	1	1	1	0	1— 9
F. Johnson	1	1	1	1	1	1	1	1	1	1	1—12
Cane	1	0	0	1	1	1	1	1	1	0	0— 8
J. Harry	0	1	0	0	0	0	1	1	0	0	1— 5
E. Edwards	1	1	1	0	1	0	1	1	0	1	1— 9

The tie between Maskey and Johnson was disposed of at double birds in favor of Maskey with the following score:

Maskey	11	10	11—5
Johnson	10	11	10—4

The second deposit in the Robinson-Lambert match which comes off on April 1st was paid in to the stakeholder on Saturday, making the total amount to date already put up, $500. The final deposit is forthcoming on the day of the match. Considerable interest is manifested in the result which promises to be exciting and hotly contested. Both parties are admittedly crack shots, though general opinion inclines towards Robinson for the reason that, all other things being equal, he is not apt to become disconcerted as the finish draws near. Lambert on the other hand is expected to display some nervousness which may seriously interfere with his chances of success.

The Vacaville Sportsman's Club held its annual meeting Saturday evening, March 3d, for the purpose of electing officers for the ensuing year. Following are the officers elected: President, A. R. Long; Vice-President, J. M. Bassford Jr.; Secretary, S. P. Dobbins; Treasurer, Isa L. Blum; Steward, D. K. Corn; Financier, F. H. Buck.

A three-cornered match will be shot at Birds Point, to-day, between Orr, Babcock and Butler, against Havens, Ewing and Gordon.

Match at Birds Point.

A closely contested match was shot on Saturday at Birds Point, in which the fortunate winners succeded in capturing good sized stakes in a fifteen bird match, twenty-one yards rise. The score made was as follows:

Havens	0	1	1	0	0	1	1	1	0	1	1	1	0	1	0—9
Gordon	1	1	0	0	0	0	1	1	1	0	1	1	1	1	0—9
Woodworth	0	0	1	1	0	0	0	1	1	0	0	1	1	0	1—7
Nagle	1	1	0	0	0	1	0	0	1	1	1	0	1	1	1—9

A regular meeting of the Gilroy Rod and Gun Club was held last week Wednesday evening, President J. R. Payne presiding. Considerable discussion was had in refereuce to bills contracted during the last club hnut, which brought the opiuions of several members, characterizing club hnnts as somethiug akin to game slaughter, aud foreign to the spirit and intention of the club, which was organized to preserve and protect game. Upon motion, E. Leavesley, D. M. Pyle and Geo. Holloway were appointed a committee on Field Trials. A Committee of Arraugements and a Reception Committee for the State Tournament next May were appointed as follows: Committe of Arrangements: E. Leavesley, D. M. Pyle, John Holloway; Reception Committee, E. S. Harrison, H. M. Briggs and E. H. Farmer. By motion the chair was added to the committee. Upon motion of Mr. Leavesley it was determined to resume the bi-weekly clay pigeon shoots, commencing on the 28th iust., and that members be allowed the use of both barrels. Geo. Holloway, D. L. Dunham and E. Leavesley were appointed to make rules to govern trap shooting. E. S. Harrison teudered his resignation as secretary, and E. Leavesly was unanimously elected to fill the vacancy.

The latest lie comes from San Luis Obispo, reciting as a fact that some men on a mountain in the Suey Rancho rolled a stone over and sent it down the Sulphur canyon. While thundering down the mountain the noise it made started two deer from the brush in front. The rock at once split open and each half hit and killed its deer. The animals were not known to be there till the rock, a 200-pounder, aroused them. The deer were fifteen rods apart when killed, and proved to be fat and excellent. F. F. Field, an employee of Mr. Newhall of the Suey Rancho, has the hardihood to tell this stony story. There is room for a Sunday school on the Suey Rancho, which now takes the head of the class in the Sazerac Club for producing the boss liar.—*Los Angeles Herald.*

Beaver hunting, which has become one of the lost arts in many parts of the Union, is very active on the Colorado river. Jack Neely and another hunter is reported to have caught seventy-five of these fine animals last week and over 300 during the winter.

At the pigeon shooting match hy the Black Diamond Gun Club last week the largest score was made by Mr. J. Uren.

THE RIFLE.

Shell Mound, March 18th.

Last Sunday there was but little done in rifle matters at the Shell Mound range. The prospects in the morning of a rain no doubt kept many of the riflemen at home, though the day cleared pleasantly before noon. Following are the scores of three marksmen on the 200 and 500-yard targets, and considering the cloudiness of the sky, the uncertainty of the light, and the gusty, varying wind, the scores are very good:

TWO HUNDRED YARDS.

Austin	4	4	4	4	4	3	4	4	4	4—39
Brown	3	3	3	4	4	4	4	5	3	4—37
Pendleton	4	4	4	4	4	4	4	3	4	4—39

FIVE HUNDRED YARDS.

Austin	4	3	4	5	4	4	5	4	5	3—41
Brown	4	3	2	4	5	3	4	4	2	4—35
Pendleton	4	5	4	5	4	4	3	2	5	4—40

The Little Rifle.

On the 16th of this month, at Shell Mound range, a match took place between E. F. Hovey Sr. and Ed Hovey Jr. The shooting was done with a twenty-two caliber Stephens pocket rifle, ten-inch barrel, on the 100-yard target, bullseye eight inches. These little weapons carry with surprising accuracy. The shooting was done off-hand. Following are the scores; possible, 250:

Ed. Hovey Jr.	5	5	4	5	5	4	5	5	5	4	4—47
	5	5	5	5	5	5	5	4	5	5	5—49
	5	5	5	5	4	5	5	5	5	4	4—48
	4	5	5	5	5	5	5	4	5	5	5—48
	5	4	5	5	5	5	5	5	4	5	5—48
Total											240
Ed. F. Hovey Sr.	5	4	5	5	5	5	5	4	4	4	4—46
	5	4	5	5	5	5	5	5	5	5	5—49
	4	5	5	5	4	5	4	4	4	4	5—45
	5	5	4	4	4	4	5	5	5	5	5—46
	5	5	5	5	5	4	5	5	4	5	5—48
Total											234

Oakland Guards.

Last Sunday several members of Company A, Fifth Infantry Regiment, in a practice at 200 and 500 yards made the score given below:

	TWO HUNDRED YARDS.											FIVE HUNDRED YARDS.											Grand Total.
Crawford	4	5	4	5	4	4	4	4	5	4	—43	4	5	5	5	4	5	4	5	5	—46	89
Waltham	4	4	3	5	5	4	4	5	4	5	—43	5	4	4	4	4	5	5	4	4	—43	86
McKibben	4	4	4	3	4	4	4	5	4	4	—40	4	4	4	4	4	4	4	3	3	—38	78
Macdonald	5	5	4	5	4	5	4	4	4	4	—44	5	3	3	5	5	5	3	4	3	—40	84
Daniels	3	5	4	3	4	4	3	4	4	4	—38	4	3	4	5	3	5	4	3	5	—40	78
Green	4	4	4	3	4	4	4	4	5	4	—40	5	5	3	5	4	3	4	4	4	—41	81

We hear that the Oakland Guarda are getting their rifle team in practice ao aa to enter in the spring tonrnament of the California Rifle Association and to judge from their practice scores they will without doubt carry away some of the prizes and honors.

A disposition has been recently manifested to infuse new life into rifle matters throughout the State, and with this object in view, invitations will shortly be issued to the various rifle inspectors, to attend a meeting at which the best means of bringing about the desired result will be discussed. Other important matters in connection with rifle practice will be ventilated, with a possibility of establishing a State range. In addition to these measures, it is understood that arrangements will be made to send a team to Carson to compete for the Pacific Slope Trophy, which was won at the last meeting of the California Rifle Association by the Nevada team. Should arrangements be perfected, the trip will undoubtedly partake of the nature of an excursion so as to give all who desire to witness the contest an opportunity for so doing.

FISH.

The Fish Commission.

Fish Commissioner Joseph D. Redding has written to his colleagues with a view of securing an early meeting of the Commission, and with every probability that it will take place early in April. The object of the meeting is to definitely settle upon some course of action in the discharge of the duties of the commissioners and to arrange for the nsual spring distribntion of fish. The meeting will be held in Sacramento. Since the organization of the Fish Commission no effort has been spared by the members of the snccessive boards to stock our streams with choice fish, both native and imported, but they have been considerably handicapped by the open violations of the laws, especially so in counties adjacent to San Francisco. Since the matter of suppressing these infractions was taken in hand by the various sporting clubs the evil has been very noticeably diminished, and in consequence anglers have been more successful than formerly. Not alone were choice streams wholly depleted, but every vestige of fish was removed by the then common use of giant powder as a potent fish destroyer. The construction of dams across rivers so as to impede the progress of fish was another fruitful source of complaint. It is pleasing to notice in this connection that a similar complaint, which was recently made to certain members of the Gilroy Rod and Gun Club, was promptly investigated by them and the obstructions removed. With the assistance of the sporting organizations throughout the interior, the commissioners will be in a position to distribute fish judiciously, and to preserve them from the invasions of irresponsible anglers. The hatcheries are reported in excellent order and about ready to commence distribution of shad and several varieties of trout. J. G. Woodbury, who has been attending to the raising of shad at the San Leandro hatchery, will distribute a large number in a few days in several well-known streams. It has been suggested by a prominent sportsman who is an enthusiastic angler that Purissima creek should receive the attention of the commissioners when they commence the work of distribution. This creek has always been a favorite resort for city sportsmen, and is well adapted for the successful propagation of trout, and reasonally sure of immnnity from trout hogs.

The Monterey County Fish and Game Society held a meeting last Saturday to devise measures to put a stop to the destruction of fish in the streams of that county. It was resolved to offer a reward of twenty-five dollars for the conviction, or for information that would lead to the conviction of persons who killed fish in the streams by means of giant powder or nsed seines, contrary to law. It was also voted that warrants be procured for the arrest of parties who had already violated the fish and game laws. As a direct result of this action two men who were known to be guilty took time by the forelock by going before a Justice and accusing themselves. They were fined eighteen dollars each, which they paid. The club is in earnest in the matter and will break up the nnlawful practices if the courts act in unison with them and impose proper penalties in cases of conviction.

Mr. W. Thomas writes to the London *Fishing Gazette*: "I send yon by post a sprat that I have kept in my solution for more than a month. You will observe it is as tough and as bright as when taken from the fishmonger's shop. In addition I will guarantee it keeps in this state for years. My solution is made by the addition of half an ounce of boracic acid to every ten ounces of glycerine. Probably half the quantity of boracic acid wonld answer as well."

The shore fishing on the Sancelito side of the bay is beginning to be very good. The run of fish from the sea is just commencing in earnest. The catches are composed of caberaones, sea trout and black rock-cod. All of these fish are quite large in size. A few small red rock-cod are caught also; these no doubt are the forerunners of large numbers yet to come in from outside. A lively summer in bay fishing is expected.

Bay fishing during the past week was nnnsually good. Smelts ran in shoals, and were generally of nnusually good size. Tomcods have been abundant, while at Mission rock, Alcatraz island and Angel island, rock-cods were freely hooked.

Last Saturday parties fishing off Mission Rock caught seventy-five pounds of perch and porgies. The perch bite very lively and fight so as to tear off the hooks nnless the hooks are very strong and well secured.

There is bnt little boat fishing done yet as the fish most all hug along the shores. The tomcod fishing east of Goat Island is most always good and many large baskets of these fish are being daily caught.

Mr. A. King of San Francisco, who is now in San Diego, says that halibut are beginniug to run in a month earlier than nsual this year. Large strings of these fish are being taken from the wharves.

Fishing for porgies up at the drawbridges is very good. Last week a gentleman from Honolulu was up there and says that he caught all the fish he could carry away.

Last Saturday Mr. Lambert, vice-principal of the Lincoln grammar school, was at Ross' Landing and caught a large salmon trout that weighed seven pounds.

Last week Mr. Bogart was over along the Saucelito shore and had excellent luck with rod and line. All he hooked were of goodly size.

M. A. Williams was over last Sunday at Point Bonita and brought home twenty-five pounds of fine fish.

Fishiug near Alcatraz is very poor at present.

ANOTHER PRESCRIPTION.—A writer to the Salem, Oregon, *Statesman*, who seems to have had some experience with the disease that is playing such havoc among the horses of the northern country, gives the following treatment for the disease: This being a typhoid disease, requires a sustaining treatment or a cure will be very doubtful. In the early stage of the disease, give the first two days ten drops of tincture of aconite, or bryona, in a little water, every six hours; after which give in a pail of water to drink, once a day, one ounce of spirits of niter or two drachms of extract of belladona; and give in the feed three times a day one of the following powders: Gentian root, saltpeter and anise seed, of each one ounce; sulphate of quinine, one drachm; mix and divide into eight powders, or powdered ciuchona and powdered quassia, of each two ounces, powdered anise seed one ounce, mix and divide into four powders; the throat should be bathed in mustard and vinegar; no hay should be given, but scalded oats and wheat bran, with linseed tea or oatmeal gruel, should constitute the diet; a few carrots would be very good, and above all good nursing is very desirable.

OUR CANINE FRIENDS.

Brief History of the Early Importation of Dogs to the Pacific Coast.

Throughout the entire world, civilized and barbarous, the dog is and ever has been the faithful companion of man. He may be a silken-eared Irish setter, with floss of rich, red chestnut, and a stalwart baronet for his master; or he may be a slinking, mangy, yellow cur that skulks at the heels of a vermin-eating Apache on the deserts of Arizona. But he is, nevertheless, the emblem of fidelity in animated nature. Man enjoys seven senses, one of which is speech. The dog has seven, one of which is recognition without speech. And remember that whenever you cut off a dog's tail, you deprive that dog of his organ of recognition. The stock of native dogs on the Pacific coast, at the time of the American accession, was of very scrubby appearance and decidedly murky ancestry. Hence it was no great wonder that as men began to realize that California was a good country to live in, the importation of dogs became more frequent. Bulldogs and bull terriers were the first to make their appearance on the English ships and those from Sydney. In fact, as early as 1852 there were dog fights for as high as $500 a side in San Francisco and one for $2,000 a side at Sacramento in the year following. In 1858 a British ship, called the Enroclydon, arrived at San Francisco, and the mate had a large, white dog with brindle ears, which he called Tom. The dog he claimed to have purchased from the noted pugilist, Tom Sayers, at five weeks old. This dog was for sale at $200, but none of the canine fanciers wanted him. Those who follow the low avocation of fighting dogs insisted that he was too heavy to be purely bred; and further, that his weight was so much in excess of every other dog of his class that it would be impossible to get a match on him. One day, however, the mate of the Euroclydon was standing in front of that once popular saloon, the Bank Exchange, with his dog beside him, closely muzzled. A dog came along and undertook to fight with Tom, and before the mate could take the muzzle off his dog, Tom had knocked the other dog down and butted him like a ram until his assailant ran off with his tail between his legs. A barkeeper in the saloon saw the occurrence and went out on the sidewalk. He priced the dog at $200 and gave the mate $20 to bind the bargain. The mate was to keep the dog till the ship was ready to sail. A few days after this the mate went into the Montgomery baths to get shaved and took Tom with him. The shop was expensively fitted up and had long and narrow mirrors reaching from floor to ceiling. The mate had just seated himself in the chair and was being lathered, when he heard a deep growl.

"Ah, Tom, ye rascal, come 'ere and lie down," he said.

The dog came and lay down beside him, but soon got up again and then came a sound like distant thunder.

"Knar-r-r-r-r," it rolled out.

"Tom, lie down, ye beggar," cried the mate.

Just then came a crash and the big mirror was shivered to atoms as the angry monster sprang at his counterfeit presentment in the glass. The mate merely said: "Pon my soul, it's the most extraordinary thing on the world, you know."

"Well, barber, I suppose you'll expect me to pay for the glasses me dog broke."

"Ye-e-s," drawled the barber, "I can't very well afford to lose it, but I'll tell you what I'll do. The glass cost me $100, but if you give me the dog I will call it square."

"Ah, call it square! An' undred dollars—I say, 'ow many pounds is that? Twenty?

The barber nodded assent.

"Not at all," cried the mate indignantly. "Do ye think I'd take twenty pounds for me beautiful dog that I brought ball the way from Hiugland? Not a bit of it! Ere's yonr money."

He paid the bill and Tom soon afterwards became the barkeeper's property. From him are descended some of the largest and finest watch-dogs on the coast. He was mated at $40 the season and the cocktail architect more than got his money back.

The first setter of any note imported to the State was Grouse, brought out by Col. Jack Gambill in 1852, when he brought the noted ten-mile trotter that bore his name, as well as the old dun roadster, Joe Waterman. Grouse was an orange and white dog, and, for snipe-shooting on the twelve-mile marshes, the present site of Baden station on the San Jose railroad, was the hero of his day. From him are descended many of the best dogs on the coast. The best of his sons was Dr. Aylette's old True Blue, a double-nosed dog that was the finest retriever I ever saw in the field. In 1856, James F. Quin, who kept the Willows, performed a valnable service for the sporting world by bringing out two beautifnl setter bitches, Rose and Nelle, botb of which produced some good dogs. In 1858, Stephen B. Whipple bronght ont his celebrated team of trotters, Powder and Shot, and at the same time he imported a flea-bitten setter slut called Fanny. She was very high bred and produced some good stock, but none equal to herself, although she was stinted to all the best dogs in California. Fanuy was light of bone and rather deficient in substance, hence did not do well in wet gronnd. But on quail shooting I donbt if the Pacific Coast ever saw her equal.

The Gordon setters, by which name the beautiful black and tan dogs of this species are known, originated in Scotland in the kennels of the noble duke of that name. Yon will find them described as early as 1834, long before I was born, in N. P. Willis' "Pencillings by the Way," and in better language than I dare attempt. This strain of blood is either very hardy or else very prolific, I don't know which: for they are now more common in Oregon than they were in New York twenty-five years ago. In 1867, having become interested in them from readiug Willis' description of them, I went all the way from Louisville to Chicago to see a brace of them that had just been imported from England at a cost of $500, which was then deemed very extravagant. The first Gordon setters brought to this coast were imported by Frank Sumner of Alvarado, Cal., who bought a dog and a slut for himself, and a dog for Capt. Richard Ogden. Sumner sold whelps from this slnt for $100 apiece as fast as their eyes were opened; but none of them showed any remarkable excellence in the field, over dogs that were bred ahead of them. Judge Leavesley of Gilroy has probably some of the best dogs on the coast, and as for handling them, he is head and shoulders over all the trainers west of the Rockies.

The cocker spaniel so extensively used in the south, as well as in England, is bnt little known on this coast. He is smaller than the setter and larger than the King Charles dog in his own race. He is generally black; with long and flossy ears, and not unfrequently has a dash of tan tbrough his silky coat. Indeed many wiseheads surmise that it was through a remote cross of cocker blood that the famous Gordon color is derived. These dogs take their name from the fact that in England they are hunted almost entirely on woodcock, a bird unknown between the Rocky mountains and the Japanese empire; and it may be owing to the latter fact that they are so seldom seen on these Pacific sbores. They bark loudly on approaching game, which renders them useless for quail or grouse shooting, and those two tribes of birds constitnte more than half the shooting in Oregon. The finest dog of this tribe that I have seen on this coast is old Pouto, a black dog owned by John T. Howard of Victoria. Another nearly as handsome was Jack, owned by the late Capt. Jeff. Howell. On the night before the ill-fated Pacific left Seattle, never to return, Jack ran away from the ship and stayed ashore till after she had steamed away, thus escaping the awful catastrophe wbich made all Puget Sound and British Columbia one common honse of mourning.

The importation of pointers must have commenced at a period about coeval with the importation of setters, for in 1853 there were several fine ones about Sacramento. The late Samuel Hyatt, of that place, was very fond of pointers, and nsed to say that setters were "good enough dogs for children to play with." His two pointers, Fred and Rollo, were the greatest quail dogs in the live oaks out on Mokelumne river, tweuty-four years ago, that I ever saw. Take them of a hot September afternoon (hotter weather than you see in July at Portland) and these dogs would go racing along at a slashing gallop when setters would have lain upou the ground and perished of thirst. This is a great advantage in the pointer's favor, but it is offset by duck-shooting in the bleak December days when the sloughs are covered with thin ice that cuts the legs of the short-haired dog. Then is when yonr pointer begins to flinch as badly as does the setter in the heat of early autumn. Ward Eaton, the genial and jolly carriage and buggy importer of early days, was another man who preferred pointers to setters, though not so deeply rooted in his prejudices as Mr. Hyatt. How they have all gone and left me alone here to write about them, as I do, with choking throat and quivering lips. The very room seems filled with whispers.

The truth to tell, I am getting old and lazy, becanse I am growing fat and unwieldy. I hunt less and I fish more, and when the June clouds hover around the crest of Hood alone, I long to betake myself to some deeply-wooded stream where the gronse-fiends and the trout-hogs, who kill more than they can eat, are most conspicuous by their absence. Then I can shoot all I want to cook for the little camp, and as for catching trout, I'll get them if they will rise. And my old favorite shooting places are getting wiped ont by the encroachments of a progressive civilization. The chicken patch near Dnfur's on Fifteen-mile creek, where I used to kill four dozen prairie hens one day after Angust, is not good for five brace. Extensions to Albina are wiping out the pheasant ground where Uncle Dave Monnastes and I used to knock them over as they arose from the coppice. Lake Labish is being drained for dairy farming and I shall never kill another jack-snipe there. And the farmers' sons, by killing off the old birds during mating season, have abont wonnd up the splendid blue-grouse shooting around Eugene and the Long Tom country. Well, this Angust I go either to Alsea or the Tillamook country, and I'll dare some of those pot-hunting villains to follow me.

Sir Edward Landseer has gone down to posterity as the greatest of animal painters, bnt in reality he was not a remarkable artist outside the faces of his dogs, to which he imparted almost hnman sententionsness of expression. Herring could always beat him in horse portraiture, but he had been a stage driver and could not do jnstice to either cattle or sbeep. Rosa Bonheur attempted tbe portrait of Gladiateur, for which Comte de Lagrange offered her 30,000 francs in advance, but she made a pitiable failure of it. Yet her cattle and her cart horses were superb. Bnt it is of dogs we are now speaking. Landseer excelled all others in this strange and weird branch of art. When Mrs. Stowe brought out her famous work, Landseer read it and painted a picture entitled "Uncle Tom and Aunt Chloe to he Sold," in which he represented two black curs to whom he has given the expression of old negroes. He also painted a picture entitled the "Counoisseurs," in which he represents himself as painting a picture of a terrier, while a greyhound and a setter are seated on either side of him and scanning the work with trne artistic criticism. Charles Dickens, the man who always fonnd heroism in hnmility, might be called the Landseer of fiction, as his marvelous powers in descriptive writing enabled him to portray dogs so keenly that you could always fancy them standing before yon. Witness his pen portrait of "Bullseye," a brnte belonging to the London burglar and rnffian, Bill Sikes:

"'Here, Bullseye, if he speaks ever so soft a word hold him. D'ye mind, hoy?'

"The dog growled frightfnlly, and, licking his lips, eyed Oliver as if he were auxious to attach himself to his windpipe.

"'He's as willin' as a Christian, strike me blind if he isn't,' said Sikes, regarding the animal with ferocious approval. 'Now you know what you've got to expect, so call away. The dog'll soon stop that game.'

"Bullseye wagged his tail in acknowledgment of this endearing form of speech, and, with a growl, led the way onward."

Also Miss Dora Spenlow's King Charles spaniel, whose name was Jip, in "David Copperfield:"

"On my way through the hall I encountered her little dog, who was called Jip—short for Gipsey. I approached him tenderly, for I loved even him; but he showed his whole set of teeth, got under a chair expressly to snarl, and wonldn't hear of the least familiarity. * * It increased my sufferings to see the pats she gave him on his nose for punishment, while he licked her hand and growled like a double bass."

A touching picture is the way in which this master of men's hearts interweaves this little dog, now grown old and feeble, with his dying wife, a mere child in years, and wholly ignorant of the world. Dora is dying of consumption, and thus he tells the plaintive story:

"I am again with Dora in our cottage. They have left off telling me to 'wait a few days longer.' I have begun to fear, remotely, that the day will never shine when I shall see my child-wife running in the sunlight with her old friend Jip. He is, as it were, suddenly grown very old. It may be that he misses in his mistress something that enlivened him and made him younger. But he mopes and his sight is weak, and his limbs are feeble, and my annt is sorry that he objects to her no more, but creeps near her as he lies on Dora's bed and mildly licks her hand.

"The dying woman beholds the hour of rest approaching, and sends him out of tbe room to call Agnes Wickfield. She goes upstairs, leaving him alone with Jip. He sits in a reverie, till aroused by the dog licking his hand and then scratching the door to go npstairs.

"'Not to-night, Jip! Not to-night!

He comes very slowly back to me, licks my hand again and lifts his dim eyes to my face.

"'Oh, Jip! It may he, never again.

"'My child-wife's' old companion lies down at my feet, stretches himself out to sleep, and, with a plaintive cry, is dead."

Our young city is not behind San Francisco in the matter of fine dogs. Millard Lownsdale, a young man modestly well off and one who enjoys bis honr in the field as well as his shattered health will permit, has made some very valuable importations, and S. G. Reed, the well-known steam boat millionaire, brought out a dog called Hamlet, four years ago, for which he paid $500 at a bench show in New York. He is now in the possession of Dr. Shackelford, at the The Dalles. About two months ago a field trial on California quail took place at Gilroy, Cal., on which occasion two Portland setters—owned by Robert E. Bybee and F. G. Abell, respectively—took part in the runs and carried off prizes in their respective classes. It is almost impossible to run field trials in Oregon, as the quail always have been scarce, the grouse fly into trees at the first sound of danger, the pheasants are stupid and listless, and the prairie chickens are retreating before the march of civilization. Hence the outlook for field trials in Oregon is not a good one unless Eastern quail can be successfully domesticated here, yet it is a great consolation for our Oregon dogs to win California prizes.—*T. B. Merry in Portland Oregonian.*

Hunting the Wild Horses.

There is a strip of country between the Kansas Pacific and the Atchison, Topeka and Santa Fe railroads, having Cimarron and Grinnell, in Kansas, and River Bend and Pueblo, in Colorado, as its corners, that is sparsely settled. Broad, treeless prairies, small rain-water lakes, filled by local rainstorms that flood one section and fill every hole so fnll that the water stands all winter while a few miles away deeper hollows are bone dry. It is one of the last strongholds of the mustang in America. They range all over it in bands of from two to one hundred, generally from five to twenty-five in a band. They differ in color further west; in Western Kansas they are more roan, on the Colorado line dark brown, and further on pinto or spotted black and white. There is one band of thirty-one head now on White Woman Creek, Kan., all roans, called the Dry Ridge Band, because they always strike straight west on a dry ridge when pursned; and another band that are all black with white faces, called the Head-light Band, that range in the same vicinity. Tame stallions occasionally escape from emigrants or stock men and take a band of mares from tbe wild stallion and are not captured. In this manner the stock improves. It is a common thing to find tame branded ponies that formerly belonged to cattle men or Indians among them, and I have seen mules with scars on their shonlders from the collar that ran as fast and seemed as wild as their mustang companions. A band generally consists of one or two stallions, abont ten mares and ten or twelve colts and yearlings. Of course one of the stallions is "boss" and the other has to keep out of the way, but he stays aronnd and will cut the hunch in two if he gets a chance, run them off and set up an establishment of his own. There are thousands of these mustangs, and catching them is a regular business dnring the summer.

It requires two or three men, two spans of good, tongh ponies broken to harness, well shod and fat; abont six fast saddle horses, a ligbt, strong spring wagon, a twenty-gallon keg for water, lots of oats and a light camp outfit. Then find a bunch of horses that snits you and put the buggy after them with two men, the water keg and a little feed in it. The baud will run off and travel seventy-five miles the first day. Manage to keep in sight of them, follow all night if it is moonlight; by the next day at noon you will be back where the horses started from. Man No. 3 has made camp near water, and when he sees you coming is ready with the fresh team. Drive down to camp and slap in the fresh team, leave your most tired man to keep camp, and at them again another ronnd of fifty to one hundred miles, and yon come near camp again in about twenty-four hours with the mnstangs badly tired. Chauge teams, put one man on horseback and make another rouud. It won't generally be more than twenty-five miles, for the horseman can turn the bnnch a little. The next day with two saddle horses and no buggy you can turn the band as you please, and everybody go to bed at night if it is dark; after that keep at them. In from seven days to twenty-one days you will tire them completely down. They are accustomed to the sight of the man on horseback and are not much afraid of him, and he can turn them where he pleases and get within one hundred yards of the wildest. If you have no corral yon have to snare the best ones. Let the colts and the dead lame ones stop and ronnd them np; they will be only too glad to stand, for you have been wbipping them along for the last two days. The well ones will run off a little way, but when you get between them and the cripples they will try to get back, and you can shack ronnd and ronnd the cripples in a little trot, and the wild ones will make fonr miles to your one, and half a day will tire them down. Then lay ropes on the ground close to the cripples and drive the others over them. Wheu they get used to them make nooses and catch them by the feet and hobble and side-line them. To hobble is to tie both feet together, so that a horse can only hobble. To side-line is to tie one fore and one hind foot together with about three feet space. The cripples need not be touched.

Now go home witb your horses and yon haven't secnred much after all, for they are worn out and seldom recuperate. It is hard to break them gentle, and if they ever get away and find a band of mustangs yon must have all your fnss over again, if you want to catch tbem. There were about twenty outfits after mustangs last summer with varying success. Wild Horse Johnson, with his three sons, of Anbrey, Kansas, caught about 150 and got from $15 to $20 apiece for them.

Fat colts are shot and eateu by some people tbat follow them, and one of the wild horse hunters shipped six hindquarters of old stud meat to Kansas City for buffalo, and some people besides horse hunters' families know how wild horse meat tastes by this time.

I have lain and watched them play for hours when I was out antelope bunting. I had a band of eight all around me at thirty yards three months ago, as W. P. Dixon, of Livermore, Pa., and I lay in a buffalo wallow watching them, but when they got our wind they rau clean out of sight in a bee line.—*Forest and Stream.*

FAVORABLE PROSPECT IN OREGON.—A correspondent in Portland writing under date of tho 16th inst., says: Tho outlook is good now for some good race meetings here during the coming summer and fall. We are having the most delightful weather for a month past ever seen in any country, and horsemen feel encouraged.

The tariff on firearms which will go into effect July 1 is: On breech-loading guns of all kinds, 35 per cent; on muzzle-loading guns of all kinds, 25 per cent. Duty on wads, 35 per cent; cartridges and cartridge shells, both metal and paper, 35 per cent; on percussion caps, 40 per cent; on gun materials of all kinds, 45 per cent.

Brains are as necessary on the farm as in the store or

William West and W. M. Miller went over to the Suisun marshes in Solano county last Saturday morning and had two hays' hunt. They returned Monday evening, having killed in the meantime 152 gray geese. They also caught a gunnysack of catfish, ranging from eight to fourteen inches in length. Their ammunition gave out, so they had to go a fishing, else they would have depopulated the marshes of geese.—*Napa Reporter.*

Market Report.

FLOUR—We quote: Best City Extra, $6 25@$6 50; medium grades, $5 50@$5 75; Shipping Superfine, $4 25@$5 25.

WHEAT—The dullness of the Liverpool market offers no inducement to shippers to ship their grain. There has been but little business done lately, and $2 07 is the quoted figure.

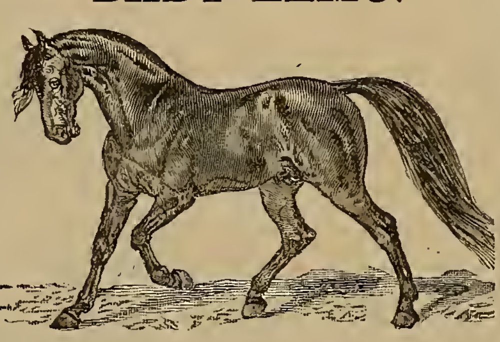
STALLIONS.

BABY ELMO.



SIRED BY ELMO, DAM BY TOM HOOPER, WILL MAKE THE season of 1883 from March 1st to July 1st at the corner of 23d and Church streets, San Francisco.

Baby Elmo is a dark chestnut, with blaze face and left hind foot white. Coming six years old, 15¼ hands high and weighs about 1,100 pounds.

Terms, $20 for the season. Mares not proving with foal can be returned next year free of charge. No responsibilities assumed for accidents. Apply before 12 o'clock, noon, to

GEORGE F. PRACY,
Twenty-third and Church streets, San Francisco.

THOROUGHBRED STALLION

X X,

BY MALCOLM, HIS DAM COLUMBIA, WILL MAKE THE ensuing season at the Oakland Trotting Park. Terms, $25 the season.

X X (Doublecross) is of as high and fashionable breeding as any stallion in the country. His sire, Malcolm, is by imported Bonnie Scotland, his dam, Columbia, also by imported Bonnie Scotland, hence his name. Malcolm was one of the best racehorses of his day, and Columbia was also a fine race mare. For extension of Columbia's pedigree see advertisement of Anteco. Her dam, Young Fashion, was the dam of Surprise, Scotland, Wananita, Bonnie Kate (the dam of Bonnie Lizzie), Andes, Hock Hocking, Three Cheers, etc. The dam of Malcolm, Lady Lancaster, was the dam of Sagamore, Ontario (the dam of McWhirter), Regent, Lady Fairfield, Lady Amanda, Lady Middleton, etc., and a reference to the racing calendars will show how distinguished the members of these two families are. This is the only Bonnie Scotland stallion in California, and from his inbreeding has as much of the blood as if he were a son of that renowned sire. He is a horse of immense substance, good size, high form, and of the best disposition.

JOS. CAIRN SIMPSON, Oakland,
or 508 Montgomery street.

ANTEEO.

DARK BAY COLT, NEAR HIND FOOT WHITE: FOALED MAY 5th, 1879; bred by Joseph Cairn Simpson, Oakland, California.

BY ELECTIONEER.

1st dam—Columbine, by A. W. Richmond.
2nd " Columbia, by imported Bonnie Scotland.
3rd " Young Fashion, by imported Monarch.
4th " Fashion, by imported Trustee.
5th " Bonnets o' Blue, by Sir Charles.
6th " Reality, by Sir Archy.
7th dam—By imported Medley.
8th " By imported Centinel.
9th " By Mark Anthony.
10th " By imported Janus.
11th " By imported Monkey.
12th " By imported Silvereye.
13th " By Spanker.

See Bruce's American Stud Book, vol. 1, p. 307, and vol. 3, p. 79.

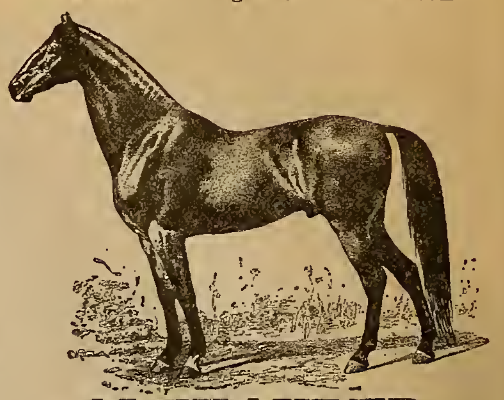
Will make the ensuing season, 1883, from February 15th to June 15th, at the Oakland Trotting Park. Terms $50 the season.

JOSEPH CAIRN SIMPSON,
Oakland or 508 Montgomery street, San Francisco.

Mares intended for either of the above stallions, and sent by Donahue, Petaluma, Sacramento or Stockton boats consigned to J. W. Morshead, City Front Stables, will be received, good care taken of them and forwarded to Oakland.

STALLIONS.

The Fast Trotting Premium Stallion



ALEXANDER

WILL STAND THE PRESENT SEASON AS FOLLOWS: MONdays, Tuesdays and Wednesdays at Clark's stables, Santa Rosa. Balance of time at Fashion stables, Petaluma.

Alexander is by Geo. M. Patchen Jr., the sire of Sam Purdy (2:20½) Starr King (2:22) and Vanderlynn (2:22). Dam Lady Creim, by a son of Brown's Bellfounder, by imported Bellfounder. For full description see BREEDER AND SPORTSMAN of Sept. 9, 1882.

Of Alexander's get Tommy Dodd has a record of 2:24, Reliance 2:22½, Nellie Patchen 2:27¼, Eudora 2:34½, Inauguration three miles in 7:29—last mile in 2:26, Sonoma Boy 2:37. Alex. Button proved by his performance in 1880 to be one of the best three-year-olds which have ever appeared in any country. He won the stake for three-year-olds at the State fair, beating Belle Echo, Annie Laurie, Len Rose and others, winning the first, third and fifth heats and making a dead heat with Annie Laurie in the fourth; time, 2:34½, 2:30, 2:29, 2:30¾, 2:35. At the fair of the Santa Clara Valley Association at San Jose he won, beating Belle Echo and Len Rose; time, 2:28¾, 2:30¼, 2:33¾, 2:31¾. Belle Echo won the first heat. He won at Stockton, beating Honesty, Len Rose and Upright in straight heats; time, 2:32, 2:33½, 2:32½. In 1881, as a four-year-old, Button made a record of 2:26¾ over the Santa Rosa track. Dot Craig, by Alexander, has a private record of 2:29.

The Frasier team took first premium at the Sonoma and Marin District fair; also at Oakland for best carriage team.

Mares left at the City Front stables, San Francisco, will be forwarded. For further informatian apply to

T. T. UNKLESS, Petaluma.

THE CELEBRATED TROTTING STALLION

ERWIN DAVIS

WILL MAKE THE SEASON OF 1883 AT OAKLAND TROTTING park.

DESCRIPTION.

Erwin Davis is a beautiful mahogany bay with very black points and one hind foot white; 15 hands high; of superior good disposition and fine trotting action.

PEDIGREE.

Erwin Davis was sired by Kentucky Hunter (Skenandoah) by broken-legged Kentucky Hunter (the sire of Flora Temple) by Ferguson's Kentucky Hunter, by old Kentucky Hunter, by Highlander. Erwin's dam was Lost Diamond, by Vermont Hambletonian.

TERMS.

Twenty-five dollars for the season, payable at the time of service. Good pasturage at $5 per month. No responsibility for accidents or escapes. For particulars apply to

JOHN ROGERS,
Oakland Trotting Park.

THAD STEVENS.

THIS THOROUGHBRED HORSE WILL BE AT AGRICULTURAL Park, Sacramento, for the season commencing Feb. 1 and ending the 1st of July next. Good pasturage for mares will be provided at $3 per month. For terms and particulars apply to or address

W. M. MURRY, Agent,
Sacramento Racetrack.

TROTTING STALLION

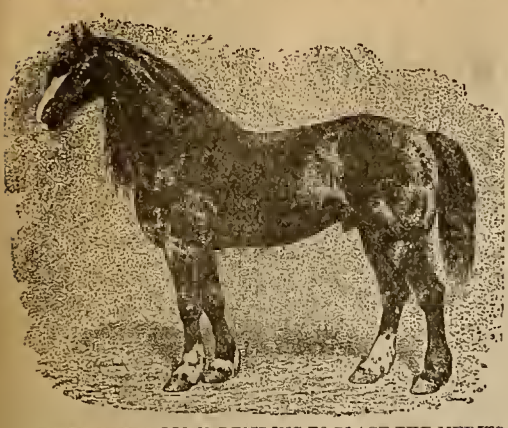
Eugene Casserly.

SIRE OF SWEETBRIAR, 2:26¼; NAPA QUEEN, 2:38½; ROCKwell, 2:39; Bill Woodward, 2:40; Smoothbriar, two-year-old record 2:57; May Day, two-year-old record 2:59¼. Will make the season of 1883 at Oakland on Thursdays, Fridays and Saturdays and at Walnut Creek Sundays, Mondays, Tuesdays and Wednesdays. He was sired by General Taylor, dam Jennie by Lexington. Terms $30 for the season. Good pasturage at reasonable rates. No responsibility for accidents or escapes. Address

THOMAS S. BREMNER.
Seventeenth street and Telegraph Ave.,
Or J. M. Heinold, 1426 San Pablo Avenue, Oakland.

STALLIONS.

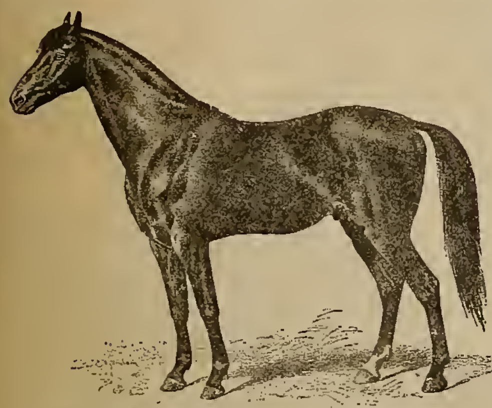
STALLIONS.



OWNERS OF STALLIONS, DESIRING TO PLACE THE MERITS of their stock horses before the breeding public should advertise in the BREEDER AND SPORTSMAN. The fee from one mare will pay the cost of a reasonable advertisement.

Stallion bills printed in first-class style. Call at this office and see samples.

NO. 508 MONTGOMERY ST.



MAMBRINO WILKES.

Black Stallion, sixteen hands in height, by George Wilkes, son of Rysdyk's Hambletonian, bred by B. J. Treacy of Fayette County, Kentucky. Dam Lady Christman by Todhunter's Mambrino or Idol, son of Mambrino Chief. Second dam by Pilot Jr. Third dam by Kentucky Whip. Idol's dam was thoroughbred and was by American Eclipse.

THIS IS THE LARGEST AND ONE OF THE BEST COLTS OF George Wilkes (weighing at this date 1,260 pounds) combining the Hambletonian and Mambrino strains and also several thoroughbred crosses. His colts demonstrate that he possesses in an eminent degree the same faculty of transmitting the family qualities to his offspring which put George Wilkes in the front rank as a sire of trotters.

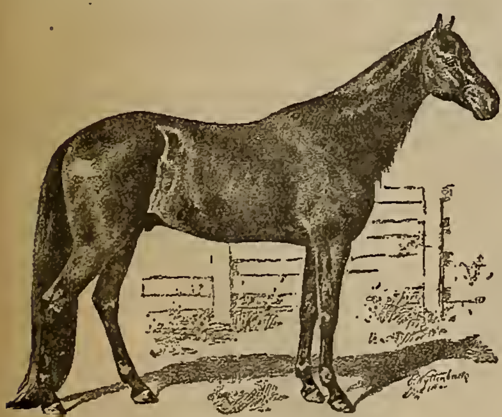
☞ George Wilkes has twenty representatives in the 2:30 list, of which 10 have records of 2:25 or better, 4 of 2:20 or better and 3 of 2:18 or better.

Will make the ensuing season, beginning February 1st, 1883, at STOCKTON.

In putting the price by the season at the low figure of $40 the owner does not acknowledge, thereby, any inferiority on the part of this horse to any other sire of Trotters.

IRVIN AYRES.

MAMBRINO TROTTING STALLION



ABBOTSFORD.

☞ Record at Six Years old, 2:21½. ☜

PEDIGREE.

BY WOODFORD MAMBRINO, HIS DAM COLUMBIA BY YOUNG Columbus. Woodford Mambrino by Mambrino Chief, his dam Woodbine by Woodford, a thoroughbred son of Kosciusko.

Woodford Mambrino is recognized to be the best son of Mambrino Chief. His own record is 2:21¼, and there are a large number of his get in the 2:30 list. Among them: Abbottsford, 2:21¼; Convoy, 2:22¼; Magenta, 2:21¼; Lady McFatridge, 2:29; Dacia, 2:29¼; George A. Ayer, 2:30.

Besides those having public records, he is the sire of the two celebrated mares owned by Robert Bonner—Manetta and Malice. Manetta, with a running mate, and harnessed to a road wagon, trotted two miles in 4:27¼, and Malice trotted a trial, on the same track, a mile in 2:19¼. Woodford Mambrino is also the sire of Princeps, the sire of Trinket; record, 2:14. Woodbine is also the dam of Wedgewood, record, 2:19. Young Columbus, the sire of the dam of Abbottsford, has nine of his get in the 2:30 list, so that on both sides of the house there are notable performers. Abbotsford is a rich rosewood brown, 15¾ hands, and of very high form. His get are very promising, his daughter Jasmine having won the Embryo Stake for yearlings in 1881, and every one which has been put in training has shown good speed.

TERMS.

Seventy-five dollars the season, to be paid before removing the animal. Mares not proving in foal can be returned the following season free of charge. Good pasturage at reasonable rates, and extra pains taken, but no liability for accidents or escapes.

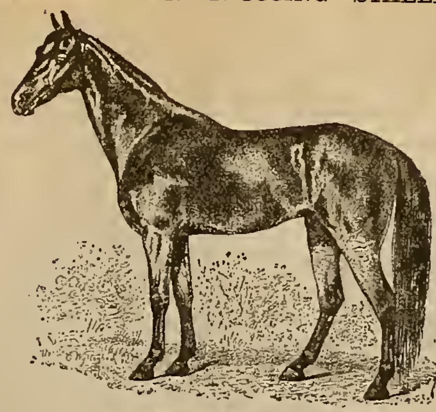
LOCATION.

Abbotsford will make the ensuing season, 1883, on the ranch of S. B. Whipple, Esq., San Mateo, season commencing February 15th and ending June 1st, 1883. For full history see the issue of BREEDER AND SPORTSMAN of August 5th, 1882.

GEORGE BAYLIS, Agent, San Mateo, Cal.

STALLIONS.

HAMBLETONIAN TROTTING STALLION



BOB MASON

By Echo. His dam Belle Mason by Belmont, Thoroughbred.

Echo by Rysdyk's Hambletonian, his dam Fanny Felter by Magnolia (by American Star). Belle Mason by Belmont (Williamson's); First dam Lucy Johnson by the Pony (son of Imported Leviathan); second dam Catalpa, by Frank; third dam by John Richards.

WILL MAKE THE ENSUING SEASON, LIMITED TO TWENTY mares, commencing February 15, 1883, and ending June 15, 1883, at the stables of his owner, Figueroa street, Los Angeles.

DESCRIPTION.

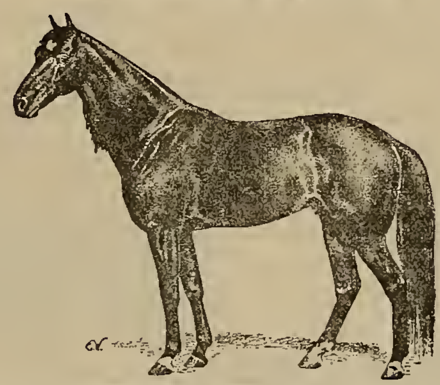
Bob Mason is a mahogany bay, with inside of off hind ankle white and star in forehead; sixteen hands, and weighs 1,100 pounds. Foaled May 10, 1879. He is of fine, kindly disposition, a natural trotter, and has shown great speed, but as yet has no public record. For full history of his sire, Echo, see BREENER ANN SPORTSMAN July 29, 1882. See also, for his full brother, Exile, BREEDER AND SPORTSMAN, issue of September 16, 1882.

TERMS.

One hundred dollars the season, payable at time of service. All mares at risk of owners. Mares not proving in foal can be returned the following season free of charge. Address

CHARLES J. ELLIS,
Post office box 55, Los Angeles, Cal.

THE TROTTING STALLIONS



SINGLETON AND LA HARPE.

SINGLETON WILL MAKE THE COMING SEASON, FROM Mach 1st to July 15th, 1883, at the farm of the owner, three miles north of Chico, Butte Co., Cal.

PEDIGREE.

Singleton is by Willie Schepper, a son of Rysdyk's Hambletonian, his dam Lightfoot (the dam of Pride) by Flaxtail, a son of Pruden's Blue Bull.

DESCRIPTION.

Singleton is a dark brown horse, tan flanks and muzzle, a little touch of white on hind feet and one fore foot, and star in forehead. He is 15¾ hands high and weighs 1,100 pounds. He was bred by Dr. M. W. Hicks, foaled spring of 1878.

TERMS.

Fifty dollars the season. Mares not proving in foal will be bred the following season free of charge. Mares from a distance will be pastured without charge during the season. Mares shipped to Chico, consigned to me, will be received on arrival of train, and taken to the ranch. Mares kept in any manner their owners desire, at reasonable rates. There is every convenience on the place, boxes, paddocks and plenty of shade and water.

LA HARPE

Will also make a short season at the above place on private terms. La Harpe is by Fame, a son of Alexander's Belmont, his dam Prairie Bird by Flaxtail, the dam of Flight and Prompter. Address

J. T. McINTOSH, Chico, Cal.

STEINWAY.

TWO-YEAR-OLD RECORD 2:31¾; 3-YEAR-OLD RECORD 2:25¾.

TERMS

WILL SERVE MARES THE PRESENT SEASON AND ENDING July 1, 1883, at the stock farm of the late Daniel Cook, Danville, Contra Costa county, Cal., at $100 for the season, payable before the animal is removed. Mares not proving with foal can be returned free the next season. Pasturage at $6 per month, and extra pains taken with mares in attendance, but no liability for accidents or escapes. Mares sent in care of of McOleverly & Noblett, Fashion stable, Oakland, S. J. Bennett, Martinez, or D. S. Smalley, Haywards, will be forwarded immediately to the farm.

DESCRIPTION.

He is a rich bay; 15¾ hands high; long, flowing mane and tail; two white hind ankles; remarkable style and lofty carriage; has a good, resolute head, set on a stout neck; his shoulders are of the Hambletonian form—do not mount very high at the withers; has great length and capacious middle piece; plenty of bone and substance, and his gait is big and square.

PEDIGREE.

Steinway was sired by Strathmore.

First dam Abbess by Albion, the sire of Vanity Fair, with record of 2:24.

Second dam by Marshal Ney, by imported Emancipation.

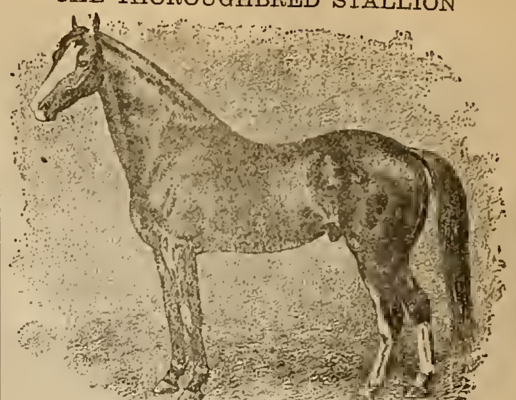
Third dam by Bertrand, by Sir Archy.

Steinway's dam is the dam of Solo with five-year-old record 2:28¾, and also the dam of W. S. Buckner's colt Currency that trotted as a yearling last fall in 2:46. See N. Y. "Spirit of the Times of November 18, 1882. Strathmore is the sire of Santa Claus 2:17½; Chestnut Hill, 2:22½; Steinway, 2:25¾; Alice Stoner, four years old, 2:24; Nannie Talbot, four years old, 2:29; Solo, five years old, 2:28¾; Moulton, five-year-old record 2:29; by Rysdyk's Hambletonian, the sire of 35 in the 2:30 list. Address

SAMUEL GAMBLE,
Danville, Contra Costa Co., Cal.

STALLIONS.

THE THOROUGHBRED STALLION



JOE HOOKER,

BY MONDAY.

First Dam Mayflower, by Imported Eclipse.
Second dam Hennie Farrow, by imported Shamrock.
Third dam Ida, by imported Belshazzar.
Fourth dam Gamma's dam, by Sir Richard.
Fifth dam by imported Eagle.
Sixth dam Bet Bosley, by Wilkes' Wonder.
Seventh dam by Chanticleer.
Eighth dam by imported Stirling.
Ninth dam by Clodius.
Tenth dam by imported Silver Eye.
Eleventh dam by imported Jolly Roger.
Twelfth dam by Partner.
Thirteenth dam by imported Monkey.
Fourteenth dam imported mare from the stud of Harrison of Brandon.

TERMS—$50 THE SEASON, TO A FEW MARES OF APPROVED breeding. Good pasturage for mares from a distance at $4 per month. Care will be taken to avoid accidents and escapes, but the owner must take the risks.

My place, where Joe Hooker will make the coming season, is five miles from Sacramento on the Freeport road.

This young stallion has proved to be one of the most successful racing sires, and every one of his colts that has been trained can run fast. Among them are Fred Collier and Jim Renwick. For history of Joe Hooker see BREEDER AND SPORTSMAN Jan 20, 1883.

THEO WINTERS, Sacramento, Cal.

THE THOROUGHBRED STALLION

WILDIDLE.

BY AUSTRALIAN.

DAM IDLEWILD BY LEXINGTON.

THIS GREAT RACEHORSE AND SUCCESSFUL SIRE WILL make the season 1883, from Feb. 15th to June 15th, at Judson's Wildidle farm, Santa Clara. For terms and particulars apply to or address

A POSITIVELY RELIABLE "FLY-BACK"
HORSE-TIMER
And Accurate Time-piece Combined.

STEM WINDER AND STEM SETTER.

In heavy Gold Open-face Cases, price $55
In heavy Silver Open-face Cases..... 27

[From the Jewelers' Circular.]

"The Centennial chronograph (fly-back) or horse-timer, recently introduced by Messrs. Cross & Beguelin, is, regardless of price, one of the most substantial and accurate pieces of timing mechanism we have seen. This timer is constructed on scientific mechanical principles that must excite the admiration of every intelligent watchmaker, and it will doubtless become universally popular."

IMPORTANT BREEDER'S SALE

BY DIRECTION OF L. J. ROSE, ESQ., OF SAN Gabriel, Los Angeles county, we will offer at public sale at the

BAY DISTRICT TRACK

AT 1 P. M. ON
THURSDAY, APRIL 5TH.

Twelve head of fillies and geldings, two and three years old, sired by the well-known stallions

SULTAN AND DEL SUR.

The young horses to be offered are closely related in blood to the famous mares Sweetheart and Eva, and their style of going and breeding warrant the belief that they will develop into trotters. They are broken and will be driven to harness the day of sale, that buyers may have an opportunity of judging of their merits. Though handled but a few months, they can trot as fast as many road horses. Mr. Rose's instructions are positive and peremptory, as the expense of transportation makes this absolutely necessary.

The sale will be bona fide, without limit or reserve and will determine whether a market can be had in California for fine-bred colts or owners will be compelled to ship East.

The colts may be seen at the track on Tuesday, April 3d. Full pedigrees and description day of sale.

KILLIP & CO., Auctioneers.

CITO, CHESTNUT COLT, FOALED APRIL 5, 1882. By Joe Hooker, his dam Too Soon by Norfolk, grandam Lady Davis (dam of Dashaway) by Red Bill, son of Medoc, etc. This is a bigbly-formed colt, of good size and a hearty feeder. Being nearly a brother in blood to Fred Collier (Lady Davis being the great Grandam of Fred, and his dam also being by Norfolk) and the Joe Hookers so far as tried all make horses, this is a good chance to get a colt of great promise for a moderate sum. He has four white legs above knees and hocks, a white face and other white markings. Price $500 if applied for before the 20th of March. For further particulars address this office.

FOR SALE.

A VERY FINE HAMBLETONian stallion, imported from Syracuse, N. Y.; nine years old; mahogany bay; sixteen hands high; perfectly sound; well broken; very stylish; cost over $1,500; property of a banker; full papers; got by Hambletonian Prince, he by Volunteer. Can be seen at Clnb Stables.

Two-Year-Old Trotting Stake for 1883

for 1883

A TROTTING STAKE FOR COLTS AND FILlies (foals of 1881), to be trotted at the California State fair of 1883; $50 entrance, of which $25 must accompany nomination, and the remaining $25 to be paid August 1, 1883; $500 to be added by the society.

Conditions.

The above stake to be mile heats, in harness, and to rules of National Trotting Association. Entrance money to be divided as follows: Fifty per cent of stakes to first colt, 25 per cent to second, 15 per cent to third and 10 per cent to fourth. Five to fill.

The $500 added money to be divided as follows: One hundred dollars each to winners of money and $100 to the stallion whose get wins first money, if the stallion is owned in California. Entries close April 7, 1883, with the Secretary. A colt winning by a walkover is entitled to all the stakes but none of the added money; a colt distancing the field is entitled to first money and all the stakes.

P. A. FINIGAN, President.

ERWIN F. SMITH, Secretary.
Sacramento, March 12, 1883.

P. S.—This is the same stake that was advertised to close, March 15, 1883, but was withdrawn on account of an error. The time for closing has been extended to April 7, 1883.

A. C. BASSETT, Superintendent. H. R. JUDAH, Asst. Pass. & Tkt. Agt.

☞ S. P. Atlantic Express Train via Los Angeles, Yuma, etc., leaves San Francisco daily via Oakland ferry, foot of Market street, at 9:30 A. M.

TO
Sportsmen & Pleasure-Seekers.
THE
SOUTHERN PACIFIC R. R. CO.

RESPECTFULLY CALLS ATTENTION TO THE
SUPERIOR FACILITIES

AFFORDED BY THEIR LINE FOR REACHING with speed and comfort the best places in the State for

Sea Bathing, Shooting and Fishing.

TRAINS LEAVE SAN FRANCISCO DAILY FOR
MONTEREY,
THE MOST CHARMING

Summer and Winter Resort of the Pacific Coast,

with its beautiful Groves and delightful Drives. Front in abundance can be obtained from the several streams in the vicinity of Monterey, and the best shooting may be had in season.

THE BAY OF MONTEREY

Is noted for the extent and variety of fish which abound in its waters, notably Salmon, Rock Cod, Barracuda, Pompino, Spanish Mackerel, and Flounder. The above-mentioned attractions, in connection with the low rates of fare, rapid transit, and the superior accommodations furnished at the "HOTEL DEL MONTE," have made Monterey a paradise for sportsmen.

THE BATHING ESTABLISHMENT
OF THE
"HOTEL DEL MONTE,"
IS UNSURPASSED.

A SPACIOUS SWIMMING TANK
(150 x 50 feet)
FOR WARM SALT WATER, PLUNGE AND SWIMMING BATHS.

ELEGANT ROOMS

For Individual Baths with DOUCHE and SHOWER facilities.

MAGNIFICENT BEACH

Of pure white sand for SURF BATHING, Etc., Etc.

THE FAVORITE ROUTE to those well-known Watering Places,
APTOS, SOQUEL AND SANTA CRUZ,
IS VIA THE
Southern Pacific Railroad,
(Broad Gauge), and the
SANTA CRUZ RAILROAD.

☞ At PAJARO, the SANTA CRUZ R. R. connects daily with Trains of the S. P. R. R.

The S. P. R. R. runs through the counties of San Mateo, Santa Clara, San Benito, Santa Cruz and Monterey, in each of which game abounds in great variety. Notably

Quail, Pigeon, Snipe, Duck, Geese, Deer and Bear.

Lakes PILARCITOS and SAN ANDREAS are reached by this line. Stages connect with trains daily at San Mateo for those well-known Retreats, PURISSIMA, SAN GREGORIO and PESCADERO. We would particularly call attention to the unlimited extent of range at and about SAN BRUNO and McMAHON'S for RIFLE PRACTICE.

These resorts are but a short distance from San Francisco and offer special inducements to the lovers of this manly sport.

SPECIAL NOTICE.

Sportsmen and others presenting Passage Tickets o any description issued by this Company will be entitled to

FREE TRANSPORTATION OF THEIR DOGS

when carried in Baggage Cars and put in charge of Train Baggagemen. Train Baggagemen are instructed to issue CHECKS for all dogs received in Baggage Cars.

☞ In order to guard against accidents to Dogs while in transit, it is necessary that they be provided with COLLAR AND CHAIN. Guns and Fishing Tackle checked and carried free of charge. Guns taken apart and securely packed in wood or leather cases may be taken in Passenger Cars.

TICKET OFFICES.—Passenger Depot, Townsend street, and No. 2 New Montgomery street, Palace Hotel.
A. C. BASSETT, Superintendent. H. R. JUDAH, Asst. Pass. and Tkt Agt.

☞ S. P. Atlantic Express Train via Los Angeles Yuma, etc., leaves San Francisco daily via Oakland Ferry, foot of Market Street at 9:30 A. M.

I CURE FITS!

When I say cure I do not mean merely to stop them for a time and then have them return again. I mean a radical cure. I have made the disease of FITS, EPILEPSY or FALLING SICKNESS a life-long study. I warrant my remedy to cure the worst cases. Because others have failed is no reason for not now receiving a cure. Send at once for a treatise and a Free Bottle of my Infallible remedy. Give Express and Post Office. It costs you nothing for a trial, and I will cure you.
Address Dr. H. G. ROOT, 183 Pearl St., New York.

CONSUMPTION.

I have a positive remedy for the above disease; by its use thousands of cases of the worst kind and of long standing have been cured. Indeed, so strong is my faith in its efficacy, that I will send TWO BOTTLES FREE, together with a VALUABLE TREATISE on this disease, to any sufferer. Give Express & P. O. address. DR. T. A. SLOCUM, 181 Pearl St., N. Y.

BREEDER AND SPORTSMAN

Vol. II. No. 13.
NO 508 MONTGOMERY STREET.

SAN FRANCISCO, SATURDAY, MARCH 31, 1883.

SUBSCRIPTION
FIVE DOLLARSA YEAR.

Tips and Toe-Weights.

A query published in the *Breeder's Gazette* has led me to think that it will he well to add other cuts, with an explanation, to give a perfect understanding of the system. It appears simple enough to state that the tip should he made of nearly uniform thickness, square at the ends, and the horn cut away so that the foot will have the proper hearing when the tip is set. A more perfect elucidation, however, is afforded hy the cuts, and in order to show exactly the state of the foot of a four-year-old that has never worn a shoe, a few days ago Mr. Wyttenhach made the drawing from nature. The outline was ohtained from placing his foot on a piece of cardhoard and carefully tracing around it. The other parts of the sketch were filled in while the colt's foot was held up so that the artist could see as he went on with the work.

There are many points of interest to examine. In the first place it is widely different from a foot that has worn a shoe, and it also varies from one that has never heen shod, if the foot has not heen cared for in the same manner. The first position will he readily granted, as any one can verify it hy making a comparison; the second is not so well understood, and the causes for the difference overlooked. The natural supposition would he that if a colt had run without shoes until four years old the foot would he in the proper shape, and if the animal was in an entirely natural state, roaming over the country wherever it desired, it might be so. Domestication, however, changes the course and small fields, paddocks and stahles entail a different life. In the case of Anteso, the field was circumscrihed to 200 feet hy 133, with a jog that douhled the latter distance, so that 266 feet was the longest run he could take. The yard he sometimes ran in was 50x133 feet, and when uot in these a medium sized hox-stall was his domicile. With no better chauce to wear the horn away, the feet would have grown loug at the toe, split and broken off. The heels would have got out of all proportion and undouhtedly more or less contracted. The frog would have shrunk from lack of use, and even the inner portion hetween the walls been in an ahnormal condition. From the time he was a few months old, his feet have beeu trimmed to get rid of the excess of growth, and at fifteen months the front part has hoen protected with a tip the greater part of the time. The wall from the tip has been cut down so that it was only a trifle lower than the frog so that the "spring" of the quarters would permit the frog to hear its due share of the weight, and no matter how ragged it hecame, the frog was never cut. When the new frog was ready to replace the old, there were small hanging fragments which were pulled off, though the knife was never hrought into requisition further than to cut away where the tip rested and the sole hack of the tip was left intact. This, too, would exfoliate and when a flake was so loose as to be easily removed that would also he removed hy prying it off with an instrument which would cut away the horn only where the mstal replaced it; the sole between the wings of the tip would also be left to exfoliate, but iu order to get a true hoaring, with only a knife, rasp and file, it was uecessary to level that portiou.

As the cut shows exactly the size of the sole of the foot, it will he easy to determine the proportion hetween that and the size of the colt when the measurements are given. Anteeo is a trifle over fifteen and a half hauds high, and of more than ordinary substance. His limhs are larger than usual, or rather it will he hetter stated hy sayiug wider. As a geueral thing the Electioneers have rather small foet, and I firmly helieve that if Antceo had worn shoes his would be at least half an inch narrower than they are. The width and length are nearly the same, and eveu a diagonal measurement as from oue heel to a point the same distauce ou either side of the toe is only a trifle greater. But the most strikiug featuro in the cnt is the frog, aud doubtless, those who have ohtained their knowledge of this important part of the foot of the horse from seeing those of horses which have worn shoes, or from illustrations in the hooks, will he surprisod, and think that there is something wrong iu the delineatiou. It is not only wide at the posterior portion, as it reaches far nearer the toe, aud in place of the crevice in the center there is only a slight depression.

In a previous illustration, given on page 8, chapter I. [illegible] only cut ohtainahle at the time, the representation i [illegible]

(CONTINUED ON PAGE 197).

NEW YORK LETTER.

Decadence of Jerome Park—Plunger Walton's New Purchase—Theatrical—Etc.

EDITOR BREEDER AND SPORTSMAN: Since my last letter, the attention of those interested in turf matters in this section has been fully occupied with the entries for the different stakes just closed at the various Eastern racing centers. Washington and Baltimore, Monmouth Park and Saratoga have filled their many racing events with, in the main, as numerous a list of entries as last year, Jerome Park being the only one to show any serious decrease in this very important degree, and our wise (?) legislators at the State capital are responsible for the gradual decadence of this famous and fashionable resort of our metropolitan race-goers. By their senseless and mischievous legislation against betting on race tracks only, a law that is dead letter everywhere except within the limits of this city, they only show to thinking and reasonable persons in general how far hypocrites and fanatics will go in their endeavors to cripple a sport that has assumed the proportions of a national industry, and the necessary material to carry on which helps to largely swell the revenues of the tillers of the soil who are the greatest part of the constituency of these same thick-headed idiots. It has been settled long ago by practical trials that no racing association can live any length of time that is debarred from the privilege of speculation, for average race-goers will not attend at tracks handicapped in this respect. When the public stand aloof, horsemen do likewise, and the enterprise dies a natural death. Such will he the fate of our magnificent, celebrated course at Fordham unless the law as now existing is amended before this legislature adjourns. There is still some chance left that this will be done in spite of the defeat of one bill two weeks ago, which I mentioned at the time, a measure that was not the one as originally worded, but a garbled affair, put forward most likely by some enemies of the bill to invite defeat. The correct measure will, it is said, be again brought forward at Albany this session, and if there are any clear-headed men left in that august body of lawmakers, it will he put on the statutes without delay, and save us Jerome Park which will undoubtedly end its career this season, in default of relief in this matter.

Since the announcement of the contemplated expatriation to England of the famous racemare Girofle, doubts have been freely expressed on all sides as to the wisdom and the ultimate consummation of the project. When it was known, however, that the mare had been sold to F. Theo. Walton (the Plunger) for a large price, Jacob Pincus, ex-trainer for Lorillard in England having also been engaged by the same party to go "across the briny" again and take charge of Girofle and the Plunger's other horses abroad, all doubts as to her ultimate destination were dispelled, especially as her name is absent from each and all of the spring stakes just closed. Mr. Walton is quietly gathering the nucleus of a strong racing stable, calculating to race here and in England also, it is believed. He tried to buy Tom Bowling's best son, Gen. Monroe, from the McElmerls a short time since, but his bid, $5,000, was not high enough, and the white-faced horse did not change owners.

As Walton branches out in the racing line he has drawn in one of his many "irons in the fire," retiring in a few weeks from the management of the St. James Hotel in this city, the new incumbent being no less than the well-known turfman and theatrical manager, Wm. M. Conner, who, whether as owner of the famous Scotland mare Glidelia, the best daughter of her deceased sire, as starter at Washington, Baltimore, Jerome, Saratoga, Monmouth and all the race grounds East, or as managerial worker with your John McCullough, is as well and favorably known to the general public as he could desire. Success to "Billy" in his new venture.

As you probably have been informed by wire, the Louisville Jockey Club have secured the privilege of having the great race for the Lorillard Stallion Stakes next September run over their track, probably the fastest in the country. Their large bid of $10,575 completely "overtopped" the $6,000 offered by the Sheepshead Bay party, and Kentucky carried the day. Whether this large sum is not just a trifle (?) too heavy for the L. J. C. to give with profit to themselves on the eventful day next fall seems rather problematical, especially in view of the counter attractions since hung up by their rival competitor, the Coney Island Jockey Club. This vigorous young association, realizing that the situation required prompt action of some sort, if the powerful Eastern stables were to be retained here next September, have offered $10,000 also, for two great handicaps to be run at their September meeting, $5,000 for two-year-olds, three quarters of a mile, and $5,000 for three-year-olds, one mile and a half. The enterprise and liberality which prompted these large inducements to turfmen to remain East next fall are beyond praise and question, and yet had the race for the "youngsters" been changed to a larger one for all ages it might have been more judicious, for we have entirely too much racing of two-year-olds nowadays, and the penalty is, that in a majority of cases the early maturity causes early decay. This rule has of course exceptions, but all those who have the welfare of the matured racehorse at heart will condemn so much two-year-old racing as is in vogue at the present day. Eole, perhaps the best Cup *horse* we have in training, never ran as a two-year-old. Eolist, his three-year-old brother, has yet to make his bow to the starter, and Maj. Doswell of Virginia, fully coinciding with the views of Mr. Hancock, breeder of the above horses and their two-year-old brother Eolite, has refused a good price for this youngest scion of Eolus, presumably because he wishes to retain the colt until another season, and not have him hammered away as the average two-year-old is nowaday. But then these races draw the crowd and assist speculation by their uncertainty, and so present excitement is preferred to ultimate excellence.

The rumor is again revived regarding Mr. Geo. Lorillard's future movements on the turf. When a man marries, it is said, "his trouble begins," but in case the famous orange and blue is known no more among race goers, save in memory, the trouble will be on the other side, this noted stable, in spite of its ill success in 1882, having more followers than, perhaps, any we have, by reason of its always going to win. Some have it that the trip of Mr. Lorillard and his lady abroad will, however, have no bearing on the dispersion of his racers, and it is to be hoped that the mutterings of Dame Rumor are this time wide of the mark.

The Islip two-year-olds of last fall, now three, have improved greatly in looks. Magnate (a brother to Monitor) and Trafalgar, by King Alfonso, out of Spendthrift's dam, are highly spoken of. The Brooklyn stable of the Dwyers is again in hard luck. Their two high-priced three-year-olds, by Billet, Barncy and Miss Woodford, are under a cloud, the horse having been blistered, and on top of that, quite badly injured in his stable, while the filly has been ailing for some weeks with farcy, it is said, but that this is what is ailing her has since been denied. Be that as it may, they are both hors in combat for the present, with no likelihood of neither fulfilling their spring and early summer engagements. As the two represent $18,000 purchase money, this is bad for the plucky brothers who have given such large sums for Hindoo, Onondaga and others. But they have still two fine three-year-olds left in George Kenny and Joe Blackburn (brother to Luke), and will be heard from with these before snow flies again.

Although up only 200 miles north of us, at Saratoga, they had a foot of snow yesterday; here the balmy atmosphere is telling us that our deliverance is at hand.

From Kentucky, Tennessee and Louisiana come news of this and that turf candidate doing their work in a fashion that, if true, will break many a slate.

Drake Carter, a Derby candidate, worked a mile in 1:51 recently. He is by Ten Broeck out of Fellowplay's dam. Leonatus, by Longfellow, another favorite for the same race, is doing so well that after one bet was made recently of $2,000 to $200, about his chance, his admirers went in and have backed him down to four to one, which is also Ascender's price.

Tilford, three years, a full brother to your Grinstead, owned at Santa Anita, is doing so well at New Orleans that the hook of Watts & Co. at Louisville on the Merchants and Turf Stakes is full on him. In other words they don't care to bet any more money against him. Farrag, by Wanderer, has been backed just as strongly for the Merchants, as has also Thora for the Cup and Merchants, Mediator, by Buckden, Fellowplay, by Longfellow and others. The big bet of $7,500 to $1,500, about Thora for the Lonisville Cup is said to have been booked in Lonisville recently.

From England come good accounts of our horses over there. Foxhall is doing so well that he is a strong favorite for the City and Suburban at ten to one in spite of his 130 pounds; however, Shotover, the Derby winner, is second choice, and Sachem third in favor. His 105 pounds ought not to stop him in the race, surely, if he has improved only half as much as it is claimed he has.

To-morrow the Oxford and Cambridge boat-race takes place, and you will get the result by wire long before this reaches you. From the way things have looked with the two crews of late, and by the daily work, etc., it looks as if the Cambridge (light blue) will be first at the finish.

Two prominent candidates for English events died recently Edelweiss, six years, belonging to the late Mr. Crawfurd, and Woodbrook, the winner of the Grand National of 1881 and a prominent favorite for this year's race. Also Lord Rouald, the sire of the celebrated Master Kildare, who won the "City" in 1881 with 128 bounds on his back. Lord Ronald before Kildare's great race stood at the low price of ten guineas, but after that his services were more sought after.

Chicago has changed the date of her race meeting from June 27—July 6 to June 23—July 4, which latter dates will begin and end the summer meeting, at which California will be well represented.

Doubtless it comes direct from Gov. Stanford himself regarding his intentions of sending a racing stable East this summer.

New York, March 14, 1883. PACIFIC.

Size alone does not make a draft horse. A good many will remember a trial of strength made on the fair grounds of our country by a pair of imported draft horses. After being loaded so heavily that they refused to move the load, a pair of crooked-legged diminutive mules were able to move it with comparative ease. The draft horses were lacking in brain power and had become discouraged. Not so with the mules. Size failed to win this time, and brain power was the more than equal avoirdupois. As the paternal ancestor of the mule has never been famed for speed, his hybrid offspring from the mare has long been celebrated for drawing anything that may be placed behind them, and it is even said they can draw an inference—with their hind legs. The loading down the draft horse with fat to make him weigh big as well as cover up deficiencies is worse than useless. This is done at the expense of vitality, and in time will render his offspring heefy, as well as undermine the constitution. While the breeder may rejoice in an easy keeper, let him remember that all animals with a quiet disposition take on flesh as well as fat, much more readily than an animal with a nervous temperament. A race or trotting horse loaded down with fat can hardly be expected to come in at the fore, and a draft horse loses the strength or tension of his muscles from the same mismanagement.

Mr. James Maullen, Beaverhead, Montana, one of the largest horse breeders in the Territory, gives his experience in breeding large-sized Percheron-Norman stallions to the small bronchos and Indian mares of the West: "In 1874 I bought some Percheron stallions weighing from 1,600 to 1,800 pounds each. I commenced at once to breed them to their full capacity to my native mares, some of which weighed less than 700 pounds. Many persons considered the horses very much too large, and prophesied a failure; but the result proved a most remarkable adaptability of the French stallion for this purpose. The great uniformity, superior style and muscular build of all the colts produced by these horses have convinced the most incredulous persons that they are just what we need as a cross."

Mr. Labouchere says in *Truth* of the 1st inst.: "Let me implore my speculating readers not on any account to back Foxhall till they see him. Marsh is one of these bank-breaking magicians whose stables abound in two-necked geese and six-legged calves. If you back Shotover you know exactly where you are; there is one risk and one only; but in the case of Mr. Keene's horses the risks are manifold. The fact is that there will be a very limited market on the Epsom race until after the Lincoln Handicap, and the crazy investments of a few hare-brained simpletons will now bring a horse up to a short price in a day.

John Bailiff of Santa Rosa township lately sent to his stock ranch in Santa Barbara one of the finest and most stylish young horses ever raised in this county. This young fellow, though only three years old, is over sixteen hands high and weighs 1,375 pounds and has the action and appearance of a perfect coach horse or horse of all work. He is by Briton, and his dam was a Norman and thoroughbred. He will make his mark down in that country.—*Petaluma Courier.*

At an auction sale of trotters held in New York on the 19th inst., the highest price paid was for Administrator, by Rysdyk's Hambletonian, the sire of several notable trotters. Mr. E. E. Frost was the purchaser, at $1,125. Among the others sold were Ferndale, by Idol, to Mr. F. Thorne for $800; Nellie L, by Daniel Lambert, to Mr. Galvin for $450; Fernwood, by Idol, for $385, and Fanny Fern, by Idol, to Mr. Stont for $325.

Hon. John Boggs, of Colusa county, sold to Messrs. Washburn and Miller, of the Yosemite Stage Company, thirty head of fine stage horses at a good round figure. The horses were put aboard the cars at Norman, on Thursday, and shipped to the company's headquarters at Merced.

ANCIENT AND MODERN ARMS.

How a Difference in the Caliber Influences the Turn of the Rifling—Continued.

BY DR. E. H. PARDEE—NO. 13.

As stated in my last communication, the resistance of the air is greater in proportion on the small than on the large projectile, and if the gentleman at Red Bluff, for whom I ordered a Ballard rifle, 40 caliber and 90 grains of powder, will closely peruse this article he will see wherein my theory on projectile force differs from his wild notions of small caliber and large charges of powder, and that his idea is contrary to any established theory and well-regulated deductions. I think he must agree with me that the resistance of the air is proportional to the square of the velocity with which the body is moving at the time considered; therefore, if the velocity is double the resistance, it will beyond all doubt be quadruple, for where a body is moving with a double velocity it must encounter in the same time a double number of particles of air, hence it loses a double quantity of velocity; but to this double quantity of particles it imparts a velocity double that in the first case. Therefore, as in the one case it encounters double the number of particles and in the other imparts twice the velocity, it must be that the resistance is four times as great. But it may be but fair for me to acknowledge that this law of resistance is not uniformly correct, and it might be better to put the proposition in this light, that the resistance of the air is proportional to the product of the anterior portion of the surface of the body multiplied by the density of the air and by the square of the velocity with which the body is moving at the time considered. That proposition will hold good in all cases, and I carefully commend it to my Red Bluff friend for his consideration.

But to carry this subject a little farther I will refer to some previous communications in regard to vacuo; the trajectory was represented as composed of two equal and symmetrical parts; in the open and unconfined air this is not the case. If the fire is under small angles, the differences of the action of gravity are not great, but the ranges vary considerably. For instance, in air the spaces passed over in equal times go on constantly and rapidly diminishing; the successive lowering of the projectile tends, then, to deform completely the curve, which approaches rapidly its culminating point from its departure. For in air the range becomes much less than in vacuo, neither are tangents symmetrical, and the angles they make with the axes are much greater in descending than in the ascending part of the trajectory.

I believe that theory has laid down a rule, that the greatest range in the air for the musket is twenty-eight degrees; in the air it is not as it is in vacuo, an equality of range, where the fire is with an angle greater or less than forty-five degrees by the same number of degrees.

A little application of common philosophy must decide this matter beyond all doubt; and rest upon this problem of progressive motion: That the range is greater as the projectile is larger; that it augments with the density of the projectile, always resulting with the product of the diameter by the density of the shot. Always taking into consideration that a similarity of circumstances governs the manipulation of different sized projectiles, that is a proportional amount of projectile force he used in each case; for instance, one-eighth in powder to be used to the weight of the shot. I have already shown quite conclusively in previous communications, in what respect the caliber would influence the turn of the rifle, and I will now give as near as possible a rule, that by actual deductions will hold good; and I most earnestly request any of our experts of the hair trigger, also those of the seven-pound pull, to give it a trial and let the result he known through the columns of the BREEDER AND SPORTSMAN, as it is a subject full of versatility of thought and the more one studies it, the deeper and more pleasing the subject becomes.

That the length of the turn should be increased in proportion to the square root of the caliber, therefore it can be stated in the following proposition, divide the larger diameter by the smaller, extract the square root of the quotient and multiply the quantity thus obtained hy the length of the turn.

In order to make the above more plain I will, by illustration, give an example, which will he applicable in all cases of a similar character. Therefore, in order to ascertain the length of turn required for a gun with a caliber 4.2 inches in diameter, which is to be used for firing a similar shot or shell as another with a bore 1.2 inches in diameter, for which the proper length of turn has already been ascertained to he sixty-four inches, divide 4.2 by 1.2; the quotient is 3.5, the square root of which—1.87—multiplied by 64, gives the length of the turn, 119.7 inches, or ten feet less a fraction.

I find in Hans Busk, an English author of a book, "The Rifle and How to Use it," a table that is applicable to this subject, but not having an exalted opinion of this book, I will in part leave the table of statistics to the reader's consideration and reflection. But as they are in full, the following is a scale of the different lengths of the turn required for guns of different calibers, according to the above method, taking the Enfield rifle as a standard, and supposing leaden shot of a form similar to those used with that rifle to be employed:

Description of Guns.	Diameter of Bore. Inches.	Length of Turn for Leaden Shot. Feet.	Inches.
9 pounder	3.66	16	4
12 "	4.2	17	3
18 "	4.62	18	3
24 "	5.29	19	8
32 "	5.82	20	6
42 "	6.41	21	6
55 "	6.97	22	6
68 "	7.65	23	6
8 inches	8.12	24	4
10 "	8.00	24	3
12 "	10.00	27	0
13 "	12.00	30	6

It will be remembered that Mr. Busk made the above table from the English Enfield rifle, a weapon much inferior to that of Dahlgren and other first-class arms manufactured in America.

I believe I have successfully established a theory which is quite fully supported by practical experiments, or at least I have demonstrated the actual necessity of all experiments being conducted upon some fixed principle founded upon scientific as well as practical and philosophical data. I will now briefly state my reasons for advocating the system in this and former articles to the BREEDER AND SPORTSMAN on the manner in which a difference in the caliber influences the turn of the rifle. Therefore I will lay down three essential points that must be kept in view: First, the description of the shot; on this account, therefore, any set of experiments undertaken for the purpose of arriving at different conclusions, in connection with the turn of the grooves, must be made with the same kind of projectile. Secondly,

it will change with every variation in their size. Therefore, in making the necessary experiments for ascertaining the turn required under these circumstances, the various conflicting arguments in favor of the different ratios of variation in the angular velocity or turn required for the shot should be taken into consideration and those for which any plausible reason can be assigned should be tried by a systematic method which I have given. Thirdly, it will differ with every different elevation of the gun. For this reason, as the turn required for great elevation is greater than that for small, in experiments for ascertaining the proper degree of the turn, the gun should always be fired with the greatest elevation which would be used in actual practice. How necessary then, it seems, to have a fixed principle as a starting point from which the mechanical part would soon conform, and this vexed problem of caliber and turn of the rifle would be solved. The time, in my opinion, is not far distant when the theory of rifle practice is destined to be governed by immutable laws which will conform to the laws of attraction and repulsion, as much so as the universal laws that govern and control our solar system, and until that consideration is recognized all will be to a certain extent in confusion and uncertainty.

The changes are drifting toward this, and another century will develop the laws of dynemics so that the unsteadiness of the flight of projectiles will be overcome, when the marksman will be able to account for every jump shot, and, knowing the cause, will be able to correct all variations of the same.

Belle Meade.

Belle Meade, the magnificent estate of Gen. W. G. Harding, six miles from the Tennessee State Capital, contains 4,000 acres in one body, in the highest state of cultivation, without a single rod of waste in the entire tract, and cultivated in the most intelligent manner.

The 425 acres devoted to the deer park is covered with a natural growth of timber, in which the grass grows and cattle run. The deer number about 350, and may be seen at any time leaping and running over the vast tract. They represent their own increase from a few animals since the war. The herd was started with one animal caught on the place in its original wild state, gradually increasing the number by catching three or four each year until at the begining of the war there were 300 or 400. He also had about fifty buffaloes, some elk and water oxen. All but the deer were destroyed during the war, and most of these also. They were driven off by the soldiers of both armies, the estate frequently being used as a camping-ground. Occasionally a deer hunt is enjoyed by the visitors to the place, but the intention is to preserve and increase the herd.

It is in connection with the thoroughbred horse that Belle Meade farm has a reputation in all civilized lands, and ranks first in the world as a breeding establishmeut. There is scarcely a distinguished horse that has appeared for a number of years that cannot be tracked back to Tennessee, and many to this farm. Bassett's dam was bred in Muray county. A large number of the finest imported horses and mares have lived on Belle Meade. Imported Priam died and was buried there. He was purchased at the highest price ever paid for a horse in England in that day, $25,000, and an immense sum was subsequently offered for his return. His was the best blood of that time, and is still sought after, the best horses there being traced back to him yet. He was never beaten but once in a race.

On the occasion of a recent visit to Belle Meade there were on the place four stallions, eighty brood mares, and forty-two colts, all of the best breeding, and comprising some of the most valuable stock in the country. The stallions are Enquirer, imported Great Tom, Bramble, and Luke Blackburn. The business of General Harding is the breeding and sale of the thoroughbred horse. Everything else is auxiliary thereto. He neither exhibits nor races horses, but confines himself to supplying the best-bred animals of their class to fanciers of the horse. His customers are from all sections of the country, and represent some of its leading men. No animal is ever sold at private sale, the entire product of the farm being disposed of at public auction on the premises about the 1st of May each year. These sales began in 1867, and are largely attended. Every man who buys knows that he is being fairly dealt with, and that he is sure of what he purchases. The colts of the previous year, numbering twenty-five to forty, are sold to the highest bidder, and the time occupied rarely exceeds two hours, while the sums realized amount to many thousands of dollars. The sale of 1881 embraced thirty-four colts, which brought $37,800, and represented the last of the Bonnie Scotland stock. One animal of this strain could not now be bought for $15,000. The sale of 1882 covered thirty-eight head, and aggregated $24,300. Prices, of course, are governed by the breeding of colts. Both the father and grandfather of Gen. Harding were breeders of the blooded horse, and he therefore came naturally by his fondness for the science.

The live stock of Belle Meade, representing at least $250,000 in value, is in charge of Robert Green, a colored man, now silvered over with gray. He is about fifty-eight years of age, was born on the estate, and has always remained there. He handles the valuable stallions and mares, and superintends everything belonging to the blooded stock department, assisted by three or four subordinates. It is a pleasure to see him handle the horses Enquirer, Bramble, Great Tom, and the other noted animals, which in his hands are as docile as kittens, and the best-behaved of their class we ever saw. He is an invalnable man, faithful, kind, intelligent, honest, and truthful. He was never known to strike an animal. Robert takes great pride and interest in his employers, their families and their property, including the stock, and his faithfulness and ability are highly prized.

Northern Notes.

Another quarter race between the Payne and Sly mares came off at Phœnix, Oregon, last Saturday. The Payne mare won by fifteen feet but the Sly party claimed foul riding and the stakes, $500, were paid under protest.

It is stated that J. Q. Shirley has sold his ranch of 4,000 acres on Raft river, Idaho, with 3,000 head of cattle, 1,000 sheep and 300 horses, to Keogh Brothers of Nevada for $90,000.

Some Portland capitalists have purchased 1,000 acres of land near Albany, and are going to start an immense hop yard.

Horses to the value of $10,000 have died in Yamhill county, Oregon, the past winter of prevalent diseases.

A meeting will be held in Portland in July to organize a Jersey Breeders' Association.

TURF AND TRACK.

Belnor and the Chicago Colt Stake—A Statement from Mr. Gamble.

EDITOR BREEDER AND SPORTSMAN: I noticed in the BREEDER AND SPORTSMAN, *Wilkes' Spirit of the Times*, *Turf, Field and Farm*, and *Dunton's Spirit of the Turf* the list of entries to the Ashland Colt Stakes, for three and four-year-old stakes.

In Ashland Trotting Stake, 1884, for colts and fillies (foals of 1881), I did not see my entry of my bay horse colt, foaled May 12, 1881, Belnor, by Strathmore; first dam by Conster, second dam by Mambrino Chief, in the list published. I made out the entry the 15th of February last, and gave it to our bookkeeper to copy, and inclosed $15 to accompany nomination, and told some of my best friends that Belnor was entered in that stake, and announced it before 500 people at the late sale of Daniel Cook's on 28th of February last, that Belnor was entered in the Ashland Stake. This I honestly thought, and never knew differently until I saw the list published. I went and saw the bookkeeper about it; he said he sent it the morning of the 16th of February, and inclosed $15 as I told him. I saw advertised the first time I saw the notice of the Ashland Stake in *Dunton's Spirit of the Turf*, published in Chicago, that $15 were required to accompany nomiuations. You see that the entry was made out and the money inclosed and placed in the mail bag here in this office on this farm. The mail bag is locked here and leaves this office at five o'clock every morning, and then taken to Danville to the regular post office; there the letters are transferred to another bag. The stage from Oakland runs directly to this farm and carries our mail from Danville in a small bag. This bag is always locked; the bookkeeper, Mr. Wiley, or myself, unlock the bag and take out the mail for all persons on the farm. Any person wishing to send a letter away leaves it at the farm office the night before, and the hook-keeper places all mail in the bag and locks it, then stage takes it to Danville, where the mail is transferred to a larger bag, and so sent to the city. There is no regular post office on this farm, but that is the way we receive and send our mail. The entry of the bay colt Belnor went from here the same way. My reason for sending Belnor's entry on so soon was that I was very busy getting ready for the sale at Oakland, and would be away from home, and thought I would attend to the matter right then and there. I did not stop to think that the entry made out on the 28th of February would answer. Knowing the entries would close the first of March in Chicago, I did not think the post mark would do. I write this to explain the matter to the public. I did not tell my friends that he was entered in this stake merely to sell him, for I honestly thought the entry was all right. To show my friends and the public that I did not say he was entered to sell him: I knew before the sale that the man who bought him would have to give over $2,500, for Seth Cook told me before that he would give that much for him. I told him he would own Belnor then, and he said all right, that he would give that much just as he was. It was an act of carelessness that the letter was not taken to Danville and registered; if it had been done so, Belnor would be entered in the stake as I said.

SAMUEL GAMBLE, Cook Farm.

I will swear that the foregoing statement is true and that I copied Mr. Gamble's letter of entry of colt in the Ashland Colt Stake on the night of February 15 and placed the same in the mail sack and locked the same.

FRAZIER RIDGWAY, Book-keeper at Cook Farm.

Danville, Cal., March 28, 1883.

The Chicago Running Meeting.

The programme of the Chicago Summer Running Meeting has been received. It runs as follows:

First day, Saturday, June 23, Inaugural Rush, for all ages, one mile. Ladies' Stake, for two-year-old fillies, three-quarters of a mile. Board of Trade Handicap, for all ages, one mile and a half. Criterion Stakes, for two-year-old colts, three-quarters of a mile. Hurdle Purse, for all ages, mile heats, Welter weights.

Second day, Tuesday, June 26, Club Purse, for all ages, one mile and a half. Illinois Oaks, for three-year-old fillies, one mile and a quarter. Rapid Sweepstakes, for all ages, three-quarters of a mile. Chicago Stakes, for three-year-old colts, one mile and a quarter. Club Purse, for all ages, mile heats.

Third day, Wednesday, June 27, Flash Stakes, for two-year-old colts and fillies, half a mile. Handicap Purse, for all ages, one mile and three-quarters. Merchants' Stakes, for all ages, one mile and a quarter. Steeplechase Handicap Purse, for all ages, about two miles and a half.

Fourth day, Thursday, June 28, Selling purse, for all ages, one mile and an eighth. Dearborn Stakes, post sweepstake, for three-year-olds, one mile and three-quarters. Club Purse, for all ages, one mile. Club Purse, for all ages, five-eighths of a mile. Handicap Purse, for all ages, one mile and five hundred yards.

Fifth day, Friday, June 29, Nursery Stakes, for two-year-old colts and fillies, one mile. Club Purse, for all ages, two miles. Summer Handicap, for all ages, one mile and an eighth. Handicap Hurdle Purse, two miles.

Sixth day, Saturday, June 30, Green Stakes, for three-year-old colts and fillies, one mile and an eighth. Selling Purse, for all ages, one mile and a half. Garden City Cup, for all ages, two miles and a quarter. Club Purse, for all ages, mile heats.

Seventh day, Tuesday, July 3, Calumet Stakes, post sweepstake, for two-year-olds, seven furlongs. Illinois Derby, for three-year-old colts and fillies, one mile and a half. Club Purse, for all ages, heats of a mile and an eighth. Selling Purse, for all ages, one mile. Steeplechase Purse, for all ages, about one mile and three-quarters.

Eighth day, Wednesday, July 4, Consolation Purse, one mile. Club Purse, for maiden two-year-olds, five furlongs. Club Purse, for three-year-olds that have not run first or second in 1883, one mile and an eighth. Northern Stakes, for two-year-olds, three-quarters of a mile. Champion Stakes, post sweepstake, for all ages, one mile and a half. Handicap Purse, for all ages, mile heats. Steeplechase Handicap Purse, for all ages, about two miles and a half. Club Purse, for all ages, one mile and five hundred yards. Club Purse, for all ages, three-quarters of a mile.

Among the twenty-two nominations for the Singleton Stakes, to be run over the New Mile at Goodwood on August 2, are Mr. P. Lorillard's Pinafore and Sachem. Under the conditions Pinafore will have to carry 126 pounds, including five pounds extra for having won "races amounting together to £600." Sachem's weight at the present time is 124 pounds. Mr. Keene's Foxhall is nominated for the same race, but, if a starter, will have to carry 134 pounds.

Disqualification by Death.

The death of Mr. W. S. Crawfurd, preceded as it was by that of the Earl of Stamford, Mr. F. Gretton and other well-known English owners, has again brought the subject of "disqualification by death" before the English public, and Mr. Edward Tattersall is again in the field with an earnest protest against it, and in a communication dated Albert Gate, February 28, says: "Mr. Crawfurd's much-lamented death will make us know how great was his loss to those of the public who enjoy racing without being able to afford to keep horses, and will also make a large loss in the value of the stakes, as no one, except, perhaps, Lord Falmouth, entered his horses on so large a scale; and the nominations that become void by his death will take very much from the interest of the races for this year and the next, and will take away from the value of the general fund of money to be run for over £15,000 in the minor forfeits alone, as I have had them calculated; £30,000 I have seen is the amount calculated in one of the sporting papers as the loss, but that, I suppose, means if they could have run out their engagements. The amount lost to the funds for racing purposes consequent on the deaths of the five persons named cannot be estimated at less than £50,000. And this brings out more forcibly than ever before, and I hope ever again, what I think, and a great many others think, a weak spot in our racing law, and one which requires to be largely modified. Why should the nominations die with the owner or nominator. Who is the better for it? Cui bono? By the death and disqualification of the horses belonging to the four owners named and Mr. Stirling Crawfurd at least £50,000 is absolutely lost to the public stakes of England. Many good horses are reduced to one-fourth or one-third of their value. Take, for instance, Macheath, the best horse of last year and the first favorite for both the Two Thousand Guineas and the Derby. What was he worth last week and what is he worth this? Does £5,000 represent the difference? Why, the loss in the value of half a dozen horses in Mr. Crawfurd's stables would represent more than the amount of all his forfeits. None of this need to have been lost to the public, and who is the gainer? Certainly not Mr. Crawfurd's estate, as I think I have proved. Certainly not the breeders of some of the valuable young horses which were deeply engaged and are now rendered useless for the races they were engaged in. Ten horses were engaged in the Two Thousand Guineas alone, and this is a loss to the stake of £500, or about one-tenth of the whole value. And to the real sportsman much of the interest of the race is gone, as well as the money for the winner. Some of the leading racing men in Australia, members of their Jockey Club and members of their Parliament, and large owners and breeders, and training and running their own horses, were in England last year, and some of them are here still, and they expressed their surprise that such a rule—good 100 years since perhaps, but now out of date—should be allowed to remain in force in our racing law. They have done away with it, and I believe the custom is now universal in Australia that the nominations are attached to the horse under certain conditions, which being complied with to the satisfaction of the Jockey Club, the stakes go with the horse, and do not become void by the death of the original nominator. They expressed their astonishment that we had so long gone on in the old groove. The new country has thrown off the trammels of the old, and they find their plan works well; and even if there are some greater difficulties in carrying it out here, some relaxation of our hard-and-fast rule, by which so many of the best animals are rendered comparatively valueless, might be adopted, and I hope will be, to the benefit of all and in the true interests of the turf."

The subject of "disqualification by death" has never been forcibly brought home to the American racing public. In the case of the late J. W. Hunt Reynolds, H. P. McGrath and E. A. Clabaugh, they had put few nominations, and the canceling of them did not affect the public very much. But there are other gentlemen whose death would disqualify so many entries that some of the stakes in which they have made nominations would be reduced fully a third in value. Why, then, the question can be asked, shall such a rule exist in this country? For some of the stakes to be run at Monmouth Park the nomination is made to follow the horse if the then owner is himself qualified. But all the stakes now closed, to be run at Jerome Park, Sheepshead Bay, Saratoga, Louisville, Cincinnati, St. Louis, Chicago, and elsewhere, are subject to such a rule, and it seems desirable that some different conditions should be agreed upon. In many instances, the disqualification of a horse reduces his value by fully one-half. At least such is the argument used in ruling a horse off the track as a punishment for fraud. As far as the estates or heirs of the deceased nominators may be concerned such rules could be drafted that they could not possibly suffer any greater loss than in the deterioration of the value of the horses thus disqualified under the rules.

Edwin Thorne, chestnut gelding, with record of 2:16½, whose contests with Clingstone were the sensation of last season, has wintered at the home of his owner, whose name he bears, at Thornedale, Duchess county, N. Y. At the close of his campaign his shoes were removed, his feed reduced, and two days after arriving home he was turned into a ten-acre lot, in which there had been no stock for a month, and in which the grass was up to his knees. Here he was allowed to run from early morn to sundown. His grain was reduced daily for two weeks, when it was entirely stopped, and he continued at grass two weeks longer. During his month's run the weather was fine, and he devoted most of his time to the grass, scarcely noticing the horses in adjoining lots, but would come from one end of the lot to the other on being called; seemed to enjoy being admired, and was so docile that the ladies fed him apples from their hands. On removal from pasture he weighed 1,080 pounds, his shoes were replaced, he was fed liberally with sweet apples and chopped oats, and, soon after, jogging in harness was commenced, taking six to ten miles each day, weather permitting. Every Saturday night he gets a feed of boiled oats, mixed with bran, and each Wednesday night a bran mash, carrots having taken the place of sweet apples. He is weighed weekly, and his food regulated to keep at about 1,080 pounds, until in company with Daisy Dale he goes back into Turner's hands about April 1. The son of Thornedale shows no blemishes, and is thought to be perfectly sound.

Goldsmith Maid trotted 232 heats in 2:30 or better, won $364,200 during her trotting career and captured 121 races. American Girl took forty-nine races in gathering in the $118,100 she got for her owners, Rarus won sixty-three races to make his winnings of $114,950, and Judge Fullerton was victor in thirty-two races before his winnings amounted to $102,035; Dexter, while on the turf, won $86,000 in four nine races; Flora Temple $90,000 in eighty-six races; Lu $89,400 in forty-nine races, and Lady Thorne, $79,575 ty-one races. The actual net gains, aside from expe Goldsmith Maid has brought to her owner, foot up $

The two-year-old trotting stake at Sacramento, to be trotted at the State Fair, 1883, closes on Saturday next. See advertisement.

Henry, Lummux and John.

The *Rural Spirit* of Portland, Oregon, digs up the following notes of some sires whose pedigrees have been but illy preserved, but whose blood figures largely in the horses of the Northern tier:

Outside of well-established breeds of horses few have attracted more attention among breeders and horsemen than any of the three animals named at the top of this article. The descendants of these stallions are so favorably regarded here that the prepotency of them is assured to an extent scarcely below the thoroughbred and highly bred horse. We have spoken of these sires many times, claiming that the combination of the blood had to a very great degree established a breed of horses which we have been pleased to call the Oregon horse; we have argued also that this class of horse, all things considered, was the superior of any other in the whole world. More than once have we been asked to give the history of these stallions, and, if possible, their breeding. We shall now do so as best we can.

The Henry horse, brought to this State by his breeder, Judge Young, from Illinois, was a gray, of fine style; stood 16¼ hands high, and weighed about 1,350 pounds, perhaps more; he was sired by a horse called Rambler, purchased in Ohio by Henry Van Meter of Illinois. His dam was a remarkably handsome black mare called a Whip. Her first colt was by a large gray horse called Sampson, brought to Illinois by the same gentleman who owned Rambler—Mr. Van Meter—and it is supposed he was a son of a large imported draft horse that was kept in Ohio. A Mr. Ownsby brought the sire of the horses that were called Lummux from Missouri in 1843. In 1839 a horse racer traveled through Missouri with several head of runners, one of which was a dark brown stallion called by his owner a Whip. One of the race mares became lame and was left with a farmer. The next spring she foaled a colt. The owner not returning, the mare and colt were sold to pay charges. Mr. Ownsby, who lived some distance from this portion of the country, was traveling and happened to attend the sale, and bought the colt for $30. This colt was brought here, as stated above, and is the founder of the Lummux stock. Among his get we can name Shingle Tail, the Eads Mare, Old Dan, Old Charley, Comet, and Old Nig. Most every one of these was speedy at a short distance, and for service had no superiors in their day.

Within the past few years the breeders of Oregon discovered that in nearly every Oregon-bred horse of large size and fine style, the blood of old John and Henry was most sure to exist, while if Lummux blood existed no objection was made. This fact became so universal that breeders could not help recognizing a superior quality in the blood of these animals. And it became evident that this blood had the effect of improvement whenever used. So important did the breeding of these horses become that a history of them and their ancestors was seemingly demanded. A year and a half since we commenced the investigation. Our account, as above, of Henry and Lummux, while no doubt correct, does not give us any direct proof of certain blood lines; as to Old John, however, the case is quite different, and when the breeding of the horse is read no one will ever question the reasons of his good qualities.

In 1861 Mr. A. Shultz, now of Dalles, Oregon, brought these stallions to Oregon from Mercer county, Illinois. John, now called Old John, a half-brother, and their sire Old Charley, were bred in Kentucky their sire being imported Arabian Charley's dam being a Whip mare. Old Charley was a bay, and it is said was one of the most perfect horses ever seen in Oregon; indeed, many say they don't think he could have been surpassed.

We give Old John's pedigree: Bay, 16½ hands high; weight, 1,600 pounds; by Old Charley, son of imported Arabian, his dam a Whip mare; Old John's dam a brown, good size, by Stockholder, by Sir Archy; Stockholder's dam by imported Sterling; grandam by Shakespeare, by Fearnaught. Stockholder's dam weighed 1,700, and was a horse of remarkably fine action.

One observable fact here presents itself, and it is, all three of these horses have more or less of the Whip blood, once so popular in the United States.

Foals.

At E. J. Baldwin's Santa Anita Ranch, Los Angeles Co.:

March 8, Sister to Clara D, by imported Glenelg—The Nun, by Lexington, a light bay filly, star in forehead, by Rutherford.

March 20, Jennie B, by imported Glenelg—Regan, by Lexington, a sorrel colt, white face and left hind leg white half up to the hock, by Grinstead.

March 29, Joseph Cairn Simpson's Too-Soon, by Norfolk, from Lady Davis, by Red Bill, a filly foal by Thad Stevens. Chestnut, hind legs white half way to hock, near fore pastern, and part of ankle white off fore foot, pastern and ankle white, white stripe face wide between the eyes narrowing to a point which extends nearly to right nostril. The name of Ex-Tempo is claimed for her.

Nearly every prominent rubber is known to the brotherhood by a nickname, which sticks to him so long he sometimes loses his proper name. Splan graduated with Dan Mace, and was then called "Buffalo" or "Bluff," and it is related that when he first began to drive he appeared in a race at Middletown, N. Y., and on being asked by the starting judge: "What is your name?" "Buffalo," unconsciously replied John; but he speedily corrected himself. Then there are the three Kellys; one is known as "Kelly, the Bullpusher," the other as "Kelly, the Geazer," and the third as "Kelly, the Rake." The latter used to rub Heatherbloom years ago; the first named are now drivers. "Knapsack" McCarthy derived his patronymic from his native town, Elmira, N. Y., and he was given the title by the late Joe Mace, who also nicknamed Splan and John Croker, who is known among the fraternity as "Cooley."—*N. Y. Spirit.*

Rosa Wilkes (2:18¼) the mare that made such a grand race with Monroe Chief at Louisville last fall has been sold to H. P. Winship of Providence, R. I., for $11,000.

The New York *Post* publishes the reply of H. H. Bancroft to Charles V. Phelps, as to the methods pursued by the former in his literary labors. He says his works, as finally laid out, proved sufficient to occupy one man for two hundred years, hence his employment of assistants, who for the most part are engaged in abstracting and preparing the material.

THE KENNEL.

The Bench Show.

During the past week this office has been literally flooded with letters from all parts of the city and State asking for information relating to the coming bench show. One gentleman wants to know the form of entry, another the names of the judges, and so on. To all these inquirers we have sent a copy of the prospectus prepared by the club and such other information as we could command. But one or two questions we cannot yet answer, for the reason that no definite arrangements have yet been made. The matter of judges is still an open one, but we hope to see it settled before the next issue of this paper. Until it is settled the entries will lag. One gentleman informs us that he has nine entries awaiting the selection of the judges. Another asks if the judges are to be chosen by the club or by the exhibitors. In the latter case, he says that three dogs he contemplates entering will stay at home. The managers of the show must not attempt to make their own burdens light by shirking the task of choosing judges. To allow the exhibitors to vote for judges will not work and is especially unfair to country exhibitors. Many of these cannot possibly be present at the show to protect their interest in securing fair play. Ignorance, dishonesty and good fellowship are too potent factors in determining how exhibitors will vote to make their judgment valuable. Exhibitors are but human, and if they can secure the selection of a judge whom they know will favor them, they think they have done a smart thing. Three or four exhibitors not strictly honest, by making a combination and pooling their issues on judges, can secure the election of one pledged to give all the prizes to the pool, regardless of the merits of the dogs entered. Conducted in such a way bench shows are worse than useless. Those who are posted are indignant at the fraud; others go away with a wrong impression of the form of a good dog. They see the first prize on a scrub and not even a c— on a fine animal, and mistrusting their own judgment they imagine that the scrub animal is the correct thing. The Kennel Club is composed of men who know a good dog and a good judge of one. They are able to find the half dozen men needed to make the awards, and pick them out regardless of the likes or whims of anyone. This done and their names given to the public, exhibitors knowing who is to judge their dogs will enter them freely, and having entered them with their eyes wide open, can have no possible ground for complaint at any future day. Of course Stonehenge is to be the standard, but Stonehenge without a skilled interpreter is no use at all. No pen can describe the fine shades of difference between a setter of the highest form and one of inferior grade. The writer has to fall back on such general terms as style and symmetry, words which have a fine sound and yet may mean almost anything.

As we go to press, the advisory committee of the club just concluded a meeting at which it was agreed to call a meeting in the Occidental Hotel at 8 p. m. Tuesday next and select judges for all the classes. This properly disposes of the judging question to the satisfaction of every one who takes an interest in seeing the show carried out in a sportsmanlike style. A number of competent gentlemen have been written to and asked if they will serve in case they are elected. It is to be hoped that they will send in an answer before Tuesday next. The committe express a hope that any gentlemen who are acquainted with competent judges will send in their names. It is desirable to get the very best men to serve and unless names are suggested some good men might be overlooked.

The interest shown in the show by the very large number of entries already sent in is extremely gratifying to the managers, who now look forward to at least six hundred entries in all classes with the utmost confidence. Most unexpectedly a number of fanciers who have heretofore held aloof from dog shows have promised to participate. We hope to see a big class of all the toy and pet dogs. San Francisco especially can boast of more fine terriers, poodles, Maltese, King Charles, Japanese and the other fancy varieties than most American cities and they should all be well represented.

California Coursing Club.

The coursing match open to all dogs in the State to be held under the auspices of the California Coursing Club on last Wednesday and Thursday was postponed on account of the heavy storm which swept over the country last week. A telegram from Merced said that the roads were in very bad order and almost impassable and the ground too soft to make the going possible. After a little consultation it was unanimously agreed to postpone the match until Thursday and Friday, April 5 and 6, the club to leave San Francisco at 4 p. m. on Wednesday next, April 4. The drawing of dogs and election of officers held last Saturday night resulted as follows:

The first prize offered was $70; second, $45; third, $25; fourth, $20. The following officers were elected: Judge, J. C. Murphy; President, John Hughes; Slipper, John Perrigo; Stewards, J. Farelley and N. Lane. The list of entries in the Old Dog Stake included thirty-two dogs, drawn as follows: M. Mercedites' black bitch American Girl against S. Brinkerhoff's blue dog Blue Jacket; J. C. Murphy's black and white Cassa Maria against William Lane's brindle bitch Lady Costello; J. C. Murphy's blue dog Chinchilla against J. J. Murphy's fawn and white dog Presidio Boy; Wm. Quigley's white and fawn dog Hornitos Boy against M. Mercedites' brindle bitch Lady Smith; Joseph Franklin's blue dog S. J. Tilden against John Healey's black dog Black Cloud; William Fahey's black and white bitch Tuolumne Belle against William Lane's brindle and white dog Connaught Ranger; J. C. Murphy's black and white dog Fides against John Ferry's black dog Skip; M. Mercedites' brindle dog Parnell against F. Callahan's brindle bitch Sierra; J. J. Harrigan's white and black dog Pacific Life against J. C. Murphy's fawn bitch Lady Mary; Joe Rosenberg's fawn dog Oby against J. F. Carroll's white dog Monarch; Pat Piley's brindle dog Tornado against John Perrigo's brindle and white dog Longfellow; John Hughes' blue dog Speculation Jr. against J. F. Carroll's blue dog Stonewall Jackson; Thomas Brown's black dog Modoc against William M. Fallon's brindle bitch Mollie McCarthy; J. F. Cunningham's brindle dog Jim Cormack against John Hughes' white and red bitch Belfast Maid; E. Packer's fawn bitch Daisy against John Terry's black bitch Nellie; John Hughes' blue and white bitch Lady Franklin against J. F. Carroll's white and black dog Paul Jones.

Sapling Stake—B. Grogan's white and brindle bitch Main Street Lady against John Perrigo's blue and white dog Spring; John Ferry's white and black dog Butte against F. Hall's white and black bitch Mary. Prize, $20.

In making entries for the bench show exhibitors only need to state the name, class and description of dog, with age and pedigree—if any.

Bench Show Matters.

EDITOR BREEDER AND SPORTSMAN: Having just received a catalogue of classification of dogs, prize list, etc., of the next bench show I desire to say something with reference thereto. I desire to speak only as a setter and pointer man, as those are the only breeds of dogs that I know anything about. Looking over the list of officers of the kennel club I failed to note one person familiar with either of those breeds and consequently think those gentlemen should give some consideration to gentlemen who breed and own setters and pointers. I join with M. B. J. in condemning the provision for a Laverack class. As he says, there is but one gentleman in this State who owns a Laverack, and knowing that gentleman as I do, I am sure he would not appreciate the doutful honor of winning in a class in which of necessity there can be no competition. The Laverack setter is simply an English setter and by the English setter standard he is judged; then why the necessity for and the benefit of a separate class for them? We made ourselves ridiculous in the eyes of Eastern sportsmen at our last show by having a Laverack class when there was not one on the coast, and for goodness sake let us not repeat the folly in a lesser degree this year, but on the contrary let us give a show with the different breeds properly and sensibly classified, and intelligently judged. I also agree that money prizes instead of medals should be awarded. A gentleman from up country can not fit and take his dog to the show and get back home again without an expense of from $10 to $20 per day, and if he desires to show three or four it amounts to a considerable sum. Now it will be said that some prefer medals; well, let the Kennel Club give the exhibitor his choice, a medal or its equivalent in coin.

I think a great mistake was made in not making two classes for pointers—a large class, over fifty-five pounds, and a small class under that weight; also, in not making dog and bitch classes for puppies.

The suggestion was made to the Kennel Club that they establish an imported class for English setters, to include all setters imported and descended purely from imported stock, and a class for natives, which would include all setters not otherwise provided for. This is the only classification that will accomplish in this State the only practical purpose for which bench shows are held, namely, the selection of the best pure-blooded specimens of the different breeds for winners, in order that their admirers may know what form to breed for and what dogs to breed to, that the type may be maintained. Now, in the nondescript class (so far as blood goes) of native setters that are usually shown on the bench, there may be some with enough blue blood in their veins to give them a "taking form," and yet, gentlemen of the Kennel Club, do you suppose any man owning a thoroughbred bitch, who appreciates her value, would breed her to such? Not by any manner of means.

I would ask you, Mr. J. C. Simpson, if Bonnie Scotland, that great sire you esteem so highly, might not get a colt of very high form from a mare of ordinary blood? Assuming that he might, would you, if Anteeo was a mare, breed to such a horse? I apprehend that you would scorn such a proposition if there were stallions such as Buccaneer, Electioneer, Steinway and others of equally good breeding accessible.

And I ask you gentlemen, members of the Kennel Club, who so ardently admire the fleet and game greyhound, and I notice that all of the officers of the club are greyhound lovers, I ask you if you would like to have greyhound and foxhound crosses on any but hounds of unquestioned purity of blood compete in the same class with your costly and magnificent descendants of Master McGrath, Speculation and other noted stock dogs. I certainly think you would resent it. I think there should be a prize offered for the best stud dog with a certain number of his get; (I have no stud dog and therefore have no personal interest in this matter). The names of the judges should be published immediately, and I will take the liberty of mentioning three gentlemen now, either one of whom is competent to judge setters and pointers, as they should be judged according to Stonehenge. I refer to Hon. Jos. McKenna, of Suisun, Ike N. Aldrich, of Marysville, and John B. Martin Esq., of San Francisco. The country will be represented better at this show than ever before and it behooves the Kennel Club to so order this show that those succeeding will be looked forward to with pleasure by the admirers of man's best friend, the dog. Sacramento will send two pointers and three setters that I know of and in conjunction with Marysville, Oroville, Auburn and Colusa will send a strong canine representation to battle for the honors of the bench.

The changes I have suggested have been offered in the best of feeling and I hope the Kennel Club will at least give them careful and serious consideration. Hoping that the coming show will be an immense success and that nothing will happen to prevent my being present with my favorite "fielders" to spend a few pleasant days with my brother sportsmen, I remain yours in the good cause of pure blood and high breeding,

C. N. POST.

P. S.—Could not the Kennel Club make some arrangement with the transportation companies for a reduction of rates or a free pass for dogs sent to the show. Eastern companies take dogs free I think, or at half rates to shows. POST.

Sacramento, March 23, 1883.

Mr. Post is slightly in error. Of the officers of the show (who really have no important duties in connection with the judging) only one is a greyhound man. John Stack has won several prizes for setters and pointers. Of the advisory committee, several members are fanciers of the setter and pointer. But in other matters Mr. Post is eminently correct, and the club will do well to heed his remarks.—ED.

Pedigree Value.

A Sacramento correspondent writes as follows:

"At the coming bench show in the pointer class will a fine dog with all the points, 'without a pedigree,' score with one that has a pedigree, or in other words, will pedigreed dogs take precedence over others regardless of the standard. Please answer, as I have a dog that I will show if he will be judged on his looks and not pedigree."

An answer to this note will doubtless answer many similar inquiries. All dogs are to be judged on their merits exclusive of the factitious value of pedigree. Pedigree only counts in the rare case where two dogs tally precisely even on standard points. In such an instance should one dog have a pedigree tracing back to some well-known strain of field or bench winner and thereby give promise of reproducing all his best points in his progeny the judges would give him the preference. Where one dog leads another even by a hair's breadth, pedigree counts for nothing. In any case for pedigrees to be of value they must go back to the American or English Kennel Club Stud Book. The mere fact that Dash is by Flash, dam by Jumper, he by Spring, means nothing. It is only the proof that a dog is descended from a line of known good blood that makes pedigree valuable.

BASE BALL.

The Season to Be Opened To-morrow.

The base ball season according to the schedule of the California League will he formally opened to-morrow at the Recreation Grounds hy a game between the Haverly and Niantic Clubs. The season opens auspiciously and will no douht he marked by that rivalry and good feeling which made the game so popular previous to the advent of the professional system. The management of the various clubs composing the League has lahored industriously to hring ahout a hetter nnderstanding of the requirements of first-class teams, and with this end in view a series of rules have been formulated for the guidance of the players in addition to the rules previously noticed in these colnmns. There is every reason to helieve that the disagreeahle features which have for some time past characterized hase hall contests both in this city and in Oakland will be guarded against, and that the original popnlarity of the national game on this coast will be reestahlished. With this object in view, a hoard of umpires has heen provided for, as well as official scorers, whose duty it is to keep the records of the championship games. The comfort of the spectators has also heen carefully looked after, and the proprietors of the grounds have agreed to do everything in their power to assist the League in its endeavors to inaugurate a new departure with the commencement of this eeason. Practicing while the game is in progress, or the throwing of halls in the vicinity of the grand stand or along the line of the henches reserved for the nse of the patrons of the sport, has heen provided against, and the rules in this respect will be rigidly enforced. Another salutary change that has heen introduced prohihits the sale of spirituone liqnors to the players. The importance of thie section of the rules will he apparent when it is borne in mind that formerly the spectators, among whom were a numher of ladies and children, were frequently obliged to witness condnct which was not calcnlated to impress them with the advantages of the sport. The personnel of the clubs has also heen somewhat improved, end with the assistance of responsihle managers the contests will he marked hy an absence of these drawbacks. A championship fnnd has also heen created, which will he maintained hy a small deduction from the receipts of the games, in addition to the fines collected, and et the end of the season the cluh winning the greater nnmber of games will he entitled to the choice of either fund, the other heing awarded to the second team in the championehip contest. The prospects for an exciting season were never hetter or more promising.

The Board of Umpires of the California League is compoeed of Delos R. Ashley, E. Van Court and Henry Videau. The official scorers are J. Fisher and J. Eagan.

There is some talk of a game between the surviving memhers of the original Eagles and Pacifics. The occasion would insnre an immense crowd.

The projected Oakland League is slowly arranging for a championship season. A meeting will prohahly be held on Friday evening.

It is not improbable that a set of heautifnl silk fonl flags will he presented to the clubs on this side of the hay.

The police departments contemplate organizing a team. Peckinpah as usual is one of the moving spirits.

Interior clube will shortly arrange for an interchange of courtesies with local teams.

Piercy is doing good work on the diamond at the Recreation Gronnds.

Printed schedules of the games can be had on application at this office gretis.

Amatenr clube are issuing challenges with alarming rapidity,

BICYCLING.

Dr. Coleman of the Canandaigua B. C., New York, is at present a visitor at Los Angeles with his wife and some friende. The gentlemen of the party hrought their bicycles across the continent with them, having passes for them. The Doctor makes a prectical nse of his hycicle. Starting ont for a hunt with a friend, they carried their guns strapped upon the handles of the machine end rode to the hunting gronnds, returning in the evening in the same manner each with e fine string of game across his shonlder.

The Los Angeles clnb, recently organized, is in a flonrishing condition, and under the instructions of Capt. Wedgewood is rapidly becoming skillfnl in drill. The club drills are usually held in the evening npon a hroad nnfrequented street, and as each hicycle carries a lamp and hell, the effect is very fine. Runs are also made hy the club to Santa Monica, seventeen miles; to the old Mission San Gabriel, and to Pasadena, nine or ten miles, which at this seaeon are very pleasant.

Leroy has been to New York collecting a team of horses for his coming race with Prince and an unknown. He ohjecte to racing at the Institute Building hecause the dirt track ie laid on hoards. It is not settled as yet where the race will be held.

As soon as it ie definitely decided which is the best tricycle, for nse upon our roads, there will be quite a numher ordered for ladiea who have become interested in this independent means of progression.

The annual trip of the Oakland and San Frencisco clubs will take place shortly, the run being prohahly made to San Jose and including excursione in the vicinity.

The Stanley Show balance eheet leaves a emall balance to the cluh. The cluh had many things to contend against, and we are glad it is not ont of pocket.

The ranks are being recnited by many new riders who make short excursions from thie city to Oakland, preparatory to longer journeys later in the season.

With the lengthening daye of spring the older riders begin to consider excursione into the conntry, which will he all the more pleasant for the recent rains.

A fifty-mile race at Los Angelee yesterday, hetween Figuero and Anderson, wae won hy the latter. Time—1:47½, the hest on record.

Thia is rough. At Bowne's Ferry (Windemere) the list of tolls ends thns: "Asses and bicyclee, 6d."

The late Adelaide Neilson's mother telle a reporter that it ie a great mistake for an actrese to marry at all. "She must choose one life or the other to sncceed in either."

(CONTINUED FROM PAGE 192.)

faulty. In fact this is the first instance of correct drawing of a frog that may he termed perfect, all others which I have seen being studies from feet which have become malformed.

Althongh the frog changes in appearance, and there is quite a difference between the old, ragged surface and the new which is ready to take its place, still the similarity of broad enrfaces and elasticity is apparent. The old has served the intended purpose, doing its work until the other is ready.

When mntilated with the knife, and that mutilation accompanied hy non-use, in place of this healthy growth it shrivels and becomes nearly as hard as the horn, there is a deep fissure in place of the slight depression in the middle, the longitudinal axis is shortened, and the whole is as different from the engraving as can be well imagined.

The illustrations leave little to add regarding the manner of setting the tip or applying the toe-weight which I am partial to, hut inasmuch as the qnestions asked indicate that the proper method is not fully understood it may he as well to he more minnte in the instructions.

As has heen stated the tip is only a trifle thicker at the toe than the posterior portion, the ohject heing to give as nearly a level hearing as possihle. If there was much taper the slope from the toe would bring a greater strain on the nails, and, consequently, a greater danger of misplacement. It is also evident that the square shoulder is of material assistance in keeping the tip in place while the nails are driven, and does away with any necessity for a clip at the toe.

Many years ago I advocated driving the nails from the inner side of the wall, and the benefit of this practice has heen snstained by the score of years in which I have followed it. There is not eo mnch danger of "pricking" in setting the tip as the fnll shoe, owing to a greater thickness of the wall in the anterior portion of the foot; it also gives a more secure fastening, as the horn is perforated in place of the layers heing divided, and a mnch lower hold can he taken. A horse nail is wedge-shaped and when driven parallel with the fihers there must be a tendency to split the layers apart, hnt if they are perforated there is no such risk. When the nail holes are punched close to the edge the nail has to be driven on a curve. At first the direction is towards the sensitive portion of the foot, and then the hevel at the point throws it outwarde. Now it is evident that if the conrse of the nail approaches the sensitive part of the foot there is danger if even it ie not wounded at the time of driving. Clinching the nail when it is curved throws a greater strain on the central part, forcing the outer pert to press against the horn, and the concnesion aggravates the tendency.

If in place of being driven on a curve the nail goes straight the strain caused hy clinching and concussion ie nniform, and the straight line at whatever angle ohviatee this difficnlty.

Then it is manifest that if the nail is started from the inside of the wall and driven at any angle which will bring the point throngh it never can get near the sensitive tissues. The nearest point is where it is first started, and this is so far helow the qnick that there cannot be any danger of wonnding. In driving the nails from the inside it is necessary to give the nail hole the same slope outwardly, or make the hole large enough to give room for directing the point.

I prefer the latter plan, and then sink the head of the nail below the surface, which completely filis the opening. A punch is nsed when the nail-head is level with the shoe to drive it home, and a clinching iron that hae a projection which keeps the nail in place when it is rivited. This is when tolerahly heavy tips are used; with lighter and thinner ones the head of a No. 3 nail will fill the countersnnk hole. Countersinking is preferahle to creasing—fullering as some smiths term it—and when the tip is so thin as to let the heads of the nails project they are filed to a level of the tip.

The conntersinking cannot he done as close to the edge as a crease withont giving an inward direction, and the tool with which the crease is cut is held on a hevel incliniug to the inside. This, as has heen shown, compels the nail heing driven on a curve, first, to get sufficient "hold" and when that is done to bring it to the outside in order to clinch it and fasten the shoe.

Anyone who will take the tronble to bend a horse nail into a slight cnrve, twist the point off and hammer it down while the head is resting on a eolid suhstance will readily perceive that the curvature ie increased with every hlow, and that if there ie only a thin stratum between the nail and the eensitive part of the foot there must he a pressure that will reenlt in lameness.

When the nails are driven, in lieu of filing a notch to receive the cliuch, I use a small gouge, only cutting away so mnch of the horn as will hold it. By following this plan the clinch is depressed where it cannot do injury and this without weakening the foot. As is well known, the enamel is much the strongest part and when the edge of the rasp is used to cut a receptacle for the clinch the groove extends from the front to the rear nail. I have known many instances where the whole eide, from the clinches to the nail holes at the bottom, was torn off with the shoe, and this could not occnr when the plan recommended is followed. The toe and sides of the tip ehould he flush with the edge of the horn or so near that there is only a trifle of projection to he filed away. It is better to have it exactly even, and if the gouge cutting is properly done, the clinch will be hammered uniform with the horn so that there is no necessity for filing, and ehonld there be a roughness, care must he taken that in removing it the horn is uot marked. Every mark of the file on the enamel is an injury. It not only weakens, as it also gives a chance for moisture to penetrate, and I am thoroughly convinced that moisture is injurious and that one purpose of the enamel is to render the foot impervious to the entrance of fluids. Ae has been ehown heretofore, the horn ie composed of tuhes, hairs fastened together with an agglutinizing material and each tube filled with a snbstance that gives life. The application of water weakens the adhering properties, maceration destroys. That is, long-continued soakings are prejudicial, and even washing the feet had hetter he dispensed with, especially when the enamel has heen wounded hy the rasp or file. It was also shown that driving the nails cut these tubee off, and that helow the severed portion the horn is virtually dead. The low hold arising from driving the uail from the inner parts of the wall does less injury thau when it takes the curving direction and a high hold, and the larger the nail the greater the damage. Four small nails, No. 3, will hold a tip of the size figured in the cut, firmly in its place ae long ae it should he worn, and in cases where I have heen negligent in resetting, the tip was not misplaced nntil that and the nail heads were worn away so that the tip conld be pulled off without cutting the clinches, and yet it was retained by the slight hold which the worn nails gave.

This description I think will be qnite snfficient to explain the mode of setting and the reasons in brief for following that system. The toe-weights have been described in the appendix and the cuts will complete the lesson.—*Tips and Toe-Weights.*

Note—As it might be thought that my pertiality for tips and favoritism for the colt warped my jndgment, I reqnested O. A. Hickok to make a careful and close scrutiny to eee what the effect had heen of constant wearing of tips an Anteeo. The appended certificate shows the result:

"OAKLAND, March 29, 1883.

"I have to-day critically examined the feet and legs of Jos. Cairn Simpson's colt Anteeo, and herehy certify that in my estimetion they conld not be in more perfect condition.

"O. A. HICKOK."

A certificate from Mr. Hickok will carry more weight with Eastern readers than that of a veterinarian.

A trainer of his skill and experience will detect anything wrong with the lege end feet, and if there is the least variation from a normal condition discover it. It is almoet unnecessery to state that every individnal who has seen Anteeo concnrs in the viewe expressed, and very meny regard the "perfect condition" of the feet and legs as heing wonderful under any circumstances.

Market Report.

FLOUR—We qnote: Best City Extra, $6 25@$6 50; medium grades, $5 50@$5 75; Shipping Snperfine, $4 25@$5 25.

WHEAT—High ruling rates bave bad a tendency of late to keep sbippers in tbe background. $1 81 seems to be the ruling figure but fancy milling lots brought $1 87½ and $1 90.

BARLEY—The changes in tbe weatber bave produced cbanges in tbe prices of this grain but operators expect the market to become steadier in a few days. Recent sales are April, $1 21¼@$1 22; May, $1 22¾@$1 23¼.

OATS—Fair Feed, $1 75@$1 80; Good, $1 85@$1 90; Choice, $1 95@$2 05 ⅌ ctl.

RYE—Quotable at $1 90@$2 for fair to good.

FEED—Gronnd Barley, $30 ⅌ ton; Cracked Corn, $36@$37 ⅌ ton; Shorts, $19@$20 ⅌ ton; Oilcake meal tbe oilworks sell to tbe trade at $35 ⅌ ton, less the usual discount; Middlings, $24@$25 ⅌ ton for lots at tbe mill.

HAY—Alfalfa, $15@$17; Wheat, $18@$21; Wild Oat, $18@$21; Mixed, $18@$19 ⅌ ton.

STRAW—$1 per bale.

PROVISIONS—Eastern Hams, 16½@16¾c; California Hams, 15@15½c for plain, 15½@16c for sugar-cured canvased; Eastern Breakfast Bacon, 16@16½c; California Smoked Bacon 14@14½c for beavy and medium, and 15½@15c for ligbt and extra ligbt; Clear Sides, 14½@14¾c; Pork, $18@$18 50 for Extra Prime, $20@$20 50 for Prime Mess, $23@24 for Mess, $25@$25 50 for clear and $25@25 50 for extra Clear; Pigs' Feet, $16@$18 ⅌ bbl; Mess beef, $15 50 for bbls and $8 75 for hf bbls; Extra Mess Beef, $15 50 for bbls and $8 75 for hf bls; Family Beef, $18@18 50 ⅌ bbl; California Smoked Beef, 13@13½c ⅌ ℔.

FRUIT—We qnote: Apples, 25c@40c for common and 75c@$1 50 ⅌ box for good to cboice; Lemons, $5@$7 per box for Sicily; California Lemons, $1 50@$2 50 per box; Limes, $11@$12 per box for Mexican; Bananas, 1 50@$3 ⅌ bnnch; California Oranges, $1 25@$1 75 for common and $2@3 for good to cboice ⅌ box; Pineapples, $6@$8 ⅌ doz. Western Cranberries are offering at $15@$17 ⅌ hhl.

VEGETABLES—We qnote: Marrowfat Squash, $20@25 ⅌ ton; Carrots, 30c@50c; Turnips, 75c@$1; Cauliflower, 75c@$1 25 ⅌ dozen; Cabbage, 75c ⅌ ctl; Garlic, 2c ⅌ ℔; Celery, 50c ⅌ doz; Dried Okra, 20c@25c; Dry Peppers, 10c@12½c ⅌ ℔; Green Peas, 6@5½c; for common and 7½@8 for sweet; Rbubarb, 6@8c per lb; Musbrooms, 75c @$1 ⅌ box; Green Peppers, 5c@6c per lb; Tomatoes, 1 25@$2 ⅌ box; Cucumbers, 50c@$1 75 per doz.; Asparagus, 75c@$1 25 ⅌ lb.; Sprouts, 3c ⅌ ℔.; Articbokes, 10c@15c ⅌ doz.; String Beans, 20@25c ⅌ ℔.

POTATOES—River Red, 50@60c; Early Rose, 55@65c; Tomales and Petaluma, 80c@$1 ⅌ ctl; Humboldt Red, $1 10@$1 15; Kidney and Peacbblow, $1 10@$1 15 per ctl; New, 3c@3½c per lb.

ONIONS—Cboice, $2 15@$2 50; Ordinary, $1 25@$1 75.

BEANS—Bayos $5 25@$5 50; Butter, $3 25@$3 50 for small and $3 50 @$4 for large; Lima, $3 75@$4; Pea, $4; Pink, $5@$5 15; Red, $5@$5 10; small White, $4; large White, $3 25@$3 50 ⅌ ctl.

BUTTER—We quote jobbing lots: Fancy, 25c@26c; cboice, 23@24c; fair to good, 18@22c; inferior lots from country stores, 15@17c; firkin, old, 19@22c for choice; new, 22@25c; pickled roll, 20@21; Eastern 17@20c.

CHEESE—Firm. California, 14@15c for choice; 11@13c for fair to good; do, factory, in boxes, 14@16c; Eastern, 16@17c.

EGGS—California, 22@23c ⅌ doz.

POULTRY—Live Turkeys, gobblers, 20@21c; do Hens, 21@22c; do dressed, 18@22c; Roosters, $7@$7 50 for old aud $11 for young; Hens $7@$8 50; Broilers, $7@$8 50, according to size; Ducks, $10@$12 ⅌ dozen; Geese, $2 25@$2 75 ⅌ pair; Goslings, $3@$3 50 per pair.

GAME—Gray Geese $1 75@$2 25; White Geese, 50c@75c; Honkers, $3 50@$4; Snipe, $2 25@$2 50 for English and 75c@$1 for common; Hare, $1 50@$2; Rabbits, $1 25@$1 75.

WOOL—Inactive; Spring clip coming in slowly.

HIDES AND SKINS—Dry bides, usual selection, 18@18½c ⅌ ℔; culls one-tbird less, and Mexican Hides 2c ⅌ ℔ less. Dry Kip, 18 @17c; Dry Calf, 20c@22½; Salted Steers, over 55 ℔s, 11c ⅌ ℔; Steers over 55 ℔s, 11c; Steers and Cows, medium, 9c@ 10c; light do, 9c; Salted Kip, 15 to 30 lbs. 11c; Salted Calf, 14@15c ⅌ lb; Salted Veal, 12½@15c; Sbeep Skins, 25@30c for Shearlings, 30@60c for short, 60c@$1 for medium, and $1@$1 50 apiece for long wool and wool skins. Butcbertown Green Skins bring higber prices.

TALLOW—Quotable at 7¾@8c ⅌ lb for rendered and 11@12c for refined, botb in sbipping order.

MEATS—Following are rates for whole carcasses from slaughterers to dealers:

BEEF—Prime, 8@8½c; medium grade, 7@7½c; inferior, 5½@6c ⅌ lb.

VEAL—Large Calves, 8@9c; small ones, 8@10c ⅌ lb.

MUTTON—Wetbers are quotable at 5½@6c and Ewes at 5@5½c ⅌ lb, according to quality.

LAMB—Spring is quotable at 12½@15c ⅌ lb.

PORK—Live Hogs, 7¼@7½c for bard and 6¼@6½c for soft; dressed do 10½@10¾c ⅌ lb for bard grain bogs.

HERD AND SWINE.

The Duroc Hogs of Saratoga County, N. Y.

The Duroc hogs of Saratoga county, N. Y., have an interesting and somewhat romantic history. They were known by this local name for nearly half a century before the title of Jersey Reds had been applied to the red hogs bred in New Jersey. I am informed by good authority that the name Duroc was applied by some to the red hogs of New Jersey before they were called Jersey Reds—showing that they had no distinctive name or history.

The Duroc hog of Saratoga county had often been mentioned in the agricultural papers; and half a century ago attracted a great deal of attention. Old men are now living who remember the sensation they caused at this time, and the notices of them in the local press and elsewhere. The fanciful name of Duroc was given to a red boar by Isaac Frink Esq., who purchased him of Mr. Harry Kelsey, who then owned the famous stallion Duroc. Mr. Frink took a mare to this horse in the year 1823 or 1824, where he was standing in the town of Florida, Montgomery county, N. Y., about twenty miles from his home in Milton, N. Y. There he saw a litter of red pigs Mr. Kelsey had bred from a pair said by him to have been "imported;" whether he meant from England or from Oyster Bay, Long Island, N. Y., where he moved from, it is now impossible to find out. The word "imported" may mean brought from any other locality or State; but it is usually, and more correctly applied to anything brought from a foreign country.

I notice it is quite common to say, in the South and West, of animals brought from other States, that they have been "imported." It is unfortunate that there is such a mixture of meanings. A pig man showed me a Chester white boar the other day and said he was "imported." There can be no doubt but that if Mr. Kelsey's stock of red hogs were not imported their immediate ancestors were. They have demonstrated a thousand times that they were thoroughbreds by the continuous marking of their progeny and the stamping of their characteristics upon all their descendants for more than half a century. Notwithstanding all of the crosses and recrosses the Duroc hogs of Saratoga county have preserved their identity and peculiarities, and are to-day the most valuable and the most popular breed of hogs in the county. I recollect that when I was a boy Mr. Frink was elected sheriff in a hotly contested canvass, and his merits and demerits, as is usually the case (may be they don't do so out West), were discussed. It was urged by his friends that he was a progressive farmer and had done a great deal to promote the agricultural interests of the country. I also remember that he was noted as a successful farmer, and I once visited his home and he showed me his hogs up to their eyes in clover and in fine condition. "That is the way," he said, "to make pork." I was a boy then and not much interested in pigs. Isaac Frink, by his purchase of that red boar, put thousands of dollars into the pockets of Saratoga farmers, and has made his name a household word. For many years making and selling pork to the packers at Waterford and Albany was a leading business in this county; and such was the excellent character of the meat produced that Saratoga county pork rated the highest in the market and was the standard of the trade. It was the Duroc blood which gave the pork this superiority.

After cheap transportation was opened to the West, and this competition came in, feeding hogs was not so profitable, and the Saratoga county farmers fed less hogs, and their interest in raising them diminished accordingly. The crossing of this Duroc boar upon the best sows in the county produced a class of half-breeds which were long in the body and very growthy, and cut up to the best advantage. About the year 1830, Wm. Ensign, who lived on the extreme eastern edge of the county, at a place now called Wilbur's basin, brought a pair of red hogs from Connecticut, and the next year brought more. These hogs he bred and sold for years. They were first called the "Ensign hogs." They were afterwards mixed with the descendants of Mr. Fink's Duroc, and are now known by the latter name. The leading breed of hogs in this part of the country at the time the Durocs were introduced into the county of Saratoga were the Byfields—an English breed—and one of the numerous families of Yorkshire blood. The modern Durocs show this cross in their make-up.

The Byfields have long since become extinct as a separate breed or family, but their general characteristics are exhibited in the Yorkshires. As I remember them, they were medium in size. The most profitable swine for feeding today would be just such a cross as made the Saratoga county hogs so famous years ago, to wit: The long and deep-bodied and the coarser-boned Duroc, or the truer type, the Red Berkshire, with the finer, plumper and more delicate Yorkshire. A breed of hogs which would combine the good qualities of both would be a valuable one for the farmers who have small cornfields and must study economy in making pork. In my next I will speak more fully of the characteristics, weight and other peculiarities of the Red hogs.—*F. D. Curtis in Breeder's Gazette.*

The Fresno *Republican* calls for organization among the stock men of that county to protect their ranges and says: Self-preservation is the first law of nature, and the law can be and ought to be recognized without doing injustice to fellow-men. Agricultural interests are watched through the grange associations. Industrial and mechanical interests are looked after through the various trades unions and industrial associations. Horticultural and viticultural interests are protected and fostered by law. The time has come when the stock owners of Fresno county should protect themselves by local organization. This season, as in every dry season, the roving bands of sheep, owned and driven by men who have no permanent ranges or habitations and own no land, are flocking into the county and destroying what little feed there is on our ranges by slowly driving over them, and are pushing back into the mountains as fast as the melting snow will permit. The mountain ranges of Fresno county properly belong to the men who live in and own stock in the county. Our own stock men recognize each other's mountain rights, but interlopers recognize no rights and steal feed wherever possible. In Switzerland the high ranges in the Alps have been held for centuries as adjuncts to the adjacent valley ranges, and neither government nor individuals question their yearly occupancy. The same rule should prevail here, and will prevail if there is concert of action among our stock men.

When California shippers pack sixteen ounces of butter in a pound package, instead of the fourteen ounces now given, Arizona will recognize a slight inclination on the part of her last neighbor to merit the continuance of the flood of patronage that now stands a good chance of being divided with Eastern cities and Sonora.—*Tucson Citizen.*

Scientific Breeding.

The past ten or fifteen years have witnessed very great diligence in the study of skillful breeding of improved stock. Every advance which experience has suggested has been assiduously followed, and every hint that has been traced through the various windings of mysterious nature has been eagerly laid hold of. The predetermination of color, form, size, sex and quality of progeny has been discussed and tried from almost every point of view; and if all possible knowledge has not been acquired, certainly much has been learned under each of these heads. Sometimes steps have been taken, and theories have been hastily embraced, which have led wide of the true mark, and sometimes years have been sadly wasted in the pursuit of facts and in the collocation of laws which have scarce been worth the pains, except as the efforts have developed greater breadth of thought, and have prompted the thinker to engage with more courage than before in the pursuit of his object. If, to-day, we may not properly move forward under the term with which I have headed this article, we surely have enough successful experience to justify us in speaking as I have done in the first sentence; for notable examples of "skillful breeding" are to be found in many parts of our country, where the exact results desired by the breeder, and for which plans have been studied out and securely laid before hand, have been attained.

On no field has this purpose been more ardently courted or more vigorously put into practice than in the breeding of the Jersey cow. Money, brains, patience, study and devotion almost supreme have been expended in the unswerving determination to make of her, if already she has not fairly won that position, the great butter cow of the future. Two great principles have, in the main, been relied upon to accomplish this result—heredity and variation, the latter to form the new and more perfect type, the former to fix and perpetuate it. Afterward, by judicious and careful selection—a matter by no means fully understood, but far too little appreciated in the measure we do understand it—to produce in one animal qualities we have found in two, which qualities have in turn been the outcome of what we have discovered in still other four, and so on. The skillful breeder has a bean-ideal ever in his mind, and the qualities which he sees as possible to be blended in her must be gathered up and placed at his bidding until the imaginary animal that flitted like a shadow through his fancy has been transformed into a living, breathing creature in his pastures. Simply to couple prize animals with prize animals, or to mate accidental good animals, is not enough. They must be selected from among those which have been produced at our pleasure to reach our beau-ideal, or produced by some person who has in his mind a beau-ideal near akin to our own. In all this pedigree is essential. Let the fossilized cattle raiser sneer to his heart's content; there can be no successful breeding without the study of pedigree. The accidental good animal is not of heredity, but of variation. It is a new type, possibly a prodigy, and would require generations to fix its valuable characteristics in its progeny. To breed as a science, with reasonable hope of success, we must know the foundation to see how certain animals have "washed;" we must know the coupling to see how they have "nicked;" and we must know the quality to see how they have "handed down." To breed on any other basis will disappoint us.

I have in my mind an animal that illustrates what I have said. An analysis of his breeding will show how faithfully these principles have been kept in mind, and with what devotion they have been carried into effect. Cobweb Duke of Darlington 7,926 is a son of Duke of Darlington 2,460 and Lily of Maple Grove 5,079. There would be nothing particularly significant in this if it were a mere matter of names, but both these animals represent what the Jersey breeder is constantly seeking to produce, a typical butter race of cattle, which shall have acknowledged pre-eminence above all breeds in this particular. Duke of Darlington is known both far and near as the sire of the wonderful Bomba 10,330, whose unparalleled record, at her age, 21 lbs. 11½ oz. of butter in seven days, has awakened anew the interest taken in butter tests all over the United States. That he should produce such an animal was not the general expectation, but it was the persistent hope of an enthusiastic few who had waited long and anxiously for some such grand results, and was grounded upon an unshaken confidence that these principles I have herein enumerated were the real basis of successful breeding. Let us look at him. He was out of a dam who had made 22 lbs. 7 oz. in seven days, and 778 lbs. 1 oz. in one year, Eurotas 2,454, the queen of cows everywhere. He was sired by a bull, Sarpedon 930, who was out of the same cow from whom Eurotas had come, namely, Europa 176, who made at the rate of 15 lbs. 8¼ oz. in seven days. Next, this bull Sarpedon 930 was sired by the bull Mercury 432, who has sired at least two cows that have made over 15 lbs. each in seven days, and who is a full brother to this same Europa 176. Eurotas was sired by imported Rioter 2d 469, who sired an additional 14-lb. cow, Rioter 2d's Venus 3,658, through a daughter of Europa's half-brother, an 18-lb. cow, Pet Gilford 3,317, through a daughter of Saturn 94, the double grandsire of Europa, and who is grandsire of Euphrates 9,778, who made at the rate of 16 lbs. 10 oz. in seven days, where again his cross is made through a son who is mated to a half-sister of Europa. Now, going back to Europa and Mercury, we find the great Alphea 171, whose butter test is quite generally received as at the rate of 25 lbs. 4 oz. in seven days, and her full brother Jupiter 93. Of Saturn 94, the sire of this remarkable pair, it is not saying too much to declare him the greatest ancestor of famous butter cows in the known world. He was imported at a time when there were but few Jersey cows in America, and consequently had but little opportunity for leaving his impress upon the breed in America, compared with the chances of great bulls of the present day. He sired four bulls and nine cows, thus making in all but thirteen channels of access to his blood, and only one-third of them males. Notwithstanding these disadvantages, he still leads all other bulls in the number of descendants with published records of 14 lbs. and over in seven days. Of something over four hundred cows of published 14-lb. records, forty-four of them trace to Saturn 94; and of these twenty-one have made 16 lbs. and over, and four have an average of over 22 lbs.

Turning now to Lily of Maple Grove 5,079, I find much the same class of facts, and a hint also of successful nicking that points out Duke of Darlington, or one of the five sons of Eurotas, as her proper mate. She was sired by Isaac B 1,951, a grandson of Mercury 432, mentioned above, and of Clement 115, known on the Island of Jersey as Clement 61, who is sire of three cows with published 14-lb. records, and has twelve descendants of the same class, among them Young Garenne 13,641, the $3,700 cow, and Mr. Clarkson's Evaline of Jersey 6,871, and what to some would be a particular attraction just now, he is fifth sire of Sir George 221 J. H. B., who was recently purchased by Col. Russell at the unprecedented price of $5,000, an amount which I venture not will soon be repeated, unless paid for one of the sons or descendants of Eurotas. The grandams of Isaac B are, first, a daughter of Southampton 117, who has two daughters and eight published descendants in the 14-lb. list, out of a Jupiter 93 cow, which is another slight dash of this Europa 176 blood; and, second, a daughter of Potomac 153, sire of three cows of published 14-lb. records, out of Custard 321, dam of one and grandam of two others in the same class. Potomac 153 is also a half brother to Plenty 950, a 14-lb. cow sired by Comus 54. Lily of Maple Grove 5,079 has recently made several tests which bring her well to the front among the great cows of America, namely, 16 lbs. in seven days, 23 lbs. 10 oz. in ten days and 39 lbs. 10 oz. in seventeen days. Her daughter, Lida Mullin 9,198, on a test made at the same time, gained a record of 16 lbs. 8 oz. in seven days, while her dam Symphonia 4,635, on a test made in July, 1882, gained a record of 16 lbs. 1 oz. Symphonia is a granddaughter of Rob Roy 17, who sired two cows of published 14-lb. records, and has seventeen descendants in the same list, and of Beauty 804, a 15-lb. cow, and dam of St. Perpetua 3,648, a 14-lb. cow.

Following this back we have here an animal who is not an accident, but a production, just as Thomas Bates and the two Booths had a production in their famous Shorthorns, and Bakewell had a production in his improved Leicester sheep. He stands as the representative of eighty-nine great butter-producing animals, and, with individual excellencies and typical family traits, which always show themselves in him, five years from this we may reasonably expect to witness in his progeny a repetition of what we have already seen in his ancestry, or perhaps a new surprise awaits us that shall serve to further certify the principles I have mentioned. If so, the fulfillment of my prediction shall also give color to my caption and lead us still nearer the consummation of what some already triumphantly claim—scientific breeding.—*A. J. F. in Breeder's Gazette.*

Devon Cattle.

Youatt, in speaking of the Devons, says: "The slightest observation will convince us that the cattle in Devonshire, Sussex, Wales and Scotland are essentially the same, and have been the same from time immemorial. The Devons are middle horned; tolerable, but not extraordinary as milkers, and remarkable for the quality, rather than the quantity, of their milk; active at work, and with an unequaled aptitude to fatten. There is a kind of superstitious reverence attached to the red color in the legends of the country, and in almost every part of Scotland, and in some of the mountains of Wales, the milk of the red cow is considered to be a remedy for every disease, and a preservation from every evil. Every one who has had an opportunity of comparing the Devon with the wild breed of Chillingham Castle, has been struck with the many points of resemblance, notwithstanding the difference of color."

Since the day of Youatt the improved Devons, while the quality of their milk has not deteriorated, have become more than tolerable as milkers. The celebrated Oakes cow, owned by Mr. Quincy, of Massachusetts, Mr. Colman says was a Devon, and yielded in one year 484¼ pounds of butter, in one week 9¼ pounds, and within his knowledge 16 pounds a week for more than three months in succession. Of this cow it is stated in the *Country Gentleman* that she never gave more than eighteen quarts in a day, and that on several trials five quarts of her milk afforded a pound of butter. A pretty fair showing even in these days of butter record. Mr. Colman also speaks of a Devon cow in England, which produced for several weeks in succession, without extra feed, twenty-one pounds of butter per week. Many other cows, large producers of butter, are mentioned in the Devon herd books. At the last Minnesota State Fair, held at Minneapolis, our Devon cows belonging to Mr. Baker contested the prize for comparative richness of milk with Jerseys, and after a careful and critical analysis, the prize was awarded to the Devons. The butter is noted for its richness and fine flavor, and the milk is superior for drinking.

As working cattle they are unsurpassed, the oxen, in addition to their remarkable docility and good temper, being active and good travelers.

Devons are very hardy, thrifty and active. They are fine beef cattle, laying their flesh on the valuable parts and giving that which is fine-grained and marbled. In a recent letter in the *Breeder's Gazette*, the writer, a breeder of Polled cattle, says that in the Smithfield markets Devons and Polled Aberdeen cattle bring from two to four pence a stone of eight pounds (half to one cent per pound) more than Herefords or Shorthorns. It is generally supposed that they do not arrive at maturity as early as Herefords or Shorthorns. It is probable that the same pains have not been taken to force them; yet Mr. Giblet's yearling Devon, at the Smithfield show, weighed 1,331 pounds. Many prizes have been taken by them at the annual show of fat cattle at Smithfield, and they have frequently carried off the £50 gold medal for the best beast in the show. One year, out of twelve prizes, six were taken by Devons. This year the champion at Norwich, England, was a Devon steer, two years and nine months old, and weighing 1,772 pounds, beating the Polled Aberdeen heifer, which was the champion at Smithfield last year.

Other features which recommend them as beef animals are the very small percentage of offal, the extreme fineness of bone, and the excellence of the meat. Although not belonging to the large breeds, steers are frequently found weighing from 1,600 to 1,800 pounds. Their activity enables them to graze easily in rough and hilly pastures, and it is believed by many breeders that Devons will make more pounds of beef to the acre than any other breed. In color they are always red, with generally a white switch, frequently white about the udder and scrotum, long, tapering horns, fine heads and muzzles, and graceful forms, appearing among cattle as the thoroughbred does among horses. Having been bred from time immemorial without admixture of other blood, the prepotency of the Devon bull stamps his progeny with his characteristics, thus rendering them of great value for improving the common breeds of the country.

Ayrshire Cattle.

The county of Ayrshire, in Scotland, extends along the eastern coast of the Frith of Clyde and the north channel from Renfrew to Wigtonshire. The climate is moist but mild; and the soil with its produce is calculated to render it the finest dairy country in Scotland. It is here where within the last century have originated a world-wide acknowledged breed of dairy cattle; established especially for its milk and dairy qualities by those shrewd, frugal and close calculating West Scotland farmers who were not satisfied with the dairy results of their little black and white native cows, but proceeded to rapidly improve on them by importing bulls, from the best dairy stock of their time, and raising calves from their best cows only. After years of patient and persevering labor, for which the Scotchman is noted, they succeeded in establishing such a cow as was needed for Ayrshire husbandry. A cow that on such food as they could best supply would

give the largest return in milk. And the Ayrshire cow of to-day as a breed, is conceded to give more milk according to the amount of food consumed than any other. Her milk is richer in casein than that of any other breed, and consequently is more valuable for cheese, of which casein forms an important part. Casein being also the bone and muscle forming matter of growing animals, renders the milk of the Ayrshire cow of more value as food for all growing animals—including children — than milk from any other breed. Consequently Mr. Pierre Lorillard purchases Ayrshire cows of me to grow his thoroughbred colts on for racers, to compete for prizes both in America and England, as he wishes to bring them to early maturity.) In describing what I consider a model Ayrshire cow of the period, she should be of medium size, weighing, in good milking condition, some 850 pounds, the head small and clean, the face long and narrow at the muzzle, with a sprightly, yet generally mild expression, horns short and fine, curved upwards, neck rather long and quite thin, body tapering from hind to fore quarters, or what I call "wedge shape," the fore quarters being much the lighter; back straight and narrow, but wide across the hips. Bone, fine; tail, long, with very fine bones and heavy switch; hair, fine and soft; udder, capacious, extending well forward; teats of fully medium size, set regularly and wide apart; milk veins prominent and well developed; legs rather short but well shaped, and very smooth and clean. In color, I prefer a dark red and white, or brown and white, and to have the white distributed over the body in spots. Some breeders of the present day are breeding for as little white as possible, but as the Ayrshire is known as a spotted breed, I much prefer to have them spotted with white. The first account we have of the importation of this breed into the United States was in or about the year 1831. They were somewhat different in appearance from the later importations, being in color usually very dark red or brown flecked with white, and black noses. In more recent importations many of them have assumed more the Shorthorn colors, the red in them being of a lighter shade and less of it, white being the prevailing color in many, with yellow noses. Of the wonderful milking capacity of the Ayrshires we have abundant proof. For instance, an Ayrshire cow imported by a Mr. Cushing of Massachusetts, in 1837, gave 7,728 pounds of milk in a year. Mr. F. H. Appleton, also of Massachusetts, reports the average yield of three Ayrshire cows of his, for 1872, to be 7,053 pounds of milk. The New Jersey Agricultural College reports the average yield of six Ayrshire cows, for 1872, to be 6,865 pounds per cow. The imported Ayrshire cow Corslet gave from May 2, 1865, to September 1 of that year an average of forty-six pounds per day, or in 122 days 5,617 pounds. This same cow Corslet gave twenty-eight quarts of measured milk per day. And descendants from her have given as high as thirty-one quarts per day. As cheese makers the Ayrshires are conceded to beat all breeds, and for reasons previously stated, i. e., the richness of their milk in casein or cheese-forming materials. As butter makers, they, as a breed, do not excel, although we have instances on record of their making as high as sixteen pounds of good butter per week. For raising children, colts, calves and pigs, the milk of the Ayrshire cow is invaluable and incomparable. With those of all other breeds, I am often asked the question, "What is a good Ayrshire cow worth?" My reply, once for all, is that a good Ayrshire cow for all purposes is worth as much as those of any other breed, and to the average dairyman and the milkman more than those of almost any other.

Although the boom is just now centered on breeds far inferior to them, yett we all know that the fashions in breeds and colors of cattle are subject to the same changes that effect the texture and colors of the material with which we are clothed.—*Kentucky Live Stock Record.*

Weights of Fat Shorthorns.

The following net weights of Shorthorns in England in the last century, and up to 1822, taken from "Youatt's Treatise on Cattle," edited about 1832, and published in Philadelphia in 1836, may interest cattle men that have not read Youatt. We don't see any live weights in the book except that of the Durham ox, that was exhibited for several years:

	Lbs.
George Coates' heifer, by the supposed sire of Hubback, fed on turnips and hay, weighed at two years and two months sixty-eight stone	952
A sister to Coates' Badsworth (47), killed by accident at seven months old, weighed	476
A three-year-old heifer of Miss Allen's, fed on hay and grass only	1,260
A cow of Mr. Hill's weighed 127 stone	1,778
A four-year-old ox, fed on hay and turnips only, 135 stone	1,890
A seven-year-old ox of Mr. Charge's, 168 stone, 10 pounds; tallow, 13 stone	2,534
A four-year-old and ten-months ox of Mr. Robinson's, in 1794, weight of four quarters 145 stone 3 pounds; tallow, 24 stone 7 pounds	2,376
A three-year and eleven-month steer of Mr. Robinson's, in 1815, four quarters 112 stone 7 pounds; tallow, 26 stone (364 pounds)	1,939
A three-year and six-month steer of Mr. Robinson's in 1622, four quarters, 133 stone (1,862 pounds); tallow, 21 stone (294 pounds)	2,156
A two-year and twenty-two days steer, fed on potatoes and straw, 72 stone	1,008
A two-year and four-month steer, weight of the four quarters	1,231
Robert Colling's heifer, which, like the Durham ox, was exhibited as a curiosity, was estimated to weigh at four years old	1,820
The Durham ox, from a common cow, and sired by Favorite (252), was computed to weigh at five years old 168 stone of 14-pounds (2,352 pounds), his live weight being 216 stone, or	3,024

The Lincolnshire ox was a pure Shorthorn, sire and dam. He measured five feet six inches in height at the shoulder; eleven feet ten inches from nose to tail; eleven feet one inch in girth, and three feet six inches across the hips; shoulders and middle of the back. His breast was only fourteen inches from the ground, and he stood one foot ten inches between the fore legs. Weight not given.

In the year 1808 Mr. Baily, the agricultural historian of Durham, saw a cow at Mr. Mason's not less remarkable in point of fat than the Durham ox. At that time the depth of fat, in a perpendicular position, from the rumps to the hips, was not less than twelve inches, and the shoulder score at least nine inches thick. We think this cow was Mason's old Gaudy, calved in 1797, and illustrated in the E. H. B., Vol. I.

Here is a Longhorn that was not a dwarf. Youatt quotes from Parkinson "On Live Stock," Vol. I, "That Mr. Princep was bid 500 gs. for a two-year-old bull; and that a four-year-old steer of Mr. Princep's breed weighed 248 stone of fourteen pounds (424 stone Smithfield weight, or 3,472 pounds). In addition to this there were 350 pounds of fat, and the hide weighed 177 pounds. If this is the true weight, the live weight of that four-year-old must have been but little short of 5,000 pounds!

It is stated that Lux & Miller will ship a large portion of their cattle now in Fresno and Merced counties to Winnemucca, Nevada, by rail, and from there drive them into eastern Oregon for better feed.

SHEEP.

Lamb Management.

Many a battle has been lost by reason of failure on the part of the defeated commander to prepare for the shock of battle before the crisis was upon him. Good generalship means never to be taken unawares—never to be forced to perform under difficulties what might have been foreseen and better performed in advance of the moment that determines the tide of battle and the fate of the cause for which it is waged. So with the shepherd; many of his failures are attributable to neglect to provide against such loss and inconvenience as ensue from unusual and unexpected conditions. The knowledge of what is best to be done at such times is worth much; but that practical knowledge which foresees and provides against both probable and possible vicissitudes is what brings from flock management fruition of its owner's highest hopes. It is, in reality, the proverbial preventive ounce so much to be desired above the curative pound.

Unless in-lambed ewes have been well managed through the past winter, and thus given the strength necessary to tide them well through the trials and drafts upon the system inseparable from maternity, there is quite likely to be in store for the shepherd responsible for their condition still further disappointments. The lamb crop, from which so much has rightfully been anticipated, will be found reduced as to numbers and lowered in the scale of excellence from the standard hoped for. The skill of the shepherd is to be gauged not so much by his ability to bring a flock successfully through adverse conditions as by his management to escape such conditions.

If justice has been done by the dams their lambs will be found very generally supplied with all the milk necessary for thrift until they are sufficiently advanced to require and seek for an additional supply of solid food. This should be accessible at an early day, if the daily ration of the dams does not afford it. The propensity of the sheep to follow the lead of its fellow is inherent, and prompts the lamb to accompany its dam to the feed trough and "go through the motions" of eating when the period of its existance is to be measured in days rather than weeks, while its earliest frolics over the green sward are alternated with attempts at grazing as certainly, and more frequently, than appeals to the maternal udder. Many successful managers provide a trough in the shed or fold supplied with bran and meal of corn or oats (or better still, a mixture of the two), so arranged as to be accessible to the lambs, but beyond the reach of the older animals. For this a few portable panels of fence are used, with openings between boards wide enough to allow the passage of the lamb's body; or, if it be placed on the ground, stakes or pickets may be driven about the trough so as to accomplish the same result. When lambs come sufficiently late in the season to be met with a good supply of grass, other provisions for food will not be necessary, except in cases of protracted bad weather.

Equally important to the health and thrift of lambs is a comfortable resting place. The requisites to such comfort are dryness and warmth—important in the order named. Until the lamb's fleece has grown so as to prove something of a protection, the damp ground and cool air of an early spring might rapidly rob the young system of strength gained through the preceding day, to be surely followed by diminished appetite, thus paving the way for the "bad luck" to which is charged much of the mortality resulting from bad management. If the flock manager has neither the comforts necessary to success with lambs dropping in early springtime, nor the means and disposition to provide such comforts, his only relief from inevitable disappointment is in so arranging that lambs will not appear until nature has tempered the air and provided the necessary warmth in the ground to make sure the necessary comforts.

Trimming—that is to say, castration, docking and earmarking—should be attended to during the first month of the lamb's life. Experienced shepherds differ as to the precise age when these can be performed with least detriment to thrift. When any considerable number are to be operated on, more attention should be paid to the condition of the weather than to the exact age. The one should always be favorable, the other may vary for a week or two without serious inconvenience. When the lambs are from two to four weeks old, the first fair, warm day, that gives promise of being succeeded by several days equally pleasant, should be devoted to the task. In a flock of any considerable number the lambs should be separated from their dams as a first step, and placed in a pen, or room, in the shed, no larger than necessary for holding them, without allowing the weaker ones to be forced down by others crowding over them. From the pen they can be lifted one at a time as the operator may require. The entire operation of castration, docking and earmarking is usually performed before the lamb is released. Though a somewhat severe ordeal, disastrous consequences rarely result under skillful manipulation. Arrangements should be such that no driving or crowding of the flock will be necessary for some days succeeding, as injury from such cause, before the wounds from the knife are healed, is liable to prove more serious than the operation itself.

This crisis passed, the lambs may be considered well launched on their road to sheephood, and the shepherd's aim should be to afford them every possible facility. They will now be regular feeders, and, with their dams, should be given access to the best obtainable pasturage, with shade and water, close together, for a resting place when not feeding.

If the shepherd has performed his whole duty up to the time for separating the lambs from their mothers, little inconvenience will be experienced in the weaning process. With fresh pasturage, supplemented, if necessary, by a well-filled trough, no diminution of thrift will result from the loss of mother's milk. The inevitable restlessness and worry that ensues from separation can be greatly alleviated by placing with the lambs a few gentle old ewes, to serve the double purpose of holding the flock together and to assist in moving them when a change of location is necessary. If the flocks are placed so far apart that the bleatings of the bereaved ones cannot be exchanged much restlessness will be obviated. From this time forward the aim of the shepherd should be to keep the lambs growing; and to this end neither labor nor reasonable expense should be spared. No matter how good the blood, the young animal must be followed from weaning to maturity by liberal, intelligent management, or the full benefit of breeding will never be realized. Steady, vigorous thrift is the best possible preventive of diseases, whether contagious or acute, and, at the same time, offers the surest road to their eradication when once contracted. No one realizes this more forcibly than does the experienced shepherd; and no more important lesson is to be learned by those who aspire to gain through flock management.—*Breeder's Gazette.*

The two-year-old trotting stake at Sacramento, to be trotted at the State Fair, 1883, closes on Saturday next. See advertisement.

FISH.

The Trout Season.

Once more the rod is taken from its cover, or from its place on the wall, and the specks of dust are wiped from the shining bamboo splints. The trusty breechloader is well oiled and consigned to its case, the shells and loading apparatus packed up, and the talk is no more of the marsh and field. Now the quick eye rests and the skill of the wrist again comes and plays. Birds on the wing give place to tiny flies, gaudy in colors, showy in design, beautiful to the eye and—like many similar things—deadly in effect. The music of the ripple, the rumble of the little fall, the breeze among the bushes, the swish of the line and splash of the jumping fish are now the sounds to delight the disciple of the rod. Once more will he wander by favorite haunts, approaching with pleasure the well-remembered pool where the big fellow was lazily basking when fate, in the shape of a tasty fly, led him to destruction. With what tremulous excitement he again sees ahead of him that long ripple near the bank where, with plenty of room and clear space for rapid work, he landed a dozen quarter-pounders last season. With what care he selects his fly and sees his gear all in order, and bow delicately he drops the fly the first time on to the dancing waves, hoping the dreams of the winter will be realized.

Talk about the ambition of man, his business struggles, his political aspirations, his love and his many desires. For the moment none is more intrinsic than that experienced by the old hand when revisiting a well-known stream where he has been successful, and once more standing ready to make a cast at a lucky spot. His nerves are tightly strung, his attention is in one direction only, his utmost skill is invoked, as with cautious step and ready arms he approaches the spot that shall fill him with the keenest pleasure known to the sportsman or with the heavy dissapointment that awaits expectations unrealized.

Trout fishing is one of the few things where expectation is not wont to exceed the actual realization. The simple roaming along the banks of a beautiful stream is a pleasure in itself even if luck is bad.

Last season was not by any means a successful one for anglers. Many old fishermen never wet a line during the summer. Perhaps it may be this year will be the better for it, yet the fingerlings are somewhat too numerous, and the full sized fish too scarce.

Those who expected, by reason of the long-continued dry period, that the streams would be clear on the 1st of April will be disappointed. The rains of the past week have, of course, muddied them, and it will be several weeks before water shows itself in the larger streams. Fly fishing in muddy water is rather delusive sport, so some of the parties made up for the first day of the season have been postponed for later on. Nearly all the anglers have of course made up their minds on what stream to make their first casts, but they must now put off the pleasure for a while, for, contrary to expectation, the season opens with turbid waters.

The late rains have been just what has been needed for stream fishing. Had the rain held off till after the 1st of April the front would have been all caught at once as they could not get out of the deep holes and pools, and the anglers that go out to-morrow would have completely cleaned out the streams: but now, as the creeks are up, the finny tribe are well distributed the entire length of the watercourses. To-day there will probably be a camping party of seventy-five persons go to the Lagunitas Creek to be on hand to wet their lines on the daybreak of April 1st. Several parties are going out on like purposes. The principal streams we hear will be visited on the opening day are, to the south, Parissima, San Gregorio and the upper Pescadaro, the last named stream is reached by the way of Mayfield. On the Contra Costa side of the bay, the Alameda, Calavaras creeks and the tributaries will get their full share of visitors, while to the north anglers will crowd the banks, hardly a cast of a line apart, of the Paper Mill, Sonoma and Napa creeks. As nearly all of the anglers will undoubtedly vie with each other in the number instead of the size of the fish there will no doubt be a great many fingerlings destroyed.

Last Sunday J. H. W. Riley and J. F. Denning from a boat off the the southeast part of Mission Rock in two hours' time caught thirty-five pounds of perch. These gentlemen had all the fun they desired in that length of time as the fish took the hook as fast as it was thrown to them.

Red rock-cod are beginning to come into the bay in good numbers. As they are at present in deep water, the boat fishing off the Saucelito shore is first rate.

Shore fishing on the Saucelito shore is very good and those who enjoy a day's recreation will be justified in spending a day on the north side of the bay.

Last Sunday Dr. W. F. Bogert had some very good pole fishing near Saucelito; he caught twelve very large, fine fish.

Vast numbers of cows are ruined every year by the carelessness, neglect and brutality of milkers. When milkers go to milk, they should understand that it means business. A poor milker should not be employed at any price, and a person who has no more sense than to strike and maltreat a cow should be kicked out of the milk yard. The cow should be made to feel perfect confidence in the milker's good intentions, so as to keep as free from excitement as possible. Cows that are frightened, that are kicked and beaten for every misstep, not only fall off greatly in their yield of milk, but their milk is rendered unwholesome, and often so much so as to cause disease and death to persons partaking of it. The quantity of milk a cow gives depends much upon the mode, time and regularity of milking.

Lambs should be docked when a week old. Hold them between the knees of the operator, with the rump against a smooth block of hard wood. A sharp chisel is held between the thumb and forefinger of the left hand and the skin of the tail drawn well forward. A quick, sharp blow upon the handle of the chisel and the work is done. A little tar, carbolic acid and pure lard, is the only ointment needed, to keep away flies while healing.

Ayers & Lowell, of Fort Bidwell, one day last week [illegible] two hundred head of horses to Christman & Green of [illegible]mer Lake, Oregon.

Lines will average ten words. A discount of 10 per cent. will be allowed on 3 months, 20 per cent. on 6 months and 30 per cent. on 12 months contracts. No extra rate charged for cuts or cutting of column rules. No reading notice taken for less than 60 cents each insertion.

San Francisco, Saturday, March 31, 1883.

SPRING RACE MEETING AT THE OAKLAND TROTTING PARK.

Now that the committee has made a selection of the course on which the spring meeting of the Pacific Coast Blood Horse Association will be held, the ball may be said to have received an impetus, which will gather strength until it stops after a brilliant finish. It was supposed that it would be a difficult point to settle, and that the selection of the course would try the acumen of the members of the committee to bring it to a choice. Both places are admirably adapted for the purpose. Both courses are so good that it would be invidious to make comparisons. Both are accessible at a cheap rate for tickets, and the meetings of the association on both of them have been eminently satisfactory to the public. Now that it has been definitely fixed that the races will take place at Oakland it is unnecessary in this connection to do more than call attention to the track on which the racing will be done. It is safe to assert that there is not a better in the United States than it is at present. Some years ago it was liable to become hard during the dry weather, but this has been completely remedied by the application of correcting material, and it can be "cut" with a harrow to any required depth. This was accomplished by coating it with a heavy covering of coarse manure, which was plowed under to the depth of twenty inches. The soil above was mixed with sand, and gardeners are aware that even a small proportionate quantity of sand will ameliorate the stiffest, heaviest clays. It completely overcame the adobe which was on the north turn, changing its characteristics into a friable, easily disintegrated soil, and when that was done the surface was dressed with "sediment." Our Eastern readers may require an explanation of the latter term. It is the deposit which is left from an overflow, and as there is a creek which runs across the field in which the track is made, the material was close at hand. It is the fine particles that are suspended in the water in time of a flood, and as in former years the bed of the stream was shallow the overflow spread over a large extent, and there is an unlimited supply. The late rains have put the question of "a good and safe track" beyond dispute, and that it will be kept in first-rate order is also certain.

As the races cover a period of two weeks, it is important that there should be the best opportunity given to preserve the condition of the horses. To do this there are extra facilities. The importance of "green feed" as an adjunct to keep horses in order is now generally acknowledged, and an allowance of this great natural rejuvenator is far more potent than drugs or mashes.

If a colt has a hard race or two on Saturday an occasional bite of the succulent grasses will be of immense benefit in getting it ready for another contest on Wednesday.

There is plenty of this grand panacea in close proximity to the track, and, in fact, there is no necessity for going outside of the inclosure to obtain it. During April and May it is rare, indeed, that there is anything but the finest weather.

Those who have the good fortune to live in Oakland make claims, which some consider extravagant, that it is the one favored spot, though it is certain that the location of the track is peculiarly favorable.

Between it and the bay is a dense growth of trees so thickly set with underwood and climbing vines that it is a complete protection from the western winds. On the eastern side there is also a belt of trees and shrubbery so that the course is embowered on these two sides.

These advantages are shared by those who own and have the horses in charge, and also by the spectators. To the first it is a boon in the better chance to "order" their horses; those who assemble to witness the sport can enjoy it in comfort.

From San Francisco to the course is one of the most pleasant short trips imaginable. We have been "crossing the bay" almost daily for nine years, and enjoy the journey more and more as the months roll by. To the people of the metropolis it is a country visit. The whirl, the din, the tumult of the city is got rid of as soon as the boat leaves the wharf, and in a few minutes there is a view well worthy of crossing the continent to see. The grandest bay in the world, ocean, mountains, hills, slopes and cities; it would require chapters even to give an outline sketch. A chapter would not do justice to the depot where the passengers are transferred to the cars, and in thirty-five minutes from the time of leaving the foot of Market street the journey is ended. There is a sylvan picture at the station, a rural scene of great beauty. A farm house on a knoll, and now there are trees surrounding it adorned with blossoms; the red of the almond, the pink of the peach, and the buds on the pear trees will soon swell into a snowy bloom.

There are green fields and a nursery from which is borne the fragrance of roses, violets and mignonette, and when the stands are reached there are the green hills of the Contra Costa range, and the slope on this side in full view.

Clad in the emerald-hued garments of the full flush of springtime there is a pleasing picture, and many eyes will see it with delight in the intervals between the races.

As the Pacific Coast Blood Horse Association has adopted rules which make promptness peremptory, there will be no danger of being detained to an hour which will be beyond the usual time for dinner. There will be plenty of time for lunch before the start as the boat which leaves at one o'clock and the connecting train will arrive at the course before the horses are called for the first race, and by taking the train on the return journey that leaves the track station, Shell Mound, at 5 p. m. the city will be reached at the usual hour for dinner. As half-hourly trains are run from four o'clock a choice is given for the time of leaving without long delay. For those who prefer going to the races in carriages the creek route gives the chance without being troubled with locomotives.

The Oakland landing is at the foot of Broadway, and there are pleasant drives from there to the park. From this brief statement it will be readily conceded that the ground selected is very handy to get to from San Francisco. It is also convenient for those on the line of the Central Pacific and passengers can leave Sacramento in the morning and reach the course before the races begin. Those on the old line can change cars at the wharf, and along the route of the narrow gauge come to Fourteenth street, Oakland, and by horse cars from there to the track.

FROG MUSIC.

Sunday night a few drops of rain fell. Early Monday morning there were showers, and in the afternoon there was a copious downpouring. Previous to that the ground was dry, and where we live there were suncracks as wide as in the early part of summer.

Not a puddle for weeks, and yet soon after sunset Monday evening the frogs were singing a merry tune. A ranunculan roundelay: a song of welcome to the fluid blessing which not only gladdened the heart of the amphibious harmonists, but a boon worth millions to California.

Where do they hide when the earth is dried into cracking, and not a drop of water within their reach? They are not far off, as is shown by the short time it takes for them to get in singing order.

The first rains of the season bring them from their hiding places, and though not a note has been heard for months the concert commences with the first downfall of magnitude enough to be fairly called rain.

Where we live there is a full orchestra, and though at times there may be rather too much monotone, when hay is $25 per ton, with a prospect of $40 with two weeks more of dry weather, there is a rich and rare melody in the newly awakened notes. Happy frogs! Happy horsemen! In the little field beyond where they are singing the grain is as green as rain can make it and forty-eight hours after the rainfall it seemed to have doubled its growth. It is difficult to say what occasions such jocund merriment among the frogs; the gleesome horse owners have good reasons to be joyful.

Saturday last the most sanguine indulged gloomy forebodings. High prices for grain and hay were not the worst features of the situation.

The dry time extending a couple of weeks longer and the prospects for the race meetings and fairs would range away below zero.

High prices for hay and grain, no chance to get anything back. This dreary outlook has passed away, and the frogs sing cheerily and the horsefolk are in high spirits.

NATIONAL ASSOCIATION OF TROTTING HORSE BREEDERS.

The advertisement of the stakes of this popular association appears in this number and the catalogues can be obtained at this office. We have written so much in regard to the importance of California breeders making nominations in the Eastern stakes, that it appears supererogatory to do more than call attention to them as they are published. But then again no harm can come from reiteration, if even it is tiresome, and therefore we urge a liberal response to the invitation. It does not require long arguments to show that other than home markets must be found for the trotting stock of this Coast. The East is the national outlook, and the buyers there when convinced of the superiority of our stock will not haggle about paying remunerative prices.

To convince them the first thing is to show confidence in the quality by making nominations. Enough of them to give a chance for selection, and then win the stakes. The latter repeated a few times will be worth more than all the verbal and written arguments that can be printed in years, and so we insist on the breeders taking hold of the business with spirit and determination.

YOUNG AMERICA.

Mr. Finigan informs us that this horse, which figured so prominently on the tracks of California a good many years ago, could not be used either on the track or road with shoes, and it was compulsory on the part of his owner to put on tips. This was on account of corns which were so bad that he crippled terribly with full shoes.

Mr. Finigan says that it never entered into his mind to try them on his horses that wore full shoes without trouble, but in the case of the fast pacer it was either tips or keep him in the stable.

Now if there is so great a relief from the pains caused by corns when shod by leaving that portion of the foot unprotected, what better proof can there be that the iron at the heel is an aggravation in the place of "protection?" Again, if corns are never known on unshod feet, could there be more satisfactory evidence that the full shoe is the cause of them?

Then if the concussion between the shoe and the foot is forcible enough to cause corns, and to cripple a horse that has them, is it not probable that other injuries come from wearing them?

DEATH OF MOLLIE McCARTHY.

In the paper of last week there was a notice of the death of Mollie McCarthy, at that time being unable to give any intelligence of the cause. A letter from Santa Anita merely states she died March 14, after twenty-four hours sickness, and that bots were the trouble. We scarcely think that the diagnosis was correct, but of course, to ascribe it to any other ailment would be only conjecture.

Whatever the fatality arose from it is a serious loss to her owner in a moneyed view, though the loss of an animal of her stamp cannot be measured in that way. She was surerly a great mare, and it can truly be written a wonderful racehorse. Small and of rather delicate proportions, she was able to go all distances and "pack weight" that appeared enough to crush one of her build.

When her daughters come on the turf we hope that they will be worthy of their maternity, and if they come up to this standard the regrets will be still greater that the dam had not been spared to produce a necklace of jewels.

INFORMATION WANTED.

The following circular from the compiler explains what is wanted, and we earnestly urge the breeders of California to comply at once with the request. It will only require a short time to convey the intelligence in something of this style:

Foal of 1882. Cito. Chestnut colt, all four legs white to knees and hocks, white face and other white marks; foaled April 6th, by Joe Hooker, his dam Too Soon, by Norfolk.

Horses in training:

Lady Vivia, 3 years, by Three Cheers, her dam Lady Amanda. Colors, Tartan jacket, black cap. Trainer, Dudley Allen. No jockey engaged. JOS. CAIRN SIMPSON.

Oakland, March 27, 1883.

This is not much trouble, and the benefit to the breeders themselves will repay it a thousand-fold:

Dear Sir: You will oblige the undersigned by sending information as indicated below, for publication in "Krik's Guide to the Turf," part II, now in the press, and to be published abont April 25.

Your list of yearlings (foals of 1882) now alive. Give, if possible, date of foaling, color, sex, name, name of sire, dam and dam's sire.

If you own horses in training, give your racing colors (describing both jacket and cap), trainer's name, jockey's name or names, with their color and lowest riding weight. If other owners have a call on their services, give names if possible, in the order of precedence. Respectfully,

H. G. CRICKMORE,
The New York World, Nos. 31 & 32 Park Row.
New York, March —, 1883.

☞An immediate answer is requested.

THE AUCTION SALES OF STOCK.

On the coming week there will be two auction sales of stock under the management of Killip & Co. and in both instances some valuable stock is to he offered. On the 5th of next month, April, at the Bay District track, a draft from Sunny Slope will be put up. There are ten in the list, six of them heing by Del Sur, two by Young Echo, one by Sultan and one by Inca. There is scarcely a question that Del Sur will get fast trotters. This belief is not only predicated on his hreeding and performances, as his colts show the right step, are fast for the handling they have received, and have fine action. One of the fillies by Del Sur is from the dam of A. Rose, by Clark Chief, and her dam a thoroughbred mare by Captain Beard, a son of imported Yorkshire. Another filly by the same sire is from a mare by Tbe Moor, and her dam Lula Jackson, by Jack Malone. As was stated before, Mr. Rose has more young stock than he cares to handle and offers this consignment to reduce his stock.

On the followitg Saturday, the 7th of April, the sale of Lieut. Fred Kuhnle will take place at Petaluma. From the pedigrees given in the advertisement it will be seen that this stock is well worth looking after.

The only reason whioh causes the owner to part with tbem is a European trip he has determined to make and as that may be extended to quite a long time he desires to dispose of his stock before leaving.

Whippleton is one of tbe best bred sons of Whipple's Hambletonian, a horse of good size and highly formed. Every son of Hambletonian that has been placed in the stud has proved a sucoess, as General Dana, Priam, King William, etc., prove.

As Whippleton is a brother to Lady Blanchard he has the right sort of backing to insure his taking a prominent place in the distinguished family to which he belongs. The short trip to Petaluma is not much in the way for buyers from San Francisco as the journey can be made with plenty of allowance for time at the sale.

THE TWO-YEAR-OLD TROTTING STAKE AT SACRAMENTO.

The objectionable clauses having been eliminated from the two-year-old trotting stake offered by the California State Agricultural Society it behooves hreeders to show their appreciation hy making a lot of nominations.

With such liberal entries away from home they "cannot afford" to remain out of those which are here. The State Society has shown laudahle enterprise in encouraging the breeding of trotters and it rests with the breeders to do their part which will make the youngsters the prominent feature of the speed departments of the fairs. There is no necessity for arguments to prove that colt trotting is far more to the advantage of the hreeders than where older horses are the chief performers.

The views advanced by Governor Stanford some time ago are certain to prevail before many years and in time the classification will be guided by age in a majority of the premiums offered. To hasten the fulfillment it is necessary to make full entries and give every care to the education so that there may be large fields of starters. It has already been demonstrated that the idea was erroneous that colts had not speed enough to interest the spectators; it has also been proved that they can trot in races when young without as much risk of injury as the older horses run, and the man who objects to training colts is far bchiud in this age of progression.

As there are four divisions of the stakes, and the added money equally divided between the colts that are placed and the sire of the winner, there is a chance for four to get a share.

We hope to record at least fifty nominations in this stake. Do not forget tbat it closes on Saturday next, the 7th of April, and by referring to the advertisement all the particulars will be found.

THE QUERY FROM PORTLAND.

In this paper of March 17 there appeared a communication signed Portland, in which a statement was made regarding the withholding of a purse won and presenting the points which had a bearing on the question. All are irrelevant excepting one, though if the advertisement under which the entries were made had accompanied the letter the question would be made clearer. The weak point is that while the color was known, it was not given in tbe entry, and then the action of the judges in permitting the colt to start indicates that they were satisfied that the animal presented was the one which X intended to engage from the outset.

Before giving an opinion we will be obliged to Portland if he will send us the advertisement containing the conditions and also state on what grounds the association withholds the purse. State also whether the entry was made bo fore receiving the information that tho colt was "a bay, sixteen hands high, no white, stylish and handsome," and copy of the entry as mado.

OLD RELIABLE.

The New York *Spirit of the Times* publishes a letter under the caption of "News from the Pacific Coast," that has the merit of heing news here as well as in the Orient. It is dated Portland, Oregon, and the signature attached is Hidalgo. We have heard of provinces in Spain where the inhabitants are given to embellishment, and this Hidalgo must have a clear pedigree, as he builds from tho ground up with airy fabrics which are represented as solid marble. It is not surprising that the *Spirit* was imposed upon, as the style of the communication is pleasing, and the writer takes his stand with all the confidence of being mathematically correct. Writing of Joe Howell he introduces the following paragraph:

> The best thing ever happened was his last victory at Oakland, in November. He was in a handicap, at 120 pounds, with several good three-year-olds, weighted as low as 92 ponnds, but even then the veteran looked dangerous at nine furlongs. The boy was ordered to pull him, and, in spite of all orders to the contrary, old Joe came like a whirlwind on the stretch, and won by a neck in 1:56, to the disgust of the army of thimble-riggers who were buying Frank Rhoads as a favorite. The boy got down and showed his hands, raw and blistered, and swore the old horse was too much for him. My own idea is that a job was put up to catch a well-known ferry owner of this place, who was down there on a picnic, and that he went to the boy and quietly paid him $250 or $300 to run it ont on them. One thing cannot be denied, old Joe made an awful mash of the ring.

As Joe Howell never ran a race on the Oakland track, and as in none of his races in California there were any incidents of the character represented, the charge against owner, trainer and jockey has not a single point to sustain it. Patsy Duffy rode Howell in a handicap race at San Francisco against Frank Rhoads, the weights being 124 pounds on Joe to 103 pounds on Frank, and this is the nearest approach to the fanciful contest which Hidalgo portrays.

Again, he says that "Ayres (his owner) took him to California, where he (Joe Howell) won every selling purse hung up, making seven races out of eight in California." The only selling race at the fall meeting of the P. C. B. H. A. Belshaw won. At Stockton Belshaw also won the selling race, and though Howell was entered in both he did not start in either. Ella Doane won one selling race at Sacramento and Joe Howell one, and that is widely different from the statement of Hidalgo.

Hidalgo also claims that Fred Collier won the Pacific Cup at Sacramento. That race has never been run elsewhere than San Francisco or Oakland.

A three-year-old filly (the age of the Duchess of Norfolk) to win that trophy in 3:58½, a faster race for two and one-quarter miles than any other colt or filly of the age ever made, and two days after run one and three-quarters miles in 3:04 in a gallop may appear inferior to a man who never saw her run, but as that is an opinion which he is entitled to he can air it if even it does give those who were acquainted with that great filly a contempt for his knowledge.

Of the same piece is rating Chesapeake superior to Norfolk, and when he classes Connor as the best son of the winner of the first New Jersey Derby it is a hopeless case of wrong bias. Ralston, Flood, Duke of Norfolk were in every sense great racehorses, and though we do not desire to detract from the well-earned fame of Connor, a man would be thought crazy here who gave him a higher rank than either one of this trio.

In writing of Gano he couples his opinion of his caliber with the remark that he is of "great size," when the fact is that he is not nearly so large as his stable companion, Lucky B.

When these statements are so much at variance with the facts, opinions based on them cannot be of much value. Finding so many errors little credit can be given to any part of the story, if even it is told in a pleasant way, and so the long walks, the "pulling" to Patsy Duffy, etc., may be the fertile imaginings of a busy brain.

MORE STOCK AT AUCTION.

Since writing the other notices the announcement bas been made that on tho day of Mr. Rose's sale, and at the same place, there will be offered some finely-hred youngsters from the Rancho del Paso stud. This will be an additional inducement for people to attend, and will make an aggregate of twenty animals to choose from.

There are a colt and filly by Santa Claus from capital mares, several by Alaska, a son of Electioneer and Lucy, hy Washington, two by Poscora Hayward from a sistor to the dam of Hinda Rose, two-year-old and yearling, and others by Norwood and Inauguration.

Alaska will bo shown with the colts, so that buyers can have a knowledge of his form as well as his hreeding.

Pools on the Robinson-Lambert pigeon match will be sold by Killip & Co. this (Saturday) evening, at 327 Bush street. It is generally regarded as a good betting event and a large amount of money will be staked.

FAIRLAWN.

In all probability there is not a trotting-horse breeding farm having a more extended reputation than Fairlawn. With the exception of Palo Alto and Woodburn it is questionable if there is another which the people have heard so much about, or rather the stock that have been bred there.

Palo Alto has become famous from the brilliant achievements of the colts reared on that famous rancho, and still in the hands of the hreeder. Woodburn may be termed the first to systematize the breeding of trotters and prove that the pursuit was not the hap-hazard business it was thought to be. It is nearly thirty years ago when Mr. R. A. Alexander laid the foundation of a trotting stud, and very many of the celebrities of the track have been the result.

General Withers, although commencing ten years later, has demonstrated that the breeding of fast trotters and fast roadsters is a legitimate business, and that when conducted in a thoroughly business-like manner it can be made remunerative. He has shown more. He has disseminated trotting-bred stock so widely that the merits of trotters are acknowledged in places that his energetic methods have opened, and he has been one of the potent aids in increasing the value of trotters all over the country. He has accomplished still more. Through this same presistent energy he has taught people that fair dealing was an essential feature and that the stigma which the public generally attached to the sale of horses was undeserved. We do not believe that there is a more honorable body of men engaged in any pursuit than those who are breeding and rearing thoroughbred and trotting horses. We form this estimate from an extended acquaintance and after intimate knowledge and close scrutiny. But men are prone to form estimates on what the shysters do, and the actions of a scoundrel, who would be a "petty larceny thief" were it not for the fear of the jail, are credited to the business having a demoralizing tendency. It would he better to write "were prone," as this view has given way to more rational knowledge and the correct interpretation is largely due to the efforts of the proprietor of Fairlawn.

Others of his stamp were not so intent in correcting the wrong impression. They were contented with the knowledge of their own integrity, and gave little thought to the prevailing opinion. At Fairlawn a neopbyte has the same chance as an expert. The goods are displayed, defects, if there are any, pointed out, and an unvarying price affixed. There is no "dickering," no disguise.

Next to having stock that warranted eulogies, the success of General Withers has been due to this system, and to giving it publicity.

Good stock alone would not have accomplished what has been affected, Without that, of course, the management, however skilful, would have been ineffectual. There had to be a basis of worth and with that intelligent handling which has been a characteristic of Fairlawn.

While the breeding of fine horses has a fascination to most men beyond any kindred pursuit, it entails a vast amount of study, constant observation. In old times it was held that fast trotters were freaks of nature, divergencies from the types used to produce them. The next step was to credit the sire with all the prepotency, and that any mare was good enough to suckle the offspring.

Anyone who will take the trouble to write General Withers, Fairlawn, Lexington, Kentucky, for his catalogue for 1833 will see the difference at the present day, and intelligent breeders in all parts of the country realize the importance of securing the right kind of dams, as well as sires, of approved strains. The catalogues that General Withers publishes annually are very complete, containing an immense amount of information in regard to the trotting families, and so arranged as to be both compact and comprehensive. The tabular arrangement summarizes the main facts and presents them so as to afford an easy comparison, and it is safe to say that if the book was intended for sale in place of gratuitous distribution, those who are interested in trotters, on becoming acquainted with its merits, would secure a copy at any reasonable price. In the *Breeder and Sportsman* of February 3 we copied quite a portion of it to accompany the illustration of Altoona, and from that specimen we are sure that our readers would like to see the volume complete.

Mr. Hickok has exhibited to us letters from L. J. Powers, president, and T. B. Warren, secretary of the Hampden Park Association of Springfield, Mass, showing that Overman's best time was 2:20½. The horse has been credited generally with 2:20, which barred him from the 2:21 class, a condition of things to which Mr. Hickok very properly objected. These certified figures settle the question.

See advertisement of Capital Turf Club. Comm week.

THE GUN.

The Move Against Shooting at Live Birds.

J. R. Debbingham, a gentleman hailing from Manchester, England, who is prominently identified with sporting matters at home, recently arrived in this city on his way to British Columbia and in course of conversation with a representative of the BREEDER AND SPORTSMAN he took occasion to relate some of his experience relative to trap shooting which will prove of interest to sportsmen generally. It may be well to state at the ontset that his conclusions on this subject are wholly at variance with the proposed action of certain persons who have inaugurated a movement tending to suppress pigeon shooting. He characterized any attempt that might be made at home in this direction as an unwarranted interference in an exceedingly popular sport. As a rule, pigeon shooting matches were conducted with more than ordinarily good management, and were usually attended by a spirit of rivalry to which the sport owed much of its popularity. The opposition that had been created against its continuance was in his opinion by no means such as would interfere with it, and could hardly be said to aspire to the pretension of being seconded by representative persons. In one or two instances the nobility, which formerly took great pleasure in witnessing both club and international matches, had commented rather severely upon what they considered unnecessary cruelty, and in deference to their sentiments clay-pigeon shoots became more numerous. It was not proposed, however, to bring about a revolution in the sport, by abandoning shooting at live birds. He also cited in this connection the great favor with which the introduction of the sport was received, stating that it would eventually be found that some more formidable movement would have to be inaugurated before regular shoots would be entirely suppressed. The chief drawback was not in any popular disapproval, but rather in a very noticeable scarcity of birds in certain districts when pigeon shooting was particularly active. It not infrequently happened that birds were brought from remote places, so that, as is the case in this State, the sport was somewhat expensive.

California Wing Shooting Club.

The opening shoot of the California Wing Shooting Club at San Bruno on Sunday last was well attended, and despite the prevalence of high winds throughout the day, which shifted at intervals to different points, the match was exciting and well contested. In addition to the club medal, the possession of which depends upon the best average score for the season, the club has also provided three medals for competition among the members, and which must be won three times before they become the property of individual shooters. An invitation was extended to S. A. Tucker of the Fountain Gun Club of Brooklyn, N. Y., to enter the match, which was shot under Hurlingham rules with the following score:

Robinson	1.	0	0	1	1	1	0	1	1	1	0	1—8
Spencer	1	1	0	0	0	0	0	1	0	0	0	1—4
Stackpool	0	1	1	0	1	0	1	1	1	1	0	1—8
Brandt	1	1	1	0	0	0	0	0	1	0	1	1—6
Boche	1	0	1	0	0	0	0	0	1	1	0	0—5
Parker	1	0	0	0	1	0	1	0	1	0	1	0—6
Carrigan	0	0	0	0	1	1	0	0	1	0	1	0—4
Knowles	1	0	1	0	0	1	0	1	1	1	0	1—7
Ellon	1	1	1	0	1	1	0	1	0	6	0	1—7
Chismore	0	0	0	0	0	0	1	0	0	1	1	1—4
Jillett	1	1	1	0	1	1	0	1	0	1	0	1—8
Walsh	1	1	1	0	1	1	0	1	1	1	0	1—9
Burbank	0	1	1	1	0	1	0	1	0	0	0	1—6
Burwick	1	1	0	0	0	0	1	0	0	0	0	0—3
Pearson	1	1	1	0	0	1	1	1	1	1	1	1—10
Fay	0	0	1	0	1	0	0	1	1	1	0	0—5
Hanson	1	0	0	1	1	1	0	0	1	0	1	0—6
Bogart	0	1	1	1	1	1	0	1	1	0	1	1—9
Tucker	1	1	0	1	1	1	1	1	0	1	1	1-10

Shooting at Birds Point.

On Saturday last a number of sportsmen assembled at Birds Point, Alameda, to witness the three-cornered match previously announced in these columns, the contestants being Orr, Babcock and Butler on the one side, and Havens, Ewing and Gordon on the other. Unfortunately, the birds were a poor lot, and in several instances were scarcely induced to fly even by a most liberal shaking of the trap lines. The slowness of the birds seems to have seriously disturbed the tender passions of the scribes who were in attendance, and who, in their garbled reports of the match, gave vent to their sympathetic feelings by an occasional sigh for poor slaughtered pigeons. The score is as follows:

Butler	1	1	1	1	0	1	1	1	1	1	1	0	1	1—13
Babcock	0	0	0	1	0	1	0	1	1	1	0	0	1	1— 7
Orr	1	1	0	1	0	1	1	1	1	1	1	1	0	0 1—11
Total														—31
Havens	1	1	1	1	0	0	0	1	0	1	1	1	1	1 1—11
Gordon	1	0	0	0	1	1	0	1	1	1	1	1	1	0—10
Ewing	1	1	0	1	1	1	1	1	0	1	1	1	1	1 1—13
Total														—34

A number of minor matches followed, including a sweepstakes, six birds, at thirty yards, in which the annexed score was made:

Orr	1	1	0	1	1	1—5
Havens	0	0	0	1	1	0—2
Butler	1	1	1	1	0	1—5
Gordon	1	1	1	1	0	0—4
Gillette	0	0	1	0	w	—1
May	1	1	1	1	1	1—6
Ewing	0	1	1	1	1	0—4
Hopkins	1	1	1	1	0	1—5

The Pigeon Match.

Considerable interest is manifested in sporting circles generally in the match between Crittenden Robinson of the California Wing Shooting Club and J. Lambert, which takes place to-morrow at the San Bruno grounds. As is usual in matches where the stakes assume more than ordinary proportions and where the men are so evenly matched, much speculation has been indulged in as to their respective claims for public preference. Both are admittedly crack shots, and barring unforeseen causes, the shooting will be close and exciting. Robinson has prominently figured in all important pigeon shooting matches among local sportsmen, and has always been considered a careful and reliable shot, thoroughly acquainted with the flight of his birds, and, in consequence, an exceedingly scientific shooter. Possessed of a cool head, and rarely allowing himself to be influenced by either the changes of a close contest, or seeming difficulties which are to be overcome in the progress of the score, he is confidently relied upon as preserving at least a good average throughout the match. In the discussion which has naturally arisen over the contest, a partiality has been manifested for Robinson simply for the reasons above enumerated. Lambert, on the other hand, though he has figured in local freezeouts, and other minor matches, is comparatively unknown as a pigeon shooter, his reputation being chiefly based upon his good record in connection with his business as a market hunter, and from the constant practice which its pursuit affords him. His style differs entirely from that of his opponent and it may be said to be peculiarly his own. He braces himself firmly, leans over as much as possible, holding his gun with almost straightened arms, and is invariably fretful and anxious, especially towards the conclusion of the match, and, strange to say, this feeling manifests itself even when the match is about to be decided in his favor. This description of him was fully borne out in his recent appearance at the San Bruno pool shoot at fifteen birds, in which Lambert succeeded in maintaining a clean score up to the close of the thirteenth round, none of the others doing better than eleven. At his next turn at the score Lambert missed an easy right quarterer, also missing his next bird, a very slow tailer. Robinson's most notable performances before the traps include a match with Bogardus, at Schnetzen Park, Alameda, in which he defeated the then champion. He also defeated Gerber for the *Chronicle* Cup. During a trip East he acquitted himself with distinction in the Eastern circuit, both in match and stake shoots. It is also affirmed on the authority of several well-known gentlemen of this city, that, in a practice shoot at Birds Point about three years ago, he killed eighty straight birds, and abandoned the score of 100 purely from the result of overloading. His recent performances are too well known to need mention. Since the above match was made both men have done considerable quiet work. The preliminaries for the match, such as the choosing of judges and the trapman, have been completed, but for obvious reasons the names are withheld. The conditions of the match are $500 a side, 50 birds, Hurlingham rules except as to the height of the gun and as to charge of powder and shot. Any gun not larger than a ten-bore can be used, no limit of powder, 1¼ ounces shot, Dixon measure. The match will come off as soon after reaching the grounds as possible. Sportsmen from this city will leave on the 8:30 train. The balance of the stakes will be paid to the stakeholder, William Golcher, on the grounds, where the referee will also be appointed.

A double match will be shot at the Oakland Trotting Park on April 8 between John Muller and Zach Taylor on one side and E. Edwards and Fred Curtiss on the other side, for a pool of $40.

A pigeon match has been made between E. Edwards of the Cosmopolitan Club and John Muller for $50 a side which will be shot at the Oakland Trotting Park, on Sunday, April 8.

D. M. Pyle, of Gilroy, suggests that, owing to the scarcity of pigeons, blackbirds be used at the State Sportsmen's Association shooting match in May.

YACHTING.

The opening of the season of 1883 will be celebrated by the S. F. Y. C. on Saturday, April 21. There will be a dance at the club house and a moonlight sail to Vallejo, with a race down next day.

The Whitewing has been sold by Mr. Tevis to Mr. Lee of the S. F. Y. C. This yacht is new and well outfitted and the general impression is that Mr. Lee got a bargain in her.

The planking and caulking of Mr. Tevis' new yacht has been completed. The men are working on the cabin and the yacht will soon be coppered.

The Lurline was outside the heads last Sunday.

The Fannie has gone up to Port Costa.

The Annie came down from Antioch last Sunday.

Men are at work on the Emerald fitting her out for opening day.

The Frolic's masts are scraped and she is being painted.

The San Francisco Yacht Club elects its officers next Tuesday.

The Pacific Yacht Club is going to have a boat club, and have a place to store boats.

The Lolita has been outside the heads.

The Mollie has a new suit of sails.

A 40-foot steam launch is being built here.

Commodore Harrison is still at Puget Sound.

Vice Commodore Phil. Caduc will be acting Commodore for the Pacific Y. C. this season.

The Aggie will not be out before August.

The Nellie has been brought down from Donahue and been on the ways. She has been put in fine order and her cabin has been refitted.

The Fleur de Lis will be kept moving lively all this season.

The Thetis was out sailing last Sunday looking very well in her new paint.

Mr. Mumfrey's "Skipper" has been put in fine order and will soon be brought over and put in commission.

The twelfth anniversary of the San Francisco Fusileers will be celebrated on the 22d of April at Shell Mound Park by a picnic. Aside from the amusements of the picnic there will be $40 prize money for the bowling alley. The principal feature of the day will be the target shooting. There will be $60 given for shooting on the public target, $20 being the first prize and the balance divided fairly. Being a military affair, the only rifles used will be the U. S. Springfield, with a six pound pull of trigger. As this takes place a short time before the California Rifle Association's spring meeting it will afford riflemen an opportunity for profitable practice. Riflemen are cordially invited as a good time is anticipated.

In view of the fact that there is a scarcity of feed for the stock in the lower country, and that many of the stock-owners are seeking the mountains in search of feed, the Alturas *Independent* desires to say that Modoc county possesses an unlimited amount of feed, and owners of hungry stock can find no better location than in that county. The county north is an unbroken stock range, covered with a heavy growth of the best grass. As one man expressed it, there is room on this range for a million cattle. The hills to the south, east and west are also covered with grass, and there will be no danger of stock starving to death if they are able to once get there.

BLUE BULL AGAIN.

Was He Neglected by the Scribes?—Columbus Takes Issue with Hoosier.

EDITOR BREEDER AND SPORTSMAN: In your issue for March 17 I note a short article, written by one Hoosier, and hailing from the great wicked city of Chicago. Hoosier states that no Eastern paper or periodical has ever said a good word for Blue Bull or his get. For his benefit I will say that scarcely a paper published in the East has had other than a kind word to say for Blue Bull. If Wilson or his friends did not care enough about the old Rush county hero to write of him and his offspring, who does Hoosier expect are going to take upon themselves the thankless task?

A few years since a friend of the writer contributed to the *Turf, Field and Farm* a number of articles upon Blue Bull and his virtue as a sire of trotters. At that time the stallion had but few representatives in the 2:30 list, and many thought the earnest advocate had been a little previous. Mr. Wilson was not personally acquainted with the champion of his stallion's merits, but wrote to the gentleman and in a brief but business-like letter thanked my friend for his unasked-for services and begged the privilege of sending to the writer's home one of the choicest weanlings at Flat Rock breeding farm. Ed was modest, but, fearing to gain the displeasure of Mr. Wilson, he accepted the offer. Several years, many months and hundreds of days have passed away since the freewill offering was made, but the *Turf, Field and Farm* writer has not been granted the privilege of gazing upon the colt that was to have started from Rush county.

The *Western Sportsman*, published at Indianapolis, Ind., has always been a stanch advocate of Blue Bull's superiority, and has never allowed an opportunity to pass unimproved when fortune gave the editor liberty to speak or write a word of praise for his favorite stallion.

From time to time during the life of Blue Bull numerous well-written articles appeared in the *Spirit of the Times*, and shortly after his death there appeared in that valuable paper one of the best written notices of the season. This article, nearly two columns in length, was widely copied and generally discussed, and very few stallions have received as liberal a notice from the equine historian as the one-eyed, broken-kneed pacer was accorded by the *Spirit's* correspondent. I quote the closing sentence of the article referred to and ask Hoosier if he does not think it fulsome praise:

> True, o'er the tomb in which this favorite lies,
> No vaunting, boast appears of lineage good;
> Yet the "Speed Register's" bright page defies
> Greater achievements in the trotting blood.

Wallace's Monthly has frequently recorded a good word for the old pacer, and yet many think that J. H. Wallace cannot see outside the Hambletonian family.

Having gone over the list of Eastern papers that have been especially friendly towards Blue Bull, let us return to the very city from which Hoosier writes his communication. I am certain that the gentleman has never been on the inside of Dunton's office, or is not an old reader of the *Spirit of the Turf*, else he would have exempted this journal from his list. Mr. Dunton has always been friendly to Blue Bull and even went so far in his admiration for the horse that he obtained and has at present in his office the only portrait of the famous sire in existence. Wilson would not have the image of the animal that made his name known all over the trotting horse world placed upon canvas, in order that those coming after him might see the shadow of that which became one of the seven wonders of turf history, but allowed the young horse to become old and famous, to gain for himself and his owner a name that shall stand so long as a "Turf Register" exists, and above all he allowed Blue Bull to make him, James Wilson, a wealthy man, and yet he appreciated the horse so little that he did not have his portrait painted. Mr. Dunton knew the horse and his owner extremely well and he deemed it but just and proper that, as the editor and publisher of a journal devoted entirely to the horse, he should preserve the image of what he believed was the greatest Western sire, and in accordance with this belief he dispatched an artist to Rushville, and procured the only painting from life of Blue Bull. This excellent portrait was done in oil by a faithful and cunning hand and the observer can realize how true to life the painting is, when he detects the broken knee and ruined eye.

Hoosier truly states that Mr. Wilson was a peculiar man, for all Western horsemen know him as such, had he been a generous, open-hearted man, such a one as many of our Southern breeders of the day are, how different would the record of his favorite stallion appear, when it is completed and the world is able to state the number of offspring that are credited to Blue Bull in the 2:30 list.

Would a kind word spoken by an able horseman, to his companion, as the two friends conversed on the merits of their favorite sires, have done the cause of Mr. Wilson or his stallion any harm?

Would not a more liberal method of conducting the affairs at Flat Rock have tended to benefit its proprietor?

The writer of this communication firmly believes in cultivating all the means within ones reach for the advancing of a person's interest; it matters not whether it be the press, or the words that come from our friends. At this time it is all a matter of conjecture, the result to have been derived from a liberal use of the newspaper fraternity by Mr. Wilson. That it would have tended to his harm we are certain could not have been the case; rather do we hold to the opinion that Blue Bull would have received such patronage that instead of being second on the list of 2:30 sires, he would have stood head and shoulders above the great king bee, Ryskyk's Hambletonian.

From my experience with the knights of the pencil, I have derived the conclusion that newspaper men are greatly like others of the same species, i. e., that they are blessed (or cursed) with sensitive nerves, have impulses differing but little from other men, are susceptible of blows or quick to appreciate kindly greetings, and, taken all in all, they prefer to say or do a good word, or a kind favor, for the man that respects them, and has spirit enough to appreciate the effect of the same.

My advice to Hoosier in closing this article is for him to read up a little in the old files of the Eastern sporting press.

Tiskilwa, Ill., March 23, 1883. COLUMBUS.

Alex. Lewis has arrived at Louisville, Ky., with Ewing, Mambrino, Strugs and Mambrino Sothern, Mr. Shaughnessy's stable. The horses are in fine shape and have gone into training.

The two-year-old trotting stake at Sacramento, to be trotted at the State Fair, 1883, closes on Saturday next. See advertisement.

The Horse's Mouth.

The time has now arrived in the North when the preparatory, jogging work of the coming turf season should commence; in fact, many have had several weeks of jogging already, and not a few have had a winter's work.

Nearly every driver of any prominence knows the important part the mouth of his horse plays in the problem of success in his engagements, but how many have availed themselves of the services of some skilled veterinary dentist? These thoughts suggested themselves after s thorough examination of my own horses recently by a doctor.

Finding ons of my colts suffering from a badly decayed and ulcerated tooth, I found myself compelled to call the doctor. Considering myself a fairly clever hand with the float or tooth rasp, I flattered myself that my driving stock, with one exception, had their mouths in good shape, the colt alone needing the skillful dentist. After the doctor had operated on the colt I had the horses brought out for his examination. Now if there is anything in the horse's mouth that seldom escapes my notice it is wolf teeth. Whether they affect the eye, as claimed by many and disputed by not a few, I will not say, but I certainly prefer to have them removed.

The very first horse examined—a recent purchase by the way—the doctor turned to me with the question, "Do you intend to keep this horse long?"

"Why?" I replied.

"Because I find two good-sized wolf teeth."

Sure enough he soon had two supernumerary teeth in my hand. The mouth being otherwise in fair shape it was polished up by the doctor and the horse led to the box.

"Bring —— out here! Well, doctor, I think you will find his mouth in good shape? I have recently floated him." After a careful examination the doctor remarked:

"This horse carries his head to the right sometimes."

"You are right, but not bad, however."

"Now I will show you something that you probably have never seen before."

"What is it?"

"A good-sized wolf tooth on the lower jaw of a horse."

We acknowledged the find and confessed to ignorance of wolf teeth on the lower jaw of a horse.

The doctor remarked: "Examine and you will notice the inflamed condition surrounding the tooth. When the bit presses here it becomes painful, and to relieve himself he carries his head to one side to avoid pressure."

I have driven him three times since the removal of the tooth, and he is much improved in his driving qualities.

"Bring out the Almont. Now, doctor, examine this fellow's mouth closely. When he goes to a break, unless carefully handled, he swerves to one side."

The examination was made. "You have this colt's mouth in good shape, but look here; that sharp point on this upper molar has escaped your notice and the rasp too."

The doctor soon fixed him, to my great satisfaction. He examined eight, and I know both my horses and myself are greatly benefitted and much happier for his skillfull operations

I will instance one more case. Examining a trotter in her teens, he remarked: "Think I will give her a younger mouth. Now has it ever occurred to you that the act of masticating her food must be, to a certain degree, painful?"

"I have never given the matter much thought," I replied.

"The molars of a horse, from constant use in mastication, grow shorter, while the front teeth make each year a moderate growth. In mastication the jaws must bring the molars in contact with each other. This necessarily causes great pressure on the front teeth, and they, in the maturer years of the horse, are consequently pushed forward, and must necessarily interfere seriously in the grinding or assimilating of the food, causing, undoubtedly, no small degree of pain in the operation."

The front teeth were quickly reduced in length by cutting and rasping. Even after removing so much of the teeth the molars did not prevent the upper and lower teeth in front from coming in perfect contact with each other. The statement of the doctor that the animal would now thrive better on less grain than before his operating was unquestionably correct.

Four years ago I had occasion to call the doctor to operate on a mare then nine years old, that I had put to breeding. She was badly overshot or "parrot-monthed," so much so that at pasture she became very low in flesh. To look at her teeth, one would call her twenty years old. The doctor performed an excellent job on her. The mare began at once to improve and thrive, and has continued to ever since.

No man who is fond of his horse and takes interest in his comfort should fail to call occasionally a veterinary dentist to examine the teeth.—Mambrino in Breeder's Gazette.

The Historical Father of Drainage.

Columella tanght that when a soil was wet ditches were to be dug to allow the water to run off. He also tanght the use of both wide-open drains and hidden under-drains. Of these latter we quote from the text as given by the late J. H. Klippart: "One will dig out trenches of three feet in depth, which shall be half filled with small pebbles or pure gravel, and then the whole will be covered with the earth which was taken out of the trench. Should there be neither stones nor gravel, then fascines, formed of branches tied together, of the same shape and capacity of the trench, may be placed into it so as to fill up the cavity. When the fascines have been sunk into the bottom of the canal, they must be covered with leaves of cypress, pine, or of any other tree. Then shall be superadded the earth extracted from the trench, and the whole will be strongly compressed. At both ends must be placed, in the form of a buttress (as it is done for small bridges), two large stones, surmounted with a third one, in order to consolidate the sides of the ditch, and favor the fall and exit of the water."

A drain as carefully made now would leave little to be desired, as it is the most perfect form of drain other than that of tile. Palladius, who wrote long after his eminent predecessor, and who evidently had access to his writings, says: "When the lands are wet they will be dried up by digging trenches everywhere. Everyone knows how to make open trenches, but here is the way to make hidden trenches: One must cut ont across the field ditches of three feet in depth, which are half filled with small stones or gravel, after which they are filled up with earth from the digging and leveled. But the ends of those canseways must lead in declivity into an open ditch, whither the water will run without carrying away the earth of the field. Should there be no stones, one will lay at the bottom of the ditch fascines, straw or briers of any kind whatever."

From these extracts we find that in the time of Columella, who lived about the year 42 of the Christian era, not only the making of open drains, but also under-draining was well understood; and that when Palladius (Rutillius Taurus Æmillianus) lived (about the fourth century) open drains were so common that all were supposed to know how to construct them. Even in the time of Columella the proper depth, economically (three feet), of these under-drains was also known.

California lions in the Sanllago mountains have been feeding on goats at the expense of N. D. Harwood, who nas large hands in the mountain canyons. He has been trying to hunt them down with hounds, but so far has not been successful.

The Sage Hen of Nevada.

As the sage hen in this section greatly resembles the grouse, I write to-day of what little I know of their habits. In color they are a trifle darker than the grouse, and have black spots or speckles on them, and are just a trifle smaller; and in habits are nearly directly the opposite. They are essentially a sage hen, and like to feed in the valleys during the summer, and are not often found near water or crops in the extreme heat of the day, when they sometimes lie aloug the banks of the valley streams in the shade. They breed in the spring very much as the grouse does, but instead of going up the mountains they descend to the valleys and remain there until the cold drives them to some high, bleak mountain top, where the wind blows the snow off, leaving it bare. On these bald peaks lives the sage hen in winter, partly on account of the facility for food and partly for protection from wild animals; and it is useless to try to find sage hens in winter. You might find a straggler whose parent was killed and left him without instructions as to winter protection, but never many of them. It is very singular that the male birds live ten ont of the twelve months on these bald peaks. They are shy old fellows, and only descend to the valleys in the breeding season—March, April or May—and then return to the peaks, remaining until spring again.

I often hear cowboys tell of the large flocks of sage hens on different mountains in the summer. I then know the breeding season is over and that the old cocks have flocked to their favorite haunts to keep bachelors' hall until winter comes, when their mates join them from the valleys. It is hard work to secure a good bag of these hardy old chaps, as they are very wary and careful and lie poorly to the dog. Not so with their sisters in the valleys. The latter are nearly fools, and with a good dog in August, September and October, it is an easy matter to extinguish a whole flock in a short time. They are easily killed, as they fly slow and straight, much like the Eastern prairie chicken, making a whistling, cooing noise as they rise. They are poor eating at best, and should in all cases be drawn befores they are cold, otherwise they taste of the sage.

There is no skill required in hunting or killing sage hens. Just find a flock and kill it, has been my experience. They are, however, scarce in the settled portions of the state along the railroads, and one must go 50 to 100 miles away before finding them plentiful. They never fly and light in bnsh or tree, though one out of ten may be found hiding in underbrush on the ground. They are a ground bird, and directly opposite to the grouse in this respec. So when you kill a sage hen sitting upon a limb make up your mind it is a grouse.—Hoosier in Sacramento Bee.

A Frog Ranch.

There is money in frogs, and it isn't everybody who knows it. They find ready sale in all large cities, at extra prices. Frogs' hind legs, properly cooked, are a great delicacy—a long way ahead of anything else in shape of meat. Quail on toast is nowhers. There is no expense attached to raising them. They feed themselves and do their own croaking without assistance. Along the Truckee meadows there are many places where frog vineyards could be maintained with profit. In some parts of the Eastern States the raising of them is a regular industry. The marshes between Detroit and Lake St. Clair, Michigan, are the resorts of millions of frogs, and it is asserted that more of them are sold in Detroit and any other city of its size. During the frog season heavy shipments are made to New York, Boston and other Eastern cities. The commercial frog is said to be as suspicious as a wolf, as wild as a deer and as shrewd as a fox. A good hunter, however, has been known to capture 200 frogs per day, but three or four dozen legs are considered a fair day's bag. The animals are not worth catching until they are two years old, and are not "prime" until they reach the age of five. Frogs have been caught in the St. Clair marshes weighing as much as seven pounde, and having legs like drumsticks. One was caught at the head of Belle Isle two years ago which kicked the beam at nine pounds.

The State Firemen's Tourney.

The Gilroy "Record" of last Saturday says that a committee, consisting of Messrs. F. M. Lamb, A. D. Cameron and V. Hoslinger, canvassed the town last Thursday for contributions towards defraying the expenses of the firemen's tournament which will take place the 14th and 15th of next May. The people responded liberally and between $800 and $900 was raised without difficulty. This with the $170 already obtained by entertainments, etc., makes something more than $1,000. The leading donations are as follows: Geo. Seaman, $100; Chas. Lynde, $75; Herold & Casey, $60; L. V. Slavich, $30; Henry Daily, $25; John Paine, $20; Dr. Luhbock, $20; Ellis & Moore, $20; L. Loupe, $20; A. Lewis, $20; Jacob Theis, $20; A. P. Baillaige, $20; Bennet & Son, $20; Bassignano & Co., $15; Henry Bertram, $15; A. J. Robinson, $15; Wm. Happs, $15; Chavers & Co., $15. The prizes, amounting to $1,000, will be given in coin. No silver trumpets nor lanterns, but $1,000 in coin; this ought to be an incentive to fast running and we hope and expect to see the best time made that has ever been recorded in the State. The track will be first-class, and the prospect is that everything will be favorable for the complete success of the tournament.

Forty years ago Eatonton was a fast town. Gambling of all kinds, cock-fighting and horse racing was the rule, and it is the exception now. Why, sir, at one term of the court—1845 or 1846—the grand jury returned one true bill against forty persons—John W. Ashurst, Solicitor General, and a number of prominent lawyers included—in one batch for gaming. It was in this case that it is said Judge Cone made himself famous. When the case was reached all of the defendants arose and pleaded guilty. Judge Cone fined each of them $10 and costs and lectured them severely upon the uselessness and immorality of such habits and the viciousness of the example which they were setting for the youth of the country; then, commanding the defendants to take their seats, with a solemn face but a merry twinkle in his eye, he turned to the clerk and said: "Now, Mr. Clerk, enter after these cases, State of Georgia vs. Judge Cone, gaming—special information by his honor; plea of guilty, and fine him $100 and costs. Call the next case, sir."

Cotton-seed oil is preferred to tallow for making oleomargarine, since it imparts to the compound a softer, more unctious character than is secured through the use of kidney fat, gut fat, lard or grease, which harden the mixture. Thus a gallon of cotton-seed oil, costing fifty to sixty cents, weighs about seven and a half pounds, and mixed with a little sweet milk and twenty-five per cent of aromatic dairy butter rivals in costany genuine butter from the cow. It is unaccountable that, for the sake of saving a few cents so many well-to-do people will continue to consume oleomargarine with full knowledge of its character in preference to using the natural product of the dairy.

Two thousand seven hundred and thirty dozen eggs were shipped from Santa Ana by rail during the past week.

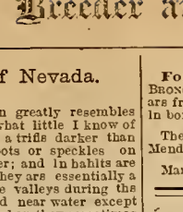
SUBSCRIBE FOR & ADVERTISE IN THE BREEDER AND SPORTSMAN

For Throat Diseases and Coughs, Brown's Bronchial Troches, like all other really good things, are frequently imitated. The genuine are sold only in boxes.

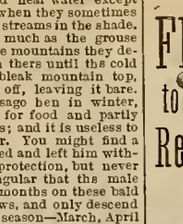
There is a large increase in the number of sheep in Mendocino county this year.

Marysville will hold an agricultural fair this fall.

FREE to every Reader



OF THIS Advertisement, A SPLENDID TIMEKEEPER.



In order to advertise **HOUSE AND HOME**, and secure subscribers promptly, we have decided to make the following most princely and magnificent offer to each and every reader of this paper. It is the common practice of the gold and silver refiners of England and Switzerland to purchase from the pawnbrokers of their respective countries all the gold and silver watches that have been unredeemed, simply for the sake of the gold and silver cases. The works are then sold to a celebrated watch firm who have made a specialty of this business. The firm places the works in the hands of skilliful workmen, who set to work and put them in as good condition as possible. These works embrace every variety of movement, some of them being very fine and perfect timekeepers all handsomely cased. *We have just purchased the entire stock* (25,000) of a bankrupt concern of the above described watches at less than the first cost of the material.

On receipt of $1.50, the subscription price of **House and Home**, and $1.00 extra to pay for packing, postage, and registering, we will send **House and Home** for one year (52 numbers), and one of these watches, postpaid, to any address in the United States. Watches mailed the day the order is received. The watches were purchased specially to go with **House and Home**, and will be furnished only to subscribers to that publication. In order to introduce it at once we make this unusual offer, which could not be made were it not for the fact that we bought the watches at quarter cost of manufacture.

On receipt of 50 cents extra we will send our new and elegant watch-chain, with a **Whistle Charm and Dog Call Attachment**—just the thing for hunters and sporting men.

MONEY RETURNED IF NOT AS DESCRIBED.

AT 1 P. M. ON

THURSDAY, APRIL 5TH.

Twelve head of fillies and geldings, two and three years old, sired by the well-known stallions

SULTAN AND DEL SUR.

The young horses to be offered are closely related in blood to the famous mares Sweetheart and Eva, and their style of going and breeding warrant us in belief that they will develop into trotters. They are broken and will be driven to harness the day of sale, that buyers may have an opportunity of judging of their merits. Though handled but a few months, they can trot as fast as many road horses. Mr. Rose's instructions are positive and peremptory, as the expense of transportation makes this absolutely necessary.

The sale will be bona fide, without limit or reserve and will determine whether a market can be had in California for fine-bred colts or owners will be compelled to ship East.

The colts may be seen at the track on Tuesday, April 3d. Full pedigrees and description day of sale.

KILLIP & CO., Auctioneers.

Also, immediately after the above sale, by direction of

J. B. HAGGIN, ESQ.,

WE WILL OFFER TWELVE HEAD OF YOUNG

Trotting Stallions, Fillies, Geldings and Roadster Mares.

Sired by Santa Claus, Alaska by Electioneer, Norwood, Poscora Hayward and other noted stallions. Among the roadsters are two well-matched teams, one particularly suitable for a ladies' phaeton team. Catalogues giving full description and pedigrees may be obtained at our office. The horses may be seen at track Saturday, March 31.

Alaska, the sire of a portion of these colts, will be exhibited at the track at the time of sale.

Auction Sale

OF

Fine Trotting Stock

AT

Fashion Stables, Petaluma.

ON

SATURDAY, APRIL 7.

CATALOGUE.

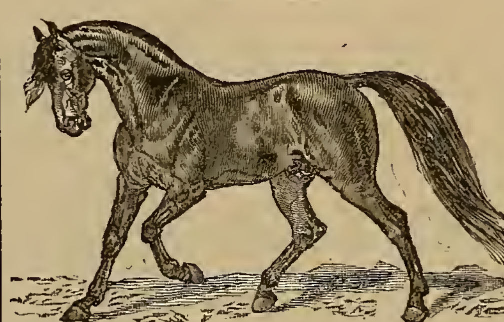
YERBA BUENA
Jerseys and Guernseys

THE YERBA BUENA HERD OF JERSEYS AND GUERNSEYS won all the herd prizes for 1882. Since then have been added three young bulls and some females and it now contains Farmer's Glory, Jersey Belle of Scituate, Coomassie and Alphea strains. These, with forty head selected on the Islands of Jersey and Guernsey from the best without regard to cost and imported directly, make this the best herd on the Pacific Coast, and equal to any at the East, where the extraordinarily high prices ruling show conclusively that these are the accepted butter producing animals of the country. Bulls have recently sold in New York for $10,000 to $12,000- Animals of both sexes for sale at moderate price.

HENRY PIERCE, San Francisco.

STALLIONS.

UNDERMAN.



SIRED BY ELMO, DAM BY TOM HYAR, SON OF OLD Belmont, will make the season of 1883 from March 1st to July 1st at the Bay District Track, San Francisco.

Underman is a dark chestnut, with blaze face and left hind foot white. Coming six years old, 15¾ hands high and weighs about 1,100 pounds.

Terms, $20 for the season. Mares not proving with foal can be returned next year free of charge. No responsibilities assumed for accidents. Apply to

FRED BENNETT.
Bay District Track, San Francisco.

THOROUGHBRED STALLION
X X,

BY MALCOLM, HIS DAM COLUMBIA, WILL MAKE THE ENSUING season at the Oakland Trotting Park. Terms, $25 the season.

X X (Doublecross) is of as high and fashionable breeding as any stallion in the country. His sire, Malcolm, is by imported Bonnie Scotland, his dam, Columbia, also by imported Bonnie Scotland, hence his name. Malcolm was one of the best racehorses of his day, and Columbia was also a fine race mare. For extension of Columbia's pedigree see advertisement of Anteeo. Her dam, Young Fashion, was the dam of Surprise, Scotland, Wauanita, Bonnie Kate (the dam of Bonnie Lizzie), Andes, Hock Hocking, Three Cheers, etc. The dam of Malcolm, Lady Lancaster, was the dam of Sagamore, Ontario (the dam of McWhirter), Regent, Lady Fairfield, Lady Amanda, Lady Middleton, etc., and a reference to the racing calendars will show how distinguished the members of these two families are. This is the only Bonnie Scotland stallion in California, and from his inbreeding has as much of the blood as if he were a son of that renowned sire. He is a horse of immense substance, good size, high form, and of the best disposition.

JOS. CAIRN SIMPSON, Oakland,
or 508 Montgomery street.

ANTEEO.

DARK BAY COLT, NEAR HIND FOOT WHITE; FOALED MAY 5th, 1879; bred by Joseph Cairn Simpson, Oakland, California.

BY ELECTIONEER.

1st dam—Columbine, by A. W. Richmond.
2nd " Columbia, by imported Bonnie Scotland.
3rd " Young Fashion, by imported Monarch.
4th " Fashion, by imported Trustee.
5th " Bonnets o' Blue, by Sir Charles.
6th " Reality, by Sir Archy.
7th dam—By imported Medley.
8th " By imported Centinel.
9th " By Mark Anthony.
10th " By imported Janus.
11th " By imported Monkey.
12th " By imported Silvereye.
13th " By Spanker.

See Bruce's American Stud Book, vol. 1, p. 307, and vol. 3, p. 79.

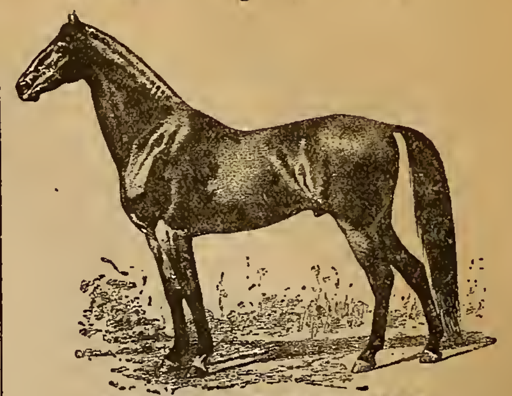
Will make the ensuing season, 1883, from February 15th to June 15th, at the Oakland Trotting Park. Terms $50 the season.

JOSEPH CAIRN SIMPSON.
Oakland or 508 Montgomery street, San Francisco.

Mares intended for either of the above stallions, and sent by Donahue, Petaluma, Sacramento or Stockton boats consigned to J. W. Morshead, City Front Stables, will be received, good care taken of them and forwarded to Oakland.

STALLIONS.

The Fast Trotting Premium Stallion



ALEXANDER

WILL STAND THE PRESENT SEASON AS FOLLOWS: MONdays, Tuesdays and Wednesdays at Clark's stables, Santa Rosa. Balance of time at Fashion stables, Petaluma.

Alexander is by Geo. M. Patchen Jr., the sire of Sam Purdy (2:20½) Starr King (2:22) and Vanderlynn (2:22). Dam Lady Crehn, by a son of Brown's Bellfounder, by imported Bellfounder. For full description see BREEDER AND SPORTSMAN of Sept. 9, 1882.

Of Alexander's get Tommy Dodd has a record of 2:24, Reliance 2:22½, Nellie Patchen 2:27¼, Eudora 2:34½, Inauguration three miles in 7:29—last mile in 2:26, Sonoma Boy 2:37. Alex. Button proved by his performance in 1880 to be one of the best three-year-olds which have ever appeared in any country. He won the stake for three-year-olds at the State fair, beating Belle Echo, Annie Laurie, Len Rose and others, winning the first, third and fifth heats and making a dead heat with Annie Laurie in the fourth; time, 2:34½, 2:30, 2:29, 2:30¾, 2:35. At the fair of the Santa Clara Valley Association at San Jose he won, beating Belle Echo and Len Rose; time, 2:28¾, 2:30¼, 2:33¾, 2:31¾. Belle Echo won the first heat. He won at Stockton, beating Honesty, Len Rose and Upright in straight heats; time, 2:32, 2:33½, 2:32½. In 1881, as a four-year-old, Button made a record of 2:26¾ over the Santa Rosa track. Dot Craig, by Alexander, has a private record of 2:29.

The Frasier team took first premium at the Sonoma and Marin District fair; also at Oakland for best carriage team.

Mares left at the City Front stables, San Francisco, will be forwarded. For further informatian apply to

T. T. UNKLESS, Petaluma.

THE CELEBRATED TROTTING STALLION
ERWIN DAVIS

WILL MAKE THE SEASON OF 1883 AT OAKLAND TROTTING park.

DESCRIPTION.

Erwin Davis is a beautiful mahogany bay with very black points and one hind foot white; 15 hands high; of superior good disposition and fine trotting action.

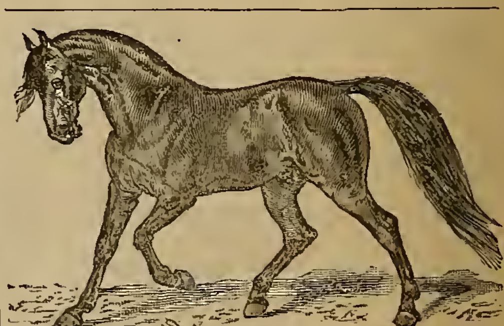
PEDIGREE.

Erwin Davis was sired by Kentucky Hunter (Skenandoah) by broken-legged Kentucky Hunter (the sire of Flora Temple) by Ferguson's Kentucky Hunter, by old Kentucky Hunter, by Highlander. Erwin's dam was Lost Diamond, by Vermont Hambletonian.

TERMS.

Twenty-five dollars for the season, payable at the time of service. Good pasturage at $5 per month. No responsibility for accidents or escapes. For particulars apply to

JOHN ROGERS,
Oakland Trotting Park.



THAD STEVENS.

THIS THOROUGHBRED HORSE WILL BE AT AGRICULTURAL Park, Sacramento, for the season commencing Feb. 1 and ending the 1st of July next. Good pasturage for mares will be provided at $3 per mouth. For terms and particulars apply to or address

W. M. MURRY, Agent,
Sacramento Racetrack.

TROTTING STALLION

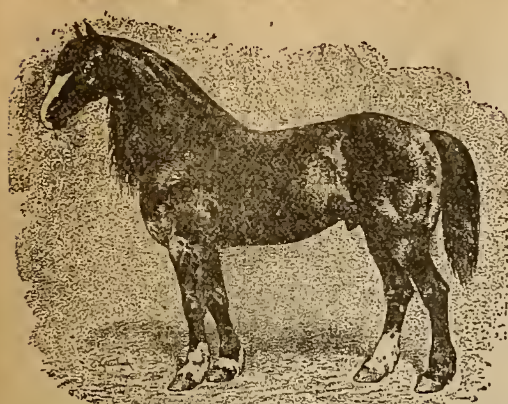
Eugene Casserly.

SIRE OF SWEETBRIAR, 2:26¾; NAPA QUEEN, 2:38½; ROCKwell, 2:39; Bill Woodward, 2:40; Smoothbriar, two-year-old record 2:57; May Day, two-year-old record 2:59½. Will make the season of 1883 at Oakland on Thursdays, Fridays and Saturdays and at Walnut Creek Sundays, Mondays, Tuesdays and Wednesdays. He was sired by General Taylor, dam Jennie by Lexington. Terms $30 for the season. Good pasturage at reasonable rates. No responsibility for accidents or escapes. Address

THOMAS S. BREMNER.
Seventeenth street and Telegraph Ave.,
Or J. M. Heinold, 1426 San Pablo Avenue, Oakland.

STALLIONS.

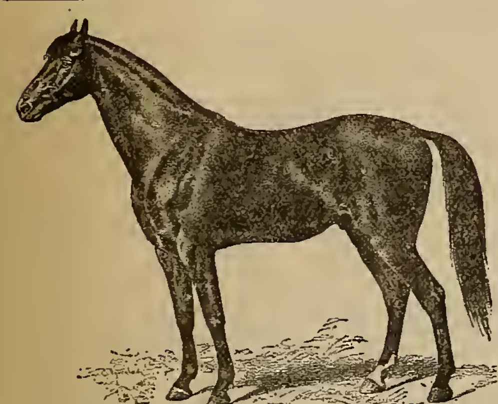
STALLIONS.



OWNERS OF STALLIONS DESIRING TO PLACE THE MERITS of their stock horses before the hreeding, public sbould advertise in the BREEDER AND SPORTSMAN. The fee from one mare will pay the cost of a reasonable advertisement.

Stallion hills printed in first-class style. Call at this office and see samples.

NO. 508 MONTGOMERY ST.



MAMBRINO WILKES.

Black Stallion, sixteen hands in height, by George Wilkes, son of Rysdyk's Hambletonian, bred by B. J. Treacy of Fayette County, Kentucky. Dam Lady Christman by Todhunter's Mambrino or Idol, son of Mambrino Chief. Second dam by Pilot Jr. Third dam by Kentucky Whip. Idol's dam was thoroughbred and was by American Eclipse.

THIS IS THE LARGEST AND ONE OF THE BEST COLTS OF George Wilkes (weighing at this date 1,260 pounds) comhining the Hamhletonian and Mamhrino strains and also several thoroughhred crosses. His colts demonstrate tbat he possesses in an eminent degree the same faculty of transmitting the family qualities to his offspring which put George Wilkes in the front rank as a sire of trotters.

☞ George Wilkes has twenty representatives in the 2:30 list, of which 10 have records of 2:25 or better, 4 of 2:20 or hetter and 3 of 2:18 or hetter.

Will make the ensuing season, heginning Febrnary 1st, 1883, at STOCKTON.

In pntting the price by the season at the low figure of $40 tbe owner does not acknowledge, therehy, any inferiority on the part of this horse to any other sire of Trotters.

IRVIN AYRES.

MAMBRINO TROTTING STALLION

ABBOTSFORD.

☞ Record at Six Years old, 2:21½. ☜

PEDIGREE.

BY WOODFORD MAMBRINO, HIS DAM COLUMBIA BY YOUNG Columbus. Woodford Mambrino by Mambrino Chief, his dam Woodhine hy Woodford, a tboroughbred son of Kosclusko.

Woodford Mambrino is recognized to be the best son of Mamhrino Chlef. His own record is 2:21¾, and there are a large number of his get in tbe 2:30 list. Among them: Abbottsford, 2:21¾; Convoy, 2:22¾; Magenta, 2:24¾; Lady McFatridge, 2:29; Dacia, 2:29¾; George A. Ayer, 2:30.

Besides those having public records, he is the sire of the two celebrated mares owned by Robert Bonner—Manetta and Malice. Manetta, with a running mate, and barnessed to a road wagon, trotted two miles in 4:27¾, and Malice trotted a trial, on the same track, a mile in 2:19¾. Woodford Mambrino is also the sire of Princeps, the sire of Trinket; record, 2:14. Woodbine is also the dam of Wedgewood, record, 2:19. Young Columhus, the sire of tbe dam of Ahhottsford, has nine of his get in the 2:30 list, so that on both sides of tbe house there are notable performers. Abbotsford is a rich rosewood brown, 15¾ hands, and of very high form. His get are very promising, his daughter Jasmine having won the Emhryo Stake for yearlings in 1881, and every one whicb has been put in training has abown good apeed.

TERMS.

Seventy-five dollars the season, to be paid before removing the animal. Mares not proving in foal can be returned the following season free of charge. Good pasturage at reasonable rates, and extra pains taken, but no liability for accidents or escapes.

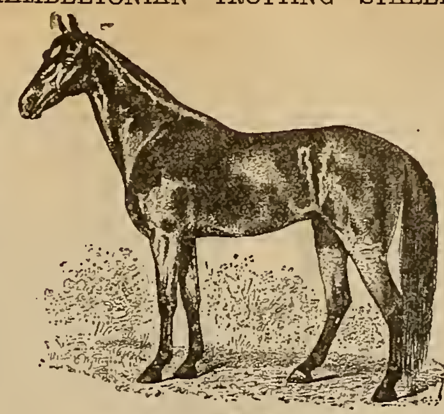
LOCATION.

Ahbotsford will make the ensuing season, 1883, on the rancb of S. B. Whipple, Esq., San Mateo, season commencing February 15th and ending Jnne 1st, 1883. For full history aee tbe issne of BREEDER AND SPORTSMAN of August 5th, 1882.

GEORGE BAYLIS, Agent, San Mateo, Cal.

STALLIONS.

HAMBLETONIAN TROTTING STALLION



BOB MASON

By Echo. His dam Belle Mason by Belmont, Thoroughbred.

Echo by Rysdyk's Hambletonian, his dam Fanny Felter by Magnolia (by American Star). Belle Mason by Belmont (Williamson's); First dam Lucy Johnson by the Pony (son of Imported Leviathan); second dam Catalpa, by Frank; third dam by John Richards.

WILL MAKE THE ENSUING SEASON, LIMITED TO TWENTY mares, commencing Fehruary 15, 1883, and ending June 15, 1883, at the stahles of his owner, Figueroa street, Los Angeles.

DESCRIPTION.

Boh Mason is a mahogany hay, with inside of off hind ankle white and star in forehead; sixteen hands, and weighs 1,100 pounds. Foaled May 10, 1879. He is of fine, kindly disposition, a natural trotter, and has shown great speed, but as yet has no public record. For full history of his sire, Echo, see BREEDER AND SPORTSMAN July 29, 1882. See also, for his full hrother, Exile, BREEDER AND SPORTSMAN, issue of Septemher 16, 1882.

TERMS.

One hundred dollars the season, payahle at time of service. All mares at risk of owners. Mares not proving in foal can be returned the following season free of charge. Address

CHARLES J. ELLIS,
Post office box 55, Los Angeles, Cal.

THE TROTTING STALLIONS

SINGLETON AND LA HARPE.

SINGLETON WILL MAKE THE COMING SEASON, FROM Mach 1st to July 15th, 1883, at the farm of the owner, three miles north of Chico, Butte Co., Cal.

PEDIGREE.

Singleton is by Willie Schepper, a son of Rysdyk's Hambletonian, his dam Ligbtfoot (the dam of Pride) hy Flaxtail, a son of Pruden's Blue Bull.

DESCRIPTION.

Singleton is a dark brown horse, tan flanks and mnzzle, a little toncb of white on hind feet and one fore foot, and star in forebead. He is 15¾ hands high and weighs 1,100 pounds. He was hred by Dr. M. W. Hicks, foaled spring of 1878.

TERMS.

Fifty dollars the season. Mares not proving in foal will he hred tbe following season free of charge. Mares from a distance will be pastured without charge during the season. Mares shipped to Chico, consigned to me, will be received on arrival of train, and taken to tbe ranch. Mares kept in any manner their owners desire, at reasonahle rates. Tbere is every convenience on tbe place, boxes, paddocks and plenty of shade and water.

THE **Centennial Chronograph**

A POSITIVELY RELIABLE "FLY-BACK"

HORSE-TIMER

And Accurate Time-piece Combined.

STEM WINDER AND STEM SETTER.

In heavy Gold Open-face Cases, price $55
In heavy Silver Open-face Cases...... 27

[From the Jewelers' Circular.]

"The Centennial chronograph (fly-back) or horse-timer, recently introduced by Messrs. Cross & Beguelin, is, regardless of price, one of the most substantial and accurate pieces of timing mechanism we have seen. This timer is constructed on scientific mechanical principles that must excite the admiration of every intelligent watchmaker, and it will doubtless become universally popular."

CROSS & BEGUELIN,

MANUFACTURERS,

21 MAIDEN LANE, NEW YORK.

When you send an order mention the BREEDER AND SPORTSMAN.

My New Catalogue For 1883;

OF 180 PAGES, CONTAINING VALUABLE TAbles, with trotting statistics up to close of 1882, with descriptions and pedigrees of 276 high-bred trotting stock, now at Fairlawn stock farm, adjoining the city of Lexington, Ky., will be sent free to all applicants who contemplate purchasing, and to all others who send four cents in stamps to prepay postage.

TWENTY
Fine & Highly-bred Broodmares

bred to the Fairlawn stallions, and

138 Head of Promising Young Trotting Stock,

consisting of young stallions, fillies and roadsters, most of them sired by ALMONT, HAPPY MEDIUM, ABERDEEN and CASSIUS M. CLAY JR.,

ARE OFFERED AT PRIVATE SALE.

There are in use at Fairlawn over one hundred HIGHLY-BRED BROODMARES, with the standard-bred and noted trotting stallions ALMONT, HAPPY MEDIUM and ABERDEEN at the head of the stud.

It is confidently believed that no breeding establishment in the world possesses greater facilities for making judicious trotting crosses. Hence parties who wish to engage in breeding and raising fine, highly-bred and fast trotters, and those who want fast, stylish, game, level-headed and reliable roadsters, have an opportunity of obtaining just what they want at FAIRLAWN.

ALMONT already has twenty of his get with public records of 2:30 or better, and two with records below 2:20. He has a granddaughter with a record of 2:20, made in 1881; another with a record of 2:23¾; another with a record of 2:26, made in 1882; another with a record of 2:28¼, and a grandson with a three-year-old record of 2:23¾, the fastest ever made up to 1881. No trotting stallion at the same age ever made such a showing.

HAPPY MEDIUM has sixteen of his get with records ranging from 2:20¼ to 2:30, a larger number than any other stallion except Almont ever sired at same age.

ABERDEEN, with very limited opportunities in the stud, has eight of his get with public records ranging from 2:15¾ to 2:27½. No son of Rysdyk's Hambletonian has made as good a showing at same age.

ETHAN ALLEN JR., full brother of Daniel Lambert, who has twenty-two of his get with records of 2:30 or better, has recently been added to the Fairlawn breeding stud. He was sired by Ethan Allen, dam Fanny Cook, by old Abdallah; second dam by Stockholm's American Star; third dam by Red Bird, son of Bishop's Hambletonian. With very inferior opportunities in the stud, Ethan Allen Jr. has sired five trotters with records of from 2:23½ to 2:28½, all of them being out of mares of unknown pedigrees.

The Fairlawn stallions have in 1882 had eleven new ones of their get to make records below 2:30 and one to make a record below 2:20. Besides this, each of the Fairlawn stallions has had a granddaughter to drop into the 2:30 class, viz.: Maud T, 2:26, by Hamlin's Almont Jr.; Carrie Medium, 2:27¼, by Happy Medium Jr.; and Carrie B, 2:28¼, by Elial G, son of Aberdeen. The stallions on no other breeding farm in America have made such a showing in 1882.

These stallions will be permitted to serve

A Limited Number of Mares
IN 1883.

ALMONT, limited to twenty mares, at $300; HAPPY MEDIUM, limited to twenty-five mares, at $150; ABERDEEN, limited to forty mares, at $100 the season, and ETHAN ALLEN JR., limited to twenty mares, at $50 the season, with privilege to return such mares in 1884 as fail to stand. A few approved mares will be bred on shares to either stallion.

The ONE-PRICE PLAN is strictly adhered to at Fairlawn, and THE PRICE OF EVERY ANIMAL FOR SALE IS PRINTED IN THE CATALOGUE. These prices will neither be advanced nor reduced A SINGLE DOLLAR until after May 1, 1883. PURCHASERS FROM A DISTANCE CAN BUY ON ORDERS AT EXACTLY THE SAME PRICE AS IF PRESENT IN PERSON, AND ALL STOCK SOLD ON ORDERS WITHOUT THE PURCHASERS SEEING THEM CAN BE RETURNED BY THE PURCHASERS IF THEY DO NOT IN EVERY RESPECT COME FULLY UP TO THE DESCRIPTIONS GIVEN. Full written descriptions will be given any applicant who contemplates purchasing.

Time will be given responsible parties at regular bank rates of interest.

FOR SALE.

Thoroughbred Colt for Sale.

CITO. CHESTNUT COLT, FOALED APRIL 5, 1882. By Joe Hooker, his dam Too Soon by Norfolk, grandam Lady Davis (dam of Dashaway) by Red Bill, son of Medoc, etc. This is a highly-formed colt, of good size and a hearty feeder. Being nearly a brother in blood to Fred Collier (Lady Davis being the great Grandam of Fred, and his dam also being by Norfolk) and the Joe Hookers so far as tried all racehorses, this is a good chance to get a colt of great promise for a moderate sum. He has four white legs above knees and hocks, a white face and other white markings. Price $500 if applied for before the 20th of March. For further particulars address this office.

FOR SALE.

A VERY FINE HAMBLETONIAN stallion, imported from Syracuse, N. Y.; nine years old; mahogany bay; sixteen hands high; perfectly sound; well broken; very stylish; cost over $1,500; property of a banker; full papers; got by Hambletonian Prince, be by Volunteer. Can be seen at Club Stables.

10:40 A M	Salinas, Soledad and Way Stations.	6:02 P M

*Sundays excepted. †Sundays only (sportsmen's train).

Stage connections are made daily with the 10:40 A. M. Train, except Pescadero Stages via San Mateo, which connect with 8:30 A. M. Train.

EXCURSION TICKETS sold on Saturdays and Sunday mornings—good to return Monday—to Santa Clara or San Jose, $2 50; to Monterey or Santa Cruz, $5; also to principal points between San Francisco and San Jose.

TICKET OFFICES.—Passenger Depot, Townsend street, and No. 2 New Montgomery street, Palace Hotel.

A. C. BASSETT, Superintendent. H. R. JUDAH, Asst. Pass. & Tkt. Agt.

☞ S. P. Atlantic Express Train via Los Angeles, Yuma, etc., leaves San Francisco daily via Oakland ferry, foot of Market street, at 9:30 A. M.

TO

Sportsmen & Pleasure-Seekers.

THE

SOUTHERN PACIFIC R. R. CO.

RESPECTFULLY CALLS ATTENTION TO THE

SUPERIOR FACILITIES

AFFORDED BY THEIR LINE FOR REACHING with speed and comfort the best places in the State for

Sea Bathing, Shooting and Fishing.

TRAINS LEAVE SAN FRANCISCO DAILY FOR

MONTEREY,

THE MOST CHARMING

Summer and Winter Resort of the Pacific Coast,

with its beautiful Groves and delightful Drives. Trout in abundance can be obtained from the several streams in the vicinity of Monterey, and the best shooting may be had in season.

THE BAY OF MONTEREY

Is noted for the extent and variety of fish which abound in its waters, notably Salmon, Rock Cod, Barracuda, Pompino, Spanish Mackerel, and Flounder. The above-mentioned attractions, in connection with the low rates of fare, rapid transit, and the superior accommodations furnished at the "HOTEL DEL MONTE," have made Monterey a paradise for sportsmen.

THE BATHING ESTABLISHMENT

OF THE

"HOTEL DEL MONTE,"

IS UNSURPASSED.

A SPACIOUS SWIMMING TANK

(150 x 50 feet)

FOR WARM SALT WATER, PLUNGE AND SWIMMING BATHS.

ELEGANT ROOMS

For Individual Baths with DOUCHE and SHOWER facilities.

MAGNIFICENT BEACH

Of pure white sand for SURF BATHING, Etc., Etc.

THE FAVORITE ROUTE to those well-known Watering Places,

APTOS, SOQUEL AND SANTA CRUZ,

IS VIA THE

Southern Pacific Railroad,

(Broad Gauge), and the

SANTA CRUZ RAILROAD.

☞ At PAJARO, the SANTA CRUZ R. R. connects daily with Trains of the S. P. R. R.

The S. P. R. R. runs through the counties of San Mateo, Santa Clara, San Benito, Santa Cruz and Monterey, in each of which game abounds in great variety. Notably

Quail, Pigeon, Snipe, Duck, Geese, Deer and Bear.

Lakes PILARCITOS and SAN ANDREAS are reached by this line. Stages connect with trains daily at San Mateo for those well-known Retreats, PURISSIMA, SAN GREGORIO and PESCADERO. We would particularly call attention to the unlimited extent of range at and about SAN BRUNO and McMAHON'S for RIFLE PRACTICE.

These resorts are but a short distance from San Francisco and offer special inducements to the lovers of this manly sport.

SPECIAL NOTICE.

Sportsmen and others presenting Passage Tickets o any description issued by this Company will be entitled to

FREE TRANSPORTATION OF THEIR DOGS

when carried in Baggage Cars and put in charge of Train Baggagemen. Train Baggagemen are instructed to issue CHECKS for all dogs received in Baggage Cars.

☞ In order to guard against accidents to Dogs while in transit, it is necessary that they be provided with COLLAR AND CHAIN. Guns and Fishing Tackle checked and carried free of charge. Guns taken apart and securely packed in wood or leather cases may be taken in Passenger Cars.

TICKET OFFICES.—Passenger Depot, Townsend street, and No. 2 New Montgomery street, Palace Hotel.

A. C. BASSETT, Superintendent H. R. JUDAH, Asst. Pass. and Tkt Agt,

☞ S. P. Atlantic Express Train via Los Angeles Yuma, etc., leaves San Francisco daily via Oakland Ferry, foot of Market Street at 9:30 A. M.

Two-Year-Old Trotting Stake for 1883.

for 1883

A TROTTING STAKE FOR COLTS AND FILlies (foals of 1881), to be trotted at the California State fair of 1883; $50 entrance, of which $25 must accompany nomination, and the remaining $25 to be paid August 1, 1883; $500 to be added by the society.

Conditions.

The above stake to be mile heats, in harness, and to rules of National Trotting Association. Entrance money to be divided as follows: Fifty per cent of stakes to first colt, 25 per cent to second, 15 per cent to third and 10 per cent to fourth. Five to fill.

The $500 added money to be divided as follows: One hundred dollars each to winners of money and $100 to the stallion whose get wins first money, if the stallion is owned in California. Entries close April 7, 1883, with the Secretary. A colt winning by a walk-over is entitled to all the stakes but none of the added money; a colt distancing the field is entitled to first money and all the stakes.

P. A. FINIGAN, President.

EDWIN F. SMITH, Secretary.
Sacramento, March 12, 1883.

P. S.—This is the same stake that was advertised to close, March 15, 1883, but was withdrawn on account of an error. The time for closing has been extended to April 7, 1883.

* Saddle. † Thoroughbred.

The Great Broodmares.

Within the past few years the influence upon their progeny of the dams of trotters has come to be recognized as an important factor in the breeding problem, and in these days of intelligent thought upon this subject the man who would send a mare of unknown blood, and of no especial merit as a roadster herself, to the embraces of a standard trotting stallion would be looked upon as little less than a lunatic. That the maternal parent impresses her characteristics upon her foals with great certainty is universally acknowledged; and hence when examining the list of trotters whose speed has entitled them to a place in the 2:30 list, the breeding of their dams is a subject well worthy of earnest attention, for it is only by such study that the breeder can learn what families of mares impart with the greatest certainty to their foals the gift of speed that is the great prize sought for in the lottery of breeding. For this reason the table which is given above of all mares that have produced two or more trotters with records of 2:30 or better is of especial interest and value.

There are now fifty-eight mares that have produced two or more trotters with 2:30 or better records, and, perhaps, the first notable fact that strikes a careful reader of the list is that the dams of both Maud S and St. Julien—the fastest mare and gelding in the world—are to be found therein, and that each of them has three sons and daughters in the list, Miss Russell being represented by Maud S, 2:10¼; Nutwood, 2:18¾; and Cora Belmont, 2:24½; while Flora, the dam of St. Julien, 2:11¼, is also represented by Unalalla, 2:23¾, and St. Remo, 2:28¾.

And while considering the fact that the dam of the fastest trotter in the world is also the greatest broodmare, judged by the speed test, that has ever been known, one cannot but be impressed by the further fact that the family to whom she belongs—that of Pilot Jr.—is to-day celebrated almost solely for its broodmares. And certainly the showing made by them is a remarkable one. After Miss Russell comes Midnight, whose son, Jay Eye See, stands at the head of all four-year-olds with his record of 2:19, made twice in one race, and Noontide, that as a five-year-old trotted in 2:20½, and would doubtless have, ere this, greatly reduced these figures, had not a bad leg prevented her being trained further. These wonderful young trotters were by different sires, Jay Eye See being a son of Dictator, while Noontide is by Harold. Silverella, the dam of Silverton, 2:20¼, and Mamie, 2:21¼, is also claimed to be a daughter of Pilot Jr., but even with this claim not allowed the showing is a grand one, for right behind her comes Waterwitch, that gave to the world Mambrino Gift, the first stallion to trot in 2:20, and Scotland, whose record of 2:22½ is no measure of his real speed. He is by the imported thoroughbred horse Bonnie Scotland, while Mambrino Gift is a son of Mambrino Pilot, the mare throwing speed at the trot to the cover of both a running and a trotting stallion. Crop, by Pilot Jr., is the dam of Blanche Amory, 2:26, by Clark Chief, and of Code, three-year-old record 2:30, by Dictator—a showing of which any animal might well be proud. Santa Maria, one of the earliest matrons at Woodburn, foaled Billy Hoskins, 2:26¼, and Hylas, 2:24¼, to the cover of Alexander's Edwin Forrest and Alcalde; and the list ends with Diana, who has Geo. A. Ayer, 2:30, by Woodford Mambrino, and Lady Kelso, 2:29 under saddle, by Belmont, to her credit. Here, then, are seven mares by Pilot Jr. that have produced fifteen trotters with records of 2:30 or better, and a little figuring will show that the grand average of these records is 2:22¾! No other family can compare with this showing when the number of animals involved is taken into consideration. Were speed alone to be the test, the mares by Sayre's Harry Clay would take precedence, as two of them, Flora and Green Mountain Maid, have produced St. Julien, 2:11¼; Unalalla, 2:23¾; St. Remo, 2:28¾; Elaine, 2:20; Prospero, 2:20; and Dame Trot, 2:22; the grand average in this instance being 2:20¾. Next come the daughters of Seely's American Star, those that figure in the table being three in number: Clara, the dam of Dexter, 2:17¼, and Alma, 2:28¾; Julia Machree, the dam of Chester, 2:27, and Enfield, 2:29; and Lady Sears, dam of Huntress, 2:20¾, and Trio, 2:23¼.

To these three families, then, Pilot Jr., Sayre's Harry Clay and Seely's American Star, must be conceded the palm of superiority in the matter of broodmares, and as the test applied is a fair one, they are justly entitled to the position. But aside from those mentioned, there are many mares deserving of special reference. Belle Brandon, dam of Governor Sprague, 2:20½, and Amy, 2:20½, still stands out boldly as the only daughter of Rysdyk's Hambletonian in the list, a fact which is worthy of note, as there must be a very large representation of the old horse's daughters now in the breeding ranks. Belle Brandon is in fact, the only one in the list that has a drop of the blood of this great old sire that has been so potent a factor in the production of trotters.

The thoroughbred element, concerning the potency and value of which in trotting pedigrees so much has heen written of late, is represented by Abbess, by Albion, Dolly, a daughter of Iowa, and Jenny, hy Belmont, and Jenny, by Crockett's Arabian. By General Hatch, a son of Strader's Cassius M. Clay Jr., Dolly has produced Envoy and Fleta, both of whom have a record of 2:28; while Jenny is the dam of Nellie Patchen, 2:27¼, by Alexander; and Flora Shepherd, 2:30, by General McClellan. Emeline, by Henry B. Patcheu, is one of the last seasou's accessious to the list, and a notable one, she having prodnced Adele Gould, 2:19, and Ray Gould, 2:29½, hy Jay Gould; aud Kate Taylor, 2:23¾, by Aberdeen; aud all of these first came into the 2:30 list last season—a feat never before accomplished. Gretchen, hy Mambriuo Pilot, that was taken to Califoruia, has heeu doing good work for the hreeding interests of that State, having foaled Romero, 2:19¼, by A. W. Richmond, Del Sur, 2:24½, hy The Moor, and Iuca, 2:27, by Woodford Mambriuo. Jenuy, by Crockett's Arabian, who gave the turf May Qneen, 2:20, had a son, King Almont, hy Almont, enter the 2:30 list last season, making her for the first time eligible to the table. Abbese is another newcomer. Three years ago her eon, Steinway, made a record of 2:25¾ as a three-year-old, the performance being at the time the best on record for a trotter of that age; and last season Solo, a fnll sister to Steinway, entered the 2:30 list.

Altogether, eleven names have heen added to the list, they being Ahbess, by Albion, dam of Steinway, 2:25¾, and Solo, 2:28¾, both hy Strathmore; Crop, by Pilot Jr., dam of Blanche Amory, 2:26, by Clark Chief, and Code (three years), 2:30, by Dictator; Dolly Martin, by Defiance, dam of Volney, 2:23, by Voluuteer, and Romeo, 2:29¼, by Menelaus; Emeline, by Henry B. Patchen, dam of Adele Gould, 2:19, and Ray Gould, 2:29½, hy Jay Gould, and Kate Taylor, 2:23¾, by Aberdeen; Gretchen, by Mambriuo Pilot, dam of Romero, 2:19¼, by A. W. Richmond, Del Sur, 2:24½, by The Moor, and Inca, 2:27, by Woodford Mambrino; Jenny, hy Crockett's Arabiau, dam of May Queen, 2:20, by Alexauder's Norman, and King Almont, 2:26¼, by Almont; Maxwell mare (pedigree unkuown), dam of Helene, 2:21, and Guess Not, 2:27½, hoth by Hambletoniau Prince; Midnight, hy Pilot Jr., dam of Jay Eye See, 2:19 (four years), by Dictator, aud Noontide, 2:20½, by Harold; Molly Walker, hy Captain Walker, dam of General Garfield, 2:21, hy Kentucky Black Hawk, and Harry Wilkes, 2:23¼, by George Wilkes; Peralto's dam (pedigree uuknown), dam of Peralto, 2:26½, and Billy Buttou, 2:29, by Hambletonian Prince; Nelly Moore, by Westchester, dam of Lady Moore, 2:25, by Peacemaker, and Tom Moore, 2:28, by Jupiter Abdallab.—*Breeder's Gazette.*

Death of Director's Dam.

Col. West's hay mare Dolly, the dam of Mr. Salisbury's hlack stallion Director, died at Westland Farm, Lexington, Kentucky, March 18, from general debility and loss of vital power. Dolly was one of the remarkable hroodmares of the country. She was hred by J. R. Adams, Georgetown, Ky., foaled 1861, by Mamhrino Chief. First dam by a son of Potomac, second dam hy Saxe Weimar. Her record on the farm is as follows:

1865—B c Thorndale, record 2:22¼, by Alexander's Abdallah.
1866—B c (gelded) by Young Melbourne.
1866—Chc John F. Payne, record 2:45¾ at three years old, by Adams' Bald Chief.
1870—Bl f Winona by Almont.
1871—Ch f by Almont.
1874—Ch c (gelded) by West Wind.
1875—B c Onward, six-year-old record 2:25¼, by George Wilkes,
1876—B c Roulette (gelded) by Harold.
1877—Bl c Director, five-year-old record 2:23¾, by Dictator.
1879—B f Defiance, by Dictator.
1882—B f by Egmont.
Barren 1867, 69, 72, 73 and 80.

Thorndale is the sire of Daisydale, 2:19¾, Edwin Thorne, 2:16½, and May Thorne, 2:24¾. Johu F. Payue is the sire of Bay Chieftain, 2:28¼. There are less thau a dozen mares with three foale in the 2:30 list but Dolly stands alone with the credit of three sous with records better than 2:26.

BASE BALL.

Haverlys vs. Niantics.

The base ball aeason was auspicionsly opeued on Sunday last at the Recreation Gronnds by a game between the Haverly and Niantic Clnhs. The attendance was remarkahly good consideriug the uumeroua counter attractions and the game was well worth the visit. As was naturally to be expected the fielding was at times erratic though as a general rule both the fielding and hatting were such as to warrant the belief that the season would early develop much latent talent among the players. It invariahly happens at the commencement of a season that errore are in undesirable prominence. Iu this respect, however, the game wae a noticeahle exception to the rule as the annexed score will show. The fielding of Sweeney, who officiated hefore the bat, waa hrilliant, and the eame may be said of Meegan. The ont field of the Haverlys was hardly np to the standard, that of the Niantics acceptiug all of the chancee offered and especially doing good work at the bat.

Another commendable feature is the promptnesa with which the game commenced, precisely on schedule time. In fact throughout the whole gamo both teams evidenced a disposition to aid the management in carrying out a successful season, even with regard to details.

The Haverlys opened tho game, Barnea leading off with a clever hit to left, going to secoud on Levy's stroke aud coming home with the assistance of Sohr aud Morris. The Niantics were successivcly cartwheeled for five inniugs, their best work both at the bat and in the fiold having been done iu the aixth, seventh and eigthth inninga. Following is the score:

HAVERLYS.	TB	R	BH	PO	A	E
L. Barnes, 1b	4	3	1	7	e	2
R. Levy, c f	4	1	1	0	2	1
A. Sohr, l f	4	0	e	1	1	0
E. Morris, 3b	3	0	e	3	2	0
F. Carroll, c	3	1	0	13	2	0
P. Meegan, p	4	1	0	1	13	e
C. Gagus, 2b	4	2	1	e	e	0
J. Sheridan, s s	4	0	e	1	1	0
Johnson, r f	4	0	0	1	e	1
Totals	34	8	3	27	21	4

NIANTICS.	TB	R	BH	PO	A	E
Carroll, 2b	4	0	e	0	2	2
J. Donohue, s s	3	e	1	0	3	e
C. Sweeney, p	4	0	2	e	12	1
M. Finn, 3b	4	0	e	3	4	0
H. Lawton, c	3	e	0	9	3	1
G. Wright, c f	4	0	0	e	0	e
C. Sullivan, r f	3	0	e	1	0	0

Fogarty, c f	3	2	2	e	0	0
Totals	27	2	5	27	25	7

Innings	1	2	3	4	5	6	7	8	9	
Haverlys	1	e	1	e	1	3	1	1	0	—e
Niantics	0	e	0	0	e	1	e	1	0	—2

Two-base hits—Sweeney and Gagus. Wild pitches—Sweeney, 5; Meegan, e. Passed balls—Lawton, 6; Finn, 1; Carroll, 1. Double plays—Sohr and Barnes. Out on strikes—Haverlys, 8; Niantics, 8. Bases on balls—Haverlys, 3; Niantics, 4. Left on bases—Haverlys 2; Niantics, 3. Time of game—Two hours and forty-five minutes.

The California aud Redingtou Clubs play the eecond game of the seasou to-morrow.

THE STABLE.

Racing Tips vs. Racing Plates.

One of the points given prominence by the *Turf, Field and Farm* to show that the tips "would not do" was the mandate of a racehorse owner to "take the d——d thinge off." The claim was tbat they induced the gait of a rocking-horse, and if this qneer result were to follow, it is not snrprising that between the two d's there were letters which it is thought a breach of decorum to put in type. It will not require much space to prove conclnsively that a more feeble and foolish claim caunot he made, aud thongh there are other "poiuts," in relation to the use of tips, where tbere is likely to be a divergence of opinion, in this the fallacy can be eo clearly shown as not to leave a donbt.

Racing plates range from one and a half to four onncee each and are from three-eighths to five-eighths of an inch wide. They are easily beut by the hands, and in order to keep them in place on the foot, nails are required to be driven close the end.

The usual thickness is from one-eighth to three-eixteenths of an inch, so that more minute "protection" can scarcely be imagined. A majority of plating-smithe pare the foot down, after removing the ehoe, to adjust the plate, and all of them drive the nail as close to the heel eud as the hole can he punched. In paring the foot the sole ie scooped out, there being a two-fold object iu view, viz., to lighten the foot as mnch as poesible and leave a smooth eurface which will not hold the dirt. A racing-tip of the same width and thickness of a full plate will weigh a little more than half ae mnch, and if a working tip has heen worn it is formed of the same length in order to fill the space occnpied. Now the entire purpose of plating is to give a better foothold than the bare foot—a better hold of the gronud like the spiked shoes of the pedestrian, and thus giving a better fulcrum for the propelling levers to work upon. The posterior part of the foot has nothing to do towards giving the impetns. It receivee the shock attending the first contract, and snpports the hody, in which it is aided by the anterior part, as tbat is carried over it. But wheu the vigorous last effort is made to throw the weight np and forward, the heel doee not touch. The stride of the racehorse is treated upon in another colnmn though so hriefly that this part is not explained.

To commence the stride when the forefoot givee the final impetus to hurl the body through the air we find that it atill rests on the ground when it is quite a diatance posterior to the center of gravity. A perpendicnlar from the toe will hisect the body in the rear of the cantel of the saddle, and this will place at least three-qnarters of the weight—including the rider—in front of it. It may he wrong to state that the heel has nothing to do with propulaion, and the meaning in making that statement is that it does not aid in the push.

When the foot first strikes the ground far in advance of the point of the shoulder and the stifle, the impetus of the hody is aided hy the grasp the foot takee of the earth. There is a *pull* nntil the leg is straight, and as soon as the foot is level, toe and heel tonchiug, then the whole surface ia called into service.

There cannot be a better contrivance to give the full effect than the frog, bars and wall afford. It is easy to nnderstand that thin plates of metal covering quarters and heel cannot he of any service to perform this dnty, thongh it is palpahly evident that on some kinds of eoil, a sharper toe than can be formed of the horn is advantageous.

If that catch reaches from the toe the center of the foot, or even as far hack as the point of the frog, it is all-sufficient to accomplish the pnrpose. In former days when the regulation weight for training shoes was three pounds to the aet—some trainers used those which weighed four ponnds—the difference between shoes and plates was rated at from two to four seconds in a mile. Mr. Winters relates a circnmstance which exemplifies what a firm hold old practices have on some men. An old-time traiuer was engaged by him when Neopolitan was running.

The stable of Mr. Winters was training in Sacramento, and the owner insisted that the work should he given with the animals barefooted. Before shippiug the horses to Oakland, where the meeting was to be held, Neapolitan ran a capital trial. The trainer claimed that he could not form auy idea of how good it was unless she wore shoes, hut the orders were peremptory that they shonld not he put on. "Rate it the aame as though she was plated," he told the trainer, and started him on the jouruey. When he reached Oakland he was not satiefied, and sending the mare to the blacksmith ehop had a set put on of the old standard weight. When the run waa made the ahoea were pulled off, as his intention waa not to let Mr. Winters know what had heen done, paying the hlacksmith himself. The nailholes convicted him, however, and the hoya confirmed the evideuce.

In this connection it ia appropos to atate that Mr. Wintere has fouud that platee make a differeuce of one second to the mile in favor of them over the hare feet. The cause of this may be that in a trial it is rare that the animala are strained to the utmost, and uot so much care taken to "poiut" them aa in actual races. Still the more perfect "hold ou the ground" may make that difference, and should it prevent alipping hack, if even the retrogression were trivial iu each stride, it would certainly do so.

Great strees wae laid hy the old-time traiuers on the catch at the toe, and when giving an account of a trial of old ehoes were worn, that had become rounded at the toe, it was thought to add greatly to the merit of the performauce.

It is manifeet that a shoe which had beeu worn loug enough to have much of a bevel wonld not hold nearly as well as a hare foot, thongh iu making the calcnlation between shoes and platee it was on the data that the shoee were in proper order.

Admitting this assnmption to be correct, and in practice this wae fouud to he almost invariably the case, it ehowe that the greater "protection" of heavier metal is inimical to racing speed. At one time we ascribed the cause to the effect of weight on the action, and while an increase of onnces was inimical to the racehorse it might be beneficial to the trotter. Ae has been stated heretofore we have changed from former belief, being at present in something of a quandary in regard to this part of the snbject. Inasmnch as it is the intention to write an article on the text of "tips and trotting action" the questions arising will be deferred until then.

But the position is certainly tenable that if there is a necessity for protection at the heel the thicker and wider shoes shonld he preferahle to a racing plate, and the old-time trainers recoguized this principle by wearing heavier plates on a hard track than when it was soft. They were right in this respect, as the blow was distributed over a wide surface.

But it ie singular tbat while recognizing the propriety of guarding against concussion by interposing a broader tread, it ehould be denied that the broadest of all was advantageous. [A glance at the cut which was published] last week will ehow what a grand cushion nature interposee, and how the elasticity of the pad is made more effective by the spring of the quarters when in a natural state. It is true that the thinness of the plate gives a better chance for the frog to perform its duties than the thicker-beeled shoe, especially when the track is soft enough to bury the foot to a depth insnring the weight being borne by the frog and sole. On the hard track, however, even the narrow steel rim will not sink, and then the plate "bnrns" the foot as tbe traiuers call it. The thin plate which is so easily twisted before it is nailed to the foot acquires rigidity when it is riveted to the wall. Take a strip of pliant wood which can be bent into circle a without a great outlay of force, and fasten a thin strip of metal upon it at right angles to the strain, when it will be found as stiff as steel yards.

From even this short statement it is apparent that a racing tip has the same catch as a fnll plate; that it is free from the defect of interposing a hard subetance hetweeu one of the guarda against concussion and the ground, and it leaves the heels free and unhampered. That being the case, it ia beyond ordinary comprehenaion why the gait should be changed to that of a rocking-horse.

As the *Turf, Field and Farm* has quoted from English veterenarians to snstain their side of the argument, the following from "The Illustrated Horse Management," hy Edward Mayhew, M. R. C. V. S., will show that there is a diversity of opinion there ae well as here:

This reference to one kind of sport, natnrally calls to miud another form of amnsement in which the horse is a principal performer. Thoroughbreds, before they start for the race, are shod in very light, hut in equally thin shoes, of which the appended example may couvey some idea. Now, thinness and lightness, where metal is concerned, are attaiuahle only hy the sacrifice of strength. The sad accidenta which have occnrred throngh using the present racing plates, and hy these being broken, bent, or twiated, during the violence of contention, onght to provoke their abolitiou.

Such accidents are, however, fortnnately more rare than the auhstance of the shoe might lead most readers to suppose. Nevertheless, a greater injury is consummated hy affixing a fetter, which prevents the elasticity of the quarters aiding the exertions of the animal, while, from its dimension, it can afford bnt little protection to the foot. How much the speed of the racer mnst he dependent upon that elasticity with which the quarters are endowed, may he judged hy any person who has ever viaited a race course and heheld the horses trot previous to the start. Who can have failed to uotice the play of fetlock hy which "the blood action" is characterized. Now, nature never forms one part an exception to the whole. She delights in harmony; conseqnently the apring which resides in the fetlock is positive evidence of the elasticity which belongs to the nnfettered foot. But the bounding property, which the frog, sole and quarters would naturally provide, the trainer cónnteracts in order to impose a dangerous article, which is not a horse shoe, nor even a respectahle substitute for one.

It is ao formed, however, as to exercise the worst fnnctions of the regular ehoe. It is a fetter upon the foot, and firmly impales the quarters, therehy seriously crippling the animal and impeding the natural power. If any part of a thoroughhred's foot reqnired metallic protection, it conld only be the toe; for this part alone is employed during the horse's qnickest pace. The other poitions of the hoof tonch the ground when aiding the spring; hut these are never used with that amount of energy which necessitates anything approaching artificial defeuse. Now, the plate and its nails check expansion; these also oppose that force of rebonnd residing in the hoof and in its various strnctures. The hest horse must feel the bondage most. The spriug or rebound is to it of most value. But that function is destroyed. Many a fine animal has, douhtless, been condemned for having "uo go in him," which, could it have exerted all its natural power, would have heen declared winner of every race for which it wae ever entered.

The late William Percivall, the respected author of "Hippopathology," many years ago informed the author that he had long ridden a youug horse ahout town with no greater protection to its forefeet than tips could afford. He showed the hoofs of the animal to the writer, and more open or hetter examples of the healthy horse's feet ueed not be desired. Why could not tips be employed hy racers iustead of the present ridiculous pretense at a shoe? If any greater protection is imperative, or is thought to be needed, the shoe proposed hy the author would give all security, while it left the pedal structures free to exercise their important uses. There can be uo douht as to the safety of tips; in which, if Mr. Percivall could for years take his quadruped through the streets of London, another animal might, surely, scamper over the well-kept turf of a racecourse, where the heels merely touch the earth during the intervals of leaps, aud then only for an instant.

Were tips more generally employed, this form of shoe would be more highly valued. They are, however, now thought only to be of service when the animal is, "for a season," thrown up; hut there can be no reason why the racer—trained, exercised and worked alwaya on choice tnrf—shonld ever be crippled by any more regnlar form of shoe.

LETTER FROM SACRAMENTO.

Gossip About the Jockeys and the Horses in Training There.

EDITOR BREEDER AND SPORTSMAN: I was more than compensated for my stroll tbrough tbe park this morning, by the interesting scenes tbere. Tbe recent rain has washed tbe atmosphere; the exhilarating south wind whistles through the newly-leaved locusts; the streaks of blue sky between the banks of tbe white clouds, and the waving grain in the paddock below, with the snow-capped Sierras in the perspective, blend a pretty picture. Around tbe inner circle daintily steps a cavalcade of blanketed beauties, in their single file walk.

Perched npon the fence at divers places sit the traiuers aud "jocks," the former relating their numerous exploits, in racing of days gone by, while the embryo trainer is listening with all the interest and admiration he would have in reading one of Beadle's dime uovels or Dick Turpin's escapades. Of all, at present, Jim Brown is the center of attraction, relating what narrow escapes and daring tricks he did while wearing the colors of Sanford, Belmont and others that were so often borne to victory by the fleety steeds of that day; how when he was told to go to the post and get away, no matter what the consequences were; how when the prince of starters, John Hunter, had Secretary Wheatley at his right with book and pencil in hand, and his nod to Wheatley meant a $10 fine against and nnbeknown to the mount who was following instructions, when all at once the flag wonld fall amid the chorus of trainers to "Go on! Go on!" the clash of hoofs and the never failing command of jockeys to "Pnll ont! Pull ont" when at the finish and dismonnt they found standing against them an account ranging from five to fifty dollars for fines imposed at the start. In the language of Jim, "That's the only way to start these fellers; fine 'em, don't talk to 'em; dey'll come up I tell you; wheu I rode for Belmont, dey tole me to get away, dey'd pay de fines—well I got away and wheu settiug time came dey had $95 against me—de next time I kept my eye on old Hunter and got off de second break away." I agree with Jim on this proposition; the boys in delay as a rule are following instructions but if made to understand there will he no temporizing or dilly-dallying they will get away abont even. You have no donbt often observed two or three who are to work together; they get off the first time with toes abreast.

During the recital of these tales by the trainers a chain of thought passes through the minds of some of those who wield the catgut and steel, which is plainly visible on their conntenances. The wide smile and knowing wink of Patsey Dnffy satisfies the outsiders that considerable discount can be given to statements made by those who are now out of the business, as it were, but who invariably give advice free and nnsolicited. Patsey, you know, is getting to be an old hand himself, aud can relate nnmerous incidents that have occurred during his sojourn on tbe turf. He is pleased to know that yon have explained the incorrectnese of Hidalgo's letter to the *Spirit* respecting the handicap at San Francisco, as many knew this was the only race where he and Rhoads came togetber, and as Patsey was the mount he thinks the contradiction very proper, as we all know Patsey rides to win every time.

Well, the preliminary work is ended. The horses are here; if "broken out," the blankets are removed, a hole or two taken up in the girth, and the horse, rider and trainer move off from the crowd for instruction. The animal seems to understand as the order is given to move one-half or three-quarters from the "big tree" or the one-eighth post. He pricke np his eare and starts off at a nimble pace. The click of watches indicates that a run is to be made. No talk is now indnlged in. "There he goes!" sets the several watches in motion; the first quarter in twenty-five seconds causes the knowing ones to look at each other. The run is made, watches closed, not a word uttered, as it is considered "unparliamentary" to question each other until the work ie done, and all are on their way to the stable. Then, to any but a keen observer who listens to the talk between trainers, it wonld seem to have been a perplexed qnestion as to the time the run was made in, ae it is part of the business to keep such matters inviolable. A glance to the other side of the circle shows Stemler feeling old Joe Howell, who looks like a three-year-old. Old Joe deprecates the custom of lunging and tearing aronnd; his looks give all to nnderstand that he means business. Moving off at a gentle canter, he appears to be getting those eiuews off that geuerally draw up in one of his age, dnring the night, into motion. The watches once more click and old Joe is off, running as easy as a two-year-old; when the finish ie made, one can tell by the way "Ab" puts hie watch in his pocket whether or not he is satisfied, and the friendly pat on old Joe'e neck when he comes back verifies your conclnsion. Before yon have time to consider what weight he conld carry and "down" the balance in the Cup race yon observe two bright chestnuts about tbe same eize and exactly the eame color moving down the backstretch at a rate that causes yon to be with them the next quarter which ie run in—well, I don't know but I'll let yon guess; at any rate when the Prince of Norfolk and Callie Smart are pulled up you would wonder how Winters gete so many good ones; and if yon were a lover of form, grace and elegance of motion, yon would follow him aronnd juet to look at him. He ie a beantifnl colt, and Callie isn't more than a throatlatch behind him either in epeed nor looks. The others in Mr. Winters' etable are well known, being Lou Spencer, Atalanta, and Hattie B. A. Miller and Joe Courtney have them in hand.

Pritchard is working np Rhoads, Billy the Kid, The Bazaar-Minerva colt, and Ed. Smith, all of which are doing well. They are being handled by colored John Fortban. Up the grounds is located Frank De Peyster, who is getting May B and the Todhnnter colt in order. Sauntering aronnd the corner to Stemler & Ayers' etable, here is located in comfortable quarters old Joe Howell, wbo ie looking well and eeeme as if he ie really ready now to go out and do fast work. Ab's actione indicate that he has found eome new epeed in the old horee, as he does not care to show him up to any extent lately; Collier, his etable companion, is commencing to look up; he has not wintered to euit Stemler, who hopes to get him around in time for the meeting. He is a very difficult horse to order, as at timee he persistently refuece to eat, and is as dainty about his diet as a dyepeptic. Moving along the line of etables a little farther, a sight greets the eye that causes one to wonder why it has never been transferred to canvas. The time of day is abont 11:45, near to feeding time, the upper door of each stall is swung open, and nine beautiful heade and necke ranging in color from the light chestnut to black are extended through the aperturea. The first one that greets yon in the fleet little mare Maria F, who when approached drops her ears and nibbles away at your aleeve in a playful manner. She is a perfect pet and is thought much of by Jim Brown, her trainer. Next to her comee young Fluah, her fnll sister; she is a handsome filly with good action. After ber come the Kentucky imports, headed by the two Glenelgs, the chestnut Hirondella out of Susie Linwood, and the bay Faustina out of Marmot. They worked together this morning a half-mile about as fast as any two-year-olds we have. Then Malita by Lever, out of Malta, by Lexingtou; sbe is a bright bay and the favorite. Theu Mariposa by Monarchist out of Heliotrope; she is a dark bay with white strip, has fine form and motion, and is in every way a handsome filly. Next to these come the black filly, My Love, by Virgil out of Lady Lightfoot, and bay colt Winnemucca, by imported Billet, out of Lotta by King Tom. These are a portion of the lot purcbased by Mr. J. B. Haggin at the Eastern sales last year, and it seems but a month or so since tbey were pitching tbe boys off ou tbe plowed ground; they now have the air of old race horses and take to their work with zeal, are all doing well and when they strike the track next month the green and orange will be "fust or tharabouts." Old Premium is working along with them and if I should tell you that one of the two-year-olds lapped her out a quarter yon would not believe it, but such was the csse, and the boys all say, "Preminm was Premium too." So look ont when the flag falls on the Gano Stake that you are covered with this stable.

The Duke of Monday is commenciug to look better than he has for some time. Jim says he bas not been the same horse in disposition since altered. His irritability and sulkiness have beeu increased instead of diminished by the operation; one would suppose the contrary wonld have been the effect. Patsey Duffy and little Mike Kelly are the mounts. Little Mike is the cyclopedia for pedigrees and names. He can give you the history of each colt as accurately as the stud hook, and is called upon often by Brown, who says the names are too modern for him. Geo. Howson is getting Jim Donglas and Augusta E in condition, and he is partly getting himself in condition at the same time, as he has been laid up with the rheumatism for the past mouth and can only get around with a crutch at present. But nevertheless he is overseeing the boys and will be on hand by the 21st, with his nsual answer to queries, "Well, I dunno', I guess so, what do you think?"

To sit around and talk with the boys you would imagine yourself back in the short-horse era, as a good deal of short-horse talk is now being indulged iu since Howson bas matched Douglas a 600-yard race against John Adams' ch m ——, by Oregon Charlie, for $1,000 a side, to be run over this track May 21; $500 forfeit was pnt up this day, and Dan Kirkpatrick says he will match his horse, Berryessa, against the winner or any other horse in the State, to run tbe same distance for another $1,000. There is no qnestion about the Howson and Adams race and nnless it takes them as long to turn as it did the race our old friend, Col. Gift, jonrneyed to see in Kentucky, it will be worth witnessing.

Mr. W. M. Murry is getting Col. Dorsey's Partizan and Birdcatcher colts in order. They are doing fine—in fact all the horses here are taking to their work and feed well—no ailment of any kind prevails and we hope to send down all that are in training for the Blood-Horse meet the 21st.

MILE AND A QUARTER.

Sacramento, April 1, 1883.

When To Cut Alfalfa.

Alfalfa hay does not have as good a reputation in the markets to which large quantities were sent from this place the past year as it ought to have. The reason of this is that it is cut too often, that it is not allowed to mature sufficiently before being mown. It is usual to cut it when in blossom, and it reaches that state about four times in tbe course of a season. Its nature as to nutritive propeusities is just the same any other grass which no one would think of cutting before the seed is either wholly, or at least partially formed. Any grass cnt before that time wonld be almost worthless, and that alfalfa is as good as it is, cut when it is, well illustrates its valuable and nutritive properties. But when cut at the right stage of growth, as other grasses are, or the cereals, when cut for hay, it makes the best hay in tbe world, its strengthening and fattening propensities being remarkable. It arrives at this stage twice, or at most, three times in the course of the season. Cut twice in the season, it yields just as many tons to the acre as if cut four times, and the quality of the hay is beyond criticism. In favorable situations, however, the crop will be so rank and heavy that it would be almost impossible to get throngh it with the mowing machine and of necessity it mnst be cnt three times. Cut four times, the hay disappoints expectatione, and is not altogether free from cause of complaint, while in no way are so many cuttings of any possible advantage to the producer. From this time onward, particularly in seasons such as this, there will be a large export demand for alfalfa hay, and producers ehonld uow carefully study the proprieties of the plant so as not to cut it in an immature state, and thne avoid giving it a bad reputation abroad. By heeding the foregoing suggestions the minds of bnyere will be disabused of the impreseion that when they are buying alfalfa hay they are bnying an inferior article, and it will soon attain the reputation of being the most valuable prodnced and be considered as mnch superior to barley hay as that variety now is to it, and be sought after and sell accordingly. Tbe nutritive, sustaining qualitiee of all kinds of hay depend on a certain development of the grain or seed, and alfalfa is no exception to the rule. Ae this promises to be a considerable article of export in future, every farmer should study to give it the reputation to which it is really entitled, thue strengthening and increaeing the demand and enhancing its price in the market.—*Kern County Californian.*

August Harmon is a little man, scarcely five feet high, but he accomplished a feat this forenoon that uone but a Samson in strength wonld care to tackle. He picked up a large eack of salt that was lying in front of Goodday & Co.'s store and carried it around a block without resting. A large crowd of persone had gathered to witness the act, and when tbe man came up and deposited his load be wae loudly applanded. The ealt weighed 235 pounds. Geo. Trank gave Harmon five dollars, having promised to do eo if he got safely around tbe block with the ealt.—*Chico Record.*

Jerome Eddy has arrived eafely at Jewitt's Stock Farm, and he is in eplendid health. He strongly reeembles Alexander'e Abdallah, the sire of Goldsmith Maid and the prepotent Almont and also of Fanny Mapee, his dam.

G. B. Crowley and Captain Whitesido have disposed of their cattle ranges at Stein Mountain Nev., to W. B. Todhnnter. The consideration is said to be $75,000.

On Thursday, at Winnemucca, Nev., William Duupby sold 1,000 head of beef cattle to E. & H. Moffitt and Horn & Chapman of San Franciaco, for 8½ cents per pound.

Old mining pits around Oroville are said to be full of fish. Left there probably by the flood of 1880-81.

The Chico Driving Park is in capital order and trainers are busy.

THE KENNEL.

The Kennel Club.

Last Tuesday night a number of members of the Kennel Club, the Advisory Committee and tbe managers of the coming dog show held a meeting at tbe Occidental Hotel. The object of the meeting was of course business in connection with the dog show, but the proceedings were of a delightfully social and informal character, and it was only once tbat Clem Dixon, who presided, was called upon to check the enthusiasm of the sportsmen, who seemed to have an idea that a contemporaneous discussion of two distinct subjects was calculated to elucidate valuable information. However, Fritch of Oakland moved that an irregular order of business be taken up, discussion for the good of the club being placed at the head of the list. T. T. Williams seeing Judge Leavesley of Gilroy in the room suggested that he be called npon for a few remarks about dogs, dog shows and judging, and Jndge Leavesley, who was well prepared, good-naturedly took the floor. He said that he first wanted to suggest a few additions to the classification. Iu reading tbe BREEDER AND SPORTSMAN he had noticed that one or two gentlemen had suggested that the class for Laveracke be done away with, as there were only two Laveracke on the coast. Now he begged to differ with these gentlemen. If there was only one Laverack available it could be judged on its merits. He wauted to see all kinds of dogs represented at the show, and especially Laveracks. He had never seen a pure Laverack in his life and would give $5 to see one any day. He wanted to see the Laveracks kept in a class by themselves, so that intelligent sportsmen conld institute a fair comparison between them and the other breeds of English setters. In addition, he wanted a class for Llewellins and Field Trial dogs and the class for English setters to include all English setters except Llewellins, Laveracks and Field Trials. The extra technical dog fanciers claimed a difference between the Llewellins and Field Trials. A difference did exist, in fact, but botb names were a mere arbitrary designation for the special outcrosses of Laverack dogs. Then Judge Leavesley had a few words to say about judging the sporting classes. He said tbe work and responsibility were too much for one man, and suggested that the public wonld feel more generally satisfied if three judges had to pass on the merits of the dogs. He did not believe that the opinions or dicta of three gentlemen were more valuable than those of one, but the bnrden of responsibility was so great that it was better to divide it.

President Dixon said he agreed with Judge Leavesley on the judging by three. It made people less likely to feel dissatisfied. An exhibitor who thonght his dog had been slighted might say that his jndgment was as good as that of any other man bnt he wonld hesitate a long time before setting his own opinion against that of three men of acknowledged skill and probity.

A gentleman from Sonoma whose name we could not get called attention to the fact that there was only one class for sheep dogs. He thonght that the English and Scotch dogs being of different types ought to be judged separately.

T. T. Williams held the same opinion aud by giving a description of the two breeds showed how impossible it was to make a common standard for both.

D. L. Levy said that he had been asked to make a class for deer honnds hunting by scent. Mr. S. Bauer had several to enter and Mr. Hutchinson of Los Angeles also had some he wanted to exhibit.

Clem Dixon asked for a prize for trick dogs.

T. T. Williams on the suggestiou of Mr. Briggs asked for a special prize for the best bitch and litter of not less than three puppies exhibited in any sportiug class. After some discussion the following additional classes were made.

Llewellen and Field Trial dog.
Llewellin and Field Trial bitch.
Lewellin and Field Trial pups.
English Shepherd dogs.
English Shepherd bitch.
Trick dogs.
Best sporting bitch and litter of not less than three pups.

It was also decided that in case the judges thought fit and with consent of the executive committee they could make extra classes. As for instance if any nnmber of the same breed were entered in the miscellaneone class the judges conld take them out and form a separate class. If two or more persons exhibit deer hounds hnuting by scent, a class will be made and prizes awarded for them.

It was decided that the prizes consist of handsome gold medals for first, silver medals for secoud, both accompanied by certificates and also certificates of "very highly commended" and "highly commended."

President Dixon then brought np the question of judging and a long discussion ensued. In response to letters sent ont by the secretary a number of provisioual acceptances and declinations were read. As several gentlemen had not been heard from it was decided to postpone the selection of all judges until Tnesday evening next at the Occidental Hotel, when it is hoped that a large gathering of the club and sportsmen generally will be held. The judges will positively be chosen then and their names made public. Three judges will be selected for the sporting classes. Any gentlemeu who bave the names of judges to suggest will confer a favor by sending them to the Secretary of the Kennel Club, 317 Montgomery street.

A Canine Hero.

Everyone knows Landseer'e picture, "A Member of the Royal Humane Society," the said member being uo other than a large Newfoundland dog. A Parisian specimen of thie noble breed bas just qualified himself to be regarded as a member of tbe fire brigade, and has earned the medal awarded for having saved life from fire. A Mme. Relet, liviug ou the Rue de Trezel, having had occasiou to absent herself from home for a short time, imprudently left her child alone in a room wbere there was a fire. Tbe baby having got near the fireplace, slipped on the hearthstoue and fell under the bars, where he lay, unable to extract himself. The family, fortunately, possess a magnificent Newfoundland dog, which is exceedingly attached to the child. Ou hearing the infant's screams, the noble brute, who was lying down in the kitchen, bounded into tbe room, ecized the child in its mouth, and bore him into the center of the room. The neighbors, who had also heard the cries, forced their way in, and found the dog engaged in licking the face and hands of the infant, which had escaped with one or two trifling burne.—*St. James Gazette.*

We beg to inform the editor of the St. James *Gazette* that tbe picture he speaks of is not of a Newfoundland but a half-breed dog, probably a St. Bernard and Newfoundland cross.

Laverack Setters.

There hes been a good deal of talk ahont the number of Laverack setters in this State. It has been stated that Mr. Gale, of Oroville, owns the only pair that ever came to this Coast. We are inclined to believe that is an error. If our recollection serves us aright, Mr. Sothern the great impersonator of Lord Dundreary, who had received most friendly hospitality at the hands of W. C. Ralston, showed his appreciation by sending from Eugland a pure bred Laverack setter slut stinted to an eqnally pure dog. The slut arrived here all right and shortly afterwards gave birth to a fine litter which were safely reared. These pups were given by Mr. Ralston to various geutlemen, one of wbom we helieve was Mr. Whalen and another J. C. Maynard, of Menlo Park. Since the death of Ralston we have lost all trace of these dogs aud have never seen any mention of them in the public prints. Laverack stock is now plentiful and is generally recorded with the greatest care. If, as we believe, Mr. Ralston did possess a pure Laverack and any of her descendants are still alive it would be a good thing to trace them out. We respectfully ask that any gentlemen who have auy of the stock or know of its existeuce will favor us with their names or the particulars that we may be able to compile a correct record for local nse and also for transmission to the compilers of the Kennel Club stud book. Proof of pedigree is easily lost, and the valne of a fine animal is so greatly enhauced by a showing that it comes from standard hreed that it is really to the interest of the owners of these Laveracks, if such they are, to establish their authenticity as early as possible.

In reply to a query the *American Field* puhlisbes the fou lowing: "Mr. Laverack never wrote such a letter; but ol- the contrary in writing to us aud to the importer of Pride of the Border, he always claimed the dog to be what be sold him as—a pure-bred Laverack. The gentlemau who imported and owned Pride of the Border to the day of his death is ona of our most intimate and valued friends—a gentleman the peer of any, and a man who is the very sonl of honor, who would under no circumstauces have allowed Pride of the Border to be considered a pure-bred dog when he knew the contrary."

Last Wednesday afternoon the members of the California Coursing Club started for Merced to rnn their spring coursing match. The crowd that went np was unusually large, and a jollier set of sportsmeu never left San Francisco for the plains. The weather was delightful and the promise of sport excellent. Owing to the match being held one day later than nsnal we were uuable to get our regular report in time for this issue, and must ask the indnlgence of our many readers who are interested in coursing until next week.

YACHTING.

A meeting of the San Francisco Yacht Club was held on Tuesday evening last at which time the annual election of officers took place with the following resnlt: Commodore, John D. Spreckles (yacht Lurline); Vice-Commodore, W. Letts Oliver, (yacht Emerald; Secretary, Charles G. Yale; Treasurer, Matthew Turner; Directors, I. Gutte (yacht Chispa); Mervin Donahua (yacht Nellie); S. A. Eldridge, Jno. Rae Hamilton (yacht Clara); Harry L. Tevis (yacht nnnamed). Election committee ie as follows: W. L. Oliver, C. W. Kellogg, J. W. Pen, S. A. Eldridge, Herry Tevis, G. A. Story, N. C. Davis. A resolution was adopted making it optional with the trustees to charge initiation fee to yacht owners joining the club. It is thonght there will be more interest in club matters this year than last seeson.

On "opening day," April 21, the yachts of the S. F. Y. C. will go to Saucelito, where the guests will have a dance, and later on the yachts will start for a moonlight sail to Mare Island and return next day.

The men are all working hard on Mr. Tevis' new yacht, doing the joiner work in the cabin. The hull is practically done.

The Chispa is to have a large mainsail aud have more ballast taken out. Her boom will be lengthened four feet.

Nothing has been done with the Violet, Chiquita, Lively or Virgin so far, as to fitting out for the season.

The Whitewing is being painted and refitted at Oakland creek and will look nice when she comes out.

The Lurline is very foul and has sailed poorly of lata in consequence.

Tha Thetie hae been put in good order for the coming season.

Tha yachtsmen all hope for a better eeason this year than last.

The new plunger, Fanny, is said to be a very smart sailer.

The Frolic will probably not be here much this summer.

Stone'e 40-foot schooner will hardly be out this season.

Tbe Annie will do a good deal of conrsing this year.

The scbooner Ariel will be put in commission soon:

The Clara will be kept in commisaion this summer.

The Lolita has been doing outside coureing lately.

Work is progressing on the Emerald and Fawn.

The Fleur de Lis ia out on the bay a good deal.

Inspectors of Rifle Practice.

The inepectors of rifle practice of the National Guard will hold a meeting at the Palace Hotel ou next Monday evoning. The meeting has been called by Inspector of Rifle Practice Colonel Charlce Sonntag, N. G. C., and all tbo inspectors, of whom one is attacbed to each regiment of the National Guard, have been notified, and many of them will attend tho meeting. The design is principally the diecussion of mattere pertaining to this branch of the militia, and suggestions may be mado which will probably arouse renowed interest in marksmanship, as for the past few yoars riflo practico bas beeu somewhat neglected in the militia. The establishment of a State rifle range, and the forming of arrangements to eend a rifle team to Carson City to compete for the Pacific Slope tropby, will bo among the subjects discnssed. Tho match this summer will decide tho ownership of tbe trophy, as it ie to helong to the team winning it twice, and hoth a California and a Nevada team have won it once. It was originally offered hy the California Rifle Association for the best team from any of tho Pacific Coast Statee, including British Col-

ATHLETICS.

Gossip in Connection with Myers' Visit West.

Considerable doubt exists in athletic circles as to tbe correctness of au announcement that L. E. Myers, the Manhattan Club flyer, contemplates a trip to this State during the montb of September, the reason assigned for these doubts being that no informatiou to that effect bad heen received by any of the local clubs. Another reason given for discrediting the statement is that Myers previously signified his intention of crossing the Atlantic for the avowed purpose of trying conclusions with the English champion, W. G. George, in a series of international races similar to those held in New York in November last. It appears, however, that Myers has reconsidered his proposed trip to England so that it will not be made until after his return East from California. From statements which he has made since the chauge in his programme, it appears that he is anxious to meet Haley and Mastersou, and that the trip westward will be uudertakan purely with thet object in view. It is understood that some dissatisfaction exists among local amateur athletes as to the course pursued by Myers in connection with his proposed trip bere, so that there is no ahsolute certainty that he would he accommodated even should the trip be made. We are credibly informed that Masterson will positively refuse to enter into any competition with the champion, unless the events should take place under the auspices of some recognized amateur club of this city, and not nnder tha management of an agent as has been represented. In event of the former being done, local clubs will arrange a testimonial in the shape of an athletic meeting in honor of the distinguished visitor.

Arrangements are heing made by the Olympic Athletic Club for a meeting at the Oakland grounds on Decoration Day, May 30. The details in connection with the affair have not yet been definitely decided, though it is not improbable that the programme will include the following events: One hnndred yards maiden race, for members of the club ; 100 yards handicap, open; 220 yerds scratch race, open, harring Haley and Masterson; 440 yards handicap, open ; mile handicap, open; running high jump, open; hase running, for memhers of the clnb, exclnding sprinters; half mile bicycle bandicap, open to all amateurs, whether attached members or otherwise; mile bicycle handicap, same conditions, and finally a five mile bicycle handicap. A special 100 yards race between Haley and Masterson is also spoken of. Snch as it stands, the programme would be unusually interesting, especially so from the prominence given running and bicycle races, to the exclusion of events in which the spectators seemed to take littla pleasnre, as, for instance, in the numerous jumping and pole-leaping events. The grounde will be in excellent condition, as the new lot of Australian rye seed, which was recently sown, has come np well nnder the influence of the late rains.

At the winter athletic meeting of the Columbia College Boat Club beld in New York on the 17th inst. the event of the evening was the 440-yards race, in which L. E. Myers, the champion, was at scratch. He had seventeen opponents, to whom he was conceding starts varying from fifteen yards to thirty yards. When the meu were started, Myers set at once to cnt down the long starts of tbe men in front of him, and when they had traversed 360 yards had gained third place. He theu made several struggles to gain the front position, but had in A. A. Jordan, A. A. C., who had twenty yarde start, a most determined antagonist, who fought for the honors every stride of the way. It was not until sixty yards from the tape that Myers went to the front, and amid loud cheers he won the race by two feet in fifty-three seconds. Jordan was second.

The final deposit of $200, making the total amount $1,000, in the wrestliug match for the catch-as-catcb-can championship of the world, was made in New York last Saturday. The principals are Joe Acton of Philadelphia, the English champion, and Thomas Connors of England, who recently defeated Ike Smith. The conditions of the match, which is to be decided at Pastime Park, Philadelphia, April 7, are that the rival champious shall wrestle catch-as-catch-can, best two in three falls, for $1,000 and the championship of the world. Arthur Chambers is backing Acton and Noah Mankinson is putting up the money for Connors.

Attention was recently called to the probahle organization of another athletic club hy a numher of business men. Arrengements have heen recently made by which it is expected that everything will be in readiness in a few days so that the question of constitnting a gymnasinm will be considered and in all probability decided affirmatively hy Tnesday next. The details in connection with the enterprise have not been fiually settled and apart from the papularity which it is meeting in the way of suhscribiug members there is little of interest to note.

Johu G. Chambers, the recently deceased editor of *Land and Water*, is said to have heen the first amatenr who walked sevan miles within the hour. It was at Fennes ground, Cambridge, England, in 1861, that he accomplished the then wonderful performance. He lived to see eight miles crowded within the hour hy several professional walkers in his own country.

W. C. George will visit America again in July for another series of races with Myera.

There died at Taunton, on Tuesday, Major John M. Deane's well-known and much admired war-horse Dixie. Her war experience was most eventful. At the time General Grant was endeavoring to throw his army across the Chickahominy and James rivors and occupy Petershurg, Lee was so troublesome and dangerous that the forage trains were kept well to the rear. The horses had been five days withont food of any kind. They were too weak to be ridden, and had to be led whenever the regiment changed position. From this time until the evacuation of Petersburg, a period of ten months, thore was scarcely a day that sho was not more or less oxposed to tho artillery, mortars and musketry of the enemy, often being in the thickest of the numerous battles precipitated hy General Grant's endeavor to extend his lines to the left and around Petersburg; but she escaped without a scratcb. With her the booming of artillery, the exploding of ebells and hissing of hullets passed unnoticod; but tho sound of mneic, tho clanking of sabers, the sight of hristling bayonets would set every nerve in motion. As a rnnning horse Dixie nover met her equal in the army, and she could trot caeily in three minutes wben alone, but was suro to break into a run wben in compauy with othor horses. She was all norve, but always kind and gentle, yet of such peculiar disposition that not more than half a dozen persons have heen allowed to drive her in harness, and no one hut her owner has evor ridden her under saddle since the war. Her age was twenty-seven years.—*Fall River (Mass.) News.*

Col. S. D. Bruce writes tbat he will be present at the annual sale of Belle Meade yearlings on the 28th inst., and attend to all commissions entrusted to him. He will also be present at the Alexander, Swigert, Bowen and all the other spring sales. He may be addressed at the office of the *Turf, Field and Farm*, New York.

Market Report.

FLOUR—We quote: Best City Extra, $5 75@$6 25; medium grades, $4 75@$5 50; Shipping Superfine, $4@$4 50.

WHEAT—The market seems to have a falling tendency. The weak state at Liverpool is, no doubt, in a measure, the cause of the depressed state of our prices in this grain, as there is no encouragement for shippers to buy; $1 80 is claimed to be the full local quotation, but $1 77½ ts about the highest bid.

BARLEY—The market is firm, but there is but little activity among speculators. Brewing ts slow of movement at $1 27½@$1 30. There are only a few small transactions in Chevalier at $1 36½. Recent sales are No. 1 Feed, April, $1 18½; do., July, $1 14¾@$1 15; do., September, $1 12¾@$1 13.

OATS—Fair Feed, $1 75@$1 80; Good, $1 85@$1 90; Choice, $1 95@$2 05 ₱ ctl.

RYE—Quotable at $1 90@$2 for fair to good.

FEED—Ground Barley, $28 ₱ ton; Cracked Corn, $36 ₱ ton; Shorts, $19@$20 ₱ ton; Oilcake meal the otlworks sell to the trade at $35 ₱ ton, less the usual discount; Middlings, $23@$24 ₱ ton for lots at the mill.

HAY—Alfalfa, $15@$17; Wheat, $17@$20; Wild Oat, $17@$20; Mixed, $17@$18 ₱ ton.

STRAW—$1 per bale.

PROVISIONS—Eastern Hams, 16@16½c; California Hams, 15@15½c for plain, 15½@16c for sugar-cured canvased; Eastern Breakfast Bacon, 16@16½c; California Smoked Bacon 14@14¾c for heavy and medium, and 15½@16c for light and extra light; Clear Sides, 14½@14¾c; Pork, $18@$18 50 for Extra Prime, $20@$20 50 for Prime Mess, $23@24 for Mess, $25@$25 50 for clear and $26@25 50 for extra Clear; Pigs' Feet, $16@$18 ₱ bbl; Mess beef, $15 50 for bbls and $8 75 for hf bbls; Extra Mess Beef, $16 50 for bbls and $8 75 for hf bls; Family Beef, $18@18 50 ₱ bbl; California Smoked Beef, 13@13½c ₱ lb.

FRUIT—We quote: Apples, 40c@50c for common and 75c@$1 50 ₱ box for good to choice; Lemons, $5@$7 per box for Sicily; California Lemons, $1 50@$2 per box; Limes, $9@$11 per box for Mexican; Bananas, 1 50@$3 ₱ bunch; California Oranges, $1 50@$2 00 for common and $2 25@3 25 for good to choice ₱ box; Pineapples, $5@$8 ₱ doz Western Cranberries are offering at $15@$17 ₱ bbl; Strawberries. 30c@40c ₱ lb.

VEGETABLES—We quote: Marrowfat Squash, $20@25 ₱ ton, Carrots, 50c@75c; Turnips, 75c@$1; Cauliflower, 75c@$1 25 ₱ dozen; Cabbage, 75c ₱ ctl; Garlic, 2@2½c ₱ lb; Celery, 50c ₱ doz; Dried; Okra, 20c@25c; Dry Peppers, 10c@12½c ₱ lb; Green Peas, 2@3c; for common and 5@7 for sweet; Rhubarb, 6@8c per lb; Mushrooms, 75c @$1 ₱ box; Green Peppers, 10c@12½c per lb; Tomatoes, 2 25@$2 75 ₱ box, Cucumbers, 50c@$1 75 per doz.; Asparagus, $1 00@$1 60 ₱ lb.; Sprouts; 3c ₱ lb.; Artichokes, 10c@15c ₱ doz.; String Beans, 15@25c ₱ lb.

POTATOES—River Red, 60@70c; Early Rose, 55@65c; Tomales and Petaluma, $1@1 10 ₱ ctl; New, 3c@3½c per lb.

ONIONS—$3 40@3 80 for good to choice.

BEANS—Bayos $5@$5 25; Butter, $3 25@$3 50 for small and $3 50 @$4 for large; Lima, $3 75@$4; Pea, $3 25@3 50; Pink, $5@$5 10; Red, $5@$5 10; small White, $3 25@3 50; large White, $3 50 ₱ ctl.

BUTTER—We quote johbing lots: Fancy, 26c; choice, 24@25c; fair to good, 18@23c; inferior lots from country stores, 15@17c; firktn, old, 19@22c for choice; new, 22@25c; pickled roll, 20@22½; Eastern 17@20c.

CHEESE—Firm. California, 14@15c for choice: 11@13c for fair to good; do, factory, in boxes, 14@16c; Eastern, 16@17c.

EGGS—California, 24@25c ₱ doz.

POULTRY—Live Turkeys, gobblers, 25@26c; do, Hens, 25@20c; Roosters, $7@$8 for old and $10@$12 for young; Hens $8@$9; Broilers, $7 50@$8, according to size; Ducks, $10@$12 50 ₱ dozen; Geese, $2 50@$3 ₱ pair; Goslings, $2 25@$2 75 per pair.

GAME—Snipe, $2 25@$2 50 for English and 75c@$1 for common; Hare, $1 60@$2; Rahbits, $1 25@$1 75.

WOOL—Quotations nominal.

HIDES AND SKINS—Dry hides, usual selection, 18c ₱ lb; culls one-third less, and Mexican Hides 2c ₱ lb less; Dry Kip, 17c; Dry Calf, 20c@22½; Salted Steer, over 55 lbs, 11c ₱ lb; Steer over 55 lbs, 11c; Steer and Cow, medium, 9½c@ 10c; light do, 8½c; Salted Kip, 15 to 30 lbs. 10c; Salted Calf, 14@15c ₱ lb; Salted Veal, 12½@15c; Sheep Skins, 25@30c for Shearlings, 30@60c for short, 60c@$1 for medium, and $1@$1 40 apeice for long wool and wool skins. Butchertown Green Skius bring higher prices.

TALLOW—Quotable at 8@8½c ₱ lb for rendered and 11@12c for refined, hoth in shipping order.

MEATS—Following are rates for whole carcasses from slaughterers to dealers:

WILL CURE CRACKED HEELS, GALLS, SORES, CONTRACTED HOOFS OR ANY SKIN DISEASE.

A. C. DIETZ & CO., Proprietors, 9 Front street, S. F.

Auction Sale of Trotting Stock.

The auction sale of trotting stock hred at Sunny Slope and Rancho del Paso did not attract as many purchasers as was expected. There being only small drafts from each of these celebrated stud farms there was an impression that the sale was merely weeding ont the supernumeries.

Nothing could be more erroneous, as many of these were highly hred and highly formed. Mr. Rose's were uot in good condition to show being rather thin in flesh and somewhat scarred np in the journey from Sunny Slope, but those from Rancho Del Paso were in capital condition, and more than ordinarily well grown.

Purchasers were certainly favored by the ruling prices, and it may he a long time before such bargains are obtained.

The "combination" system is the true plan when there are not enough animals in one lot to induce the attendance of buyers, and as it is the intention of Killip & Co. to inaugurate such sales in the fnture the difficulty of insufficient numbers will be overcome.

All the animals went at a low price, and what may appear paradoxical those which hronght the most money were the cheapest. The three-quarter sister to A. Rose, Red Hoody and the Sultan gelding, from the dam of State of Maine, were very cheap.

The Santa Clans colt and filly were decided hargains, and, in fact, not an animal changed hands that was not dirt cheap. The following are the prices and purchasers:

Property of L. J. Rose:

Sorrel filly, foaled 1881, by Del Sur—Cecilia Clark—A. M. Esterle, $235.

Sorrel filly, 1881, by Del Sur, her dam by The Moor—John O'Kane, $200.

Bay gelding, 1881, hy Young Echo—Young Peannts—W. L. Ashe, $130.

Bay gelding, 1881, hy Young Echo—Saucebox, hy Sampson—D. McCarty, $615.

Black gelding, 1871, hy Del Snr—by Ten Broeck—Alexander Waugh, $170.

Sorrel filly, 1881, hy Del Sur—by Stormy John—F. E. Dietz, $137.

Brown gelding, 1881, hy Sultan—by Chieftain—J. C. Wolfekill, $325.

Red Hoody, 1881, hy Del Sur—hy The Moor—F. Hall, $630.

Black gelding, a fine saddle-horse, by Inca—E. Pierce, $155.

Property of J. B. Haggin:

Bay colt, 1881, by Santa Claus—by Edwin Booth—J. V. Coleman $600.

Santa Rosa, a bay filly. 1881, by Santa Olaus, her dam the Fashion Filly, by General Dana—E. M. Fry, $355.

Gray gelding, 1881, by Poscora Hayward—Mahel, sister to Beautiful Bells—D. McCarty, $150.

Brown colt Dakota, 1882, by Alaska (he hy Electioneer)—Maria Roza, by Inca—D. Chatterton, $235.

Bay colt, 1882, by Alaska—Lucy Belmont—J. S. Spanlding, $140.

A driving team, Mollie McGuire, by Inauguration, and Lizzie, by Norwood—Dr. Grattan, $535.

Fashion, 1879, and Texana, both hy Norwood—W. L. Ashe, $280.

Gray colt, 1882, by Poscora Hayward—Mahle, by The Moor—J. Mackay, $202.

May Dale, bay filly, 1882, hy Alaska—Mary, hy Maillard's Eclipse—W. H. Cambell, $117 50.

Blue Peter, gelding, three years, by Geo. M. Patchen Jr.—hy Lodi—D. Brown, $210.

Registration of Jersey Cattle.

A movement is on foot among the Jorsey cattle breeders of this coast to organize a Pacific Coast Jersey cattle club and Herd Book. Tbe reasons for this movement are snfficiently aet forth in the following extract from a letter written by one of our leading breeders:

The A. J. C. C. has of late years been eo strict, and it has heen snch a task to have Jersey cattle registered by parties who do not know the positive rules of the club, that, to oblige friends, I have more letters to answer than I can really attend to, and I have come to tbe conclusion that we breeders of Jerseys in California and Oregon wonld find a Jersey cattle clnb of our own a great advantage to onr cnstomers and onrselves. We could make the Pacific Coast Jorcey Cattle Clnb anewer all our purposes by accepting all the cattle which have been imported to California or the coast from the Eastern States; provided they are thoronghhreds and the pedigrees offered in evidence. The A. J. C. C. was invented in 1870 by calling npon ownersand breeders to show the origin of their cattle, and it has proved a cuccess so far. Althongh not by any means a guarantee of goodstock to-day, it is the fashion to buy a poor registered animal in preference to one much snperior unregistered. We mnst yield to public taste, I enppose, and we can do it best by establishing a club and a Herd Book of our own, without going to New York and benefiting the A. J. C. C. Please let me know what you think of the plan; talk to your friends about it and get their views. There is enough pure Jersey stock now west of the Rocky mountains to make a large Herd Book.

The California Rifle Association.

At the armory of Company B, on Mission etrcet, last Tuesday evening, the California Rifle Association held their annual meeting. The reports ehowed that a great deal of interest was taken in the last epring and fall meetings hy the National Guard and the citizene. The National Guard of Nevada and membera of the San Francisco police force also took a lively part in the tonrnamente, helping the association to attain the snccees it has met with and eo well deserves.

The report ahowe the expensee have been $1,816 69 and the receipts $1,552 20. Of the former amount $1,486 94 have heen paid for cash prizea, trophies, etc. The following members were elected Directors: D. Randlett, Major A. F. Close, Captains William Quinlan, W. B. Collier, Lientenants J. E. Klein, H. T. Simes, E. G. Sprowle and E. J. Kremple and Sergeant Charles Nash of the police. The Board organized with J. H. Dickinson as Presicent; W. B. Collyer, Vice-President; H. T. Simes, Secretary, and A. Andrewe, Treasurer. The spring meeting has been eet for the 29th inst. at Shell Mound Park.

H. S. Wells of Shasta valley, Siskiyon connty, has purchased from J. A. Cardwell of Jackeonville, Oregon, tbe bay etallion Mike, hy Vermont, and the horee will remain permanently in Siekiyou. Mike is the eire of Barney, 2:25½, and ie a first-class general-purpose horse.

TURF AND TRACK.

National Association of Trotting Horse Breeders—Stake Programme for 1883.

The Mali Stakes, for foals of 1880; $250 each entrance for starters; $500 added by Mr. H. W. T. Mali. The National Trotting Stallion Stakes, closed May 1, 1882, with tbe following named sires, whose owners subscribed for each their season service fee, which amounted to $650 (added to the stakes): C. H. Kerner's br h Indiaman; H. L. Russell's br h Smuggler: J. W. Gray's hr h Dean Sage; J. O'Rorke's b h Tempest; J. O'Rorke's b h Touchstone; F. B. Tracy'e b h Oxmoor; E. G. Doolittle's b b Belvidere; C. Backman's b h Kentucky Prince; W. H. Wilson's h h Indianapolis; W. H. Wilson's b h Arnold; Palo Alto Stock Farm's b h Electioneer; Palo Alto Stock Farm's b h Gen. Benton; whose get, foals of 1882, are eligible to entry as per following conditions: One hnndred dollare entrance for starters, payable in the following forfeits: Ten dollars to accompany nomination May 1, 1883; $15 additional May 1, 1884; $15 additional May 1, 1885, and the remainder ($60) twenty daye before tbe meeting of 1885, when the stakes will be trotted for.

The National Trotting Sire's Stake, to close May 1, 1883, for sires; for tbeir get, foals of 1883; $100 entrance for starter, payable in the following forfeits: Ten dollars to accompany the nomination, May 1, 1884; $15 additional May 1, 1885; $25 additional May 1, 1886, and the remainder ($50) twenty days before the meeting of 1886.

Breeders wishing the get of their stallions to enter in this stake must first snbscribe the enm of $50 each, for such stallions, toward the stake, as no colt or filly can enter unless the sire ie represented by such subscription, which is part of the stake.

The Mali Stakes, for foale of 1881, to be trotted when three years old; $250 entrance for starters, $500 added hy Mr. H. W. T. Mali; $50 (forfeit), to accompany the nomination, May 1, 1883; $50 additional forfeit May 1, 1884, and the remaiuder ($150) forfeit, twenty days before the meeting of 1884.

The Annual Nursery Stakes (fifth renewal), for foals of 1882, to be trotted when three fyears old; $150 entrance for starters, payable in the following forfeits: Ten dollars to accompany nominatiou, May 1, 1883; $25 additional May 1, 1884; $50 additional May 1, 1885, and the remainder ($65) twenty days before the meeting of 1885.

The Juvenile Stakee (first renewal), for foals of 1882, by stallions whoee get have not heaten 2:30 at three years old or under, to be trotted when three yeara old; $100 entrance for starters, payable in the following forfeits: Ten dollars to accompany nomination, May 1, 1883; $15 additional May 1, 1884; $25 additional May 1, 1885, and the remainder ($50) twenty days before the meeting of 1885.

The Everett House Stakes, for foals of 1882, hy etallion whose get have not beaten 2:45 at three years old or under; to be trotted when three years old; $100 entrance for starters, payable as in the Juvenile Stakea.

The Stallion Stakea for foals of 1882, to he trotted when three and four-year-olds, by etallions only for whom the sum of $200 each is enbscribed, of which $100 must accompany the nomination of sire, May 1, 1883, when the subscriptiou for sires will close, and the remainder ($100) o ne year there after; the amount of the first payment on the subscription (of sires) to be added to the stake for three-year-olds; the amount of the second payment on the eubscription (of eires) to he added to the stake for four year-olde; $100 entrance for starters in the three-year-old stake; 150 entrance for starters in the four-year-old stake, payahle in the following forfeits: Ten dollars, to accompany the nomination, July 1, 1883, for each race in which the colt or filly is entered; $40 additional May 1, 1884, in the three-year-old stake; $10 additional May 1, 1884, in the four-year-old stake; $50 additionel May 1, 1885 in the three-year-old stake; $20 additional May 1, 1885, in the four-year-old stake, and a final payment of $50 each in each stake twenty days hefore the meetings of 1885 and 1886, respectively, when the stakes will he trotted for.

A failure to pay the halance ($100) due on the subscription of any sire within the time epecified in the foregoing condition will disqualify the nominations of all the get of each sire in the four-year-old stake, and forfeit all payments made on all the get of euch siree in eaid stakes.

In all etakes and trials of speed the rulee of thie aseociation shall control. All nominations ehall be in writing, in the name of the owner, addressed to J. W. Gray, Treasurer, P. O. Box 516, New York City, enclosed in a eealed envelope and plainly marked "Nomination," with a bank draft, postal order, or certified check for the amount of first payment; which envelope must bear the poet mark of not later than the day upon which the stake closes. A nomination by telegraph received hy the Treasurer hefore the hour of closing, and confirmed hy a properly written entry, as above prescribed, posted not later than the following day, shall be deemed valid. The number of nominations hy one owner is unlimited but only one can start in a race. Nominatione ehall state the uame, color, marks, age and sex, whether horse, gelding or mare, and the namee of the sire and dam, if known, and her sire, if known. Nominations shall follow the ownerahip of the horse provided notice of change of ownership shall be forthwith filed with the Secretary. All entries shall close at midnight of the day named, at the office of the Treasurer unless otherwise provided. Only horses owned or bred hy members, or the get of stellione owned or stood by members, shall be eligible to entry. Money paid on entries in any one of the stakes opened by this association, wherein all the nominations fail to make final payments, shall he regarded as forfeited to the treasury of the association. All races to he in harness, mile heats, best three in five, except for three years old and under, which are to he mile heats, unless otherwise provided in the first announcement of the stake. If three or more horses start in a stake race, two-thirde of the stake shall he awarded to the winner, two-ninthe to the second horse, and one-ninth to the third horse, except otherwise provided in the published conditions of the race. If not more than two horses start, only first and second money shall be awarded; and in case of walk-overs only the first money shall he awarded. and it shall be optional with the executive committee whether the horse shall or ehall not appear. A horse distancing the field shall only be entitled to so much of the money as the starters in the race could have won. In all races best two in three, the distance shall he eighty yards; and in all racee best three in five, the distance shall he one hundred yards; except in heats wherein eight or more horses start, and therein the distance shall be one hundred and fifty yards.

The Lincolnshire Handicap.

In the race for the Lincolnshire Handicap, run at Lincoln, March 17, the American division were seriously disappointed by the defeat of Mr. Pierre Lorillard's Aranza. Her chances of winning were thonght to he excellent, and she wae backed at six to one both on Saturday and Monday. But at Lincoln she receded in the betting, and ten to one was freely offered against her. After running nearly 300 yards she was run into by John Exley's Greek Maid and all her chances of wiuning were destroyed. The race was won by Mr. John Davis' aged horse Knight of Burghley, against whom eight to one was a steady offer just before the start. Prince Soltykoff's Scobell was secoud, beaten hy three parts of a length, with Colonel Starkie's Sulpbur third, four lengths back. The odds were ten to one against Scohell and eleven to one against Sulphur. The race was run under the following conditions:

The thirty-first renewal of the Lincolnshire Handicap, for three-year-olds and upwards, at £20 each, £10 forfeit, with £1,000 added; the second to receive £50 out of the stakes and the winner to pay £100 towards expenses. Entrance 5 guineas—the only liability if declared out. Winners of any handicap after the weights were published (January 24, 10 a. m.) to carry six pounds; of two, or one of the value of £200, ten pounds extra. Closed with 70 subscribers, of which 24 declared out.

Mr. John Davis' br g Knight of Burghley, aged, by Knight of St. Patrick, dam Fanseombe, 105 pounds.....1
Prince Soltykoff's br h Scobell, 5 years, by Carnival, dam Lady Sophie, 122 pounds.....2
Colonel Le Gendre Starkie's ch h Sulphur, 6 years, hy Vulcan, dam Miss Fife, 97 pounds.....3
Thirteen others ran, including the four-year-old Greek Maid, 84 pounds.

Of the few aged horses now in training in England, Knight of Burghley, the winner as above, ie a veteran. He ie now seven years old, and having being constantly before the public but few horses are better known, especially as he was last year one of Fred Archer's pet mounts. Under him the Knight won five of the six races credited to him during the year, and as he carried at least 118 ponnds, and from that up to 125 pounds, in all his races, it may he said that in handicapping him for the Lincolnshire at 105 pounds he was lonicntly treated. He was trained at Newmarket hy Mr. James Hopper, and although never very prominent in the hettiug, several of the English writers have on more than one occasion intimated that at tbe weighte the Knight was a dangerous horse. Of course it cannot be decided how much he was benefited by the accident to Arauza. Up to the end of last season Knight of Burghley had run in forty-six races, of which he won one as a two-year-old and two as a three-year-old, one of which was the Liverpool Spring Cup in 1879. As a four-year-old he failed to score a win, while as a five-year-old he was again a winner twice, one of which victories was a selling race, when he was "bought in" for 230 guineas. Last year he won six times, which brought his total earnings up to £3,082. Thue the Lincoln Handicap is not only the most important race he hae ever won, but the richest. He has a few engagements, including the Prince of Wales Cup at Liverpool on March 29, for which he was handicapped at 133 pounds, and ae he ia peualized fourteen pounds for winning the Lincolnshire it is eafe to say that he will scarcely keep the engagement.

Among the entries for the Grand Prix de Paris, to be run on June 3, are the following American-bred horses that have not heretofore been published in the English *Racing Calendar:* Mr. B. G. Thomas' filly Queen Ban—War Red; the filly Dixietta—Dixie, and the colt Violator—Booty; and King Ban; also Mr. J. Armstrong's colt Fond du Glengarry. The last named has been declared out.

A Great Race.

The death of Mr. Stirling Crawfurd calls to mind one of the greatest races that ever took place on the English turf. It was in '68, and the race was the Two Thousand Guineas, for which the dead turfman had entered his brown colt Moslem, by Knight of St. Patrick. The colt, hitherto known as the Brother to Knight of the Crescent, had performed only moderately as a two-year-old, and in the City and Suburban of this year, with only five stone ten pounds, had cut so indifferent a figure as to afford scanty promise of carrying off a race like the Two Thousand only a month later. Still, so much was claimed for him on the ground of improvement that, in a field including such celebrities as Formosa, Rosicrucian, Green Sleeve, and some other winners of lesser note in Pace, Vale Royal and Le Sarazin, as little as 100 to 8 was taken at the start, and no more than 2 to 1 about him for a place. The favorites, justly enough, were Formosa and Green Sleeve, Chesterfield and Middle Park winners respectively, Fordham having the mount on the first and Freuch being up on the other, with Chaloner pilotiug Moslem. From a very even start the eventual dead heaters, Formosa and Moslem, soon drew away from their field, and in 200 yards were clear of everything. The pace at first was moderate, and it was not until the "Bushes" were reached that any tailiug off began, the rest of the field having kept well up with the leaders to this point. Half way down the Bushes hill the race was virtually left to Formosa, Moslem, Green Sleeve and Rosicrucian, and the two latter compounding in the dip, the contest was resolved into a match between the other pair, the filly going the strongest. Loud shouts were already proclaiming the victory of the "beauty," but twenty strides from the chair they were locked together until, amidst the wildest excitement, the filly's nose showed for a moment in front of her opponent's. Then a call from Chalouer, and Moslem answering gamely, they were once more level. Each of the famous jockeys tried all he knew to turn the fortunes of the day in his favor, but their most artistic efforts were in vain, and the pair passed the post on such terms that no one who saw the finish could for a moment question the verdict which pronounced it a dead heat. As everyone knows, the stakes were divided. Mr. Graham, the owner of Formosa, in view of her engagements in the One Thousand, which now looked quite at her mercy, to say nothing of her Oaks, wisely decided not to expose her to another such a trial as she had just gone through, and Mr. Crawfurd was generous enough to agree to a division. So ended this memorable struggle, resulting in the only dead heat in the history of the race, but two subjects for regret remain in connection with it—the first, that Moslem was not engaged in any of the great three-year-old events; the other, that his later doings should have so greatly discounted the merit of this performance, as, after some melancholy plating in his old age at Hendon and Uxbridge, he finally disappeared from view in Irelaud.

Blood for Siskiyou.

Mr. W. L. Moore has taken three stallions from W. L. Pritchard's stable to Siskiyou county, where he has purchased the ranch of the Doten Brothers, iu Butte Creek Valley. These horses are Bazaar, by Jack Malone—Ivy Leaf, by Lexington; Berrian, three years, by Bazaar—Avail, by Leinster, and Walter Moore, by Leinster—Debby, by Derby. Butte Creek Valley is a fine stock range barring an occasional snowy winter. The Dotens have always been large stock raisers and can generally count their horses by thousands, but the "Cayuse" is the prevailing blood, with an occasional strain of Kirby Smith or similar stock. As Mr. Moore can hardly expect to find many well-bred mares in that sectiou he probably intends to try the experiment of breeding np the Cayuse by an infusion of blue blood.

Nettie Hill Disabled.

Hill & Gries' bay filly Nettie Hill, by Joe Daniels—Mary Wade, met with an accident last Saturday, which, if it does not prove fatal, will prevent her ever facing a starter in a race. While galloping in the private track of her owners, near Springville, Ventura county, she started to run away, and the boy who was riding her pulled her into the fence. She struck her left hind leg with such force as to break the hock bone, the rider, Pablo Nanes, being at the same time thrown, breaking his right leg above the knee. Nettie was a very promising filly and her owners hoped for a brilliant record for her this season. She is reputed to have shown a half mile in 48 more than once since she has been in training.

Since the above was put in type we have received a confirmation of the report in a note from Mr. Hill, in which he says: We thought she was the fastest two-year-old in the world before she got hurt, and if ahe had come to the starting post in good shape, we do not think she conld have been beaten by any two-year-old in California, as we had tried her with Dotty Dimple, that ran second in Los Angeles with Aunt Betsy in 48¾ one-half mile. Nettie Hill could beat Dotty Dimple thirty yards in a half mile, or any horse we have. Our hopes for a successful trip to your city and county are shattered. We expect to send Wilditler to the spring meeting of the Blood Horse Association if he keeps all right, but onr best one ia ruined for life, and perhaps she may die.

Foals.

March 29 P. J. Shafter's b m Napa Queen, by Norfolk—Sweetwater, by Volscian, dropped a chestnut filly, four white pasterna, by Joe Hooker.

Names Claimed.

By W. G. Phelps, Stockton, Cal.

Duroc for black colt foaled March 31, 1880, by Nephew, his dam Flora, by McCracken'a David Hill. Second dam Sultana, by Grand Turk.

Lucillia for bay filly foaled May, 1880, by Nephew, her dam Lucinda, by Lewis' General McClellan; second dam by Morgan Rattler.

Through an error in writing the name of the Thad Stevens-Too Soon filly was given last week Ex-Tempo; it should have been Ex-Tempo (very soon).

Messrs. Hill & Gries write that A. W. Richmond is looking and feeling as fine as a colt. As they have forty-five mares of their own which they will breed to him this year, he will be kept as a strictly private stallion.

John Sweeney, lessee of the Treadway Park, Carson City, Nevada, is making efforts to have a race meeting on July 2, 3 and 4.

Jay Eye See has been taken to Louisville, Ky., where he is taking active work preparatory to the campaign.

THE GUN.

The Robinson-Lambert Match.

The pigeon shooting match at San Bruno on Sunday last, for a purse of $1,000, between Crittenden Robinson of the California Wing Shooting Club and Anson Lambert was unusually well attended. The arrangements for the shoot were complete in detail, and the weather was such as the most fastidious shooter could desire. A light haze prevailed during the early portion of the day, but when the party of sportsmen, who had taken the first train, arrived on the grounds, the sky was comparatively clear, with a light wind blowing from the southwest. At intervals throughout the match the wind alternately freshened and died out, the variation, however, being moderate and such as not to interfere materially with the flight of the birds. The shooters appeared in good trim and seemed to have been little exercised either over the probable result of the match or by the expressions of preference which the speculators gave utterance to. Each of the contestants had provided one or more coops of choice birds, and shortly before the commencement of the match, Frank Maskey, acting for Robinson, and M. Ault for Lambert, chose sixty birds from their respective coops, which were set apart for the contest. In the selection Maskey rejected thirteen birds and Ault three. The precantion against slow flyers was timely, and resnlted in as lively a set of birds as were ever shot at by local sportsmen. As the annexed tabulated score will show, there was a preponderance of swift tailers, which, as a rule, were close flyers. The quartering birds, with the exception of an occasional towerer, were exceedingly strong and severely puzzled the shooters. The use of the second barrel was moderate, and it was only resorted to in isolated cases, where the birds, though hard hit in the first instance, had fallen at such distance as to make a tramp undesirable, though they could easily have been retrieved. Considerable delay was occasioned in the selection of a referee, some of those selected for that office manifesting doubts as to their own qnalifications, and it was not until after teu o'clock that a choice of J. W. Wissinger had been made. The pool box showed a remarkable discrepancy between the estimated chances of the shooters; in fact, a most decided impression favorable to Robinson was manifested before the proceedings commenced, some of the pools sold reaching almost two to one as against Lambert. Gradually a more conservative feeling was evidenced, and the pools, few as they were, sold at $20 to $17 50, $15 to $11, Robinson choice. Private bets of two to one were made in several cases, the general run of such bets, however, ranging at $10 to $5 in favor of the Califoruia Club shooter. The reason for this marked preference of Robinson was based upon the popular belief that Lambert, though admittedly a good shot, would be severely handicapped in point of nerve and coolness which his competitor was credited with having to a remarkable degree. It must be admitted that Lambert's performance was wholly unexpected, aud was in striking contrast to his other public shoots where he invariably lost his matches purely on account of his nervousness. Robinson on the contrary appeared a trifle anxious and seemed to be somewhat tronbled. The first birds were noticeably swift tailers, and several of his shots were loudly applanded. Left quartering birds were at a premium, a particularly fortunate circumstance for Lambert, as he is a left hand shooter, with a decided prefereuce for right quarterers. The latter's long range shots, especially when compelled to nse the second harrel, were beautifully done. His shooting was also rapid, and as a general rule his birds fell at short distances from the traps. His fonrteenth, a very difficult straight tailer, flew close to the ground, and was brought down in excellent style. Both men used ten-bore Parker guns, Robinson loading with 5 drachms of powder, 1¼ ounces of shot, Nos. 7 and 8. Lambert nsed 4½ drachms of powder and 1¼ ounces of shot. Of the style of shooting of the men, the Breeder and Sportsman has previously treated. The remainder of the stakes $250, was deposited in the hands of William Golcher, stakeholder, shortly after which the field was cleared and promptly at eleven o'clock Robinson stepped to the score, killing a slow incomer, Lambert following by killing his bird, also an incomer, on which he used the second barrel. Rohinson's second, a swift straight tailer, though hard hit got away, Lambert killing a slow right qnartering bird. Robinson's third was an exceedingly beautiful shot at a swift tailer, which he tumbled at long range. Lamhert was nnfortunate with his next three birds and missing his fifth bird left Robinson one ahead. A slow qnarterer to the right however brought the score to another tie, Robinson missing again on a tailer. Lambert killing his next two birds and again leading. From the twelfth bird Lambert appeared fortunate in the direction and speed of hia flyers, while Robinson invariably enconntered a swift flying tailer, losing his eighteenth which, though it left its feathers flying about managed to reach the outside boundary. Out of cnriosity, a number of bystanders went after the hird and after plucking it found that the shot had completely pierced it and that it came out on the opposite aide. Lambert's sixteenth bird resulted in the most beautiful shot of the match. Sprung from the fifth trap, it turned out to be an exceedingly difficult swift tailer, which was brought down with the second barrel, after it had gone almost half way to the boundary. From the eighteenth to the twenty-fifth bird hoth meu preserved clear scores, Robinson losing his twenty-sixth, a left quartering tailer which died out of bounds, and Lambert missing his twenty-fifth, a swift tailer. At this stage of the shoot a disposition was manifested to hedge, and bets were freely offered of $15 to $10 on Lambert, with few takers. His eight following dead birds inspired renewed confidence, Robinson having in the mean while missed four birda, hia thirty-fifth dying out of bonnds, his thirty-ninth doing likewise. Lambert agaiu missed on his thirty fourth bird, a swift tailer, following suit on the thirty-seventh, a left quartering bird, and thirty-ninth, a straight tailer, which, though peppered with shot, died out of hounda. Pools, by this time, sold Lambert $40, Robinson $20, with few takers. It was conceded that, barring Lambert'a expected nervousness, he had practically won the match. When, however, Lambert lost his forty-first and forty-second hird in succession the waning hopes of Robinson's friends began to revive, only to be again dispelled when he missed his forty-third birds, a swift tailer, with an exceedingly slow second harrel. From this time to the close of the match very little interest was manifesfed, and the contest was brought to an end in favor of Lambert by two birds. The result was certaiuly unexpected, as Robinson, whatever Lambert's reputation as a good shot may have been, was generally conceded to prove the victor. As to the match itself, it forms a pleasant episode in connection with the history of local trap shooting, as it was marked throughout by a fair spirit of rivalry, in which the amenities between sportsmen were fully regarded. At no time during the match was the referee appealed to or one of the decisions of the judges questioned. In fact, bnt for the interest which attached to the match, independently of the large amount at stake, it might easily have been looked upon and mistaken for an ordinary interchange of courtesies between friendly sportsmen. The various officers discharged their duties to the eminent satisfaction of everybody, whether directly or indirectly interested, and it reflects great credit upon the gentlemen who attended to the details. The officers were as follows: Referee, J. W. Wissinger; Judges, Frank Maskey for Robinson, M. Ault for Lambert; Stakeholder, William Golcher; Trapman, Robert Liddle; Scorer, H. H. Briggs. The conditions of the match were $500 a side, 50 birds each, Hurlingham rules. Following is the score:

Lambert—11000 11011 01111 11011 11110 11111 11101 10101 00101 11111. Killed 37. Missed 13.

Robinson—10110 11001 01110 11011 11111 01111 00110 11001 11011 10111. Killed 35. Missed 15.

The following tabulated statement of the match is self-explanatory:

No. of Bird.	No. of trap.	Barrel used.	Dead.	Lost.	LAMBERT.
1	4	2	1		Slow incomer, killed after wheeling to right.
2	4	1	1		Slow right quarterer.
3	1			1	Exceedingly difficult tailer. *
4	5			1	Fast tailer close to ground.
5	2			1	Quartering tailer to right, slow flyer, hard hit.
6	2	1	1		Slow right quarterer.
7	1	1	1		Right quarterer.
8	5			1	Slow tailer.
9	3	1	1		Right quarterer.
10	5	1	1		Swift tailer, well killed at long range.
11	3			1	Strsight tailer, close flyer.
12	1	1	1		Right quarterer, killed at fourth trap.
13	1	1	1		Slow incomer.
14	5	1	1		Very difficult straight, swift tailer.
15	2	1	1		Slow incomer.
16	5	2	1		Very difficult shot, long range, swift tailer.
17	1	1	1		Straightaway tailer.
18	3			1	Close flying tailer, hard hit, second barrel. *
19	5	1	1		Slow incomer.
20	5	1	1		Swift left quarterer.
21	5	1	1		Slow tailer.
22	2	1	1		Easy incomer.
23	4	1	1		Slow right quarterer.
24	4	2	1		Slow wheeler to right.
25	2			1	Swift tailer.
26	5	2	1		Slow wheeler to right.
27	2	1	1		Swift right quarterer.
28	2	1	1		Right quarterer.
29	1	1	1		Swift straight tailer.
30	1	1	1		Slow tailer to right.
31	5	1	1		Swift right quarterer, difficult shot.
32	1	1	1		Swift right quarterer.
33	6	1	1		Left quarterer,
34	4			1	Swift tailer.
35	3	1	1		Slow incomer.
36	2	2	1		Slow tailer.
37	5			1	Swift left quarterer.
38	3	1	1		Strong, straight tailer.
39	3			1	Straight tailer, hard hit, first barrel. *
40	1	1	1		Left quartering tailer.
41	3			1	Swift, strong, straight tailer.
42	3			1	Close, straight tailer, hard hit.
43	2	1	1		Slow incomer.
44	5			1	Slow left quarterer.
45	5	1	1		Swift tailer, well killed.
46	5	1	1		Slow incomer.
47	3	1	1		Swift, straight tailer.
48	3	1	1		Straight, slow tailer.
49	1	1	1		Right qnartering tailer.
50	4	1	1		Swift tailer.

* Died out of bounds.

No. of Bird.	No. of trap.	Barrel used.	Dead.	Lost.	ROBINSON.
1	1	1	1		Slow incomer.
2	5			1	Swift, straight tailer, very difficnlt shot.
3	1	1	1		Swift tailer at long range.
4	5	1	1		Quick shot at right quarterer, well killed.
5	4			1	Slow tailer to right, hard hit with second barrel.
6	6	2	1		Very swift and difficult tailer killed at long range.
7	5	1	1		Swift, straight tailer.
8	1			1	Slow qnarterer to right.
9	2			1	Slow tailer, lowering on first fire and obstructed by smoke.
10	5	1	1		Difficult, straight tailer, close flyer.
11	5			1	Swift tailer not touched.
12	5	1	1		Beautiful shot at swift, straight tailer.
13	4	1	1		Left quarterer, quick shot.
14	5	1	1		Right quarterer, killed over trap.
15	1			1	Left quarterer, very hard hit. *
16	3	1	1		Right quarterer, killed over second trap.
17	5	2	1		Tailer to right.
18	2			1	Straight tailer, hard hit.*
19	6	2	1		Swift tailer to right, hard hit, first barrel.
20	3	1	1		Right quarterer, killed at fourth trap.
21	5	1	1		Swift left quarterer.
22	5	2	1		Slow left quartering towerer.
23	4	1	1		Close flying tailer.
24	4	1	1		Right quartering tailer.
25	6	1	1		Quick shot at right quartering tailer.
26	2			1	Left quartering tailer.*
27	1	1	1		Slow tailer.
28	2	1	1		Slow right quarterer.
29	2	1	1		Right quarterer.
30	3	1	1		Right quarterer.
31	4			1	Swift right quartering tailer.
32	3			1	Left quarterer. *
33	2	1	1		Straight tailer.
34	3	2	1		Right quarterer.
35	4			1	Slow left quarterer. *
36	2	1			Slow incomer.
37	2	1	1		Right quarterer.
38	4			1	Swift left quarterer.
39	3			1	Straight close tailer. *
40	4	1	1		Swift right quarterer.
41	3	1	1		Straight tailer, quick shot.
42	2	1	1		Slow right quartering tailer.
43	6			1	Swift tailer, slow on second barrel.
44	5	1	1		Slow left quartering tailer.
45	5	1	1		Swift right quarterer.
46	4	1	1		Straight tailer.
47	5			1	Slow right quarterer. *
48	5	1	1		Right quarterer.
49	1	1	1		Difficult straight tailer.
60	4	1	1		Straight tailer.

* Died out of bounds.

The Gun Club Shoot.

The Gnn Cluh held its regular cluh shoot at the Oakland Trotting Park on Satnrday. As usual in snch cases, where an opportunity is afforded the less brilliant shooters of the cluh to participate, qnite liheral handicaps were allowed, and this seems to have provoked the indignation of a local scribe, whose knowledge of the sport is confined to the shape of a pigeon and to the fact that he is actually shot hefore heing scored in favor of the shooter. Gross misstatements were given prominence in his report, and the affair was compared to a resort of French pool sellers. What the distinguishing attrihutes of Gaelic pool sellers may he ie left to the fertile imagination of the scrihe. In point of fact, the hetting wae confined to the spectators, though it is not qnite apparent that hetting is at all out of place at a pigeon shoot or any other sport. In addition to the clnh medals, a purse was put np for competition, the conditions governing the medals heing hest average scores for the season. The following score was made:

F. Butler, 30 yards	0	1	0	0	1	0	1	1	1	1	1	1—8
H. Babcock, 30 yards	0	0	1	1	1	1	0	1	1	1	1	1—9
C. P. Gordon, 30 yards	0	1	1	0	0	1	1	1	0	0	1	0—6
A. W. Havens, 30 yards	1	1	0	0	0	1	1	1	1	0	1	1—8
H. May, 30 yards	1	1	1	0	1	1	1	1	1	1	0	0—8
H. Black, 30 yards	0	0	1	0	1	1	1	1	1	1	0	0—5
J. K. Orr, thirty yards	0	1	1	0	1	1	0	1	1	0	1	0—7
M. Fuller, 28 yards	0	1	1	0	1	1	1	1	1	0	0	0—7
H. L. Fox, 26 yards	1	0	1	1	1	1	1	0	0	1	1	0—8
M. Bacon, 26 yards	1	1	1	0	1	0	0	0	0	0	1	0—5
W. Golcher, 30 yards	1	1	1	1	1	0	1	0	1	1	0	0—8
P. McShane, 26 yards	0	0	0	0	1	1	0	1	0	0	1	0—4
J. Grant, 25 yards	1	0	1	1	1	0	1	1	1	0	1	1—9
C. W. Randall, 30 yards	0	0	1	0	0	1	1	1	1	1	1	1—8
F. Smith, 24 yards	1	0	0	0	1	1	0	0	0	0	0	0—3

The $42 50 Sweepstakes.

After the Rohinson-Lamhert match wae shot at San Bruno last Snnday a sweepstakes was arranged. There were seventeen entres at $2 50 each. The purse was divided in 50, 30 and 20 per cent for the first, second and third hest shots. The match was six hirde, thirty yards rise, Hurlingham rules to govern. Ae the pigeone were those left over from the other match, they were a very poor lot. Mr. Swan would have, no doubt, got away with the first prize hut on his last shot the gun missed fire and it was ecored against him as a loet hird. Messrs. Funke, F. Hoefling, Pearson, Roche, Swan and Edward Fay tied on five hirds. They shot off the tie at three hirde, Mr. Swan winning the first prize after all, hy killing his three pigeons, Mr. Funke and Mr. Roche divided the second and third money after "freezing out" two other competitors who tied on two hirds. Following are the scores:

Funke	0	1	1	1	1	1—5	Swan	1	1	1	1	0—5
F. Hoefling	1	1	1	0	1	1—5	Silsby	0	1	1	0	1	1—5

Ball Breaking at Watsonville.

Last Saturday at Watsonville a match was shot at glass balls, 18 yards rise, 20 balls, when the following scores were made:

J. Frizzel	20	J. Milliken	17
T. Fischer	19	O. P. Wilcox	17
J. Colehower	19	G. W. Nidever	17
H. S. Fletcher	19	O. Miller	14

A preliminary meeting of the Pacific Gnn Clnb was held Wednesday evening, March 28, and considerable husiness transacted. The resignation of Leandro Galindo of Oakland was accepted; eeveral new membere were enrolled and the club under the presidency of the genial Thos. Valleau promises to spring iuto prominence this year. The first shoot will he held the third Sunday in April. The first regular meeting will be held this evening.

THE RIFLE.

One Hundred Shots.

On the 31st of last month Col. S. E. Beaver and Howard Carr of the 6rm of Klein & Carr were again at their old game of trying to beat the 100-shot score made hy one of the crack shots of the coast. The Colonel has made a better score on a former occasion than he did at hie last effort, and for the improvement that he has made since he began shooting large etringe of shot we can epeak very favorably. With Mr. Carr he hae alwaye shot well ever since he took an interest in rifle matters. One reason that Mr. Carr did not on this occasion beat all other scores made on thie coast, in fact, in the United Statee, is that he attempted to shoot the entire score without cleaning the gun. On the eighth round the barrel hecame leaded, which entirely crippled the score. Mr. Carr is confident that had he cleaned ont the gun he could have made 460 points instead of 455. On the eighth ronnd of ten shots he averaged 91¾ per cent, hut the last two rounde only 88 per cent. We look for a decided improvement on the next trials of these two gentlemen, hut as the following ehowe, they can look with some pride on their scores of 100 shots when threes are conspicuons hy their abeence. Edward Hovey acted as ecorekeeper:

Howard Carr	4 5 4 5 4 5 4 5 4 5—45	
	5 4 5 5 5 4 5 4 5 4—46	
	5 5 5 5 4 5 4 5 4 4—45	
	4 5 5 5 4 5 4 5 4 4—45	
	4 5 5 5 5 4 4 5 4 5—45	
	4 4 4 5 5 5 4 5 5 4—45	
	5 5 5 5 5 4 5 4 4 4—46	
	5 5 4 5 5 5 5 5 5 4—48	
	4 5 4 5 5 4 4 4 4 4—43	
	5 5 4 4 4 4 5 4 5 5—45	
Total		455
Col. S. E. Beaver	5 4 5 5 5 5 5 4 5 5—48	
	5 4 4 4 4 4 4 5 5 4—43	
	4 4 5 5 5 4 5 5 4 4—45	
	4 5 4 4 5 5 4 5 4 4—44	
	4 5 4 5 4 4 4 4 5 5—44	
	5 5 4 4 4 5 4 4 4 5—44	
	5 5 4 4 5 4 4 4 4 4—43	
	5 5 4 5 4 4 5 4 4 4—44	
	4 4 4 5 5 5 5 5 4 5—46	
	5 5 4 4 5 4 5 4 4 4—44	
Total		445

On Snnday, April 15, the California Schnetzen Club will give a grand prize shooting tonrnament at Schuetzen Park, Alameda. This affair promieee to he a success ae there will he $400 in caeh besides innnmerahle articlee of value competed for. The club extend a hearty invitation to all riflemen to come and participate.

Turner Sharpshooters.

Last Sunday the Turner Sharpshooters held their yearly shooting tournament. The shooting was held at the Alameda Schuetzen Range and was well attended. Two targets were used, the company target for members of the Turners only, and the pnhlic target for all who desired to try their luck with sight and trigger. Those of the company who wou prizes are: First prize, Charles Sagehorn; second, J. Thode; third, H. Plageman; fourth, D. Schoenfeld; 6th, P. Jacohy; sixth, R. Finking; eeventh, O. Burmeister; eighth, C. Traulsen; ninth, C. Tecklenhurg; tenth, O. J. Wagner; eleventh, Chas. Huhert; twelfth, J. Lorick; thirteenth, H. Krall; fourteenth, I. Segden; fifteen, J. Kastor; sixteenth, August Hoffman; seventeenth, S. Friedlander; eighteenth, L. Hintz; nineteenth, J. Sabla; twentieth, Wiesan; twenty-first, Biley.

The fortunate marksmen who shot on the public target are: First prize, A. Rahwyler, 73 rings; second, R. Kuhls, 72; third, William Ehrenpfort, 71; fourth, P. Jacoby, 71; fifth, A. Seicker, 71; sixth, J. Stanton, 70; seventh, Benjamin, 69; eight, Rapp, 68; ninth, Utchig, 67; tenth, Hatja, 66; eleventh, Zecher, 66; twelfth, Boeckmann, 65; thirteenth, Plageman; 63; fourteenth, Krahman, 62; 6fteenth, O. Burmeister, 61; sixteenth, J. Horstmann, 61; seventeenth, Bertelsen, 60; eighteenth, F. Back, 59.

As the ahove scores show the shooting on this occasion was far ahove the average and they are worthy of commendation.

A Sweeping Challenge (?)

Col. Beaver gives ns the information that Mr. Nick Williams has issued a sweeping challenge to shoot a match with any two other persons for a sweepstake of $150 each under these conditions: One hundred shots with any military rifle at 200 yards; 100 ehots with a 45 caliher pistol at 30 yards, and 100 shots at live pigeon, 30 yards rise, Hurlingham rules to govern.

Another condition made hy Mr. Williams is that the pigeon match must take place at the Oakland Trotting Park, and the rifle and pistol matches must he shot at Shell Mound range. And still another condition made is that the shooting must come off thirty daye after the money is put up. Mr. Williams does not bar ont any one hut he insists that there he two to enter heside himself.

Now, instead of this being a "sweeping challenge" it is only a sweepstake match, and there ie no custom now in vogue among sportsmen that allows one man to make a sweepstake match and lay down all the specifications and conditions of the same.

If Mr. W. wishes to shoot a match for hig money with any one man he might at least arrange with an acceptor on time and place, hut if he wishes to get up a sweepstake matchlike the ahove it wonld he well to let those with whom he shoots have some say in the matter.

One Hundred Shots.

The interest taken in rifle matters promises to make this season's shooting very interesting. For some time past the desire to make good scoree in strings of 100 shots has taken hold of several of our marksmen and many strings of more or less merit have been made. Following is a string of shots made last Saturday hy Lient. H. J. Mangels of Company C, Second Regiment. Mr. M. ie a good 200-yard shot and during the last year he has made considerable improvement at the target. This score was made with a U. S. Springfield rifle:

5 4 4 5 4 4 4 5 5 4.....44	4 5 5 4 4 5 4 5 5 3.....44
4 4 4 4 4 5 4 4 4 4.....41	4 4 4 4 4 4 4 4 5 4.....41
5 4 4 4 4 5 5 4 4 4.....43	4 4 5 4 5 4 4 4 4 4.....42
4 4 4 4 3 4 5 4 5 4.....41	4 4 5 5 4 5 4 4 4 4.....43
5 5 4 4 4 5 4 5 4 4.....44	4 5 5 5 4 4 4 5 5 5.....46
Total	429

At the Alameda Rifle Range the San Francisco Schuetzen Verein held their monthly shoot. Very good shooting was done as the scoree of the following ten marksmen show. The men helow named are the winners of prizes as shown: First prize, Boeckmann, 25 points; second, Waller, 23; third, P. Jacoby, 23; fourth, C. Waller, 23; fifth, Zecher, 23; sixth, Krahman, 22; eeventh, Heber, 21; eight, L. Haake, 21; ninth, J. Horstman, 21; tenth, J. Thode, 21.

At the last monthly meeting of Companies C and G a resolution was made that Company C enter a rifle team to compete for the Andrewe Trophy at the spring meeting of the California Rifle Association. This company has already won this trophy, and should they win it again it becomes their property "for keeps."

To-morrow Companiee C and G, First Infantry Regiment, hold their regular monthly shoot at Shell Mound range. There ie no excuse for memhere not attending their practicee, as they can nee any range to suit their ability, from 100 to 500 yards.

FISH.

The Trout's April Fools.

The opening day of the trout eeason wae a disappointment to nearly all who went out last Saturday and Sunday. The late raine made the streame so mnddy that even the moet expert angler could hardly get a riee. It ie well that the rain came as it did, or the army of anglers would have cleaned out the waters in the first few daye and during the snmmer there wonld have been no fishing at all. Just before the rains the fishes were collected in the deep holes and pools, where they wonld have been at the tender mercy of the anglers, but the rains opened up the watercoursee, giving the shining heauties a chance to ecatter and increase in size. All the streams accesihle to this city were visited, and where all worked hard to make a good showing there were only a few who got good stringe; the largeet eo far reported are two etrings of eeventeen and eighteen trout, most of which run from three or four to twelve inchee in length. Of twelve expert anglere some few caught as high as a dozen and some ecored a 0. Mr. J. C. Sellere was prohahly the moet lucky man of the day; beeide quite a numher of ordinary-sized trout he landed a heautiful 4½-pound ealmon trout that meaeured twenty-two inches. J. E. & W. E. Shane fiehed aloug the upper Peecadero near Dawd'e, but conld not get any hut emall-eized fish. Parties living along this creek say that the large ealmon trout are juet beginning to run in eince the rains. The crowd that returned on the late Sancelito hoat had hut little to say regarding their day'e exploits. Only Mr. Nohles conld crow. His catch was a etring of ten, the largeet of which weighed one pound and an ounce, though the moet were fair-sized, as compared with those of other anglers.

Salt Water Fishing.

Rock-cod fiehing is very good and is hecoming hetter every week in the viciuity of Yellow Bluff, or as some call it Target Point. Pole fishing continnee to improve along the Sauceli- to shore. Mr. Frank Atwood recently canght a string of ten 6ne sea trout all of which weighed one pound and some one and a half pounds; also several hlack rock-cod weighing two pounds each, and a four-pound eel. Good for Mr. Atwood. Parties who have heen ou the ocean shore near Point Bonito report excelleut rock fishing. Every Snuday fishing partiee cau he found all the way from Point Bouito to Bolinas Bay. These fishing grounds are coming into favor with salt water anglere. Fishing around the bay still continues to he good. A great many porgies are taken up at the drawhridges near Saucelito. Smelts of quite large size were taken last Sunday off the old railroad whalf at Oakland. Red tail perch also hit quite lively. On the whole, the salt water fishing in the vicinity of thie city is more than average.

The Government Fish Commission has given ont that the McCloud hatching eetahlishment is to he ahandoned and no appropriation has heen made for its continuance. These works were started eome ten years ago and were once detroyed hy high waters. They were rehnilt two yeare ago on a more extensive scale, and the Government property consists of hatching houee, wheel, ponds, dwelling and hoarding house, harn etc. The principal reason given for the ahandonment of the place as a Government estahlishement is that the reports received at headquartere are nnfavorahle as to the propagation of the McCloud fish ehipped to other waters.

Spencer & Johnson, fish dealers in the California market, had on exhihition last week a heautiful striped hass taken hy a 6sherman in the hay. It was ten or eleven inches long and weighed over half a pound. It is eupposed to he one of the lot that the Fish Commissioners hrought out from New Jersey and put into the bay last August near Arseual Point near Benicia. There were 350 of this lot brought out here at an expense of over $1,000, or over $3 per fish. It is a pity that these fish cannot he let alone for a few years, for the destruction of one fish now is equivalent to the destruction of thousands a few years hence.

The Spring Valley Water Co. will not allow any fishiag this year in the Pilarcitos or San Andreas creeks, hut after the 1st of May they will permit fish to he taken from the Crystal Springs Lake reservoir. These waters ahout six years ago were stocked with hlack hass and the increase since that time has heen so great that every portion of the lake is now overrun. Beside these fish there are a great many native salmon trout. There will he excellent sportas soon as anglers can get their lines into these waters.

A joke is told of an angler who left the city on Snnday morning and returned on Monday with ten pounds of splendid trout. His friends praised him for his ahility as an angler and wanted to know where he canght the fish, hut he would not tell them. It finally leaked out that he had caught them ont of a private pond down the road where the owner charges twenty-five cents a pound for all fish taken. The owner of the pond does quite a business with anglers of this kind.

The American representatives to the London Fisheries Exhibition left Philadelphia March 21, on the steamer Lord Gough. Professor G. Brown Goode, of the United States Fish Commission, is in charge; Mr. R. E. Earl will superintend the fish culture exhibit; Captain J. W. Collins will have charge of nets, boats and marine fisheries; Mr. Joseph Palmer, of the taxidermy department, and Mr. Reuben Wood will care for the anging exhibit.

If our people all over the county would not purchase a fish from the Indians caught with a spear, it would make a vast difference with the fishing-ground in a few years. Let them take their chances with the hook and line and they would leave many a big fellow to furnish sport for white men who fish only in the proper season.—*Quincy National.*

Two Greek fishermen, named John Popper and Nicholas Wedder, were arrested last Sunday morning, at Vallejo, for violating that section of the law which prohihits fishing hetween midnight Saturday night and noon on Sunday. Marshal Ford and Deputy Constable Wilson made the arrest.

Mr. J. H. W. Riley, who fished in the mnch-visited Lagunitos creek, says that the stream was so muddy on Sunday and Monday that no fish could he caught. This must he the fault of the anglers as there were those who had pretty fair luck in this same stream.

Tront were introduced into the waters of New Zealand eome years ago, and the natives now enjoy capital sport with the rod, as the fish rise readily to the fly, and attaiu to 6ve and eix pounds in weight.

Fisherman still growl about the saw-duet in the Truckee. One of them had a trout thie morning with its gills packed with saw-dust, and the fish was as flahby as jelly.—*Reno Gazette.*

A large ehad that measured twenty-one inches was caught last week by some fisherman iu the straits of Carquincz near Benicia. This is one of the largest ever caught in these waters.

Capt. Hub Parker, Fish Commissioner of Nevada, placed 1,000 young Eastern trout in a pond on Col. Hardin's rauch in Humboldt county last week. The fieh were hatched at Carson.

Lnet Monday Meesrs. Frank Gassaway, Frank Page and Chas. Peters wet their lines in the Lagunitos creek to very good effect. They caught eixty-one fair-sized trout.

Mr. Benj. Burling fished along one of the tributariee of tho Lagunitoe, aud in two days, Sunday and Monday, caught 120 trout, all of fair eize.

The hiennial report of Capt. H. G. Parker, Fieh Conm'seioner of the State of Nevada, has been received.

Fieh Commissioner Dibhle has heeu on a tour of inspection along the Truckee, among the 6sh ladders.

Seth Green is reported to be dangeronsly ill.

Thirty-eix teame will participate in the Firemen'e Tourna-s ment to he held at Gilroy on the 12th of May, one or more coming all the way from Los Angeles.

The etatement that Myers would visit California this fall i vehemently deuied by the New York eportiug papers.

A meeting of the Lacrosee Clubs will he held next week for the purpoee of deciding upon tho season's play.

Parole will he traiued again this season. He is the horee on the turf.

NEW YORK AGENCY.

MR. C. C. PETTUS at the office of the "Sportsman," 29 Warren street, is duly authorized special representative of the BREEDER AND SPORTSMAN in New York to receive subscriptions and arrange advertising contracts.

SACRAMENTO AGENCY.

Residents of Sacramento and vicinity, desiring to subscribe or advertise in the BREEDER AND SPORTSMAN, can do so through our agent, Mr. M. J. Henley, Russ House, 1,009 J street.

ADVERTISING RATES.—Displayed $1 50 per inch each insertion or pro rata for less pace. Reading Notices set in brevier type and having no foot marks, 30 cents per line each insertion. Lines will average ten words. A discount of 10 per cent. will be allowed on 3 months, 20 per cent. on 6 months and 30 per cent. on 12 months contracts. No extra rate charged for cuts or cutting of column rules. No reading notice taken for less than 60 cents each insertion.

San Francisco, Saturday, April 7, 1883.

THE SACRAMENTO PROGRAMME.

It must be a veritable stoic who does not admire Sacramento in the merry month of May. There is scarcely a point which is not attractive unless it he the slough a little way from the grand depot, and that has points which are not to be lightly rated. The Sacramento people, too, are worthy of admiration for the spirit displayed whenever anything is to he done to forward "getting up a race-meeting," or giving substantial aid to the fair. Forty thousand dollars subscribed in a few hours to aid in building the agricultural pavilion is a practical exemplification of a liberal spirit which cannot be gainsayed. It does not matter if the erection of such an imposing structure is to the benefit of the town, it would be a great pity if it were otherwise, though there are plenty of places in which the inhabitants hang with eager clutch to the dollars in abject fear that they will never see them again.

It is one of the grand things in this world that judicious liberality will pay, though it is lamentable that the niggardly spirit so oftentimes blinds the judgment. But this is a kind of a side issue. We "set out" to write about the races, and enjoyable as they are sure to be, with thoughts of the races come remembrances of other bright sports, and like the ancient mariner we are wrenched with a desire to "tell a tale" if it is not a penance.

The space is too short, however, to do justice to the subject, too brief even for an outline sketch. To make the most of the race week it is absolutely necessary that the visitor go there well fortified with "tired nature's great restorer, balmy sleep," or make up for deficiencies by a noonday nap. The mornings and evenings are so lovely that it is an absolute waste to spend either in somnolency, and to rise with the lark and go to bed with the whip-poor-will is the only method of a full realization. Not long ago we pictured a day at the fair, but with all the attractions offered at that season there are lacking some of the brightest features of the spring meeting.

Pomona and Ceres make the autumn a glorious fruition; in May Flora decorates with more artistic skill and she is lavish in adorning the capital city. There is such a wealth of flowers that nearly every place is blooming in a thousand bright colors, the air is redolent with perfume. The lawns and pastures surrounding the stately villa and the vine-embowered cottage are equally pleasing. There is not a chill in the air from the time Aurora streaks the East with the advance banners and streamers of the morning, and the evenings are so glorious that there is intense pleasure in mere existence. After the excitement of the races there is tranquility in the bland atmosphere which overcomes the perturbations of the losers, and restores the equilibrium upset by getting on the wrong horse. With the programme offered the afternoons can scarcely fail to furnish their full share of enjoyment.

The ten days that will intervene from the close of the meeting of the Pacific Coast Blood Horse Association will give plenty of time for the horses to recover, and make the trip from Oakland to Sacramento.

The racing previous to this meeting will put the finishing polish on the preparation, and there are likely to be some startling surprises consequent on a difference in condition. The programme being fully given in the advertisement the only necessity is to refer to it for a list of the purses and stakes, and we feel assured that it will be found satisfactory.

The Sacramento course is so easily cut up that racing and trotting on alternate days are admissible, and this arrangement adds to the attraction.

But the first thing on the part of owners of horses to do is to make entries, and with liberality on their part the success of the meeting is assured. This is due to the Turf Club in response to their effort to aid in furthering the horse interests and we feel quite sure that such will be the answer.

THE SPRING RACE MEETING.

Our correspondent, Mile and a Quarter, sent a very interesting account of the racehorses at the Agricultural Park Course. It is of more interest than merely the good reports about the horses as it brings the welcome intelligence that so many of the horses engaged in the coming meeting at Oakland will be on hand to play their part in the fray. There are so many at the popular training ground that the well-doing is a potent factor in calculating success, and with these all right, the question is settled, as from other places come the same flattering reports.

It is true Palo Alto has undergone one of the hardest sieges of old-fashioned distemper ever known in this country, but a majority of the horses in training have recovered in time to resume work and with the large number in exercise there, a few are not missed. Santa Anita is so far away that little reliable intelligence can be obtained, though as heretofore that stable has been in great force when it put in an appearance at the spring meetings there will be a wholesome dread of the drab and Maltese cross. So far we have not received any information about Mr. Boots' horses further than Lee Shaner is training them and Judge McKinstry, and J. B. Chase's have just commenced their gallops on the Oakland course.

Ever since Lady Viva returned from Sacramento until a few days ago, she was relegated to the ignoble duties of drawing a cart, but inasmuch as she drew it a mile in 3:47, and kept this clip for a dash of four miles, it is not a bad "seasoning" for the coming gallops. From a paragraph in another column it will be learned that Nettie Hill met with a serious accident, and there is little question that this daughter of Joe Daniels and Mary Wade was very fast.

There is sure to be something very fast from Santa Clara, where the Messrs. Judson are training on their private course.

The Wildidles have, with scarcely an exception, that first great quality of a racehorse, speed, and as a reserve there is a Monday colt from Lady Clare by Norfolk, that can scarcely fail to be a good one. But with nothing more than pedigrees to guide there is such a lot of good ones that the ciphering out is beyond our capacity, or rather the fancies we indulge might prove to be something of the will-o-wisp sort that would be dangerous to air. To return to the letter of Mile and a Quarter, there is a vagueness that is tantalizing, and to hear that a two-year-old was at Premium's neektie, and that Prince of Norfolk and Callie Smart ran a quarter in such presumably fast time that it was thought best to omit the essential, and to leave us all in the dark as to the identity of the youngster—well, it is, to say the least, the safest way to handle it. Not long ago there was a gentleman protesting that as last fall he had watched all the trials, listened to the opinions of all the trainers, concluded that he could pick out the winner in every race sure, and then got broke, he would pursue different tactics. He did not want to see a trial run, he would carry a watch that had not the encumbrance of a second hand, he would ignore the society of trainers and jockeys, and when the races came off, he would march to the pool stand and make his investments as his presentiments indicated. That was, he would depend more on impressions than fancied knowledge, and joined with Pope in the declaration that "a little knowledge is a dangerous thing," especially to those who speculated on races. This is sound philosophy as well as stable argument and we concurred fully in the expressed views. Our esteemed correspondent must have been governed by the same feelings, and purposely refrained from conveying intelligence that might mislead. This we also indorse. As it stands, each one of the nine nominations of Rancho del Paso may be selected as the "runner up" of Premium, and until the race is decided it cannot be said which was the right one. The speed of the two scions of the horse of Norfolk will also be in the dark until the time comes around and thus, like a skillful artist, the sketch is handled so that the imagination has a good deal to do with filling out the picture. At all events the readers of the *Breeder and Sportsman* will agree with us that Mile and a Quarter has given them a very entertaining epistle, and also concur in the view that the news from Sacramento is encouraging and betokens a brilliant success for the spring meeting.

EASTWARD BOUND.

O. A. Hickok and John A. Goldsmith will in a few days commence their journey to the East. While it is to be regretted that the people of California will lose the pleasure of seeing their horses trot at home this season, this loss brings a recompense in benefits which will more than repay. With the exception of St. Julien and Director, the others of the string are California-bred colts, and there is no recommendation which bears the same weight as actual performances made in the presence of those we desire to impress with the qualities of our stock. There is a grand future for the racehorses and trotters of California. In due time their merit will receive universal acknowledgment, and the pioneers who introduce them to the Eastern folk are well worthy of words of commendation. Last year may be termed the first season in which our horses gained Eastern distinction. There was a fatality in former ventures.

Occident went entirely to pieces, Colonel Lewis became so completely shattered that he was not a shadow of his former self. The first trip of Mollie McCarthy was a lamentable failure; the second, she displayed a portion of her former prowess. The Duchess of Norfolk waned from the time she reached Chicago, flashed for a moment with a little of her springtime brilliancy, and then the light was darkened forever. Gano did something for the place of his birth, though he, too, had his mishaps, and it remains for the future to show that this golden coast will lead the dance on the turf. Although the trotters had their full share of mishaps, there is a fair showing for 1882.

Overman proved himself a great horse and notwithstanding his stable companions, Eva and Sweetheart, "went away off" from their previous form, the former gave evidence that when she did "round to," she would be likely to play her part right well. Wildflower and Hinda Rose made a clean sweep, the only black mark being a single heat lost.

We have great expectations of "our" horses the coming year, but so much depends on good luck that ruby prognostications may be ill-timed. That everything will be done which rare skill, arising from long experience intelligently applied, can accomplish, is assured. Mr. Hickok has been full twenty years in the business, and though Goldsmith is younger, he has been educated to the profession from his early boyhood and shows a marked aptitude. There are few of the trainers and drivers of trotters, even in the front ranks, who give so much thought to the mastery of the art as the pilot of St. Julien, and he is not only quick to perceive, but is ready to apply whatever comes within his observation, and the younger captain in this tour is much of the same bent of mind.

Hickok has the benefit of more experience in making the long journey from the Pacific to the Atlantic than any other man, and is thoroughly posted in everything pertaining to the trip. The first section of the journey is from here to Chicago with stops at Ogden and Omaha. The journey and stoppage will require twelve days, and the intention is to make the shortest possible delay in the "City on the Lake," Cincinnati being the objective point.

The course at Chester Park labors under the disadvantage of being only a half mile, though it will be some time before the horses require to be sent along at a fast pace, and the benefit of the right kind of a climate will make amends for the drawback. Events will decide the next move, though it will not be long until the engagement at the Gentlemen's Driving Park will take them to New York.

Under Mr. Hickok's charge are St. Julien, Overman, Ruby, Eva and several other Sultan colts engaged in the Eastern stakes.

It is not exactly settled what Mr. Goldsmith will take beside Romero and Director, though the probabilities are strong that Gibraltar and Rowdy Boy will accompany them.

As has been stated, prophesies are hazardous, but with a fair share of the smiles of the blind damsel we have the utmost confidence that something good will roll out of the cornucopia.

Should St. Julien, Eva and Overman make a good display it will attract renewed attention to the advantages attending the wintering of horses in California, and in case there is an influx of the Eastern cracks, the winter sports of the track will revive.

In connection with this we will state that the *Breeder and Sportsman* has made arrangements to have the fullest reports of the doings of our horses in the East for the ensuing year, so that our readers can depend on being kept fully posted in all pertaining to them. This will be the next thing to seeing them in their races, and the great interest will not subside should they meet with the success we ardently desire may be the result.

THE COURSING MEETING.

We have a great liking for fine animals of every description, and in the whole range of those which are domesticated there are few which are not admired. Were we to select especial favorites, the forms most pleasing to the eye, and limited to a choice which should only embrace two varieties of quadrupeds, it would fall on the thoroughbred horse and the greyhound.

Among fowl the game cock would be awarded pride of place. Not by any means when trimmed and spurred for the pit, but with all the wealth of rich colors in plumage and with comb and spurs uncut. It does not depend on color in any of these to award the prize, for though the beauty is much heightened by the shades being of the right hues, there is still greater beauty in the perfect symmetry of the form.

The thoroughbred horse and the greyhound are models of grace and agility, and the the finer specimens are moulded into lines that are as harmonious as the "music of the spheres," which we suppose means the quintessence of harmony. The nearest approach we have ever made to attending a regular coursing meeting has been to cross the bay in company with those who were starting on the journey to Merced. Last Wednesday the 4 o'clock boat conveyed a good many dogs, though others had taken time by the forelock and gone half an hour before.

Together were two distinct types of the greyhound, one a blue, massive in proportion, something after the pattern of many horses that have been noted for speed and invincible determination. The other was black and white, fine almost to fragility and yet with a wiriness of look which augured that there might be a great flight of speed, and an alertness that would be of vast service in handiness of working. From a purely esthetic view the parti-colored was the most pleasing, though to the eye of an expert we suppose the big blue would have the most attraction. As in the case of horses, however, capacity is not always shown in symmetrical lines and there is a potency hidden beyond the ken of the most critically inclined scrutinizers.

It is fortunate it is so, else beauty would carry off all the cakes—bakery and all—and homely merit be thrown in the background.

The dogs on the boat always have a buoyant expression. The old hands at the business are well aware of what is in store for them and are cogitating over long-eared and long-legged hare. The youngsters are overpowered with curiosity, and have not the sedateness of the elder. Happiness beams from every canine countenance, though in the faces of some of the men who have them in charge there is an expression of vast responsibility. The one who has the blue dog appears as though he had the destiny of a country in his hands and his answers are as curt as he can make them. When a heavily laden hand-truck comes rattling down the gangway, and he is so crowded that there is danger of the dog being crushed with the wheels he throws himself with almost vicious energy against the human wall, and swings and hauls the dog where he will be in less danger than he is in himself.

There could not be finer weather for a coursing meeting. The "glorious rains" have wetted down the plains that were so arid, and there is verdure on the San Joaquin. An elastic carpet to run upon without risk of torn nails and worn pads, and as yet the gentlemen of the slips have not invented an artificial "protection" to use when the most speed is required. We write this before the action begins. When it is over T. T. W. will give our readers one of his most vivid descriptions and those who could not leave home will have the satisfaction of having the scene transferred from the San Joaquin to the pages of the *Breeder and Sportsman*.

THE POULTRY ARTICLES.

The articles that appeared in this paper on the breeding of poultry contributed by G. E. D. have been published in pamphlet form, and this will be a source of satisfaction to those who are engaged in the business, as it presents them in more compact form. The author is very competent and handled the subject intelligently, and the treatise on the preliminary stages, incubation, is invaluable, being a lucid explanation of this critical portion of the business. As in horse-breeding, the first thing is to get a foal of the desired type, so in the poultry line, hatching the chickens is the groundwork.

After the exhaustive articles, it is not necessary to say more regarding artificial incubation. Besides the articles published in the *Breeder and Sportsman* there is a description of the Golden Gate Incubator incorporated in the pamphlet and by sending a stamp to Davis & Look, East Oakland, Cal., it will be forwarded by mail to applicants.

THE STRIDE OF THE RACEHORSE.

Had there been the controversy regarding the action of the racehorse that the fast trotting step gave rise to, a portion, at least, of the great discoveries of the camera would have been anticipated. It was taken for granted that the chief, if not all, the propelling power was posterior to the girth, and that the back, loin, quarters and gaskins were the points where the motive power was stored. An old acquaintance, prominent on the Western turf twenty-five years ago, styled it "the driving end," and this view was shared by all who were considered to be good judges of the form of the runner. The immense quarters and gaskins of the fast "short horse" would elicit favorable comment, and though the arm and fork were not overlooked, muscular development in the anterior part of the body was only held to be serviceable in keeping that part out of the way.

The arguments which the fast trotting step brought out prepared the way for investigation, and, consequently, many had a tolerably correct idea of that method of progression long before the instantaneous photographs appeared. Not so ample an acquaintance as at present, though so much more thorough than that of running that it appears like knowledge vs. ignorance. Had one-quarter the study been given to the action of the racehorse that was the case with the fast trotter, the fact that the last great propelling effort before the body was hurled through the air was made by the foreleg would surely have been discovered.

In looking over some old papers one was found on which was represented several strides of a racehorse. The diagram was made from running a horse over a newly harrowed and scraped track and measuring the spaces between the footprints. This was done to prove a position taken in controversy the winter previous, that one foot struck the ground at a time, which was disputed by the person we had the argument with.

On the sheet are six strides, the shortest nineteen feet, the longest twenty-one feet ten inches. In all the strides the measurements commenced at the footprint before the hound, and ended where the same foot touched the ground again. In the longest stride the space representing the bound was eight feet one inch, the next space three feet ten inches, the next five feet, and the last four feet eleven inches. The photographs show exactly how these were made. The place of beginning was where the fore foot gave the last impulse, and the next print where the hind foot made the first contact. That this was while the body had no support was evident from it being so much the longest—eight feet one inch. The next space is where the relieving hind foot came to the assistance of its mate, and then the space of five feet marks where the fore foot was put down. The next space of four feet eleven inches is the distance between the fore feet, and marks the length of the stride. Now let us suppose that some one had made the discovery that the forelegs are more than props, have a more arduous task than to keep the horse from tumbling on his nose, and desired to prove it. The first step would be to place shoes on, which would be made so that each would have distinguishing features.

The scraped track would plainly show that the fore foot was the agent to hurl the body along, and that the hind foot received the first shock of landing. It would also be proved that the next to strike was the other hind foot, and then the fore foot, which before had not touched the ground, was marked. The final print shows the same foot that commenced the stride, and the old-time formula of "five tracks or four spaces," has been complied with to measure the stride. There was no end in these old times to stride-measuring. "What does he run on?" was sure to be a question when a short horse was the topic, and the reply would give the feet and inches with scrupulous exactness.

While this much is easily proven from the "tracks," there are other points which could only be elucidated by instantaneous photography. The air kept the secret of the positions assumed when body and limbs were off the ground, and had any one pictured the grotesque attitudes revealed by the camera, he would have been held too daft to converse with. Then the footprints would be liable to mislead in one respect. Aware that to give a stride of 21 feet 10 inches it was absolutely necessary that the body be hurled along without support, he would naturally take the longest space as being the representative of that interval. But he found two long gaps, and in the strides there is a singular variation. In the one of 19 feet the first space is 6 feet 5 inches, the next is 2 feet 11 inches, then there is 5 feet 10 inches, followed by 3 feet 10 inches. The query would arise, are there not two bounds, and if the first is long the next is short. He has another stride before him of 21 feet, the first space 7 feet 2 inches, the second 6 feet 3 inches, and the cause of which would baffle him however cute at figuring things out.

When the second space in the stride is printed on the ground the photograph shows a position beyond human eye to detect, and which would be altogether likely to escape the most acute mind. When the second hind foot has struck the earth it remains there, the body being carried over it, until the fore foot is brought down, being spread apart far enough to cover that much space between them. The feet on the ground are the right fore and the left hind, or vice versa, and the others are stretched in the air to a still greater distance apart. While then the order of placing the feet on the ground would be noticeable, and the correct impression received of the agency of the fore leg in giving the final impetus and also the "breaking of the jar" with the hind, there would arise so many puzzles as to lead to doubt in all other features of the stride, and, possibly, shake his belief in the correctness of the demonstration.

At all events it would have given room for endless arguments, requiring unlimited enthusiasm to sustain the sceptic who questioned the verdict of the world.

Therefore it is fortunate that the knowledge was hidden until there was absolute proof to sustain it, and even with that there are infidels. The old paper, however, and the photographs tell the same story, though it is vexatious to think of how small a portion of the teachings were applied. It only required to be studied to have thrown a good deal of light, and carried far enough would have resulted in something of an approximation to our present knowledge.

ARANZA BEATEN.

The first of the American horses to appear on the English turf this season was Aranza, by Bonnie Scotland.

The race was the Lincolnshire Handicap, which was run on the 27th of March.

The night before the race Aranza was the favorite at 6 to 1, though just before the start she receded to 10 to 1. Knight of Burghley, the favorite, at 8 to 1. After running 300 yards Greek Maid struck Aranza, destroying all her chances to win. Knight of Burghley was the winner, the weights being much in his favor.

From late advices it is probable that a better showing will be made by the Lorillard stable before the spring meetings come to a close.

THE JERSEY HERD BOOK.

Elsewhere will be found a communication advocating the issuing of a Jersey Herd Book for the Pacific coast. As we understand the matter, it is a move which will be heartily welcomed by the breeders of this section of the country. There are complaints about finical rulings and absurd conditions which must be altered on good grounds from the nearly universal agreement that they are too onerous to be borne. There is no desire to be so lax that inferior animals, or those which are lacking in the essential quality of pedigree, will be admitted. The whole purpose is to simplify the registration, and while stringent rules will be adopted, the farcical addendas and red-tapism of the East will be avoided.

There is an extended interest on this coast in relation to Jersey cattle. The breeders of this class embrace a large number of men, and in nearly every village and town are specimens of this deservedly popular race. Their adaptability to family wants insures that there will be a continued increase, and though in the last ten years they have multiplied beyond the expectations of the most sanguine, another decade will show still greater.

The publication of a Herd Book will be of immense advantage in systematizing the business. It is a settled maxim in breeding that the only dependence in securing grades that will come up to expectation is to have one parent pure. The half-bred Jersey may be only slightly inferior to the thoroughbred in milk and butter-producing qualities, though whenever the experiment is tried of coupling half-breds there is almost a certainty of failure, quite sure to be degeneration. It would be unwise to breed a pure Jersey cow to a mongrel bull, as the females are needed to perpetuate the breed, but the male can be coupled with cows of other breeds without loss.

Now that the project has been given a start it behooves everyone interested to take hold of it with energy and a determination to carry it through. We will be pleased to do all that lies in our power, but if the breeders hold back our efforts will be of no avail. There is not a dissenting voice, not a single individual that we have heard offer the least objections. With this universal acquiescence in the wisdom of the move, failure can only result from apathy. But there is little danger of lethargy when there is such a general realization of the benefits to follow.

THE AUCTION SALE.

The auction sale of trotting-bred stock, belonging to L. J. Rose and J. B. Haggin took place at the Bay District Course on Thursday a brief account will be found elsewhere.

The prices were very much in favor of the buyer and capital bargains in nearly every instance were secured.

ROWING.

How Cambridge was Beaten.

The defeat of the Cambridge crew by Oxford on the 15th inst. was even more overwhelming than the cable reports showed, while perhaps never before were the "tips" of the aquatic reporters of the London press so wrong. The *Sportsman, Sporting Life, Bell's Life, Sporting Chronicle, Land and Water* and the afternoon papers all declared for Cambridge, and on the strength of this the "Light Blues" were strong favorites at 3 to 1 on them. The start was made by Mr. Edward Searle at 5:50, the Oxford boat being the quickest away, and never reached, as will be seen by the following report telegraphed to the Cork *Constitution:*

"They rowed forty-one strokes in the first minute to Cambridge's thirty-nine, and even in the early part of the contest looked all over winners. Their stroke was clean, powerful and uniform, and certainly without the splash and hurry of Cambridge. The leader's time to the Bishop's Creek was 1:17, and to Craven Steps, 2:29. From this point to the Ragged Staff, or trec. which marks the mile, Oxford easily increased their lead, rowing really well and steering in admirable course. The Light Blues were, on the contrary, steered very badly. Mr. Hunt took them right into the Oxford wash and then out again, losing more valuable 'ground.' Oxford's time for the mile was 4:10. There was no change as we approached the soap works, except that the dark clonds and mist at the start had given place to snow and hail, and it was every minute more difficult to see from the press boat the actual condition of affairs. Indeed so far were the press boat and the other three steamers behind that a description of the race from this point cannot he exact. We could, however, tell with reasonable precision that a difference of nine seconds, or three lengths, separated the boats at Hammersmith. The leader's time was 8:9 and that of Cambridge 8:18. Above the bridge Cambridge undoubtedly spurted, and were for a little while timed to be rowing forty-three strokes to the minute. Whatever advantage was gained by this effort was, however, soon lost by had steering off Chiswick Eyot. The Cambridge coxswain seemed quite unequal to keeping out of Oxford's wash, and it must be said that between them—Mr. West and Mr. Lyon—the Oxford stroke and coxswain gave their antagonists the full benefit of the broken water. We believe Oxford's time to Chiswick Church was 12:47, but we were so far behind that the contending boats were only distant moving specks on the dark river seen through the dense mist and blinding snow. All through Corney Reach the fight went on, but it had long been apparent to any but the most blind worshippers of Cambridge that, bar accident, the race was over. Oxford went on content with their safe lead, and rowing not perhaps the thirty-seven they were doing at the end of the first mile, but still a thoroughly steady, well-timed stroke, quite without flurry or sign of exhaustion. Cambridge rowed a plucky stern, but gave no evidence of the power with which they were everywhere credited. One or two men in the boat were not pulling their own weight, and that weight was something by no means inconsiderable, while the splashing and irregularity of the feather were almost unmistakable signs of distress. It may be that the Cambridge were really holding Oxford, and preventing them going further away, but the strong probability is that Oxford, with an easy lead of forty yards or so clear, were content with this and did not try to increase it. The difference at Barnesbridge, reached by the leaders in 17:28, was ten seconds. The race home from the railway bridge was rowed in thick darkness, and all that can be said is that it was uneventful, Oxford winning by three and a half lengths, or about fifty yards clear, in 21:18 from the start. The race was remarkable for the completeness with which it falsified the opinions of the best judges of rowing. Many, no doubt, believed with justice that Oxford were a really good crew, and very many more were convinced that the odds on Cambridge were by no means justified; still, in the face of the time-test, and bowing to the fetich that says 'the favorite always wins,' they doubted their own judgment and would neither take the odds nor advise that they should be taken. The race has for so many years now been a moral certainty for the favorites that people had got to look upon the trials as the real pace and the real race, but now, however, a new and exciting element is introduced—the element of uncertainty—and we shall have for several years the refreshing evidence of 1883 to show us that the favorite does not always win and that the weight of money and weight of men do not necessarily command success. It is a great good thing for the race that Oxford won yesterday, for after this the non-favorites need never lack confidence."

Hanlan having been reported to have expressed a desire to row against Wallace Ross this year for $1,000 a side, Rose issues a challenge to Hanlan offering to row a four or five-mile race for the amount stated, the winner to receive all the money received from the railways and other sources. Ross will give $500 for expenses provided Hanlan will row at St. John or will take $500 and row at Toronto, the race to take place on or after July 1. Hanlan positively declines going to the maritime provinces to row Ross. If Ross will agree to row on any of the waters half-way between Toronto and St. John, N. B., he will be accommodated. Hanlan thinks the amount stated for expenses—$500 in a $1,000 race—is out of all proportion, and in the race he proposes expenses will not be given or taken. The latter has $500 on deposit with the *Turf, Field and Farm,* and calls on Ross to cover it.

A decision was rendered quite recently by Judge Nelson, of the United States District Court for the District of Massachusetts, strongly affirming the constitutionality of the act of Congress which prohibits the confining of cattle, sheep and swine in railroad cars for more than twenty-eight consecutive hours without unloading for food, water and rest, unless ample provisions are made for furnishing the same within the cars by any railroad company whose line forms any part of a line for conveying animals from one State to another. The action was brought by the American Humane Society against the Boston & Albany Railroad Company and the Fitchburg Railroad Company.

The action of Milton Young in chloroforming the stallion Onondaga, and having his eyes punched out with a red-hot iron, has excited the greatest indignation in all parts of the country, and especially in his own State, Kentucky, is the brutal act condemned in strong terms. The leading turfmen and breeders of the Blue Grass region say that henceforth they will have nothing whatever to do with Young, and as they are likely to carry out their sentiments to the letter, his position is anything but pleasant. The destroying of Onondaga's sight was wholly unjustifiable, as by putting blinkers on him the result sought would have been attained.

Plumas, the sire of Ashley (2:21½), is in the stud this year at the Illinois Ranch, American Valley, Plumas county.

THE HERD.

A NEW YORK RANCH.

Paraphernalia of a Model Farm—Value of the Silo System—Gossip about the Cattle.

Mountainside Farm, the property of Mr. Theodore A. Havemeyer of New York, is situated on the Ramapo river, about three miles from Mahwah, on the New York, Lake Erie and Western Railroad, thirty miles from the city. Its acres number about 600, of which more than half are arable and are cultivated in the most thorough manner, under the superintendence of Mr. John Mayer, a thoroughly practical, educated and scientific farmer, who, assisted by a foreman, directs the operations of a working force of some thirty men. The buildings are the most extensive and perfectly appointed, and probably the most costly, that are devoted to the Jersey interest. The herd numbers about 100 cows in milk besides young stock, and contains some of the most noted animals of the breed. They are kept upon the soiling system, or, in other words, are fed in the stables, summer and winter, being turned out daily, weather permitting, for exercise. Spring water is carried through the stables and barns, and the animals are watered by an arrangement of hydrants which place it before each without removal from the stall. A steam engine does the churning, cutting of fodder, grinding of grain, and pumping. The dairy rooms have tiled floors and sides, and are ceiled in hard woods. The engine room, forge, ice houses and refrigerating rooms are elaborate and perfect in appointments.

Next to the herd of Jersey cattle, the features which have rendered this farm a noted one throughout the country, are its immense and perfectly arranged silos, or pits for storing and preserving fodder in a green state for use in winter—a system that promises to revolutionize the method of cattle feeding in the northern portions of the country. These silos were constructed upon plans furnished by Mr. C. W. Mills, one of the earliest experimenters to whom the country is indebted for enlightenment upon this important subject, and after a thorough trial of two seasons are regarded as a complete success. While the adoption of the ensilage system has spread enormously, it may be doubted whether, taking the whole country over, so valuable and exhaustive a test of its merit has been made elsewhere as that which has drawn the attention of the country to Mountainside Farm. The opponents of ensilage have predicted that its success was only apparent; that it would gradually undermine the health of the animals and result in disaster, notwithstanding the favorable reports from all directions of its value for fattening beef cattle and increasing the yield of milk dairies, for the fat cattle went to the butcher and the dairymen turned off their dry cows to the grazier before final effects upon the animals and upon their progeny could be determined. Strong remonstrances and ominous warnings came from the more conservative to check the exultation with which the new departure was hailed by the enthusiastic. It was a bold measure, then without a precedent, to substitute ensilage exclusively for hay in the feeding of a herd of cattle that $100,000 could scarcely replace and from which the calves were the income of first importance. It was still holder for the fact that in so doing the grain ration of the cows was cut down to one-half that which had previously been fed with hay, causing greater physical dependence upon the new food. It was still bolder when, having passed through the winter, the cattle were not turned upon pasture in the spring, thus giving a respite from ensiloed food, as has been the custom elsewhere. From October, 1881, until now, the entire herd, old and young, were kept upon ensilage without intermission, save occasionally when, for a day or two, a change was made for the sake of experiment. The result has been that, with half the amount of grain formerly fed with hay, the same cows have averaged over 100 pounds (fifty quarts) more of milk per month than they did on the old diet. Their coats look glossy and sleek, and every indication is that of blooming health. The calves that have been dropped upon the place from silo-fed parents, themselves silo-reared, are pronounced without dissent by the hundreds who visit the place to be of the best quality and in excellent condition. It may be doubted whether another lot of animals equally large, vigorous and healthful at various ages can be found short of a climate that affords pasturage the year round. While much of this condition is due to the fact that the parent herd, both as regards the imported and the native-bred animals, was selected with an eye to constitution and superior physical capacity, their blooming condition is unquestionably due, in a great measure, to the method of feeding.

There are some facts connected with ensilage that are hard to account for. While it appears improbable that the feeding value of green forage could be improved upon its natural condition when fresh by stowage under pressure in a pit, the experiments at Mountainside Farm raise the question at least to the dignity of a debatable one. When, in August last, the working force of the farm was concentrated upon the great work of transporting the fifty acres of green corn fodder from the fields in which it grew, through the giant cutters and carriers, into the great pits where it was to be preserved for the coming year's use, a pit of ensilaged rye fodder which had been stored earlier in the season, and from which the herd were being fed, gave out. To open a new pit would be to divert the use of the machinery and the time of three or four men from the special work of harvesting, to which all energies were being devoted. Mr. Mayer therefore ordered that several loads of the corn fodder cut fresh in the field should be placed before the cows instead of their customary feeds of ensilage. Now, every country boy who has had to drive the cows out of the cornfield and noted the persistence with which some cunning old cow will find or make a hole in the fence to get back knows that cows like corn fodder. That they ate it with great relish was evident, and they ate a much larger quantity than they did of the rye ensilage; nevertheless, with the same grain ration, they fell off in milk. Thinking the result due to the fact that the ensilage had had the advantage of having passed through the cutter, the fresh corn fodder was then submitted to that treatment instead of being fed long, but the milk continued to diminish until at the end of three days the average daily shrinkage per cow was four pounds (two quarts), which, when tested in quality, showed two per cent less cream. A new pit of ensilage was opened, and in two days the cows were back to their full flow. This comparison between ensilaged rye and fresh corn fodder is the more surprising from the fact that as a fresh feed rye fodder is inferior to corn fodder. The discrepancy cannot be attributed to a difference in amount of food, for, as carefully ascertained, the cows ate sixty pounds of the corn against twenty-five pounds of the rye. Nor can it be accounted for on the principle that ensilage is a more concentrated food, in the sense that one ton of hay contains more sustenance than several tons of green grass, being a condensed product, for ensilage is said to retain all its juices and to lose less than one per cent of its weight in the metamorphosis. The chemical theory is that the method of storing ensilage causes it to develop lactic acid, which is in itself a stage of digestion, and so effective in its action that the food renders a maximum of its nutriment to the support of the animal.

The Jersey herd is a very notable one. Its first bull is the celebrated imported Farmer's Glory, a great prize winner in three countries, and whose progeny have probably won more prizes and sold for more money in Jersey, England and America than the get of any other living bull. Yet, great as his fame is, many connoisseurs prefer his companion in the next box, imported Carlo, whose mole-like skin and rich quality tell so clearly in his offspring, that with no special blood-fashion to herald them they have sold at a splendid average wherever they have appeared in the auction ring. When Mr. Edward Burnett went to the island of Jersey to purchase the imported portion of this herd, he sought among the more fashionable strains for a bull. He found that several of the most careful and successful breeders on the island were sending their best cows to Carlo. "Why do you prefer him to more fashionably bred bulls?" was the question. "Because American buyers are demanding butter tests before buying, and this bull comes of an unsurpassed line of butter cows," was the answer. "That is the fellow I'm after," said Mr. Burnett, and he brought him home. With him came Sultane IV, a daughter of the grand cow Sultane, whose name, coupled with those of Regina and Coomassie, completes the most famous trio of cows known to island history. The bull calf of Sultane IV, by Carlo, sold last spring for $1,775 at auction. A daughter of Coomassie also came over with Carlo, and her bull calf by him brought $1,500 at the same sale. None but males have yet been offered. Those gotten by Carlo have averaged $700 each. With them came the cows Cocotte, first over all Jerseys as a three-year-old, and her sister in blood Mignonne, likewise successful. For perfection of size, substance, wedge-shape, capacity of udder, and milk veins, united with the highest finish, Cocotte, when in the flush of milk, is as near the model ideal cow as one could hope to find. Brunette Hammond, Lille Bonne, Belle Dame, and Northern Queen are a few of the other imported celebrities. In some respects they are unlike most of the imported cattle that reach this country. Having been obtained before the island had been stripped of its best animals and selected to meet the standard of an owner who cannot tolerate an underling, there is not a runt among them, but all show great substance and constitution without deviation from the high blood-like finish that is so tempting to buyers and in which imported cattle excel in contrast to those reared in this country. Yet, in the butter tests which are just beginning to be made at Mountainside, the native-bred cows hold a decided lead. Whether this will continue after another year of acclimating, and this department is taken in hand more systematically, remains to be seen. Mountainside Farm, with its herd of Jerseys and its lands and buildings devoted to the interest, could probably not be duplicated at an outlay of less than $300,000.

Some General Principles.

The following points in breeding are laid down by James Howard of Brittania Farm, Bedford, England, well known as a breeder of Shire horses, Shorthorn cattle, Oxfordshire Down sheep, and White pigs:

"I am convinced that there are certain laws pertaining to the process, which, like all nature's operations, are fixed and unalterable, and which cannot be disregarded with impunity. I will therefore state very briefly what I deem to be the cardinal points in the art of breeding which have been fairly established.

"1. That from the male parent is mainly derived the external structure, configuration and outward characteristics, the locomotive peculiarities inclusive.

"2. From the female parent are derived the internal structure, the vital organs, and in a much greater proportion than from the male, the constitution, temper and habits, in which endurance and 'bottom' are included.

"3. That the purer the race of the parent the more certainty there is of its transmitting its qualities to the offspring. Say two animals are mated; if one is of purer descent than the other, he or she will exercise the most influence in stamping the character of the progeny, particularly if the greater purity is on the side of the male.

"4. That apart from certain disturbing influences or causes, the male, if of pure race and descended from a stock of uniform color, stamps the color of the offspring.

"5. That the influence of the first male is not infrequently protracted beyond the birth of the offspring of which he is the parent, and his mark left upon subsequent progeny.

"6. That the transmission of diseases of the vital organs is more certain if on the side of the female, and diseases of the joints on the side of the male parent."

Twelve Thousand Five Hundred Dollars.

Mr. P. C. Kellogg reports that T. S. Cooper has obtained from Miller & Sibley, Franklin, Pa., the famous Jersey bull Pedro, by Domino of Darlington out of Eurotas, and that he will be bred to about thirty of the cows of Mr. C.'s importation, which are to be sold in New York under the direction of Kellogg & Co., on the 17th and 18th of May next. Mr. K. writes:

Pedro is not positively sold, but will, in any event, remain at Lindeu Grove until Mr. Cooper's cattle are sold. There is no disagreement as to price, which is $10,000 cash; but Messrs. Miller & Sibley hold to the right to breed twelve cows, to which Mr. Cooper objects, unless at regular fees—$250 each. If this difference remains unadjusted the bull will go back to Franklin—Mr. Cooper paying a rental for his use upon thirty cows that is far in excess of the $2,500 at which he sold last fall. Recent events render it more probable, however, that the sale will be consummated, as Peter C. Kellogg & Co. have just sold to Messrs. Miller & Sibley, for account of Mr. A. B. Darling, the following bulls, which leaves them in somewhat better shape to part with Pedro.

Yellow Boy 6,381, dropped April 10, 1879, by Duke of Darlington 2,460, dam imported Daisy 692 (the Parau-Stevens cow).

Bull calf, dropped Jan. 18, 1883, by Duke of Darlington 2,460, dam Florinde 7,110; second dam Leda 790.

Bull calf, dropped Jan. 19, 1883, by Black Prince of Hanover 2,843, dam Eurotas 2,454.

The price of the Eurotas calf was $12,500, and the other two brought well up in the thousands. The same firm offered $10,000 for Bomba, but it was declined. The prices mentioned herein are authentic, and will interest breeders of Jerseys as being in excess of any that have thus far developed.—*Breeder's Gazette.*

Sheep Washing.

The seeker after advice as to the proper course to pursue in preparing and marketing wool will find his patience taxed not so much with the search as with the amount of such advice that comes to him from every direction. A noticeable feature of the situation is the fact that a preponderance of this voluntary counsel comes from parties whose relation to the wool clip is such as to rob their good office of the charm of disinterestedness with which they seek to surround it. Men who would take the suggestion for proper weights as a reflection upon their own honesty, will urge upon the wool grower the propriety of honesty in preparing his clip for market with the same complacency as was manifested by that other gentleman who, from the street corner congratulated himself that he was "not as other men." Of course, the flock-master should be honest in his dealings with his fellow men. He recognizes the fact as forcibly as any one, and acts in accordance with it as generally as the average business man; and the volunteer diatribes that are shoved before him as each shearing season comes round are a reflection which is not always characterized in the language that its imprudence merits. He has the right to the same freedom in preparing his clip for market that the buyer enjoys in accepting or refusing it at a stated price, and both are entitled to the presumption of honesty until forfeited by practices beyond its pale.

The first point to be determined in connection with getting the clip into market is that of washing. With many flocks this is determined, negatively, by natural obstacles, such as remoteness from suitable streams, or the presence in the fleeces of dirt and sand, which would render cleansing of little avail. Brook-washing is not now so generally practiced as formerly. This results partly from the absence of suitable facilities, such as pollution of streams by sewerage and offal from manufactories of various kinds, but more especially from the growing conviction among flock-managers that washing is unprofitable; that is to say, the enhanced price obtained for washed wool does not counterbalance the cost of labor involved in the washing process, when added to the inevitable injury resulting to the flock. Sheep washing is hard work for both men and animals, and should have the certainty of good pay for its encouragement. None of the poetry of which it is the subject was inspired by men standing for hours waist deep in chilling water during the tedious process of turning and squeezing the fleece of each sheep until the entire flock reached the point of "snowy whiteness." Where wool can be sold absolutely on its merits as to condition, there is no room for doubting the impolicy of flock washing. If the value of the clip is based upon the amount of cleansed wool it will yield, it is difficult to find any offset to the labor and expense and injury to animals involved in the washing beyond the single item of reduced freight. The practice has found its greatest encouragement in the arbitrary prices enforced by wool buyers who entered the markets with offerings for "washed" and "unwashed" without due regard to the wide range in the percentage of wool represented in those terms. Some localities, with exceptional facilities for washing, in which the practice has a fixity that is the characteristic of all inherited customs, will doubtless be slow in making a change; there is, however, little room for doubting that a yearly increasing percentage of the future United States clips will be placed on the market in an unwashed condition. This will retieve the flock-manager of much hard work at a time when every day is important, and will enable consumers of wools to purchase a supply in the best condition for preserving its working qualities, without adding to the labor or expense of cleaning, sorting or other manipulation.

In localities remote from the final market for wools, and exposed to the extortionate transportation charges commonly inflicted by railroads when not held in check by wholesome competition, the item of freight has proven so considerable as to induce efforts at retief through establishments for assorting and cleansing the wools of certain sections; in fact, putting them in proper condition for manufacture. Theoretically this scheme has much to recommend it; giving to the seller the advantage of a saving in freight of thirty per cent to sixty per cent of the grose weight of his wool, added to such enhanced price as the buyer should be willing to pay in consideration of getting just the quantity of certain grades of wool he requires, while relieving him of all risk and uncertainty as to the amount of shrinkage from an unwashed condition. Whether or not the scheme will prove successful in practice remains for the future to demonstrate. Like all innovations upon long-established customs, this one, even if found profitable by those adopting it, will be tardily accepted by the majority of flock-managers. Some will hold off by reason of their conservatism—the disposition to "let well enough alone"—while others are barred by the necessity that compels them to realize a considerable proportion of the value of their wool harvest at the earliest possible date. This, of course, the scheme of sorting and scouring will interfere with, until assumed by parties having capital that will enable them to make such advances as the grower may require for immediate use. This phase of the washing question has more especial interest for wool-growers on the frontier, in view of the double disadvantage under which they are so commonly placed—remoteness from market, inability to properly wash their flocks because of the large number of animals, and, quite frequently, an absence of sufficient water. By these, doubtless, the experiments already inaugurated will be watched with more than ordinary interest.

Upon the question of washing, wool-growers will generally be found quite free from sentimentalism. They will be controlled by the answer that experience brings to the everyday question, "Will it pay?" If buyers will in the future pay as much per pound for "washed" wool that has been allowed to become nearly or quite as heavy as it was before put into the water—as they have so often paid in the past—the probability is that all the "washed fleece" wanted by each men will be forthcoming. But as the number of buyers who name prices according to intelligent estimates of cleansed wool they are to get rather than in accordance with arbitrary rules of a certain price for "unwashed" and an advance of one-third for "washed" is yearly increasing, there is room for believing that the present decade will bring the day when every wool-grower can realize the real value of his clip without regard to the condition of the clip of any other grower, whether in the same neighborhood or in another State.—Breeder's Gazette.

Breeder and Sportsman.

The frequent races that take place at the race track and the crowds that assemble to witness them and to bet, is an indication that more than ordinary interest is taken in sporting matters in this country. People naturally desire to read up and acquire information in the direction their taste leads, hence a good local journal, if such an one were known to exist, ought to have a golden circulation here, and would doubtless be subscribed for with eagerness. Such an one is the BREEDER AND SPORTSMAN, a comparatively new publication issued at 508 Montgomery street, San Francisco. It contains all the latest sporting intelligence, wood cuts and notices of the most celebrated horses, etc., and a variety of articles conveying useful and interesting information to the breeder and sporting man and all who deal in stock or are engaged in rearing fine animals. For example, the number before us, besides all the current sporting intelligence, contains long notices of celebrated horses, and valuable articles on the following subjects: "The Trotting Horse," "Oregon as a Horse Breeding Country," "The Pacers of 1883," "Cheese Making," "Fancy Prices for Stock," "Watering Stock," "The Management of Sheep," "History of the Early Importation of Dogs to this Coast," "Hunting Wild Horses," and an infinite number of shorter articles, on a vast range of subjects of interest to the class of patrons for whom the publication is designed. Among its contributors are the leading stockmen of the Pacific Coast and the territories.—Kern Co. Californian.

Foot-rot in Sheep.

Having seen in some of the stock publications of our country, "What is the foot-rot in sheep and its cure?" permit me to say that the foot-rot is a disease of the foot, located between the horny substance and the flesh of the feet, and will, if not arrested, cause the claw to grow in an unshapely form and become loose and detatched, forming a vacuum between the claw and inside construction of the foot, and in its progress forming a fluid or mattery substance which, coming to the practical shepherd's nostrils, will never be forgotten. From my own observation, I think that the disease is communicated by innoculation, and then fostered or retarded by local surroundings or sanitary measures, such as a dry climate and dry land for the sheep to graze and feed upon. Under such circumstances it may lie dormant for months, while if grazed on low, wet land and in warm weather, or kept in dirty, wet yards or pens, it will not be long before half of the flock are on their knees to feed, and will walk as though they were on drumsticks. Some call it a parasite. Let it be what it may, it needs a cure; and I think the remedies given below, if followed by "eternal vigilance" in the use of the knife to pare to the quick and to the bottom, so that the medicine may reach to the very root of the disease, will kill the disease and save the sheep. It may have to be repeated three or four times, but in two weeks after the first dressing, if by the same operator, he will plainly see the effect of the first dressing and be encouraged.

In the use of the knife, I would say be careful not to cut into the inner or beyond the horny substance of the foot; but I have sometimes had to cut off the horny substance of both claws of a sheep's foot to accomplish a cure. Cut as close as possible not to cause bleeding, but by the most careful operator this calls for great caution.

After the foot is cleaned and pared, have the following applied: Dissolve as much blue-stone in warm, soft water as the water will take up; dip each diseased foot in the liquid. This will penetrate between the sound and diseased portions of the foot, and above the horny substance of the hoof (for the disease will sometimes break out above the hoof, as though the foot had been pierced by a nail); and at this dressing and before you let the sheep go, apply the following: Have your druggist grind in his mill a pound of blue-stone (blue vitriol or copperas) as fine as flour; then mix, in some earthen vessel, with raw linseed oil, not boiled, so as to form a salve, and put as much of this as you can hold on the end of a small wooden paddle, half an inch wide and four inches long, between the claws of each foot. Work the claws together, so as to rub it in; it will stick better, and dry as hard as glass, if the sheep are left on a dry plank floor for twelve hours after being dressed. Then let them out in the field, and go over every three weeks as at first. I think four dressings will cure almost any flock of sheep, with proper sanitary measures.—Breeder's Gazette.

Stock in Modoc.

Within the past few years the McConaughty Bros., of Ft. Bidwell, have imported direct from Kentucky several cargoes of thoroughbred bulls, besides a number of jacks and jennets, rams and swine. J. D. Carr has within the past two years shipped fifty head of thoroughbred cattle to his ranch at Clear Lake. For the past six years Joshua Brown of Eagle Creek has been engaged in importing thoroughbred cattle, and this summer he will hold his fourth annual sale of thoroughbred bulls and heifers. These sales are attended by stockmen from far and near, and animals from his herd have become pretty well distributed through the country. S. S. Bayley has been breeding up his cattle for several years, and is now selling beef cattle that are three-quarters Durham. Geo. C. Fletcher, of Goose Lake, has a fine band of three-quarter and full-blood Durham cows. We might mention others who are raising fine cattle but this will suffice for the present. As for horses, we do not believe there is a county in the State where more attention is paid to the careful selection of animals for breeding purposes. Henry Hilton of Hot Spring Valley makes a specialty of draft horses and for several years kept a thoroughbred Clydesdale stallion and several mares of the same breed. A number of the horsemen are provided with colts from this horse, and half-blood Clydesdales are quite common in this country. Parman & Co. of Surprise valley are raising some of the finest draft horses to be found in this country. In almost every band of horses in this county can be found descendants of such horses as Gladiator, Newell, Pill-box and other noted horses, all of which make excellent roadsters, carriage and saddle horses, and not a few of them are gaining reputations on the turf. In regard to sheep there has been an equal endeavor on the part of the wool-growers to improve their flocks. Three years ago J. H. Dereven brought about a hundred head of bucks to his ranch, which he selected from the best flocks in the State. These bucks were sold and distributed among the sheep-raisers. By breeding common ewes to these bucks, sheep were produced that sheared from twenty to thirty pounde of wool each year. Among the other importers of fine sheep we might mention Messrs. Scrannon and Woodson of Surprise valley, E. Lauer of Alturas, all of whom have been engaged in so doing for a number of years.—Independent.

Barns for the Genus Homo.

EDITOR BREEDER AND SPORTSMAN: I left the city a few days since for a trip to the capital. As the Oakland steamed swiftly across the bay with the air as balmy as a tropical daybreak and the harbor as smooth as beauty's cheek the surroundings were naturally somewhat exhilarating, and I indulged in pleasant thought. As we neared the landing on the Oakland side and my eye took in the depot on the pier my reflections were suddenly side-tracked. That magnificent structure on the mole would be a credit to older States than this but it is on the wrong side of the bay. Compare it with the crib by a pleasant fiction called a depot and waiting room on the San Francisco side. That dingy, horrid corral, not fit to keep fine stock in. I have stock that I would not allow quartered in such a dark, illy ventilated barn. If there is to be any difference in the stations the best building should be on the San Francisco side. Passengers are rarely detained on the Oakland pier, as trains and boats make close connections, but on the San Francisco side it is different, and I speak from experience, having traveled on the ferry since it was first established; in fact, I have crossed the bay for over thirty years. No one who has crossed on this ferry much could but have noticed the number of people who are always to be found in the waiting rooms. No one who lives on the east side has escaped the infliction of missing a boat occasionally and having to wait half an hour for the next one. Then the alternative is to take a seat in the corral, a dismal shed where the light of Heaven has never entered since the day the last shake was nailed on that uncouth and dreary structure. When I look up at the unplaned rafters which would be bare but for a fresco of whitewash and cobwebs, I cannot but mentally exclaim: What an opportunity is here for the new Board of Harbor Commissioners to inaugurate an architectural reform that shall be a monument to their good sense and well-directed liberality!

March 29, 1883. PAF.

The California Ostrich Farming Company has filed articles of incorporation with the Secretary of State. The capital stock is $30,000, about all paid in, and the object is the raising of ostriches for profit. The company has purchased the tract known as the McGregor ranch, near the Coyote house, about five miles northwest of Anaheim, and corrals have already been put up for the birds. The company will start with twenty-two ostriches—the same ones which have been on exhibition in Woodward's Gardens for some time past.

A short time since M. Mulqueeny was out near Midway, Alameda county, with his wife. He saw a pair of wildcats and waiting till they came into line he fired, killing both with one shot. The largest one ha sbeen brought to this city to be stuffed.

Brown's Bronchial Troches will relieve Bronchitis, Asthma, Catarrh, Consuptive and Throat Diseases. They are used always with good success.

Pools. Pools.

BIDS FOR POOL-SELLING ON RACES TO BE given under the auspices of the Sacramento Capital Turf Club will be received by the secretary at Sacramento. Bids close April 25, 1883, at 8 o'clock p. m. By order,

CHRIS GREEN, President.
W. P. EMERY, Secretary. 1413

KILLIP & CO.,
LIVE STOCK AND GENERAL AUCTIONEERS.

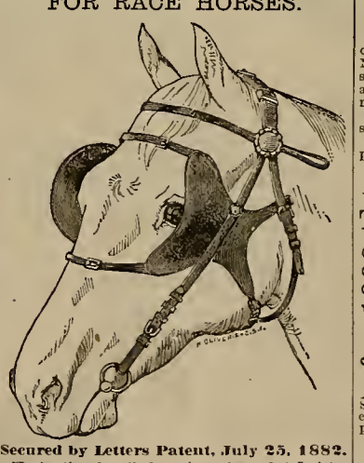
PAUL FRIEDHOFER,
PATHOLOGICAL · HORSE-SHOER
116 Washington Street.
PRACTICAL IN ALL ITS VARIOUS BRANCHES

IMPROVED
Blind Bridle & Winkers
FOR RACE HORSES.



Secured by Letters Patent, July 25, 1882.

Having thus described my invention, what I claim as new, and desire to secure by letters patent, is:

1. The part D, supported by the side straps of the bridle, extending back, as shown, the front having an opening into which the blind is fitted, substantially as herein described.

2. In a bridle, in combination with the extensions D, the curved blinds F, secured to said extensions, and as shaped, to give full freedom and ventilation to the eye while circumscribing the vision, substantially as herein described.

3. In a bridle, and in combination with the extensions D, blinds F, and side straps A, the screw, nut and washer E, to secure the blind and allow it to be set, substantially as herein described.

4. In a bridle, and in combination with the check-pieces D and blinds F, as shown, the straps or bands G and H, connecting the branches or extensions above and below the eyes, and having the adjusting slides or buckles, substantially as and for the purpose herein described.

5. In a bridle, and in combination with the blinds F, supported and pivoted to the bridle so as to be movable about the point of support, the adjustable front straps or bands G and H, and the rear hand I and the throat-latch or lash connected with the blinds, and adjustable, substantially as herein described.

The above are the claims allowed by the patent office, and though the corresponding letters do not appear on the cut, the general principle will be understood.

It meets with universal approbation, doing away with all the objections urged against blinds, and at the same time giving complete control of the line of vision. By throwing the lower portion of the blind up something of the same effect on the action follows as is induced by toe-weights. This is especially the case when young colts are the pupils, teaching them to bend the knee without the strain of weights on the feet.

For bridles of all descriptions apply to

JOHN A. McKERRON,
Nos. 230 and 232 Ellis street, San Francisco.

THE SEMI-WEEKLY EASTOREGONIAN with pictures of Pendleton, Centerville, Weston Umatilla City, Echo City, Pilot Rock and Heppner, to any address three months, $1; six months, $1 75; twelve months, $3. Sample copy of paper and picture, 3 cents. The best and truest description of Umatilla—the great wheat and sheep country—ever written. SPRING MEETING.
OF THE
Capital Turf Club
OF
SACRAMENTO, CALIFORNIA.
TO BE HELD AT AGRICULTURAL PARK ON
MAY 15th, 16th, 17th, 18th AND 19th.
RUNNING AND TROTTNG SPEED PROGRAMME.

First Day.

No. 1. Running; one-half mile dash, for two-year-olds; $25 entrance, $10 forfeit, $100 added; second to save stake.

No. 2. Running; three-quarter-mile dash, free for all; $25 entrance, $10 forfeit $150 added; second to save stake. The winner of Hearst Stake to carry seven pounds extra.

No. 3. Running; one and five-eighths mile dash, free for all; $25 entrance, $10 forfeit, $150 added; second to save stake.

Second Day.

No. 4. Pacing race; for 2:30 class; purse $200.

No. 5. Trotting race, for two-year-olds; one mile dash; purse $150.

No. 6. Trotting; purse $200; 2:40 class (Roanoke and Dutchman not barred).

Third Day.

No. 7. Running; one and one-fourth mile dash, for three-year-olds; $25 entrance, $10 forfeit, $100 added; second to save stake.

No. 8. Running; one and one-eighth mile and repeat; $50 entrance, $25 forfeit, $200 added, second horse $100, third saves stake.

No. 9. Selling race; one and one-fourth mile dash; free for all; purse $250, second $50, entrance 10 per cent; horses entered to be sold for $1,500 to carry entitled weight; one pound allowed for each one hundred dollars under fixed valuation.

Fourth Day.

No. 10. Trotting; purse $200; for three-minute class; Sacramento county horses.

No. 11. Trotting; purse $300; 2:30 class.

Fifth Day.

No. 12. Running; three-quarter mile dash, for two-year-olds; $100 entrance, $25 forfeit, $200 added; winner of Gano Stake to carry five pounds extra; second colt $150, third to save stake.

No. 13. Running; one and one-eighth mile dash, free for all; $25 entrance, $10 forfeit, $200 added; second horse $50; third saves stake; non-winners at P. C. B. H. Association meeting if beaten once allowed five pounds; if twice, seven pounds; three times, ten pounde.

No. 14. Running; two and one-quarter mile dash, free for all; $50 entrance, $25 forfeit, $300 added; $100 to second; third saves stake; winner of Pacific Cup to carry five pounds extra.

CONDITIONS.

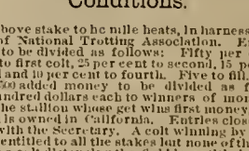
All trotting and pacing races, three in five unless otherwise specified; five to enter and three to start; National Association rules to govern; P. C. B. H. Association rules to govern running races; on trotting and pacin graces 10 per cent entrance to accompany nomination.

Entries to all close Monday, April 16, 1883, with the secretary.

Trotting purses divided at the rate of 60, 30 and 10 per cent.

CHRISTOPHER GREEN, President.
W. P. EMERY, Secretary, P. O. Box 378, Sacramento.

Two-Year-Old Trotting Stake
for 1883 for 1883



A TROTTING STAKE FOR COLTS AND FILLIES (foals of 1881), to be trotted at the California State fair of 1883; $50 entrance, of which $25 must accompany nomination, and the remaining $25 to be paid August 1, 1883; $500 to be added by the society.

Conditions.

The above stake to be mile heats, in harness, and to rules of National Trotting Association. Entrance money to be divided as follows: Fifty per cent of stakes to first colt, 25 per cent to second, 15 per cent to third and 10 per cent to fourth. Five to fill.

The $500 added money to be divided as follows: One hundred dollars each to winners of money and $100 to the stallion whose get wins first money, if the stallion is owned in California. Entries close April 7, 1883, with the Secretary. A colt winning by a walk-over is entitled to all the stakes but none of the added money; a colt distancing the field is entitled to first money and all the stakes.

P. A. FINIGAN, President.
EDWIN F. SMITH, Secretary.
Sacramento, March 12, 1883.

P. S.—This is the same stake that was advertised to close, March 15, 1883, but was withdrawn on account of an error. The time for closing has been extended to April 7, 1883.

NATIONAL ASSOCIATION
OF
Trotting-horse Breeders

Programme of Trotting Stakes for 1883.

CIRCULARS CONTAINING A DETAILED LIST of stakes, for three, four and five years, for 2:25, 2:30 and 2:30 stallions, and for 2:30 and 2:40 mares,

To close Friday, May 1, 1883.

and to be trotted for at the coming annual fall meeting, can now be had upon application to the undersigned at his office, room 81, 11 Broadway, New York city, or at the office of the BREEDER AND SPORTS-

Also stakes for foals of 1881 and for foals of 1882, now two-year-olds and yearlings, to trot when [illegible] odds, and Subscription Stakes for stallions [illegible] $200 each), only the get of stallions [illegible] eligible, foals of 1882 and foals of 1883, to [illegible] three and four years old,

L. D. PACKER, Sec'y.

MAMBRINO WILKES.

Black Stallion, sixteen hands in height, by George Wilkes, son of Rysdyk's Hambletonian, bred by B. J. Treacy of Fayette County, Kentucky. Dam Lady Christman by Todhunter's Mambrino or Idol, son of Mambrino Chief. Second dam by Pilot Jr. Third dam by Kentucky Whip. Idol's dam was thoroughbred and was by American Eclipse.

THIS IS THE LARGEST AND ONE OF THE BEST COLTS OF George Wilkes (weighing at this date 1,260 pounds) combining the Hambletonian and Mambrino strains and also several thoroughbred crosses. His colts demonstrate that he possesses in an eminent degree the same faculty of transmitting the family qualities to his offspring which put George Wilkes in the front rank as a sire of trotters.

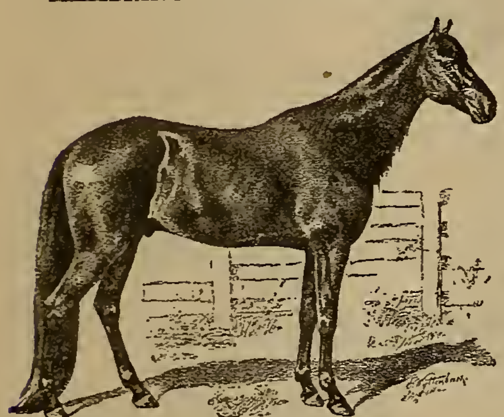
☞ George Wilkes has twenty representatives in the 2:30 list, of which 10 have records of 2:25 or better, 4 of 2:20 or better and 3 of 2:18 or better.

Will make the ensuing season, beginning February 1st, 1883, at STOCKTON.

In putting the price by the season at the low figure of $40 the owner does not acknowledge, thereby, any inferiority on the part of this horse to any other sire of Trotters.

IRVIN AYRES.

MAMBRINO TROTTING STALLION



ABBOTSFORD.

☞ Record at Six Years old, 2:21½. ☜

PEDIGREE.

BY WOODFORD MAMBRINO, HIS DAM COLUMBIA BY YOUNG Columbus. Woodford Mambrino by Mambrino Chief, his dam Woodbine by Woodford, a thoroughbred son of Kosciusko.

Woodford Mambrino is recognized to be the best son of Mambrino Chief. His own record is 2:21¼, and there are a large number of his get in the 2:30 list. Among them: Abbottsford, 2:21¼; Convoy, 2:22¼; Magenta, 2:24¼; Lady McFatridge, 2:29; Dacia, 2:29¼; George A. Ayer, 2:30.

Besides those having public records, he is the sire of the two celebrated mares owned by Robert Bonner—Manetta and Malice. Manetta, with a running mate, and harnessed to a road wagon, trotted two miles in 4:27¼, and Malice trotted a trial, on the same track, a mile in 2:19¾. Woodford Mambrino is also the sire of Princeps, the sire of Trinket; record, 2:14. Woodbine is also the dam of Wedgewood, record, 2:19. Young Columbus, the sire of the dam of Abbottsford, has nine of his get in the 2:30 list, so that on both sides of the house there are notable performers. Abbotsford is a rich rosewood brown, 15¾ hands, and of very high form. His get are very promising, his daughter Jasmine having won the Embryo Stake for yearlings in 1881, and every one which has been put in training has shown good speed.

TERMS.

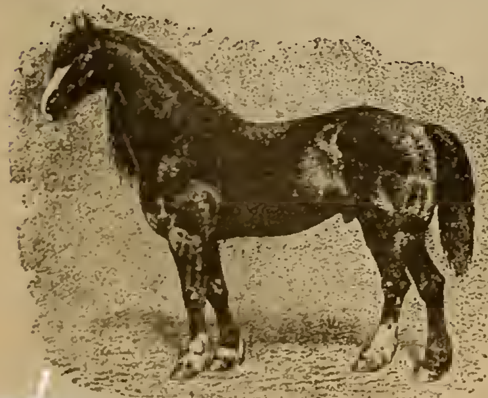
Seventy-five dollars the season, to be paid before removing the animal. Mares not proving in foal can be returned the following season free of charge. Good pasturage at reasonable rates, and extra pains taken, but no liability for accidents or escapes.

LOCATION.

Abbotsford will make the ensuing season, 1883, on the ranch of S. B. Whipple, Esq., San Mateo, season commencing February 15th and ending June 1st, 1883. For full history see the issue of BREEDER AND SPORTSMAN of August 5th, 1882.

GEORGE BAYLIS, Agent, San Mateo, Cal.

STALLIONS.



OWNERS OF STALLIONS DESIRING TO PLACE THE MERITS of their stock horses before the breeding public should advertise in the BREEDER AND SPORTSMAN. The fee from one mare will pay the ... f a reasonable advertisement.

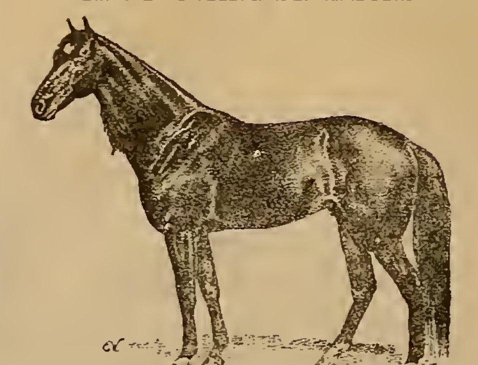
NO. 508 MONTGOMERY ST.

THE TROTTING STALLIONS



SINGLETON AND LA HARPE.

SINGLETON WILL MAKE THE COMING SEASON, FROM Mach 1st to July 15th, 1883, at the farm of the owner, three miles north of Chico, Butte Co., Cal.

PEDIGREE.

Singleton is by Willie Schepper, a son of Rysdyk's Hambletonian, his dam Lightfoot (the dam of Pride) by Flaxtail, a son of Pruden's Blue Bull.

DESCRIPTION.

Singleton is a dark brown horse, tan flanks and muzzle, a little touch of white on hind feet and one fore foot, and star in forehead. He is 15¾ hands high and weighs 1,100 pounds. He was bred by Dr. M. W. Hicks, foaled spring of 1878.

TERMS.

Fifty dollars the season. Mares not proving in foal will be bred the following season free of charge. Mares from a distance will be pastured without charge during the season. Mares shipped to Chico, consigned to me, will be received on arrival of train, and taken to the ranch. Mares kept in any manner their owners desire, at reasonable rates. There is every convenience on the place, boxes, paddocks and plenty of shade and water.

LA HARPE

Will also make a short season at the above place on private terms. La Harpe is by Fame, a son of Alexander's Belmont, his dam Prairie Bird by Flaxtail, the dam of Flight and Prompter. Address

J. T. McINTOSH, Chico, Cal.

STEINWAY.

TWO-YEAR-OLD RECORD 2:31¾; 3-YEAR-OLD RECORD 2:25¾.

TERMS

WILL SERVE MARES THE PRESENT SEASON AND ENDING July 1, 1883, at the stock farm of the late Daniel Cook, Danville, Contra Costa county, Cal., at $100 for the season, payable before the animal is removed. Mares not proving with foal can be returned free the next season. Pasturage at $6 per month, and extra pains taken with mares in attendance, but no liability for accidents or escapes. Mares sent in care of of McCleverty & Noblett, Fashion stable, Oakland, S. J. Bennett, Martinez, or D. S. Smalley, Haywards, will be forwarded immediately to the farm.

DESCRIPTION.

He is a rich bay; 15¾ hands high; long, flowing mane and tail; two white hind ankles; remarkable style and lofty carriage; has a good, resolute head, set on a stout neck; his shoulders are of the Hambletonian form—do not mount very high at the withers; has great length and capacious middle piece; plenty of bone and substance, and his gait is big and square.

PEDIGREE.

Steinway was sired by Strathmore.

First dam Abbess by Albion, the sire of Vanity Fair, with record of 2:24.

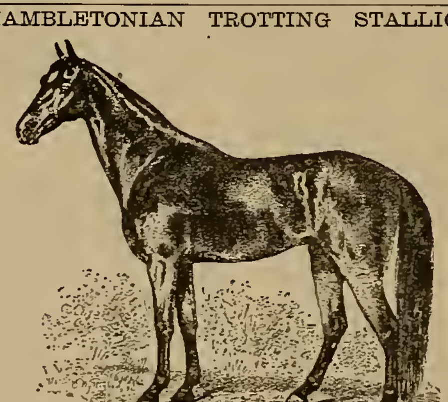
Second dam by Marshal Ney, by imported Emancipation.

Third dam by Bertrand, by Sir Archy.

Steinway's dam is the dam of Solo with five-year-old record 2:28¾, and also the dam of W. S. Buckner's colt Currency that trotted as a yearling last fall in 2:46. See N. Y. "Spirit of the Times of November 18, 1882. Strathmore is the sire of Santa Claus 2:17½; Chestnut Hill, 2:22½; Steinway, 2:25¾; Alice Stoner, four years old, 2:24; Nannie Talbot, four years old, 2:29; Solo, five years old, 2:28¾; Monitor, five-year-old record 2:29; by Rysdyk's Hambletonian, the sire of 35 in the 2:30 list. Address

SAMUEL GAMBLE, Danville, Contra Costa Co., Cal.

HAMBLETONIAN TROTTING STALLION



BOB MASON

By Echo. His dam Belle Mason by Belmont, Thoroughbred.

Echo by Rysdyk's Hambletonian, his dam Fanny Felter by Magnolia (by American Star). Belle Mason by Belmont (Williamson's); First dam Lucy Johnson by the Pony (son of Imported Leviathan); second dam Catalpa, by Frank; third dam by John Richards.

WILL MAKE THE ENSUING SEASON, LIMITED TO TWENTY mares, commencing February 15, 1883, and ending June 15, 1883, at the stables of his owner, Figueroa street, Los Angeles.

DESCRIPTION.

Bob Mason is a mahogany bay, with inside of off hind ankle white and star in forehead; sixteen hands, and weighs 1,100 pounds. Foaled May 10, 1879. He is of fine, kindly disposition, a natural trotter, and has shown great speed, but as yet has no public record. For full history of his sire, Echo, see BREEDER AND SPORTSMAN July 29, 1882. See also, for his full brother, Exile, BREEDER AND SPORTSMAN, issue of September 16, 1882.

TERMS.

One hundred dollars the season, payable at time of service. All mares at risk of owners. Mares not proving in foal can be returned the following season free of charge. Address

CHARLES J. ELLIS, Post office box 55, Los Angeles, Cal.

My place, where Joe Hooker will make the coming season, is five miles from Sacramento on the Freeport road.

This young stallion has proved to be one of the most successful racing sires, and every one of his colts that has been trained can run fast. Among them are Fred Collier and Jim Renwick. For history of Joe Hooker see BREEDER AND SPORTSMAN Jan 20, 1883.

THEO WINTERS, Sacramento, Cal.

The Supply of programmes of the National Association of Trotting Horse Breeders promised us by Secretary Packer having failed to come to hand, we answer the applications for them by printing the programme in this week's paper. Breeders and others interested will find therein all the information contained in the original draft except the invitation to become members, which is summed up in the following paragraph: This association welcomes to membership all respectable breeders and admirers of trotting horses; the only pecuniary obligation being ten dollars for initiation fee, and ten dollars for annual dues. Its membership already includes nearly all of the prominent breeders, together with many of the most prominent owners of trotting stock.

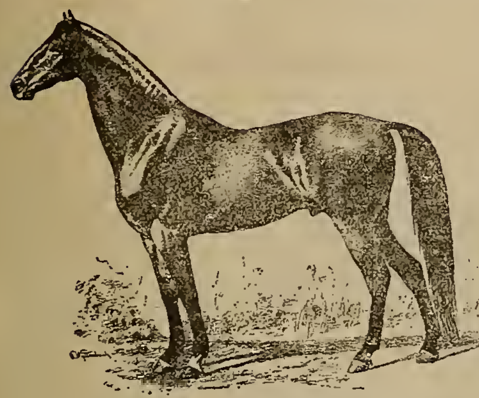
STALLIONS.

The Fast Trotting Premium Stallion



ALEXANDER

WILL STAND THE PRESENT SEASON AS FOLLOWS: MONdays, Tuesdays and Wednesdays at Clark's stables, Santa Rosa. Balance of time at Fashion stables, Petaluma.

Alexander is by Geo. M. Patchen Jr., the sire of Sam Purdy (2:20½) Starr King (2:22) and Vanderlynn (2:22). Dam Lady Creim, by a son of Brown's Bellfounder, by imported Bellfounder. For full description see BREEDER AND SPORTSMAN of Sept. 9, 1882.

Of Alexander's get Tommy Dodd has a record of 2:24, Reliance 2:22¾, Nellie Patchen 2:27¼, Eudora 2:34¼, Inauguration three miles in 7:29—last mile in 2:26, Sonoma Boy 2:37. Alex. Button proved by his performance in 1880 to be one of the best three-year-olds which have ever appeared in any country. He won the stake for three-year-olds at the State fair, heating Belle Echo, Annie Laurie, Len Rose and others, winning the first, third and fifth heats and making a dead heat with Annie Laurie in the fourth; time, 2:34½, 2:30, 2:29, 2:30¾, 2:35. At the fair of the Santa Clara Valley Association at San Jose he won, heating Belle Echo and Len Rose; time, 2:28¾, 2:30¼, 2:33¾, 2:31¾. Belle Echo won the first heat. He won at Stockton, heating Honesty, Len Rose and Upright in straight heats; time, 2:32, 2:33½, 2:32½. In 1881, as a four-year-old, Button mdaea record of 2:26¾ over the Santa Rosa track. Dot Craig, by Alexander, has a private record of 2:29.

The Frasier team took first premium at the Sonoma and Marin District fair; also at Oakland for best carriage team.

Mares left at the City Front stables, San Frencisco, will be forwarded. For further informatian apply to

T. T. UNKLESS, Petaluma.

STALLIONS.

THE CELEBRATED TROTTING STALLION

Sacramento Racetrack.

THOROUGHBRED STALLION

X X,

BY MALCOLM, HIS DAM COLUMBIA, WILL MAKE THE ENsuing season at the Oakland Trotting Park. Terms, $25 the season.

X X (Doublecross) is of as high and fashionable breeding as any stallion in the country. His sire, Malcolm, is by imported Bonnie Scotland, his dam, Columbia, also by imported Bonnie Scotland, hence his name. Malcolm was one of the best racehorses of his day, and Columbia was also a fine race mare. For extension of Columbia's pedigree see advertisement of Anteeo. Her dam, Yonng Fashion, was the dam of Surprise, Scotland, Wauanita, Bonnie Kate (the dam of Bonnie Lizzie), Andes, Hock Hocklug, Three Cheers, etc. The dam of Malcolm, Lady Lancaster, was the dam of Sagamore, Ontario (the dam of McWhirter), Regent, Lady Fairfield, Lady Amanda, Lady Middleton, etc., and a reference to the racing calendars will show how distinguished the members of these two families are. This is the only Bonnie Scotland stallion in California, and from his inbreeding has as much of the blood as if he were a son of that renowned sire. He is a horse of immense substance, good size, high form, and of the best disposition.

JOS. CAIRN SIMPSON. Oakland,
or 508 Montgomery street.

ANTEEO.

DARK BAY COLT, NEAR HIND FOOT WHITE; FOALED MAY 5th, 1879; bred by Joseph Cairn Simpson, Oakland, California.

THE

Centennial Chronograph

A POSITIVELY RELIABLE "FLY-BACK"

HORSE-TIMER

And Accurate Time-piece Combined.

STEM WINDER AND STEM SETTER.

In heavy Gold Open-face Cases, price $55
In heavy Silver Open-face Cases..... 27

[From the Jewelers' Circular.]

"The Centennial chronograph (fly-back) or horse-timer, recently introduced by Messrs. Cross & Beguelin, is, regardless of price, one of the most substantial and accurate pieces of timing mechanism we have seen. This timer is constructed on scientific mechanical principles that must excite the admiration of every intelligent watchmaker, and it will doubtless become universally popular."

CROSS & BEGUELIN,

MANUFACTURERS,

21 MAIDEN LANE, NEW YORK.

When you send an order mention the BREEDER AND SPORTSMAN.

STOCK FARMS.

My New Catalogue For 1883,

OF 180 PAGES, CONTAINING VALUABLE TABles, with trotting statistics up to close of 1882, with descriptions and pedigrees of 276 high-bred trotting stock, now at Fairlawn stock farm, adjoining the city of Lexington, Ky., will be sent free to all applicants who contemplate purchasing, and to all others who send four cents in stamps to prepay postage.

TWENTY

Fine & Highly-bred Broodmares

bred to the Fairlawn stallions, and

138 Head of Promising Young Trotting Stock,

consisting of young stallions, fillies and roadsters, most of them sired by ALMONT, HAPPY MEDIUM, ABERDEEN and CASSIUS M. CLAY JR.,

ARE OFFERED AT PRIVATE SALE.

There are in use at Fairlawn over one hundred HIGHLY-BRED BROODMARES, with the standard-bred and noted trotting stallions ALMONT, HAPPY MEDIUM and ABERDEEN at the head of the stud.

It is confidently believed that no breeding establishment in the world possesses greater facilities for making judicious trotting crosses. Hence parties who wish to engage in breeding and raising fine, highly-bred and fast trotters, and those who want fast, stylish, game, level-headed and reliable roadsters, have an opportunity of obtaining just what they want at FAIRLAWN.

ALMONT already has twenty of his get with public records of 2:30 or better, and two with records below 2:20. He has a granddaughter with a record of 2:20, made in 1881; another with a record of 2:23½; another with a record of 2:26, made in 1882; another with a record of 2:28½, and a grandson with a three-year-old record of 2:23½, the fastest ever made up to 1881. No trotting stallion at the same age ever made such a showing.

HAPPY MEDIUM has sixteen of his get with records ranging from 2:20½ to 2:30, a larger number than any other stallion except Almont ever sired at same age.

ABERDEEN, with very limited opportunities in the stud, has eight of his get with public records ranging from 2:15½ to 2:27½. No son of Rysdyk's Hambletonian has made as good a showing at same age.

ETHAN ALLEN JR., full brother of Daniel Lambert, who has twenty-two of his get with records of 2:30 or better, has recently been added to the Fairlawn breeding stud. He was sired by Ethan Allen, dam Fanny Cook, by old Abdallsb; second dam by Stockholm's American Star; third dam by Red Bird, son of Bishop's Hambletonian. With very inferior opportunities in the stud, Ethan Allen Jr. has sired five trotters with records of from 2:22½ to 2:29¾, all of them being out of mares of unknown pedigrees.

The Fairlawn stallions have in 1882 had eleven new ones of their get to make records below 2:30 and one to make a record below 2:20. Besides this, each of the Fairlawn stallions has had a granddaughter to drop into the 2:30 class, viz.: Maud T, 2:26, by Hamlin's Almont Jr.; Carrie Medium, 2:27¼, by Happy Medium Jr.; and Carrie B, 2:28¾, by Ethal G, son of Aberdeen. The stallions on no other breeding farm in America have made such a showing in 1882.

These stallions will be permitted to serve

A Limited Number of Mares IN 1883.

ALMONT, limited to twenty mares, at $300; HAPPY MEDIUM, limited to twenty-five mares, at $150; ABERDEEN, limited to forty mares, at $100 the season, and ETHAN ALLEN JR., limited to twenty mares, at $50 the season, with privilege to return such mares in 1884 as fail to stand. A few approved mares will be bred on shares to either stallion.

The ONE-PRICE PLAN is strictly adhered to at Fairlawn, and THE PRICE OF EVERY ANIMAL FOR SALE IS PRINTED IN THE CATALOGUE. These prices will neither be advanced nor reduced A SINGLE DOLLAR until after May 1, 1883. PURCHASERS FROM A DISTANCE CAN BUY ON ORDERS AT EXACTLY THE SAME PRICE AS IF PRESENT IN PERSON, AND ALL STOCK SOLD ON ORDERS WITHOUT THE PURCHASERS SEEING THEM CAN BE RETURNED BY THE PURCHASERS IF THEY DO NOT IN EVERY RESPECT COME FULLY UP TO THE DESCRIPTIONS GIVEN. Full written descriptions will be given any applicant who contemplates purchasing.

Time will be given responsible parties at regular bank rates of interest.

YERBA BUENA

JERSEYS AND GUERNSEYS

THE YERBA BUENA HERD OF JERSEYS AND Guernseys won all the herd prizes for 1882. Since then have been added three young bulls and some females and it now contains Farmer's Glory, Jersey Belle of Scituate, Coomassie and Alphea strains. These, with forty head selected on the Islands of Jersey and Guernsey from the best without regard to cost and imported directly, make this the best herd on the Pacific Coast, and equal to any at the East, where the extraordinarily high prices ruling show conclusively that these are the accepted butter producing animals of the country. Bulls have recently sold in New York for $10,000 to $12,000. Animals of both sexes for sale at moderate price.

Also 150 Fine Rams for Sale.

1348 **GEO. W. HANCOCK,** Sacramento.

Thoroughbred Colt for Sale.

CHESTNUT COLT, FOALED APRIL 5, 1882. By Joe Hooker, his dam Too Soon by Norfolk, grandam Lady Davis (dam of Dashaway) by Red Bill, son of Medoc, etc. This is a highly-formed colt, of good size and a hearty feeder. Being nearly a brother in blood to Fred Collier (Lady Davis being the great Grandam of Fred, and his dam also being by Norfolk) and the Joe Hookers so far as tried all raceborses, this is a good chance to get a colt of great promise for a moderate sum. He has four white legs above knees and hocks, a white face and other white markings. Price $500 if applied for before the 20th of March. For further particulars address this office.

FOR SALE.

A VERY FINE HAMBLETONIAN stallion, imported from Syracuse, N. Y.; nine years old; mahogany bay; sixteen hands high; perfectly sound; well broken; very stylish; cost over $1,500; property of a banker; full papers; got by Hambletonian Prince, he by Volunteer. Can be seen at Club Stables.

Sportsmen & Pleasure-Seekers.

THE

SOUTHERN PACIFIC R. R. CO.

RESPECTFULLY CALLS ATTENTION TO THE

SUPERIOR FACILITIES

AFFORDED BY THEIR LINE FOR REACHING with speed and comfort the best places in the State for

Sea Bathing, Shooting and Fishing.

TRAINS LEAVE SAN FRANCISCO DAILY FOR

MONTEREY,

THE MOST CHARMING

Summer and Winter Resort of the Pacific Coast,

with its beautiful Groves and delightful Drives. Front in abundance can be obtained from the several streams in the vicinity of Monterey, and the best shooting may be had in season.

THE BAY OF MONTEREY

Is noted for the extent and variety of fish which abound in its waters, notably Salmon, Rock Cod, Barracuda, Pompino, Spanish Mackerel, and Flounder. The above-mentioned attractions, in connection with the low rates of fare, rapid transit, and the superior accommodations furnished at the "HOTEL DEL MONTE," have made Monterey a paradise for sportsmen.

THE BATHING ESTABLISHMENT

OF THE

"HOTEL DEL MONTE,"

IS UNSURPASSED.

A SPACIOUS SWIMMING TANK

(150 x 50 feet)

FOR WARM SALT WATER, PLUNGE AND SWIMMING BATHS.

ELEGANT ROOMS

For Individual Baths with DOUCHE and SHOWER facilities.

MAGNIFICENT BEACH

Of pure white sand for SURF BATHING, Etc., Etc.

THE FAVORITE ROUTE to those well-known Watering Places,

APTOS, SOQUEL AND SANTA CRUZ,

IS VIA THE

Southern Pacific Railroad,

(Broad Gauge), and the

SANTA CRUZ RAILROAD.

☞ AT PAJARO, the SANTA CRUZ R. R. connects daily with Trains of the S. P. R. R.

The S. P. R. R. runs through the counties of San Mateo, Santa Clara, San Benito, Santa Cruz and Monterey, in each of which game abounds in great variety. Notably

Quail, Pigeon, Snipe, Duck, Geese, Deer and Bear.

Lakes PILARCITOS and SAN ANDREAS are reached by this line. Stages connect with trains daily at San Matco for those well-known Retreats, PURISIMA, SAN GREGORIO and PESCADERO. We would particularly call attention to the unlimited extent of range at and about SAN BRUNO and McNAHON'S for RIFLE PRACTICE.

These resorts are but a short distance from San Francisco and offer special inducements to the lovers of this manly sport.

SPECIAL NOTICE.

Sportsmen and others presenting Passage Tickets o any description issued by this Company will be entitled to

FREE TRANSPORTATION OF THEIR DOGS

when carried in Baggago Cars and put in charge of Train Baggagemen. Train Baggagemen are instructed to issue CHECKS for all dogs received in Baggage Cars.

☞ In order to guard against accidents to Dogs while in transit, it is necessary that they be provided with COLLAR AND CHAIN. Guns and Fishing Tackle checked and carried free of charge. Guns taken apart and securely packed in wood or leather cases may be taken in Passenger Cars.

Tips and Trotting Action.

When the first chapters of what has since been called "Tips and Toe-weights" were written I was completely in the dark regarding what would be the effect of tips on the action of the fast trotter. There were serious misgivings as to their being practicable, and with the ideas of that time uppermost in the mind, that weight on the feet was a necessity, I anticipated failure for the purposes of fast work on the road and track. That was seven years ago, and for a long time there were doubts. Every experiment was undertaken with misgivings, though from the outset I was firm in the belief that the foot would be much better if relieved of metallic incumbrance, as far as the requirements of daily work would permit. I would not have been greatly disappointed with the discovery that for fast trotters there had to be weight on the heel in the shape of a full shoe.

At that time I must acknowledge that I was governed by taking for granted what has since been found to be without solid foundation. There was something of the same ignorance that prevailed in regard to the true action of the racehorse, not so dense by any means, though still burdened with erroneous ideas, false notions and accepted theories which were without a logical base. The first chapters of the book were written at the commencement of the investigation while the mind was still travelling in the old, old ruts, reaching out a hand to grasp something, or it might be to find that the clutch was a frantic endeavor to sieze a vision in the air.

I have not lived for more than half a century without having my full share of disappointments, and apart from those troubles which time can only blunt, never eradicate, the most acute is to find that some pet scheme or expected grand improvement is worthless. The sanguine spirit of boyhood is prone to see success in every project; as years are added we learn that success is the exception, and if we score one to a dozen or more failures there is little cause for complaint. In this case there was such a complete innovation on established custom that every step was cautiously taken, and every result carefully noted. The experimental stages are not yet ended, though so far as carried there has been such a complete verification of the accuracy of the position that in lieu of doubts I have the most implicit faith that every succeeding step will add to the impregnability of the structure. Heretofore there has been little written in regard to the theory of the effects of tips on the action of the fast trotter, the showing being principally restricted to results. Three instances were given where colts trotted faster in tips than when shod with full shoes. One was cited where fair progress was made in trotting education in which the pupil never wore anything on the forefeet excepting tips, and another gave testimony that a barefooted yearling, without ever having had iron on his feet, made more than a good showing by trotting in 3:02 in a race.

These instances may be thought insufficient to establish the position by practical results, and therefore the consideration, from a theoretical standpoint, be appropriate. And yet, if there has been no break, no contradictions in the testimony of even a few witnesses, the case can be said to stand well in a practical light, and when these results also coincide with theory, supported by logic, a candid mind will acknowledge that there is "something in it." Action is rather a vague term to the general reader, although it conveys a definite meaning to those who make a study of the racehorse and trotter. In a general sense, it means the method of moving the feet and legs, and also embraces the movements of the scapula—shoulderblade—and the femur—the bone which runs from the stifle to the uppermost articulation. In fact, as the term is generally used, it may be applied to the movements of the loin, emphatically so when the fast, flying gallop is considered, and in the trot the motion of this part of the body can be governed by the manner in which the feet are moved. Though the terms "shoulder action" and "stifle action" are in common use, that of loin action has yet to be invented, though any one who has driven trotters will readily admit that there is motion enough in the loin to warrant the appellation. Those conversant with the different kinds of loin action will agree with me that smoothness of motion in this part of the frame is a quality of vast importance. There are slight variations in the loin action of racehorses in comparison with that of fast trotters, though there is far more actual motion. The fast gallop entails a bending of the vertebræ, in order to bring the hind feet so far forward as to sustain the center of gravity on one foot while the fore feet are much elevated. This movement is made when the body is in the air and the stride is more than twice as far as the real stride of the trotter. Accepting the stride of the racehorse as the proper measure for that of the trotter, the error has followed of calling two strides one, or following the formula that the stride of the trotter is from where one fore foot leaves the ground until the same foot touches again, twice in this interval the body is hurled through the air to once in the racer. This custom has been of such long standing that it would be impolitic to change it, and adhering to the plan of taking "five tracks or four spaces" for the stride of the trotter, there will be less chance for confusion. In the pure trotting gait the hind and fore feet on opposite sides of the body move partially in unison, and come to the ground so nearly together that the body has a double support, though the last impulse before the air flight is given with the hind leg. Those horses which are "mixed-gaited" have not the same rhythm in their footfalls. The cadence is broken and the ear detects the difference as accurately as the eye. In some horses there is a sort of a compromise between the trot and the gallop; in others there is an approach to the single-foot, and still others shuffle along in a slovenly manner of progression. The fastest are square in their gait, and although there have been instances of a great flight of speed when the action was anything but perfect these cases are comparatively rare.

The aim of the best trainers is to guard against their pupils falling into a "wrong way of going," and should there be an inclination to forsake the action recognized to be the best to insure improvement, every effort is made to correct the faulty bias. In the education of trotters, the absorbing question is how to control the gait. By this is meant, the power to regulate, to correct, to improve and to obtain the best progress in developing speed. If tips are inimical, defeating the best efforts of the trainer, nothing is more certain than that they will be ignored in the case of horses which are required to trot fast. It will not make amends for this deficiency if they are found to be conducive to the soundness of the feet and legs, as speed is the great desideratum, soundness a secondary consideration. The idea that weight in the shoe was a necessity for the fast trotter prevailed with a large majority of trainers fifteen years ago. There were many well-authenticated cases in which the only plausible explanation for an increase in speed was an increase in the weight of the shoe, and when toe-weights were first used, the whole benefit was supposed to arise from the opportunity it gave to add to the ponderosity of the appendages to the feet. This led to false reasoning and has also inclined people to denounce the use of tips, without trial and without investigation. The argument would take something like the following shape:

Objector—"I tell you tips will not do; your colt would trot ten seconds faster if he had shoes on his feet."

Advocate—"Give me your reasons for stating that they will not answer, and present arguments to prove that there is an addition of ten seconds to the mile by not wearing shoes?"

Objector—"Because I know it, and I'll bet a hundred dollars that I am right."

Advocate—"Proffering a wager is only evidence that such is your belief; explain why you have so much confidence and we may be able to settle it outside of the arbitrament of a bet."

Objector—"I tell you there is no use talking, I'll bet a hundred to fifty, and here's the coin, my money is no fool, if I am."

The second opponent is more logical and he takes the ground that tips are not so favorable to trotting speed for the reason that they change the action unfavorably, the stride is shortened, and the knee is not so much bent as when shoes are worn. He also claims that the feet will become sore at the heels, which will prevent the extension of the limbs, though he gives the most weight to the first objection. His views are purely theoretical, never having given tips a trial, and therefore it will be proper to answer them without reference to what practice has demonstrated, further than to bring analogous data to prove analogous positions.

"Two Leggs in the Ayre, and Two Leggs upon the Ground, at the same Time moved Cross" is the way the Duke of Newcastle described the "Trott" over two hundred years ago, and it is not very far different from the descriptions that have been given two centuries since that noted horseman and "thrice noble, high and puissant Prince William Cavendishe" published "A New Method, and Extraordinary Invention, to Dress Horses, and Work Them According to Nature; as Also to Perfect Nature by the Subtilty of Art." The trouble has been that many who have followed him in giving advice have lost sight of Nature, placing more dependence on the "subtilty" of artificial methods, ignoring the natural functions of the foot, and substituting their ideas of perfecting the mechanism of this important part of the animal economy.

But as the fast-trotting step has come in a great measure from the inventive faculty of mankind, and the art of the horse-shoer, carriage-builder and harness-maker called into aid in arriving at the desired result, divergences from Nature have been compulsory. If the same end, however, should follow an adherence to natural laws it is manifest that a course which will insure the benefits without injury is preferable to one that entails serious troubles. There are few intelligent men who do not admit that injury to the foot is the result of a horse wearing shoes for a long period. At the same time they regard shoeing as a necessary evil, entailed by the requirements of domestication, and those who are interested in fast trotters are nearly unanimous in the opinion that shoes are imperatively demanded by the exigences of the gait.

It is generally considered that the bending of the knee is essential to a proper length of stride. It is also thought to give a purer action and with less liability to wound the hind foot and leg as it passes the fore foot. The horses which have shown the longest stride in my experience have not had a great deal of knee action, and very many who "jerked their knees up their chin" had the shortest.

Heavy shoes on the latter had the effect to lengthen the stride, the weight carrying the foot further out before it struck the ground, and in the former, in some instances, had a contrary effect, quickening the motion.

The effects of weight on the feet vary with the animal, and what the result will be is problematical until after a series of trials. The injury which comes from the hind foot, pastern or shin being struck while passing under or by the side of the fore is more likely to throw a colt "off his gait" than any other. The scalping or toe-boot, the guard against speedy cut, and the shin-boot have been invented to obviate this difficulty. The scalping-boot has been of more service in the education of trotting colts than any other single guard, and the originator of it is well worthy of the thanks of every one who is engaged in driving trotters. It has slipped into general use so quietly that its claims to celebrity have been overlooked. Had the choice to be made between surrey

ing the scalping boot or toe-weights I would not hesitate an instant in giving the preference to the scalper.

Colts scalp bare-footed, with tips on, and with shoes of all weights. Toe-weights in some casee afford a remedy, in others they aggravate the evil. Practice sometimes overcomes the propensity, with others the habit becomes intensified with a continuation of the exercise. In every case the wounding of the coronet, or hard blows on the upper part of the hoof, lead to "hitching."

Hitching is a kind of bounding motion under one or both of the hind legs, elevating the loin, and is the natural method which the colt follows to avoid the injury.

It is aware that it is free from the pain when a gallop is the gait, and expecting punishment from breaking into a run it endeavors to act in accordance with the desires of the the driver so far as can be accomplished without suffering acute pain, keeps up the trotting motion with the forelege, and "runs behind." The fear of injury overcomes the fear of the whip. Every stride curtails pain in one case, there may be a cessation in the other. The scalping is done with the outside edge of the toe or the outer edge of the shoe, tip or horn back of the toe. By ronnding that portion of the horn, or leveling the shoe or tip, some relief is obtained, and it may be that it will prove a complete remedy. But in a great many cases there will still be a bruise sufficient to awaken fear that the next blow will be heavier.

The instantaneous photographs taken at Palo Alto will show exactly how this injury occurs. When the last effort is made to hurl the body through the air it is done with one hind foot, the other three being off the ground. The propelling hind foot is giving the last vigorous thrust at the instant of leaving its hold, and the other hind foot is under the fore foot on the same side, or in some horses outside of it. Hind and fore foot are close together in all casee; when scalping is done they collide. The next representation, though showing twelve inches farther forward in the stride, the fore foot has been raised until the toe is above the upper pastern joint, and the hind foot which gave the impetus has about the same elevation. While the fore foot has been carried a short distance forward, the hind one has made greater progress, so that the fore foot and the shin are still in proximity, and if they come together at this point, it is the inside of the metatarsal that is wounded. Only a foot farther and the distance is much wider. The fore foot has been carried upwards and forwards, the hind foot sweeping closer to the ground, and after two more feet of progress they are just in the act of touching the ground.

Not very many years ago an "open gait" was held to be an essential in a fast trotter, that openness consisting in carrying the hind legs so far apart that it was not possible to scalp, and if the fore feet were moved in a straight line there was little danger of wounding the shin. Immunity from these injuries was obtained through a waste of power, and, consequently, inability to sustain a very fast pace. The "closer-gaited" trotter, protected by better constructed boots, acquiring a habit of going close without injury, capable of moving in straight lines with smooth, easy action, was found to be an overmatch for the other. Exuberant action is prejudicial, no matter whether the exuberance be in carrying the hocks widely apart, jerking the hind legs up with a nervousness akin to stringhalt, "folding the knee" until the foot comes near the chest, or winding the fore feet about in curves in place of straight lines. Then, when the fore and hind feet can be separated far enough to do away with coming together at the point of commencing the stride, that will be action enough for that portion of the movement. Why should the separation be more complete with the weight distributed over the whole of the sole than when it is borne entirely in the anterior half? I must acknowledge that I cannot see any logical reason for the greater weight, or the more general distribution effecting the purpose better than under other conditions. To overcome the greater inertia of the larger mass of metal the animal might make a spasmodic effort to lift it from the ground, but before this is done the heel has been elevated, and the jerk would be more likely to throw it against the foot which was passing under or by the side of it. A more rapid elevation would result from a lightening of the weight, as it would be more under the control of the horse, the same as the feet of a dancer are easier handled in pumps than military boots. I find, however, that this phase of trotting action will require more space than can be given in one number, as it involves the most intricate problem there is, to me, in the trotting action. It is as important as puzzling, and a correct solution will be of vast benefit in overcoming the evil. Fortunately, in the illustrations of the trotting gait which were taken at Palo Alto, there are two of Edginton, in harness, and under saddle, and also of Elaine, Clay and Occident. From these valuable lessons can be obtained, and if we can discover the right application the mystery may be cleared.

Not Sold.

Last Saturday the colts advertised by Lieut. Kuhnle were offered at auction at Petaluma by Killips & Co., but as there were no bids that approached the value of the animals they were all withdrawn. The colts were a superior lot; but few horse fanciers from a distance attended because there were so few animals to be sold. The result is another argument in favor of the combination sale plan. Lieut. Kuhnle expresses himself as highly gratified with the liberal treatment he received at the hands of Messrs. Killips & Co., who kindly took the circumstances into consideration. He has from experience a high appreciation of their honorable and liberal manner of doing business.

The stallion Woodbury, by Woodburn—Mose Rose, by imported Knight of St. George, is doing stud service in Oregon.

OUR NEW YORK LETTER.

Condition of Sporting Matters and Theatricals East of the Rockies.

EDITOR BREEDER AND SPORTSMAN: The present week has fairly opened the hall for turf speculators in this city, whose enforced inaction during the long winter has caused some of them to become very rusty in more ways than one. But a good many of these impatient spirits wish now that Mr. Lorillard had deferred for a period his initial essay of 1883 on the British turf, Aranze's defeat and the attendant circumstances being a sore subject that will be long remembered by the *cognoscenti*. Of course no one insinuates for an instant that the mare was run into intentionally, for these accidents are not uncommon, especially in a large field of horses, but the fact of the offending animal being a jade that had no earthly show for the race makes the occurrence a very unfortunate one indeed. Aranza might not have won if she had not been interfered with, but speculators would then have known something of her present form, whether she had improved any since last fall, etc., while as it is now they are as much in the dark as before, although the fact that she was the over-right favorite in London for the race at the low price of 6 to 1 looks as if she had been highly tried. Pincus brought good reports of her when he returned from England last winter and she is no doubt a better stayer than last fall. If so, she ought to show to advantage in the City and Suburban at Epsom, where she will have to carry but 98 pounds, although Sachem appears to be the stable candidate for this race.

Then to-morrow at Liverpool the Grand National will be decided, and on the following day the Spring Cup, both events exciting considerable interest in this city. Saturday also inaugurates the legitimate racing season at the Crescent City, for the desultory turf contests that New Orleans has seen the last two months can hardly be considered quite regular, or as conducive to the best interests of the sport. The very last day's racing given there, about ten days ago, resulted in the ruling off the track of Hovey, a well-known light weight jockey, in the employ of Green Morris, and other scandals came to light at quite regular intervals. The coming meeting of the Louisiana Jockey Club horses will be presided over by well-know turfites of that section, whose names insure the integrity of future doings at the City of the Mystic Krewe of Momus. The debut for 1883 of several much-fancied candidates for future events will also lend great interest to this meeting, and the doings of the "crack" three-year-olds, Drake Carter and Tilford, with the form as shown of the older horses Fair Count, Saunterer, Fellowplay, Apollo, Ballast, etc., will be closely scanned by those interested in Louisville and the Western circuit.

From Kentucky comes word of the satisfactory progress of most of the horses now in active training for the spring campaign. Leonatus, a "dark" colt by Longfellow, is just at present the most talked about animal in the race, for his sudden drop in the betting for the Derby from 10 to 4 to 1 shows the weight of metal that has gone on him. Then the colt's sale by Henry Miller, his breeder, to Chime & Morgan, his present owners, in the early winter, for the stiff price of $5,000 shows that all parties connected think well of him, an opinion still further strengthened by the engagement of Billy Douahue, the famous middle weight, to ride him on the eventful 20th of May. Good money has also gone on McCloskey, Lord Raglan, Ascender, Queen Ban, and others, and on all sides it is acknowledged that the Kentucky Derby of 1883 is a very open race. The last named filly, owned by Maj. B. G. Thomas, is, it has just lately been discovered, engaged with Violator, Booty and Fond-du-Lec in the Grand Prix de Paris of next June, but of course there is not one chance in a thousand of her fulfilling that engagement, although this half sister to Lelex has improved so much the last few months in size and looks that she is being highly thought of. A large price was lately tendered to and refused by her popular owner, and as that gentleman is always willing (generally) to make any kind of a trade in horseflesh, he must think well of Queen Ban to refuse to sell her so advantageously.

The blinding, by order of some one calling himself a veterinarian, of the well-known stallion Onondaga has excited universal execration wherever it has been mentioned, and it is said that Young, the owner of the poor brute, and the so-called "vet" who authorized the barbarity, are to be indicted for the horrible affair. They would not have much sympathy should this be the case, and it is high time that such men as these should be taught by the stern arm of the law that even dumb animals are not to be tortured with impunity.

The weather in Kentucky the last week has been anything but spring-like, and the work of the horses has been, consequently, interfered with. Still, most of the Derby horses are doing well. Ascender is in good condition, rather too finely drawn, it is said, considering that the race is seven weeks off. Lord Reglau has curly hocks, but looks well, and if he stand his preparation will be a dangerous horse. McCloskey, the best two-year-old in the West last fall, is also in fine order, but has not grown much. Small horses, however, sometimes can pack weight as well as larger ones. The thoroughbreds at Sheepshead Bay and Monmouth Park are progressing rapidly in their training.

The Dwyers' stable is in good fix now, except the black gelding Carley B, who has a "leg." Barnes and Miss Woodford seem to have fully recovered from their ailment, which a few weeks ago threatened their turf retirement.

Improvements are being made at Monmouth that will add much to the success of their summer meeting, and as increased transportation facilities are promised New Yorkers will probably be enabled to take the thirty-mile trip and be landed back in the city by supper time instead of near midnight as formerly.

Old Bancroft in the string of Lewis Stewart is feeling like a three-year-old, and the Louisville Cup winner of '81 may trouble the flyers yet.

A number of famous matrons of the paddock have died of late in Kentucky. Dixie, the dam of many fast ones, including Herzog the first horse that ever ran a mile as fast as 1:43, departed this life at the farm of Maj. Thomas, her owner. Eclipsa dam of Clipsetta, died at Mcgibblen's place, a few days ago. As she was due to foal almost daily, this was hard on her well-known owner. Dolly, by Mambrino Chief, departed this life at Col. West's farm on the 18th. As the dam of Thorndale, Onward, Director, etc., she was a valuable stud matron. The news of Mollie McCarthy's decease is regretted here. The writer saw her run one of her best races at Sacramento in 1876, two mile heats in 3:38½, 3:36½, and for her size she was as game as flint. Truly, Mr. Winters will realize, so soon after the death of Duchess of Norfolk, that misfortunes never come singly.

The wires tell us that your threatened drought has been averted, however, and this is cause for congratulation.

Mr. Frank Work of this city, whose Edward and Swiveller are the fastest pole horses we have, was thrown from his wagon one afternoon this week, but escaped with a few bruises, fortunately.

The Kellogg sale was quite a success here, and to-day Mr. D. D. Withers sold a batch of fourteen racehorses which brought all they were worth. The sales of Jerome Eddy, the trotting stallion, and Rosa Wilkes have also attracted much attention; as his record was 2:16½ and hers 2:18¼, they certainly were worth what was paid for them.

Your artist, Wyttenbach, has been highly complimented by the many who have seen his admirable delineations of horse portraiture. His efforts are certainly well executed and true to nature as the writer, who has a personal remembrance of some of the horses, can testify.

The Vanderbilt carnival ball last week here created of course a great sensation and lent being past the theaters are all doing a fine business. The Mapleson company with Patti, Schalchi, Mierswinske, Galassi, etc., at the Academy are having the best season their noted impressario has ever experienced. Mr. Grau's French opera company at that beautiful theater the Casino are drawing fine houses by the aid of Theo and Capoul. Haverly's Fourteenth street theater is in its fifth week with "Siberia," your late success at the California, and Miss Georgia Cayvan has done good work as Sara, the Jewess. Mr. Harry Menn, Col. Haverly's lieutenant here, is well and favorably known to our metropolitan amusement seekers. Neil Burgess is at the Bijou in a new piece of the Widow Bedott style entitled "Vim," and it is drawing well. Mr. Daly's 7-20-8 is one of the most amusing bits of comedy seen here lately, and the "Silver King" at Lester Wallack's still holds the boards. Old Wallack's has been refitted, and, as the star theater, is starring Mr. Boucicault in his well-known plays. "Young Mrs. Winthrop" at the Madison Square will soon go off for a "Russian Honeymoon," and "Inflation" is still the order of the day at the Comique. Catherine Lewis at the Fifth Avenue, and Willie Edouin's "Bunch of Keys" at the San Francisco Opera House are also having good business, and so the fun goes bravely on.

Yours, PACIFIC.

New York, March 29, 1883.

Hints for the Shearing Season.

As to the manner of shearing, there should be but one rule; perform the work well, and as expeditiously as due regard for its thoroughness will admit of. There is a vast amount of "botch" work done by the average sheep-shearer. Many who can do good work, when they make the effort, are encouraged to become careless by the quite common practice of paying an arbitrary price for each fleece taken off, without regard to the amount of wool or the character of animal from which it is taken. Even in the best wool-growing flocks, there will be found a wide difference in the shearing qualities of different animals, such as the peculiarity and number of wrinkles, the density of fleece, as well as the amount of trimming required for properly cleaning the head and legs. To expect the professional shearer will take care to turn off an equally good job with animals thus differing, when he gets the same pay for each, requires more faith in the average of humanity than seems warranted by experience in past years. The fact is recognized that it is one thing to theorize on the subject, but quite another thing to remedy the evils pointed out. It is true that, in many localities, the demand for shearers is so well up to or ahead of the supply, that very little option is left with the flock-owner, who is compelled to accept such help as comes to him, dicteting its own terms. But, even under these circumstances, he is not entirely helpless. A careful oversight of the shearing-floor, with substantial recognition of superior workmen, by compliments and rewards of extra pay, and, in extreme cases, the public reprimand and discharge of a man who manifests neither inclination nor ability for performing reasonably good work, will go a long way in the direction of securing reform.

Equally important with proper shearing, so far as the sale of wool is concerned, is honest and workmanlike manipulation of the fleeces. Honest, in so far as they shall carry with them nothing that the buyer, who understands his business, may not, with reason, expect to find there; workmanlike, in so far that every part of the fleece shall be in its proper place, rolled so as to make a good appearance, and wrapped and tied so as to stand such handling as it is likely to be subjected to before reaching its ultimate destination, the sorter's table in the woolen mill. Every man who raises wool for market owes it to himself to put his clip in the most presentable condition. To this end, each fleece should be pressed together as closely as when upon the sheep's body, and after being properly adjusted, so rolled as to show only the inner surface, and thus tied with enough stout twine to hold it under every possible treatment. A vast deal of moralizing has been devoted to bringing about so-called reforms in tying wool; most of it volunteered by men who never spent a day on the shearing-floor, and who sieze upon every pretext for temporarily depreciating the value of the wool clip. Experience has taught every man who has tied any considerable amount of wool that a twine of fair size must be used, as with any other the constant drawing and knotting will cripple the operator's hands. The quantity of string so used can vary to suit the owner of the clip, without reference to the suggestions or wishes of any other man. There is no deception about this. The buyer will, of course, take the amount and weight of any surplus string into his account, when naming the price he is willing to pay, but he has no right to charge fraud against any practice that does not conceal such real conditions as he might detect with ordinary care and sagacity. A pound of string on the outside of a fleece is no fraud, though the fraction of an ounce hidden away on the inside of the same fleece would be a fraud. Rolling into a fleece a handful of wool, plucked from the body of a dead sheep, is reprehensible, though tribs and skirtings, that become detached while on the shearing-floor, may properly be placed inside the fleece. If the flock is being sheared without washing, it is admissable to include with the fleeces sweat locks and trimmings from every part of the animal, while all particles of dung and mud that adhere should be removed. In short, all parts of the fleece, and all that belongs to it in a natural state, are properly included in the term unwashed, and the flock-owner should be careful that nothing else is there, while the size and quantity and quality of string may depend entirely upon such circumstances or taste as he may allow to influence him. The buyer who cannot properly estimate the effect of the presence of more or less string on the value of a lot of wool, to which he has free access, has no right to ask the wool-grower to alter his manner of doing business, to bring its results within range of so dull a comprehension. As in washing, so with the other processes in preparing wool for market—those who preach so zealously for certain practices must supplement their sermons with their money, show a willingness to pay for the extra labor and expense involved in following the precepts they so complacently scatter abroad, and reiterate with such regularity, at a time when most likely to unfavorably affect the price of wool that is still in the hands of the men who grew it.

CALIFORNIA CLUB'S COURSING.

The Thirty-two-dog Stake Run at Merced Last Week.

Such a coursing match as the California Coursing Club beld at Merced last Tbursday and Friday has rarely been equaled iu this State. In spite of many forebodings that owing to the postponement, which made the time unusually late in the season, the weather would be rather too bot for dogs and borses, the temperature was not a degree too high, aud thongb it was true tbat during the heat of noonday overcoats were a snperfluous garment no inconvenience was felt by the spectators, and as tbe dogs did not complain it must be taken for granted that they found the weather to their liking. The trip up to Merced in the special car cbartered by the club was mucb tbe same as such trips generally are. There was the usual talk about dogs, the inevitable discussion of past and gone coursing matcbes, the customary betting and offers to bet, a little singing and lots of jovia lity and good nature all around. The sportsmen were early risers, leaving their beds an hour or so before the time they do when they are in the city, bnt the sun gets up rather early too on the plains and was quite warm enough to be pleasaut ere the president's carriage started from the El Capitan last Thursday morning. Old "Mac," as nsual, was in the lead, but mine host Fahey did not propose that his guests should be last on the ground and after a gallant brush between the two four-hourse teams Mac gave way and ere O'Donnell's ranch was reached Fabey's friends were boss of the road. With ten long conntry miles between the city of Merced and the coursing ground and a hard day's pull over sand and plow and hillocks the wise driver did well to hold his horses, and many a one in the party being impressed with that idea it was long past nine o'clock wben all were on tbe ground, the judges monnted and tbe first pair of doge in the slips. The gronnd chosen for the sport was west and north of the sheep ranch on John Mitchell's big pasture. Poor land the people call it and no doubt it is poor from a farmer's standpoint, but better land for coursing never was seen. The land, well covered with a carpet of wild flowers and hardy grass, cropped short by the sheep that have beeu feeding over it, presents a splendid footing for the dogs though a bit dangerons to horses, but not so if as is the nsual custom in Merced, they are nnshod. An abnndance of hillocks from which points of vantage spectators can see every course from end to end, unless as is sometimes the case the hare leads tbe dogs a long chaee, over and beyond a couple of ridges which shut out the sight completely and leave the lookers-on in doubt of the result until back comes the judge, leading hie blown horse, to announce tho winner. Many of the hares were with yonng last week and did not give the dogs as hard a cbase as they do in the fall of the year when they have no domestic arrangements to look after and their entire energies are devoted to acqniring the stamina necessary to carry them twelve miles a day for water or green food, besides the extra energy needed to escape their enemies, the coyotes, who in the spring time find so many young squirrels to feed on that they do not care to bother about the fleet and elusive jack rabbit or hare.

Last Thursday the sport began with a "bye," Mercedite's American Girl getting a walk-over through the absence of Blue Jacket. J. C. Murphy's Cassie Maria and W. Lane'e Lady Costello had the firet real race of the day. Cassie Maria ran in splendid style and won by both speed and work.

J. J. Murphy's Presidio Boy ran a bye, his competitor being abeent.

M. Mercedite's Lady Smith beat a Merced dog owned by W. Quigley, called Hornitos Boy, but had all she conld do to win the deciding points.

J. Healey'e Black Cloud beat Joseph Tilden's blue dog Samuel J. Tilden and it was no eight to seven game either.

W. Lane's Connaught Ranger beat W. Fabey's Tuolumne Bill, a Merced dog from which the local visitors expected a great performance.

F. Cahalan's Sierra, the bitch that won first prize at the match of the Pacifio Coast Club, beat M. Mercidite's Parnell.

Pacific Life and Lady Mary failed to appear.

Carroll'e Monarch ran a bye.

J. Perigo's Longfellow beat P. Reilly's Tornado.

J. Hughee' Speculation Jr. beat J. F. Carroll's Stonewall Jackson.

W. Fallon's Mollie McCartby beat S. Brown'e Modoc.

J. Hughes' Belfast Maid beat J. F. Cunningham's Jem Cormack.

E. Packer'e Daisy, a Merced bitch, beat J. Ferry's Nellie.

J. F. Carroll'e Paul Jones beat J. Hughee' Lady Franklin.

After this came a hearty lunch, and then the second ties were run over. Hares had got a bit scarce, and the elipper was well tired out before game was etarted to try the epeed and ekill of Mnrphy's Caesie Maria and Mercedite's American Girl. Cassie Maria proved the staunchest of the pair, and won tbe honors after a hard struggle.

Lady Smith was withdrawn and Presidio Boy got a bye.

Lane'e Connanght Ranger beat Healey'e Black Cloud.

Calahan's Sierra beat Ferry's Skip.

Carroll's Monarch beat Perego's Longfellow.

Hughee' Specnlation beat Fallon'e Mollie McCarty.

Hughes' Belfast Maid beat Packer's Daisy.

Carroll's Paul Jonee ran a bye.

This concluded the day's sport, and tbe party drove back to Merced to take in the sights of the town and get refreshed for the next day's coureing.

On Friday the haree were more plentiful than on the day before.

The third ties over were run off with the following result:

J. J. Murphy's Presidio Boy beat J. C. Murphy'e Cassie Maria.

W. Lane'e Connaught Ranger beat F. Cahalan's Sierra with ease.

J. F. Carroll's Monarch beat J. Hughes' Specnlation Jr.

J. F. Carroll's Paul Jones beat J. Hughes' Belfast Maid.

Fonrth ties over:

J. F. Carroll's Monarch beat J. J. Murpby's Presidio Boy.

J. F. Carroll'e Paul Jones beat W. Lane'e Connaught Ranger.

The first and eecond prizes were divided hetween J. F. Carroll's Paul Jones and Monarch, as tbe owner did not wieh to run them off. The third and fourth prizes were divided between W. Lane's Connaught Ranger and J. J. Murpby's Presidio Boy. It is remarkable that tbis ie the eecond time Monarch and Paul Jonee have divided first and second prizes.

The Puppy Stake was then run off, with the following reeult:

J. Perigo'e Spring beat B. Brougban'e Main Street Lady.

F. Ferry'e Bute beat F. Hall'e Mary.

Secoud ties over:

F. Ferry'e Bute beat J. Perigo'e Spring.

A Consolation Stake of ten doge, $5 each was run off, as follows:

Speculation beat Tornado.
Belfast Maid beat Tuolumne Bill.
Longfellow beat Atwater.
Cassie Maria beat Black Cloud.
Lady Franklin beat Antrim Maid.
Second ties:
Speculation beat Belfast Maid.
Longfellow beat Cassie Maria.
Lady Franklin ran a bye.
Third ties:
Speculation beat Lady Frauklin.
Longfellow ran a bye.

In tbe final beat Longfellow was withdrawn, and tbe prizee were awarded as follows: Speculation first, Longfellow second and Lady Franklin tbird.

Judge, J. C. Murphy; Slipper, J. Perigo. In the courses wbere Murpby's dogs were engaged Dominick Shannon acted as judge, and also for tbe Consolation Stake.

It would not be fair to finish the report of this match without a special word of praise for the judge, wbose decieions were uniformly acceptable, and the elipper, wbo performed his arduous labor to the satisfaction of all. The stewards and other officers of the meeting were indefatigable in their efforts to promote the sport.

TURF AND TRACK.

Chicago Handicaps.

Tbe programme of the Chicago running meeting bas been received and the weighte for the handicaps are as follows:

BOARD OF TRADE HANDICAP.

A sweepstakes for all ages at $50 each, half forfeit; only $15 if declared out by May 1, with $1,000 added, of which $200 to the second and $100 to the third; winners of any race after the publication of the weights to carry 6 lbs. extra; of two or more races, 10 lbs. extra; mile and a half. Closed January 16 with 60 subscribers, viz.:

	lb.		lb.
John Davis, aged	121	Minstrel, 4	104
Meditator, 4	113	Nick Cheek, 6	103
Boatman, 4	113	Storm, 6	102

Racing in England.

The principal race at the Nortbampton and Pytchley Hunt meeting on the 4th at Northampton was the Great Northamptonshire Handicap at about two milee. Tbere were only eix startere. It was won by the five-year-old Glenluce, with last year'e winner, Sun of York, second and The Glider third. The conditions of the race were as follows:

Fortieth renewal of the Great Northamptonshire Handicap for three-year-olds and upwards, at £20 each, £10 forfeit, with £400 added; winners after the declaration of the weights (January 26) extra; entrance, £3 10s—the only forfeit if declared by January 30; about two miles. Closed with forty-one subscribers, of which nineteen declared out.

Note—The highest weight accepting was 114 pounds; it was raised to 124 pounds and the others in proportion.

J. Hanbury's hr h Glenluce, five years, by Glenlyon—Escape, 105 lbs. 1
P. H. Cooper's b h Sun of York, aged, by Favonius—Eleanor, 109 lbs. 2
M. Lefevre's blk h The Glider, five years, by Dutch Skater—Bagpipe, 101 lbs. 3

Glenluce is a fair specimen of the average winner of the medium clase of handicape. Ae a two-year-old he ran eleven times and won three, viz.: A Maiden Two-Year-Old Plate, worth £100, at Alexandria Park in May, 1880, and the Great Northern Nursery Handicap, worth £132, and the Oseultetone Nursery Handicap, worth £102, over the eame couree in September. Ae a three-year-old Glenluce ran nine times, but only won the Great Northern Handicap, worth £150, at Alexandria Park in November. He ran during the first part of tbe season ae the property of Mr. H. Coventry, who in turn eold him to Mr. J. Hanbury. Last year he ran only twice. He won the Free Welter Handicap, worth £146, at the Newmarket Houghton meeting, when he wae ridden by Mr. Artbur Coventry (the reputed best gentlemau rider in England), at 143 pounds.—*New York Herald.*

A match race for $200 a eide, distance 440 yarde, wae to have been decided on the Cardwell track, Jacksonville, Oregon, last Saturday, between the Payne Mare and Capt. Jinks. The result is uot yet known in this far-off neighborhood.

Bear in mind that the entries to purses, and nominations in stakes, Capital Turf Club, Sacramento, close Monday, the 16th inst. See advertisement for particulars.

State Fair Two-Year-Old Stake.

The two-year-old trotting stake of the State Agricultural Society, to be trotted thie fall, closed last Saturday, the 7th inst., witb the following nominations:

L. J. Rose, San Gabriel. Almet, by Sultan—Minnehaha.

Same—Red Hoody, by Del Sur—by The Moor.

Wm. Beach, Petaluma, ch c Dawn, by Nutwood—Countess.

Palo Alto Stock Farm, b g Gypsum, by Electioneer—Gipsy.

Same, br f Carrie C, by Electioneer—Maid of Clay.

Same b f Chiquita, by Electioneer—Pearl.

Same b c Ione, by General Benton—Irene.

D. E. Knight, Marysville, ch f Nighthawk, by Brigadier—Nelly.

J. M. Nason, Concord, g c Frank McGuire, by Belle Alta—Taylor mare.

J. E. Dunham, Concord, ch c Oscar Steinway, by Steinway—Franky Eaton.

F. L. Smith, Sacramento, b f Cora by Buccaneer—Pearl.

E. Giddings, Lemoore, b c Bay Rose, by Sultan—by The Moor.

J. C. Simpson, Oakland, br c Antevolo, by Electioneer—Columbine, by A. W. Richmond.

G. W. Trahern, Stockton, b g Voucher, by Nephew—by Vernon Patchen.

At Boise City.

The programme of Cy Mulkey's July meeting at the Idaho Park track, Boise City, is as follows:

First day, Tuesday, July 3, first race, Novelty Race, dash of one mile, free for all. Purse, $175. First borse at ¼ pole, $25; first horse at ½ pole, $50; first horea at ¾ pole, $50; first horse at 1 mile, $50.

Second race, Boys' Saddle Race, free for all nntrained horsee. Purse, $25. Entrance free; all to first horse.

Third race, one and one-fourth mila dash, free for all. Purse, $250.

Second day, first race, match between Eastman Broe.' Warwick and Jo Kinney's Policy. Three-fourth mile heate, best 3 in 5, for $3,000.

Second race, Mule Race, dash of one mile, free for all mules. Pnrse, $25; entrance free; all to first mule.

Third race, 600 yards and repeat; best 2 in 3; free for all. Pnrse, $150.

Third day, first race, three-year-old race; free for all three-year-olds bred and raised in Oregon, Washington Territory and Idaho; three-fourth mile heats; best 2 in 3. Purse, $200.

Second race, Gentlemen'e Saddle Race; dash of one mile. Purse, $25; entrance $5, to be added to purse; all to first horse; weight 150 pounds on each.

Third race, one mile and repeat; free for all. Purse, $300.

Fourth day, first race, one-half mile heats, best 2 in 3. Purse, $150.

Second race, Sack Foot Race, 50 yards. Pnrse, $25; all to first man; entrance free.

Third race, Named Race, free for Tim Brainerd, Major Anderson, Dunleary, Dundrum, Bank Roll, Daisy, Baby Brown, Quartzburg Johnny, and all other horses of like merit; three-fourth mile heats; best 2 in 3. Purse, $250.

Fifth day, first race, Novelty Consolation Race, dash of one mile. Purse, $150; free for all beaten horses. First horse at ¼ pole, $25; first horse at ½ pole, $25; first horse at ¾ pole, $50; first horse at 1 mile pole, $50.

Second race, Slow Race, change riders; dash one mile. Pnrse, $25; entrance free; all to last horse.

Third race, Citizens' Purse, $1,000, two and one-fourth mile dash; free for all horses, mares and geldinge.

The French Jockey Club has opened an increased credit of $65,000 for the purpose of adding to tbe eums of money given away in different stakes, which now become more valuable. Tbe Poule d'Essai, or Trial Stakes, hae been augmented by $1,000, and will now in added money alone be worth $4,000, while the Oaks, instead of $5,000, will bring in beyond the entries and forfeits over $6,000; and the added money in the Prix Daru, Prix de Longchamps, Prix du Neroli and Prix Greffulhe has been doubled. Thus the races of the Societe d'Encouragement will have an excess in valuo of nearly $50,000, and the total amount voted by the committee of the Jockey Club amounts to nearly $400,000. Tbese sums of money are derived from snrplus claims, forfeits and the admission paid by the geueral public at the gates of the paddock and racecourse.

The leading trotting tracke of the country are rapidly following the plan inaugurated by Chicago of having the entrance to racee made payable by installments, and in another year or so the stake system will be in almost universal operation. Utica is the last to leave the beaten track that has been followed for so many years. That association offers four purses of $2,500 each for the 2:36, 2:30, 2:24 and 2:20 classes, to be trotted at the regular summer meeting, the balance of tbe programme to be decided upon at the coming meoting of the Central Circuit Stewarde. The payments—2½ per cent each—are due April 16, May 16, July 23 and Auguet 6, and tbe purses will doubtless fill well.

Mr. Valensin'e brown mare Flight, by Buccaneer, that won a third heat in 2:29 at Oakland, March 17, was tbe first newcomer in tbe 2:30 list for this year, as also the first of Buccaneer'e get to enter the charmed circle. We indulge in a metaphorical ehake with our cotem. of the New York *Spirit* wbo is candid enough to eay "Ae usual California leads the van."

S. F. Gilmore of Lemoore writes: We are handling eome good colts by A. T. Stewart, eon of Mambrino Patchen, and one by Algona, dam by A. T. Stewart, eccond dam by Shylock, son of Bostou, (the Boston that ran in this State in au early day) all yearlings, and you may hear from some of them in the futurc.

Dr. Hicks' bay filly Pride, by Buccaneer—Lightfoot, by Flaxtail, died at the doctor'e ranch in Sacramento county last week. She trotted in 2:44½ ae a yearling, and won the Embryo Stake for two-year-olde at Oakland last fall, making a record of 2:33¼.

At Molalla, Oregon, March 15 last, there was a race between Henry Grimee' bay mare, by King's Shermau, and J. Noblitt'e bay gelding Bunch Grase, distance one-half mile. Tbe mare won handily. Time 0:51.

Tbe horsee of the late W. Stirling Crawfurd were post[illegible] be sold at the Newmarket Craven meeting, which bega[illegible] Tuesday aud endad yesterday.

Bear in mind that the entries to purses, and nominations in stakes, Capital Turf Club, Sacramento, close Monday, the 16th inst. See advertisement for particulars.

The Liverpool Grand National Steeplechase, a handicap at about four miles and a half, was run March 30 and won by Count Kinsky's six-year-old mare Zoedone, with Mr. P. George's Black Prince second and Major Bunbury's Mohican third. Six others ran, the smallest number since the establishment of the race, in 1839. The defeat of the Irish-trained horses, Mobican, Black Prince and others caused much excitement. The conditions of the race were as follows:

The forty-fifth renewal of the Grand National Steeplechase Handicap, at £25 each for starters, £15 for non-starters and £5 only if declared out by Tuesday, January 30, with 1,000 guines added, of which £100 to the second; winners after the publication of the weights on January 4, extra; closed with 41 subscribers; of which 10 declared out; about four miles and a half.

Count C. Kinsky's ch m Zoedone, 6 years, by New Oswestry—Miss Honiton, 154 lbs. 1
P. George's bik g Black Prince, aged, by Warden of Galway—Empress, 144 lbs. 2
Major Bunbury's br b Mohican, 6 years, by Uncas—Castenette, 169 lbs. 3

Joe Bunker, by Geo. Wilkes, dam by Seely's American Star, is the first to trot in the thirties this season in a public race. He won in straight heats at Augusta, Ga., Feb. 16, beating Bessie M in 2:24, 2:23½, 2:30. The same day St. Remo, by Volunteer, dam Flora (St. Julien's dam), by Harry Clay, beat Tony Newell, Brown Wilkes, and Rachel B. Best time, 2:29¼, 2:30.

The get of Longfellow and Ten Broeck will not compete in the Champion Stallion Stakes at Louisville this fall, because the owner of these two fine stallions did not enter them in 1880, when the stake closed for etallions.

It ie understood that the Rockaway Jockey Club has for the present abandoned the idea of building a race track near the big hotel at Rockaway.

The Ukiah Park Association have decided to push the work of building their track, so as to hold the inaugural meeting in June.

Rosa Wilkes will be handled by Dan Mace this season.

FISH.

Not a Flattering Outlook.

The opening of the tront season can hardly be said to have been productive of much sport. The enthusiastic anglers who have patiently waited for the advent of their cherished season have, on the other hand, returned from visits to former choice fishing grounds with a disgusted look which speaks volumes of the ill luck which they experienced, and it is not surprising that in many cases serious doubts are entertained whether the sport is not a thing of the past. As a general rule, the reports that reach this office are not such as to make glad the heart of those whose sporting proclivities are entirely concentrated upon trout fishing. The greater number of streams visited were either found to contain very few fish, or, in consequence of the muddy water, fly fishing was entirely out of the question. The reservoir in the vicinity of San Rafael is a notable exception, but even there fish were extremely shy. Some good catches were made in Monterey and in the creek below Gilroy. A party of anglers from this city, who put in a few hours at Pnrissima, also experienced average luck, though the creek was well whipped for upwards of three miles and no tront were taken until late in the afternoon. Salmon trout were taken in the lagoon below Pescadero, some of them measuring as high as seven inches. They are said to take the fly readily and afford good sport. All the streams north of this city reports of which have come to hand show a great falling off for the corresponding period of the past year. Complaints are also made that dama have been constructed in this direction in which young fish are impounded and in other ways depleting the streams of every vestige of choice fish. It is an open secret that the fish laws have been frequently violated during the close season, and that little trouble is taken either to enforce respect for them or to bring the guilty parties to justice. At Niles tolerable success was encountered, some of the trout caught reaching five and even six inches in length. An amusing story is told at the expense of an angler hailing from Oakland who, becoming disgusted with the prospect of securing a number of shining beauties, placed the pole across his breast and reclining at full length on a log, fell into a deep sleep. His companions were considerably amused at the oscillations of the dreamy disciple of Walton, and were shortly afterwards surprised by a splash, together with his sudden disappearance. Coming to the surface, the now thoroughly awakened angler struck out vigorously for land, forswearing the sport and cursing the luck that brought him to a sudden bath. The name of the gentleman is withheld at the request of friends in hopes that he may be induced to reconsider his determination.

Owing to the unfavorable condition of the tides during the last week or ten days there has been but little done by those who enjoy holding a line over the edge of a boat or standing on the kelp-covered rocks along the shore in hopes of tempting the denizens of the deep. For a short time, last Sunday, on the slack high water the fishere from hoate off the Sausalito shore pulled in a good many rock-cod, but their sport was rather short-lived. Pole fishing along the shore was exceptionally poor. Next week excellent fishing is expected by the fishermen, who form this conclusion from the favorable condition at which the tide will be from to-morrow, and these tides will last during the week. The cold waters from the rivers keep the ocean fish from coming into the bay much farther than Yellow Bluff, so the best grounds are to be found from that point to the Heads. The tomcod fishing near Goat Island is always good. A person going there may rely on good hiting with the same certainty that a traveler can rely on bites—flea bites—at a country hotel. Shore fishing still continues to attract many to the vicinities of Point Diablo and Horse Shoe bay, and the success of those who go to those places is generally good.

A. R. Brown visited Monterey on Saturday last, and succeeded in landing fifteen trout varying in size from four to six inches.

Frank Gassaway, in a few hours' fishing at the reservoir at San Rafael on Saturday, caught twelve trout.

George Kammerer and a party of friends were at Sausalito on Monday but returned to town without any fish.

BASE BALL.

Second Game of the Chamionship Series.

The second game of the championship season between the California and Rediugton Clubs, which was played on the Recreation Gronnds on Sunday, resulted in a victory for the former. The game throughout served to show the superiority of the winning club and contrasted rather forcibly against the losers, whose fielding was at times exceedingly poor. The truth of the matter is that the Redingtons were wholly overmatched and unless they improve wonderfully they will figure nowhere in the championship fight. They are weak at the bat and still weaker in the field. The Californias on the contrary are experienced ball players who have long since served their apprenticeship on the diamond and whose errors are mainly due to negligence. They are invariably in good form and their batting is such as to puzzle their contestants, and in consequence a number of base hits were scored to their credit which under other circumstances might have figured in another column. Ingalls, pitcher of the Redingtons, has a tolerably fast delivery, but it is seldom within the rule. No advantage, however, is taken of this fact by the Californias, who have little difficulty in punishing him. His support behind the bat is good but under his erratic pitching the catcher has all he can do to prevent bases being repeatedly stolen. The first baseman has a reputation for being a careful player, but Sunday's game showed little on which to base the claim. His throwing as also that of the third baseman was poor, while the latter is severly handicapped by a habit of stepping off the bag in his endeavors to make a quick play. This plan might be well enough for a sure base-man, but is hardly to be recommended or pursued by a neophyte. On the California side, Angus sins in the same particular, though his long experience enables him to take advantage of a number of plays which offset his errore. He also clings to his old habit of putting up one hand. Angus is known to be one of the very best left fielders the State ever produced, and why he should be taken from the outfield to cover the first bag is not quite apparent. Harlow Boyle, on second, was scarcely in his accustomed good trim, while Piercy, at short, usually an accurate thrower and rapid fielder, was badly out of form. It can hardly be expected, however, that the games at the commencement of the season will be marked by that careful playing which practice only insures. The material, with the notable exception of the Redington Club, is there and can easily be brought out so that the championship games will be characterized by close and exciting contests. The attendance showa plainly that renewed interest is taken in base ball contests, and it is within the power of the management to make the games doubly popular. The diamond was in admirable condition. The lines were plainly marked, and the infield smooth as a billiard table. The outfield is covered with grass, which has been closely cut, so that the fielders have no excuse for passed balls. Following is the score:

CALIFORNIANS.	T B.	R.	B H.	P.O.	A.	E.
A. Piercy, 3b	4	1	2	4	5	1
Angus, 1b	4	1	0	13	1	2

Home run—Leman 1. Double plays—Moran, Evatt and Leman, and Arnold, Pope and Leman. Time of game—two hours and fifteen minutes. Umpire—H. Videau. Scorers—M. Fisher and J. R. Eagan.

Ornithological Nines.

The Owl and Buzzard Base Ball Clubs are now in the field and next Sunday at 10 a. m. will play their first match this season at the Recreation Grounds. The Owls and Buzzards are not birds but like their namessakes are very fond of a lark. So many of the prominent members are Bohemians, actors and sich that it was found necessary to make a rule forbidding players making speeches to the umpire during the game. Once when Unger was given "out" it is said to have taken the combined strength of the nine to stop him from reciting "Lucretia's Lament" to the assembled players. One of the customs of the club is to play for a keg and it is not unusual for the winners to find the keg an empty one and their victory in consequence a hollow one. Friends and acquaintances are respectfully invited to attend the funeral next Sunday morning. The chief mourners are as follows.

OWLS.	BUZZARDS.

Orientals	0	1	1	0	0	1	0	—3

The California Club has recently manifested a desire to make the sport popular, by numerous good features which have been included in the management of the team. It has built a stand for the exclusive use of members of the club, so that each receives a ticket entitling him to a seat in the grand stand, good for the entire season. The gate money is divided among the players, and all expenses are defrayed out of a club fund made up by monthly dues.

The Imperial Base Ball Club is the latest addition.

Live Taylor, who figured prominently with with the old San Franciscos, Centennials, and more recently with several Eastern clubs, as left fielder, has been secured by the Californias.

The third game of the season will be played to-morrow by the Niantics and Redingtone.

Amateur clubs are springing up with alarming rapidity.

The Chinese base ball team is attracting some attention East. Familiarity, etc.

It might be well for the umpire who officiated on Sunday to remember that a doubt is given to the runner.

Foul flags were wanting at the last championship game.

Charlie Stuart contemplates going back to the diamond. Here is a chance for the Niantics.

The revenge songht by the Renos for not being admitted to the League is childish.

ATHLETICS.

In other directions a renewed interest is manifested in connection with athletics generally. The various clubs are already arranging programmes for meetings in the near future, that of the Olympic Club being previously announced. At a recent meeting of the directors some changes were made, notably in the mile handicap race, limited to amateurs, which has been changed to a professional event, and an amateur hilf mile race added. For the professional race prizes have been offered, $15 for the first and $10 for the second. This of course is purely an experimental affair and done merely for the purpose of indnciug patrons of athletics to declare themselves. A special race has been arranged between Masterson and Haley, for which, as in the other events, prizes have been offered. The track is in excellent condition and forms a pleasing exception to the grounds on which meetings were formerly held. The grass has been clipped on the diamond and the track itself has been scraped and rolled and is as smooth as a billiard table. It will be kept in good trim throughout the season, and from present appearances it will be frequently called into requisition. The cricket clubs have entered into negotiations for its lease on Saturday. Base ball playing will also be resumed on Sunday next.

Arraugements have been recently made by a number of gentlemen in this city tending to the organization of an athletic club which is to be conducted on an entirely new principle. Considerable difference of opinion has existed as to the manner at present pursued in the conduct of athletic clubs, objection being principally made to the social feature, or more properly speaking to the giving of balls and parties. In conversation with one of the promoters of the new departure, he stated to a representative of the BREEDER AND SPORTSMAN that it was proposed to eliminate this feature from the club, and with this object in view the assistance had been solicited of a number of prominent athletes, with every prospect of being secured. No definite arrangements had yet been perfected and within a few days matters would be brought to a conclusion and the club roll would be opened. Signatures are promised so that no apprehension is entertained for the ultimate success of the venture.

The National Amateur Athletes have decided to hold the championship games in New York on Saturday, June 2. The entries to the games will close May 26. The games will consist of runs at 100 and 220 yards, a quarter, a half, one mile and five miles. The walks will be of one, three and seven miles, and the contests of strength will be putting the shot, sixteen pounds; throwing the fifty-six-pound weight, individual tug-of-war, and the sixteen-pound hammer. A hurdle race of 120 yards, pole-leaping, and bicycle racing at one mile, open only to members of the League of American Wheelmen, and two and five miles, open. The team tug-of-war will not be on the programme. The entrance fee to each game will be $2. There will be three medals for each event. There will be no standard of colors, as in previous years.

W. F. Bouton, a prominent member of the Olympic Club, left for Victoria, British Columbia, on Tuesday last. Quite a large delegation of athletes and other sportsmen accompanied him to the wharf and bade him bon voyage. Billy was exceedingly popular with his fellow sportsmen, and was visibly affected when the steamer cast off. He was the champion middle-weight boxer of the club, and took the precaution to provide himself with a set of gloves which he will probably use in giving the northerners a lesson in the manly art. Fulda narrowly escaped tumbling over into the water in his endeavors to assure Billy of his lasting friendship.

The announcement is made that Donald Dinnie, the distinguished Scotch athlete, has been engaged to appear in connection with the games of the Thistle Club. His performances abroad have placed him in the front rank of professionals, and numerous medals and other trophies testify to his proficiency in all the games of honnie Scotland. He will wrestle with William F. Farrell, who also possesses claims to be recognized as a powerful athlete.

At the second annual Firemen's Tournament of California, to be held at Gilroy in May, the coin prizes will amount to $900; the first hose team to receive $300; second, $175; third, $100; and fourth, $25. The first hook and ladder team will receive $150; second, $100; third, a Climax fire extinguisher, valued at $60. The hose and the hook and ladder team making the slowest time will each receive a live bog. The first prize to juvenile teams is $35 and the second $15.

Charles Harriman, the pedestrian, performed a feat at Truckee last Saturday, which, as a simple test of endurance, was quite remarkable. The exhibition took place at Truckee, and Harriman walked from 7 o'clock Friday evening till 12:40 Sunday morning without stopping for anything. In that time he covered 121 miles and 7 laps. The fastest mile was the forty-second, walked in nine minutes. The last half mile was done in 5:36.

We are in a position to state advisedly that Myers, the Manhattan Club flyer, does not propose to visit California, all statements to the contrary notwithstanding. The subject has been fully canvassed before, and the reasons then given for doubting the reported visit have been fully borne out by subsequent developments. The truth of the matter is, there are no inducements which might impel Myers to take a transcontinental trip.

The handicaps for the Olympic Club meeting on May 31 will be announced two weeks before the events come off. The entries close on May 19. This will do away with the objection of the University athletes that they usually have no time in which to prepare for the races.

The long distance pedestrians have formed a protective organization. This is another case of the stable-door.

The Golden Gate Athletic Club will give an exhibition in a few days.

THE KENNEL.

The Kennel Club.

Last Tuesday night the members of the kennel club, the advisory committee and the managers of the bench show met in the Occidental Hotel in accordance with the arrangement of the previous meeting to select judges for the various classes. Before the routine business commenced T. T. Williams asked for a separate class for bull terrier pups, stating that at least seven entries would be made. This was agreed to and entries for this class will be received.

Judges for the sporting dogs was the next matter under consideration. After some discussion this division was made to include bloodhounds, foxhounds, Dachshunds, setters, pointers, spaniels and retrievers. A number of letters of declaration and provisional acceptance were read and after much deliberation the three gentlemen finally chosen were J. K. Orr of San Francisco, C. N. Post of Sacramento and E. Leavesley of Gilroy. The skill and probity of all these gentlemen was personally vouched for by members of the club and is well known to most sportsmen in the State. J. K. Orr is an enthusiastic sportsman, probably the best field shot in the State, an old importer and breeder of setters and at present the owner of some fine stock. Judge Leavesley was the judge of sporting dogs in the last show and no matter who differed with his theoretical knowledge of modern fancy breeds all were forced to admit that he awarded the prizes to the best dogs in his classes. In England and America he has broken and handled probably more dogs than any half dozen of our local sportsmen put together, and what he does not know about dogs in the field and on the bench cannot be obtained from fifty years' of intelligent, practical study. He handled setters before the Laverack was heard of outside of Laverack's own shrine and before Stonehenge gave to the world the experience of others as his views on the dogs of the British Isles. He knows the weak places in a dog and the strong ones, and we venture to say that he will pass no dog on the bench as first-class that would not, if it had good tuition, make a mark in the field. C. N. Post of Sacramento is a younger fancier than either of the other judges, but he has taken great interest in setters, and cannot fail to be competent to judge between them. We have one regret at his selection, and that is that it will bar his own fine dogs from competition, but perhaps he will put them on the bench for exhibition only. We are thus particular in speaking of these three judges, for on their labors the success or failure of the bench show hinges. We have no doubt but that their appointment will give general satisfaction, and that their decisions will be accepted without the murmuring that has so often disgraced bench shows given in the East. Neither of them will be interested in any dog up for competition, and while all humans are liable to err, mistakes on their part are well nigh impossible.

Judges for greyhounds and Scotch deerhounds were chosen next. The three gentlemen selected were H. Burnscongh of San Francisco, Dominick Shannon of Bodie and Clem Dixon of San Francisco. Than these three better judges of the greyhound on the bench and in the coursing field do not live in America. Every coursing man in the State knows them one and all, and for twenty-five years past one or more of them has attended all the coursing matches held here. Burscongh trained and bred greyhounds forty years ago in his native country, and Dixon's experience is not less extensive. Dominick Shannon has owned, bred and reared as many greyhounds as any man in this State, and his name is coextetent with the history of coursing here. Their selection is a happy event for the greyhound exhibition, and we look forward eagerly to the declaration of the awards to determine the best representatives of greyhounds in this State.

T. T. Williams was chosen to judge yard and watch dogs, including Newfoundland, St. Bernard, Great Dane, Siberian bloodhound, English mastiff, Leonberg, Russian terrier, pug and the miscellaneous class. Williams has a thorough knowledge of all these breeds and acted in the same capacity at the last bench show.

Wm. Aiken, of New York, was chosen to judge the terriers, including bulldog, bull terrier, skye, fox terrier, Scotch terrier, Yorkshire, dandie dinmont and black and tan. Aiken has had over thirty years' experience in breeding and handling these classes of dogs. In the East his judgment is considered infallible and his experience has been rewarded by more prizes than any one man has taken except, perhaps, the veteran "Cockney Charley," who owned Pilot and many other equally celebrated dogs. Aiken is an honorable, trustworthy man and his decisions will go with the merits of the dog.

Abe Warner, of North Beach, was selected to judge the toy and lap dogs, including Italian greyhounds, poodles, Spitz, King Charles spaniels, and will also award the prizes to the trick and performing dogs. Every dog fancier knows Abe Warner and comment on his skill and experience is unnecessary.

At the suggestion of Clem Dixon it was decided to withhold the prize for the best dog in any class, it being considered impossible to make the award in a satisfactory manner.

The club decided to leave the selection of judges for chickens to the exhibitors, as the members have no experience in such matters, and the course adopted was necessary as there is no recognized association of fowl fanciers.

The Kennel Register.

The *Forest and Stream* has undertaken the compilation of a kennel register, a task which should have results valuable to all dog fanciers. Their prospectus reads thusly and is in accord with our views in every respect: "There is a decided need of a register of the pedigrees of sporting dogs easily accessible to breeders and purchasers. This will be provided in the "American Kennel Register." The breeding and sale of many of the different breeds of non-sporting dogs also, more particularly of those classed as pets, has become of considerable importance, and, as is well known, the ladies and gentlemen who by their purchases support this industry, with few exceptions, are ignorant of the qualifications which their favorites should possess. They consequently are entirely at the mercy of the too often unscrupulous dealer, who foists upon them a promising youngster with the assurance that it is by "King out of Queen," and sure to develop into one of the most wonderful dogs in the country. This prediction is often fulfilled, but, alas for the disconsolate owner, the wonderful characteristics developed are only wonderful when seen in so purely bred an animal as this was represented to be. The "American Kennel Register" proposes, with the good help of the honest breeder and dealer, as well as the owner, to render it impossible for the manufacturer of false or crooked pedigrees to thrive at the nefarious trade."

A Canine Conundrum.

Delant Bros., tanners on the San Bruno road, have a canine conundrum, which they will exhibit in the bench show. By some experts this animal has been classed as a cross between a bear and a bloodhound; others claim that one at least of his parents was a wolf, while others again contend that he is the get of a California lion. He has the general appearance of a huge bulldog, but when in motion shows the gait and action of a bear. The sideways shuffle and queer swing of the head certainly look as if they belonged to a bear. When pushed to a fast pace his gait is that of a mixing trotter, a square run behind and a trot in front. The animal is extremely savage, and his record on goats, cats, geese and other small game is excellent. He owners have a good deal of fun with him sometimes. When business is dull all they have to do for excitement is to turn him loose and await results. Results are usually in the shape of an indignant posse of neighbors asking pay for slaughtered animals. A cage is to be built for his use in the bench show.

Sacramento Coursing.

The postponed coursing match of the Capital Club was held at Whitcomb ranch last week. Thomas Waite won first money ($40) with his dog Ruler, Mr. Howard's Amy Howard took second ($25), Denie Morouly's Nelly third ($15) and Alexander Hall's Snow fourth ($10). There were sixteen dogs in the match, which passed off in a highly satisfactory manner. The winner, Ruler, is by old Ruler, owned by Sheriff Adams and the only dog that ever beat Tunstead's Minnehaha in a match. Ruler first met defeat from Meare's Monarch. Old Ruler was by King Cob—Queen Emma and is about the last living representative of the old Factor stock.

John Martin's well-know white English setter Charlie K, who sired Fritz, Snow and John Devoll's pups, died last week in this city, of old age. Fritz and Snow were both prize winners at dog shows in this city. There are many fine dogs of Charlie K's get in the interior and it is to be hoped that the famous old dog will be well represented at the coming bench show.

Holstein Cattle.

In Holland the care taken of these cattle is worthy of notice. The farmhouses, we are told, are in common with or a part of the barns, constructed to afford the greatest possible comfort and convenience under the same roof; the cattle stand on brick floors, and back of them is a deep gutter, to catch all the excrement, and this gutter is thoroughly cleansed morning and evening, with a stream of water. At the rear of the cows is a cord, to which the tail of each cow is attached, so that when she lies down it is suspended beyond the reach of dirt. The feeding and watering is done with perfect regularity, and the whole treatment is characterized by the greatest kindness and tender care, which has its effect in the amount of milk produced and the producing of a docile and intelligent race of cattle. The stables are well built and warm. In the pasture they are often clothed with a light blanket which keeps off the flies and protects them from fogs at night. The droppings are gone over every few days and scattered evenly about, and this, with the peculiar humid atmosphere, has no doubt a great deal to do with their wonderfully luxuriant pastures. In reading of the great care bestowed on them in their native country, some doubt as to their ability to endure the climate might arise. But it is found that the range of temperature in Holland is as great as here; and further, from the many herds which have been established in all parts of this country with uniform success, is found the best answer as to their adaptability and hardiness.

The experience of intelligent farmers in America has resulted in the following statement of the merits of the Holsteins: For beef they will class with the noted beef breeds; in the cheese and milk dairy they outrank all other breeds, and for butter the most careful and extended trials show that they produce a much larger amount, by reason of the continued enormous flow of milk of good quality, than any other breed. In short, they combine more effectually beef, butter, milk and cheese than any of the other improved races of cattle.

The Holstein cow is a large, sleek, fine-haired animal, well built in symmetrical proportion, weighing at maturity from 1,200 to 1,600 pounds, black and white in color. Her head is small and finely shaped, short horns extending forward with a slight downward curve; a moderately dishing forehead, with large, mild eyes, and face tapering to a moderately wide muzzle. Her neck, fine at the throat, is well set on low, thick shoulders, and the line of the body to the hips, which is a prominent, distinctive feature of this breed, and is called the "milk form," is that of a rapidly widening wedge. A fairly round barrel, well ribbed up to the hips, which are full, broad and deep, and full flanks are characteristics. The udder is very large, well shaped and of a yellowish color, with large teats and the milk veins of great size, extending well forward. Unite with this description of form, an exceedingly gentle and intelligent disposition and a vigorous constitution, coupled with an almost unlimited capacity for the digestion and assimilation of food, and you have the typical Holstein cow. Yields of eight to eighteen pounds of milk per year, and that of a good quality, are well within her abilities. It follows that when allowed to run dry, and what would otherwise produce these yields of milk is allowed to go to beef, that the results must be as extraordinary as seem the records of milk.

The milk records of these animals are now so well known that but little need be said regarding them. It is conceded by all that no race of cattle can begin to compare with them. Indeed, the requisite for admission to the two-years-old class in the Herd-book is 8,000 pounds in a year, and the average of almost every herd in the country is much larger than that. The average of a few of the best was given in a recent number of *Harper's* as follows: "Eighteen thousand four pounds is the record of Smithe & Powell's Aaggie; 17,746 pounds reported by Yeomans & Sons, for a heifer with first calf; 16,629 pounds for C. R. Smith's Muk; 16,546 pounds for Aaggie 2d, with first calf; 15,960 pounds for the best cow of the Unadilla herd; 15,661 pounds for Netherland Queen, of Smithe & Powell; 15,000 pounds for Queen of Wayne, Yeomans & Sons; 14,609 pounds for Sadi Vale; 14,164 pounds for the average of Smiths and Powell's herd. This makes an aggregate of 144,317 pounds of milk for nine cows, or on an average of 16,118 pounds a year for each." These figures as compared with a similar lot of records of Shorthorns, Devons, Ayrshires and Jerseys, are 4,718 pounds the largest. That is, the average yield of the best Holstein record, compared with the same of other breeds, is 4,718 the largest, nearly one-half greater than the average of the best yield of other breeds, which is 11,400 pounds.—*Mirror and Farmer.*

BICYCLING.

Bicycles on Highways.

After various lengthy delays, the question of allowing bicyclists in Central Park, New York, has been decided adversely. Upon the other side we give two important test cases in the courts, to show their rights upon the streets and highways; one in this country, and the other in Berlin, Germany. This question has already been settled in England in the bicyclists' favor:

In May, 1882, Mr. J. Fred Adams, L. A. W., Consul at Haverhill, Mass., was riding to his business on his wheel, when he frightened a milk-man's horse, which ran, tipped over the cart, spilled the milk and did some damage. The milkman, a Mr. Stewart, brought suit in the Superior Court, for $200. Mr. Adams wrote at once to the Committee on Rights and Privileges, L. A. W., was furnished with the "opinions as to the rights of bicyclers," published by the League, and was advised not to settle, but to employ the very best legal talent to be obtained and fight to the last resort. He proved a "good fighter," and has done every wheelman in America a great service by his pluck and energy. The following report from a Haverhill paper tells the story of his success:

"Superior Court, Civil Session, March Term (1883), Lincoln F. Brigham, Circuit Judge. The case of Stewart vs. Adams was given to the jury yesterday morning, with the instructions that owners of bicycles had equal rights in the streets with the owners of other vehicles; that they were bound to exercise reasonable care and prudence in the propelling of their bicycles as were the owners of horses and carriages; and that Stewart was entitled to recover, if, while in the exercise of due care on his part, he was damaged by reason of Adams' negligence in using or riding his bicycle. The jury returned a verdict for defendant. Brickett & Poor for plaintiff. J. P. & B. B. Jones for defendant."

This is believed to be the first straight decision as to the rights of bicyclers, given by a higher court, in America. The League should certainly help to pay Mr. Adams' lawyer's bill. The matter will be brought up at the officers' meeting.

BERLIN, 22d February, 1883.

Now that we have, after a long and hard fight, gained the day against the police authorities in Berlin, and proved that street riding cannot be prevented nor punished, I fancy a short account of this interesting struggle will please your readers.

Our club started in February, 1881, but before then single riders had often been compelled by policemen to dismount, and in May, 1881, the police issued a notice that street riding would be prevented and punished under parsgraph 81 of the street regulations of 1867. This paragraph says: "The rolling of casks and wheels, flying of kites, transporting uncovered looking-glasses, or similar objects in the streets is forbidden, as likely to frighten horses, and punishable with a fine."

From this time riders were compelled to dismount and push to the city boundaries, but they never attempted to impose fines for riding, until the 8th of April, 1882, one of our members had his name taken while riding in a street on the outskirts of the city, and received notice to pay a fine of three marks. We had submitted to this infliction for a long time, but at last determined to take this case in hand, and see if they had the right to prevent us riding. We engaged the best counsel, and the case was heard in the lowest court (Schoffengericht) on the 10th of July, 1882, the magistrate deciding that a bicycle was a carriage, and could not be brought under the paragraph in question, the rider being acquitted. The police appealed to the next court, and it was now clear that our chances depended on a fine point of law, and the meaning of the word "similar." The case was heard in the second court (Landgericht) on the 20th of October, 1882, and the judge, in a written decision, prove most clearly: Firstly, that riding a bicycle could not be the same thing as pushing a wheel or cask; secondly, that there was no similarity; thirdly, that there was no reason therefore to consider if it frightened horses or not, and acquitted the rider. Not content, the police appealed to the third and highest Prussian court (Kammergericht), and on the 19th of February, after long arguments on both sides, the judges finally acquitted the rider, the State to pay the whole of the expenses. They stated in their decision that the second judge had cleared up any doubt about the similarity in riding a bicycle and the meaning of Sec. 81, which must be strictly interpreted, and not taken too generally, or the police would have power to prevent too many things in the streets.

We have proved that riding cannot be prohibited under existing regulations, and it remains to be seen what the police will do. We hear that they mean to permit riding in general, with the exception of some most frequented streets. Meanwhile, we ride without hindrance, and hope that both authorities and public will soon come to the conclusion that we do no harm, and have as much right on the streets as others.—*Correspondence in Cyclist.*

Pro Pedal Pusher, in the *Bicycling Times*, says: "Professional bicycling in England is not worth its 'salt' in its present circumstances; it's certainly not worth keeping in form for; in fact, it is nearly an impossibility to keep in any sort of form; races are very few and far between. A man is virtually never safe on his machine in the present state of affairs, for there is a certain racing firm who 'farm' professionals, and monopolize the principal races by fair means or foul (frequently the latter). Still there is no governing body, no rules, in fact, nothing to stop this sort of business, so what's to be done?

The San Francisco Club have called a run to San Jose on Sunday.

A bicycle club is mooted at Gridley, Butte county.

Chas. Hegele of Portland has sold to J. B. Lafollette of Prineville, Crook county, Oregon, br h Western Chief, by Old Pathfinder—the Irwin mare, by a Morgan horse, his dam a fast Whip and Printer. He came from Iowa in 1867, and was brought to Oregon in the fall of the same year and made one season on the Slough. His owner was Mr. Gupton, son-in-law of Mr. Sunderland. This stallion, everything considered, may be claimed to be the best son of the old horse—the founder of the Pathfinders in Oregon. Western Chief is large and handsome, and, for the training he has received, is quite speedy. Has won the stallion race at Salem two years ago. In her prime it was no trick for his dam to take two men in a buggy five miles in twenty minutes—a thing she did many times while owned in this city.—*Rural Spirit.*

ROWING.

McInnerney and Peterson.

These scullers are hard at work, preparing for their race over the Long Bridge course, May 6. McInnerney's boat, a wooden shell made by Blarkie, was shipped from Lowell on the 18th ult., but as yet has not arrived, though several anxious inquiries for it have been made at the railroad office, and the authorities have promised to hasten the pace of the slow moving car which contains it. McInnerney is a giant in frame, standing over 6 ft. 2 inches in his stockings, and of prodigious breadth of shoulders. His legs are strong but his arms are very light for a man of his proportions. After four weeks of hard training he scales 215 pounds, and at that weight looks hollow-cheeked. He expects to reach 190 pounds before the day of the race and judging by his present condition will be gaunt at his rowing weight. He seems now to carry very little flesh. Having no boat fit to carry him, and disliking to practice in a craft that might affect his style, he confines his work to land exercise. He does about thirty miles a day at a fair pace and the work is evidently all he needs though the reduction in his weight is so slow. Rowing men as a rule stand work on the water far better than on land and when the Eastern sculler begins to train on the water he will have a difficult task to get down to what he considers his proper rowing weight. As he has a good deal of experience, he probably knows what condition best suits him. At 215 pounds, however, he shows much more plainly than Peterson the effects of his training.

Peterson looks very big and strong and is either taking moderate exercise or is capable of doing a tremendous lot of work without feeling it. He rows twice a day in the new paper shell which he lately purchased in the East. The representative of the BREEDER AND SPORTSMAN watched him row over the course this week. The boat carries him well, and he is at home in her. In some respects he has slightly altered his style of rowing. Whether the change is for the better remains to be seen. His pace has much improved and if he maintain his form and finishes his training as well as he has begun it he should make a good race. He is unquestionably rowing faster than any sculler has rowed on this bay for some years. He is a very promising oarsmen, but his good qualities hardly justify the unbounded confidence of his friends and their uncomplimentary opinion of his eastern opponent.

The statement has been freely made that Peterson will beat McInnerney half a mile in three, but it does not discourage the Eastern man. The latter takes the banter philosophically and modestly, and says that before deciding the race it would be well for the prophets to see him row. He has been only once on the bay, and then in a shell so unsuited to him that no idea of his capabilities could be formed. If he have the pace which Jack Largan declares he showed on the Thames no one can beat him a quarter of a mile in three and any second-class man can feel satisfied with having done a good performance in beating him at all.

At present Peterson lays no claims to a foremost position among the scullers of the country, and McInnerney is content to be classed as a third-rate man in the East. He expects to begin his training on the water next Monday whether his boat shall have arrived or not. His backers are naturally desirous of seeing him at the serious work of his preparation.

According to the *Turf, Field and Farm*, Edward Hanlan has taken up his residence at Washington. He is a guest at Willard's Hotel, and rows from the boat-house of the Analostan Club on the Potomac. On Thursday of last week he took a pull on the river. It was his first row in a shell since last October. The champion speaks very highly of the Potomac course, and expects to get in condition by the 15th of May, when he will leave Washington for the Point of Pines, near Boston, where the race with Kennedy will be rowed on May 30. At present he is attended by Wm. Ramsey, of Toronto, but after May 1 he will have the advice of John Davis, of Windsor, Ont., who will act as Hanlan's judge on the occasion of the race.

The Stockton oarsmen, who have been inactive during the winter, are preparing for the summer campaign. At a recent meeting of the Amity Club a committee was appointed to come to San Francisco and purchase boats and uniforms for the club. The committee could not come at a better time, as several of the clubs have been providing themselves with new boats, and the market is glutted with second-hand shells. The Amity Club expects to have a big time on the Fourth of July.

R. Crowley of the Pioneer Club is the latest accession to the ranks of scullers. Mr. Crowley did not give much promise of speed last year but he has made several changes in the rig of his boat and now looms up as a candidate for the championship of his club. His improvement in style and pace is quite marked.

McKinney, of the Potomac Boat Club of Washington, is spoken of as the best amateur single sculler at the capital. He is a pupil of John A. Kennedy, and will be pitted against Dempsey, O'Brien, Rose and others at the Passaic River, (Newark) N. J.) regatta on May 30.

The cares of political life have knocked all the aquatic ambition out of John Sullivan and the ex-amateur champion never goes out now without getting a brush from some Chinese junk or aquatic tyro just able to keep the smelts from nibbling at him.

The French amateur crews practice daily at eve on the Seine. They are said to be good oarsmen. The crew of the Societe Nautique de la Marine are reported as the heaviest and fastest of the lot.

Hanlan and Ross are still rowing on paper, Hanlan having telegraphed to Ross that Ogdensburg, N. Y., would give $2,500 towards their race there. Ross has instructed the champion to accept.

The Chicago amateur, J. S. Muchmore, has arranged to row two miles (with turn) in fifteen minutes, over the Calumet course, six days after he begins rowing.

The diet of the Yale College Boat Club crew is a bountiful supply of beef and vegetables, washed down with old English ale.

M. Price having almost recovered the use of his broken leg has ordered a new wherry and expects to be on the water as soon as the boat is ready.

Robert Tobin Jr. has taken to rowing again and is often seen on the bay with a crew.

The Essex Boat Club, of Newark, N. J., rowed 2,735 miles last season, 527½ of which are credited to T. Walker.

The Championship Cup.

The four members of the Ariel Rowing Club who won the BREEDER AND SPORTSMAN Cup last November are laudibly anxious to have a deciding race for the trophy and if possible become the possessors of it. There has been some controversy with regard to the guardianship of the trophy, the Ariel Club claiming that the cup having been won by a representative crew came into the custody of the club and if won a second time should become the property of the club. This view of the case is not just to the four members who won the trophy. The original intention of the BREEDER AND SPORTSMAN was to make the contest for the championship cup strictly a club competition. Much difficulty was however experienced in stimulating the rival clubs to that degree of enthusiasm essential for a race. First one hung back and then another became dubious about entering. The Golden Gate Club owned no racing shell, neither did the South End crew. The Ariel Club had only an old wooden tub which was altogether unfit for a championship race. The Pioneers were the only crew who were equipped properly when the cup was offered. The Pioneers owned a fine paper shell and were looked upon as sure winners owing to the superiority of their rig. None of the other clubs saw fit to provide itself with a fine boat. Under these discouraging circumstances four members of the Ariel Club, Jas. Corcoran, Alf and Oscar Branch and Leander Stevenson, agreed to form a crew and under the Ariel colors row for the championship cup. These four were not regarded in the club as the best representatives of its aquatic ability and were discouraged rather than encouraged to proceed with their training. They went on, however, in a plucky way, trained hard, and out of their own money purchased the best boat that could be obtained in time for the race. The result of their manly conduct was a victory so easy that their own clubmates were among the most astonished of the spectators. It would be unfair to award a prize won under such conditions to the club to which the victors belonged. The winning four rowed in their own boat in which the club had no interest, they were not entered by the club and the only sanction which the club gave to their venture was to permit them to wear its colors. Even this small favor was most reluctantly granted. The BREEDER AND SPORTSMAN is strongly in favor of club races, as being conducive to a revival of interest in rowing. We do not advocate the organization of crews that do not represent the clubs from which they come, and who will claim the trophies of their races as their own property. There should be harmony in the clubs. Some believe that there is harmony in the Ariel Club. The difference of opinion with regard to the ownership of the BREEDER AND SPORTSMAN Cup has caused no schism, for the club is stronger and more ambitious than ever. The conditions, however, under which the Ariel four won the Championship Cup were such that they are entitled to call the trophy their own private property if they win it once more. The season for rowing has commenced and there should be another race for the cup at no distant date. The cup has been left with the BREEDER AND SPORTSMAN, and will remain in the care of this journal until again rowed for. The first race for the cup was won in 20:17, the so-called full course of three miles having been rowed. This may or may not be fair time. There is no certainty that the course was correct. The water was perfectly smooth, but the row home was against a stiff tide, which would have made considerable difference in the time. There are several crews that think they can easily defeat the present holders of the cup, and in the abundance of so much confidence a race might be easily made.

Blinding Onondaga.

The fact that Milton Young, the Kentucky turfman, had caused the eyes of the stallion Onondaga to be put out, because the horse was vicious, has already been alluded to but, although the deed occurred over a month ago, it was not until the past week that any explanation of the matter could be had from Young. A correspondent of the Cincinnati *Enquirer* has investigated the affair thoroughly, visiting Young's farm for the purpose, and reports as follows:

"When did Onondaga begin to show his vicious tendencies?"

"Early in February. We took him up the first of that month, as our mares were coming in season and it was not considered safe to leave him out. At such periods stallions are always very savage, but I did not expect any such actions from him. When he for the first time went to the teasing-pole, he sprang at the mare most ferociously, and it was all we could do to prevent him from injuring her. This being his introduction in the stud, I thought the exhibition of temper would pass away, but he grew worse and worse. No one could manage him. If he saw a horse, a mare, or anything he wanted, he must go, if everybody went down before him, and he bit and floundered until he succeeded in gratifying his will. It was not only very dangerous for the mare, but for the grooms. I looked for a change for the better, but the devil in him increased. He bit everybody that entered his stable, no matter how kindly you spoke to him or acted toward him. He knocked men down in the stall, at the risk of their bodies, and it was actually holding your life in your hands to go in his stall."

"Could you not find a method to vanquish him?"

"No, I have tied his head down between his legs, and otherwise tried to conquer him, but all in vain. One day two of my men had him in such a condition, when his wrath became aroused, and before more help came one was thrown down and walked over, having a miraculous escape, and the other managed to hold him until aid came to him. We tried him again and again, but with no better results. I then saw that I had either to let him stand in his stall all the time, which meant death, destroy him at once, or blind him. He was young and promising, and I concluded to adopt the last named policy."

"But could you not have sold him?"

"He was fit for nothing except the stud, as his feet would never stand training. I could see no other way out of it. My groom is an old trainer, and tried his best to curb him. I knew that if I retained him somebody would have been killed, and, as a human life is worth more than a horse's eyes, the last had to go."

"How was the operation performed?"

"About the 18th of February we chloroformed the stallion in the daytime, and the surgeon inserted a fine needle in the eye, just over the pupil and through it. It took him four days to recover from the effects of the chloroform. I fully believe that the latter did him more harm than the operation. He was off in his feed for several days, but is all right now, and is regaining his flesh. He has never suffered from the eyes, and no inflammation has been perceptible in them."

"Don't you think it will interfere with his breeding qualities?"

"Not a particle. The best runners of this country were sired by blind horses. Virgil and Lever are both blind, as was Lexington toward the last. He is as strong as ever, and covers mares better than before."

Value of Grade or Part-Bred Stock.

The great mass of American farmers do not and will not for many years, if ever, have pure-bred stock "eligible to record" in any large numbers. The increased cost of such animals will be a sufficient reason for this state of things. The average farmer can not afford the money necessary to purchase a stock of pure-bred horses or cattle. Sheep, swine and poultry cost comparatively small sums and multiply so rapidly that in their case there is less difficulty in having a good number of pure-bred animals, if it be desired.

Over and over again we have repeated the truth that farmers may have animals nearly or quite equal, for all practical purposes, to the technically pure-bred ones, by the continued use of well-selected, well-bred males, and a rigorous selection of the best females produced by the successive crosses. But a great many farmers do not believe this; at least they fail to so appreciate it as to let it influence their action.

We are not sure that breeders are entirely free from fault in this matter. They will do well to have object lessons at hand illustrative of the improvement on the common stock, made by one, two or three crosses of improved stock. A noted importer and breeder of draft horses has recently issued a beautifully illustrated catalogue. We can imagine a farmer of the unprogressive order looking at the portraits of fine stallions and mares and feeling or saying: "Oh, that is all very nice for rich folks; but what interest have I in these horses?" But he would be a very dull man if the picture of a pony-mare and her half-bred draft colt did not suggest to him that, if one cross on such a mare may give such a horse, he and his neighbors may greatly improve the size and selling value of the colts they rear by the use of a good draft stallion.

Recently we were on an agricultural college farm and were interested in the conversation of a farmer to whom the professor of agriculture was showing the cattle. He looked at, admired and praised some good Shorthorns and Jerseys; but this with something of the air with which he might have examined a collection of fine paintings in an art gallery. They were fine; but he had no direct concern with them. They and their fellows were not for him or his neighbors. But when good-looking cows, heifers and calves were pointed out as "grades—half-bred, three-quarter bred," etc., there was not only a quickened interest, but the hearty exclamation—"That's the kind of stock we might have!" That man went to his home much nearer a convert to the belief that "improved stock" is not necessarily merely "fancy stock," than he would had he seen nothing but pedigreed animals. It was an argument in favor of the Shorthorn breed, not against it, that he could not see that the high grades were the inferiors of the pure-bred animals. It is quite in the possibilities that the presence of a few specimens of common, unimproved cattle may have had a stimulating effect. The herd was not so fine-looking as if they had been away. It may have been a more useful herd as an object lesson.

More encouragement to the exhibition of good grade animals at our fairs might be advisable. This would seem especially advisable in case of cattle. Good grades would serve as a connecting link between the fine herds of pure-bred stock and the poor cattle on the farms from which some of the visitors to the fairs come. The fat stock show at Chicago has been vastly more useful than if the competition had been limited to pure-bred animals.

Northern Notes.

Live stock throughout the Northwest is doing well. Grass is quite good in most localities. The foals, calves and lambs that have come appear strong and but few losses are reported.

Wm. Ross of Pilot Rock, recently sold a band of about 2,000 sheep at $2 50 per head, to be delivered after shearing. Also 100 wethers, the pick of the flock, at $5 each.

A large number of horses and cattle were killed by falling down bluffs or steep hillsides during the winter, in the Grand Ronde county.

Citizens of Walla Walla have subscribed $3,900 for fitting up a fair ground and racetrack and the preliminaries are being arranged.

The two and three-year-old breeder's stakes of the Oregon State Agricultural Society are filling well; better than was expected.

A Linn county farmer sold several mutton sheep in the Portland market for $6 per head.

McManus has leased the Seattle track and will give a summer meeting there.

Billy Ayers was offered $4,000 for his horse Joe Howell, but refused it.

None know and appreciate better than army officers the good points in a saddle, and for this reason—aside from the fact that it was adopted by the equipment board of 1879—it is no wonder that the Whitman saddle has become so popular not only among our own army officers, but those of France and England also. Of course, every new invention, no matter how perfect the theory after which it is constructed, will be lacking in point of technical construction, and so it was with the Whitman saddle when first turned out, but owing to the energies of the manufacturers, even this point has been overcome, and to-day the Whitman is not only the best tree as far as comfort of horse is concerned, but also as regards lightness and durability of the tree. First making the army or No. 1 tree only, eight different styles, and each of different size, are being manufactured now to suit the various tastes and purposes of riders, and while eight years ago the Whitman was considered "first rate" for cavalry purposes only, to-day it is being used by the most fashionable riding-schools in New York city and elsewhere by ladies and gentlemen. Whitman saddles can be had at all prices and of all sizes. The company have of late established an agency in San Francisco, Cal., (J. A. McKerron, 230-232 Ellis street,) from where U. S. army officers and others too remote from New York city can be supplied at the same prices and on the same privileged conditions as through their main office in New York city. Illustrated catalogues will be sent free on application.

THE GUN.

Shooting in the Trotting Park.

The shooting range at the Oakland Trotting Park last Sunday presented quite a lively appearance. The report in shooting circles that a match had been arranged between Mr. Edwards and Mr. Muller brought together a number of sporting men at an early hour. The conditions of this match were 15 birds, 21 yards rise, plunge trap and governed by California Sportsman's rules. The purse was $60. Of this sum Edwards put $40, against Muller's $20. The full number of birds were not shot, as Mr. Muller was so far behind in his score that on his twelfth pigeon he withdrew. The following shows the scores made:

Edwards	0 1 0 1 1 1 0 0 1 0 0 1 1—7
Muller	0 0 0 0 0 1 0 0 1 1 0 0 w—3

After the above match was finished, another was shot between Mr. J. Gould and H. R. Brown at 20 birds, 30 yards rise for $50 a side. Both men stepped to the score with the greatest confidence hut, after missing a few birds apiece, they also lost their coolness; the size of the purse, too, would naturally have a tendency to unnerve the arm. In justice it can he said that the birds were a very hard lot of "blue rocks," most of which on being thrown from the trap showed themselves as straight-away tailers and they proved their ability as being able to get out of bounds without losing much valuable time. Neither of the men shot quick enough, allowing their birds to get too far away before firing. The principal feature of this, as of the match preceding, is the number of birds missed. The match being decided in J. Gould's favor before the twenty birds were shot, both withdrew to save pigeons. These are the scores:

J. Gould	1 0 1 0 1 0 1 0 0 0 0 0 1 0 0 0 1 1 —7
H. R. Brown	0 1 0 0 0 0 0 0 0 1 0 0 1 0 1 0 1 0 0—5

The next was a sweepstake match, $2 50 entrance, 6 birds, 21 yards rise, one harrel. This was the principal affair of the day. Each man as he stepped to the score realized that his shot decided the ownership of considerable money. The bets on an average ran about $2 against $1 on the gun, though some of the favorites brought as high as $3 to $1. All ties were shot off at three pairs of double birds. There were seventeen entries and the scores stand:

Roche	1 0 0 1 0 1—3	Swan	1 1 1 1 1 1—6
Allen	0 1 1 1 1 0—4	James	0 1 1 1 0 1—4
Slade	1 1 1 1 1 1—6	Putzman	1 1 0 1 1 1—6
Jellette	1 1 1 1 1 1—6	Hoefling	1 1 1 1 1 1—6
Golcher	0 1 1 1 0 0—3	Williams	1 0 0 1 0 1—3
Liddle	1 1 0 1 1 w—4	Brown	1 1 1 1 0 w—4
Spencer	0 1 1 1 1 1—5	Smith	1 0 1 1 0 0—3
Overman	1 1 0 0 1 1—4	Edwards	1 0 1 1 1 1—6
Burbank	0 1 1 1 0 w—3		

At this stage of the game the fun began in earnest. The spectators became excited, each backing his favorite as judgment dictated. Slade, Jellette, Swan and Hoefling having tied on a clean score of the six birds it was hard for an outsider to decide in his mind which of the four would win the first money as the shooters were very cool. Slade was the first to step in front of the trap and saying "ready," the string was pulled. Two easy incomers were thrown out. He got the first one but the second one alighted on the ground before he could use the second barrel. This gave Mr. Slade the privelege of two more birds, with a blank cartridge. He was fortunate enough to get one bird which scored him as both killed. On Mr. Slade's third pair this performance was again repeated but he lost both birds when shooting with the blank cartridge. Mr. Jellette and Mr. Frank Hoefling shot steady enough to tie again with Slade, while Mr. Swan dropped out killing only one bird out of the three pairs. On Swan's last pair he failed to notice that his gun was not loaded and his birds getting away from him it was scored against him:

Slade	1 0 1 1 1 0—4	Swan	0 0 0 1 0 0—1
Jellette	1 0 0 1 1 1—4	Hoefling	1 0 1 1 1 0—4

In this Slade, Jellette and Hoefling tying, they again shot at three pairs. Slade and Jellette tied and Hoefling, falling back, quit shooting to save birds. The third tie stands:

Slade	1 1 1 1 0 1—5
Jellette	1 1 1 0 1 1—5
Hoefling	1 0 1 0 w—2

Everyone by this time was much interested, as the shooting between Slade and Jellette was so even. After shooting the fourth tie, each killing his three pairs of double birds, the two crack shots divided the first and second money, fifty and thirty-five per cent of the purse, and Hoefling took third money, fifteen per cent. From the begining to the end of the match an extraordinary interest was manifested by the spectators and everything passed off pleasantly. After this came a match between Mr. Burbank and Mr. Swan. This was for $20 a side, 15 birds, 21 yards rise. When men shoot for glory they make their best scores, but shooting for money is another thing and the pigeons are far safer if the contestants are shooting for hard cash. Mr. Burbank being far in the lead on his thirteenth pigeon the purse was handed over. The result stands thus:

Burbank	0 1 1 1 1 0 1 0 1 1 1 0 1 1—10
Swan	1 0 0 1 0 0 0 1 1 1 1 0 1 —7

By this time the birds were getting rather scarce in the coops, but there were just enough for a $10 match between Mr. Roche and Mr. James. Twelve pigeons were shot at with these results:

James	1 1 1 0 1 0 0 1 1 0 0 1— 7
Roche	0 1 1 0 1 1 1 1 1 1 1 1—10

By the time this was finished the empty coops, the sun sinking in the west, and the whistle of the last trains to the city told the sportsmen that their day's pleasure was at an end, and though some paid for the fun they had still all were satisfied, and they started for the train and talked over the incidents of the day till the boat reached the city.

Last Saturday evening the Pacific Club held their first regular meeting, all but four of the eighteen members being present. President, Thos. Valleau; Vice President, A. F. Adams; Chas. Precht, Secretary, and R. Moore, Treasurer, were all re-elected. The resignation of L. Galindo that was accepted at the preliminary meeting was reconsidered and not accepted, so Mr. Galindo remains a member. The club have made a contract with Geo. Bird this season, Mr. B. to furnish all the pigeons necessary at reduced rates. The first shoot will take place on Sunday, April 29, for a handsome medal, and will be governed by Hurlingham rules.

Last Sunday, at the pigeon shoot at the Oakland Trotting Park, Mr. Roche lost a handsome medal won two years ago at the shooting of the Cosmopolitan Shooting Club. This is a sad loss to Mr. Roche, and as it is a memento of the hard shooting it took to win it, we hope he will be fortunate enough to find it.

An Instance.

EDITOR BREEDER AND SPORTSMAN: On Sunday, April 1, a numerous party attended with hounds entered without consent upon the farm of E. Foster, at Mowry station, on the line of the narrow gauge railroad, and allowing their dogs full liberty (no attempt being made whatever upon strange territory to secure the hounds in the leash) the latter mounted the deer enclosure and literally tore to pieces and butchered two young fawns. The mother of the latter escaped only by heating off the cowardly hounds.

Mr. Foster is known as the friend of the sportsman, and is the most liberally disposed towards the hunting fraternity of any farmer in the township. The owners of the dogs immediately left the premises and attempted to return via Newark station, where Mr. Foster and the constable from Centerville detained the party till they compensated him for the value of the slain deer. True sportsmen, recognizing damage, would have remained and offered to settle for any mischief committed by the hounds. Often the farmer is loudly denounced for notifying visitors that no trespassing is allowed upon his grounds, and the hunter careful of the property of others is compelled to be a sufferer simply on account of the criminal recklessness of just such encroachers as have committed the depredations described. A portion of the party, instead of considering themselves as liberally dealt with, expressed much dissatisfaction with payment. Under the State law several charges could have been brought against all engaged in the unlawful transaction. NIMROD.

Suggestions for the Trap Shooting Season.

A few hints could he given to those who attend pigeon shooting matches that would, perhaps, he of some benefit to them. If you attend as a spectator, be sure and carry a gun, a parlor rifle or even a pistol; with these you can have plenty of practice at stray pigeons, squirrels and pieces of wood thrown into the air. Always handle the guns as much as you wish—the shooters do not care. If you have a loaded gun in the crowd, be sure and handle it as carelessly as possible, as it never disturbs anyone. If you are a shooter or only an outsider with a little money, bet; never miss an opportunity to dispute the decision of the judges and referee; you may be right instead of they. When convenient, call the judges and referee a pack of fools; they may come to that conclusion themselves after a while. When a man is retrieving a bird the crowd should always he on the stir, especially if the man has only one minute to go on. The crowd should always stand so as to obstruct the sight of the judges. There is no real necessity of the judges seeing what is going on in the field. And last, but not least, those who attend pigeon matches should always take their dog or dogs, if they have more than one. If you do not possess such an animal as a dog borrow one from some of your friends, or even hire one from the pound for the occasion. There is nothing that adds so much interest to a pigeon match as a pack of dogs running around the grounds. When a man is retrieving a pigeon a dog is often of great benefit to the person who is betting on the bird. If there are too many loose canines on the ground tie yours up in the sheds, so that when a person is passing by he will get tripped up with the chain. There are several other minor points, but if the above are strictly followed more harmony at pigeon shoots will he the result.

Gilroy Gun Club.

The first shoot of the season by the Gilroy Rod and Gun Club was held last week at twelve clay pigeons, eighteen yards rise. The following is the score as given in the *Record:*

J. R. Payne	9	D. Dunham	10
H. Frutig	10	E. Leavesley	6
A. Herold	5	Chas. Burgess	12
Geo. Holloway	11	P. Robinson	9
Wm. Phegley	11	D. M. Pyle	12

The tie between Burgess and Pyle was shot off at four birds, the score standing Burgess 4, Pyle 2. The club medal was accordingly awarded to Mr. Burgess. After this there was a sweepstakes match, in which Harry Frutig got away with first money, making a clean score of eight pigeons. D. M. Pyle was second and Robinson third.

Glass Balls at Gridley.

Last week some of the jack rabbit slayers of Gridley had a little match at glass balls with the following result:

FIRST TEAM.		SECOND TEAM.	
A. Sligar	0 0 0 1 1 1 1 0 1 0—5	H. J. Robinson	1 0 0 1 1 1 0 1 1—7
H. Biggs	1 1 1 0 1 0 1 1 1 1—8	L. McDonald	0 0 0 1 1 1 0 1 1—6
J. Taylor	1 0 0 0 1 1 1 0 0 1—5	F. Harnish	1 0 0 1 0 0 0 1 0 1—4
J. Sligar	0 0 0 0 0 0 1 1 1 1—4	J. D. Wagner	1 1 1 1 1 1 0 0 0 1—7
Wm. Harnish	0 1 0 0 0 0 0 0 0 0—1	F. H. Mack	1 1 1 1 0 1 1 1 0 1—8
Total	24	Total	32

At a meeting of the California Wing Shooting Club, held on the 5th of April, 1883, the following officers were elected for the ensuing year: J. H. Jellett, President; Robert Ellon, Vice-President; Dr. S. E. Knowles, Secretary and Treasurer. Crittenden Robinson and Thos. Pearson were appointed as delegates to represent the club at the meeting of the State Sportsmen's Association, to be held at Gilroy next month. The club has a full membership, and is in a very flourishing condition.

Pigeon matches are all the go at present. Hardly had the smoke cleared away from the guns at the Trotting Park last Sunday before another match was arranged among Mr. James, Mr. Edwards and Mr. J. Muller. The conditions are twenty birds, twenty-one yards rise and $25 each, the match to take place within thirty days.

To-day the Alameda County Sportsman's Club will hold their first monthly shoot at the Oakland Trotting Park. The shooting will be for club medals, and will begin at 2 o'clock sharp. On the last of this month this club will have a clay-pigeon tournament.

The next club shoot of the Cosmopolitan Club comes off at San Bruno to-morrow. A number of minor matches will be shot during the afternoon.

The California Wing Shooting Club holds forth at San Bruno on Sunday, April 21.

The old stallion, Chieftain, died at L. U. Shippee's ranch, San Joaquin county, on March 31, after a sickness of twelve hours. He was foaled in 1856, and brought to California in 1860. He has two representatives in the list, Defiance and Cairo. He was a son of Hiatoga, (Old Togue) and his blood is a valuable addition to the stock of the State, as Chieftain mares do very well when crossed with stouter strains.

THE RIFLE.

C and G's Shoot.

Last Sunday the above named companies of the First Regiment held their monthly shoot at Shell Mound Park. Though no very brilliant scores were made still the shooting was above the average and the marksmen were satisfied with the result. The day was very good for practice, the sky being lightly overcast with clouds, which has an effect to mellow the light and take away the glare that is often so objectionable on sunny days. In the afternoon the usual wind sprung up which made those shooters on the 500-yard target shove their wing guages over several points. Nothing of particular note took place during the shooting except in the case of Mr. Cummings, of the first-class shots, on the 500-yard target. This gentleman was so unfortunate as to make a break in a very handsome score; through no fault of his, but owing to his gun hanging fire, he was scored an 0 on the seventh round. The cap was, probably, not set down tight on the tube of the cartridge—hence the miss. The first-class shots shooting on the 200 and 500 yard targets made the following score.

TWO HUNDRED YARDS.

Kelly	5	5	5	4	4	4	5	4	4	4—44
Capt. Templeton	5	4	4	4	5	4	4	4	4	4—42
Lieut. Sime	4	4	4	5	5	4	5	4	4	4—43
Lieut. J. E. Klein	4	4	5	4	4	4	4	4	5	5—43
Cummings	4	4	4	4	4	5	4	5	5	4—43
Perkins	5	5	4	4	5	4	4	4	5	4—44

FIVE HUNDRED YARDS.

											Grand Total.
Kelly	4	3	4	5	5	5	5	4	5	5—45	89
Capt. Templeton	5	5	4	4	4	4	5	5	5	5—46	88
Lieut. Sime	4	3	4	4	4	5	5	5	4	4—42	85
Lieut. J. E. Klein	5	3	4	4	5	3	5	4	4	4—41	84
Cummings	4	4	5	5	5	4	0	5	5	4—41	84
Perkins	5	4	3	4	5	4	3	2	5	5—40	84

The second-class shooting on the same range made these scores:

TWO HUNDRED YARDS.

Major Klose	0	5	5	3	5	4	4	4	4	4—38
Sherman	4	3	4	4	5	4	4	4	2	3—37
Thompson	4	4	4	4	4	4	3	4	4	3—38
Elder	4	5	4	4	2	4	3	4	2	0—32
Hampton	4	4	4	4	3	4	3	4	4	5—39

FIVE HUNDRED YARDS.

											Grand Total.
Major Klose	5	4	4	3	5	4	4	4	3	4—40	78
Sherman	3	0	3	2	4	4	4	4	5	3—32	69
Thompson	4	0	0	4	3	2	3	3	3	5—27	65
Elder	3	4	0	0	3	3	5	2	4	0—24	50

The third-class shoot on the 100-yard range. The establishment of this range has been of great benefit to embryo sharpshooters, as new members and those who have never used a rifle before can practice by themselves and begin at the a, b, c of markmanship, so to speak. When this range was first used there were only three or four in this class, but now at every shoot the number increases and the better shots are being promoted to the higher classes. Following are the members of the third class and scores made:

Lane	40	Ganzert	33
S. H. Palmer	31	Wharff	39
Bedbury	27	Munson	25
E. Palmer	23	English	18
Jehu	8		

After the regular shoot was finished two members of the third class tried their hands, or rather their rifles, on the 500-yard target. As we have not ciphers enough to give their scores in full, we will let one score answer for both. Following are the scores of both:

Score, 0.

National Rifle Association.

The National Rifle Association held its regular monthly meeting on the 3d inst. Upon General Wingate's statement that General Grant would accept the presidency of the association a vote was taken and he was unanimously chosen. He was also elected a life member and an honorary director. A committee was appointed to notify General Grant of his election.

The coming international match then came up for discussion. It was resolved that the competition for the selection of a team of American National Guardsmen to compete with the British at Wimbledon in July next shall be held at Creedmoor on May 14, and the following Tuesday, Thursday and Friday, at 10 o'clock in the morning daily.

The team selected to shoot against the British marksmen will report at Creedmoor, June 15, for practice and continue to practice (as a team) till the 20th. Competitors will be required to confine themselves to either the Remington or Brown rifle.

It was also resolved that, in view of the practical benefits that have already resulted and will hereafter be obtained by the National Guard of the country in improving the character of American arms and raising the standard of military marksmanship, the military authorities of the several States are earnestly requested to use their influence to induce the members of the National Guard to compete for places on these teams and to see that they are represented upon the first representative body of American soldiers that has ever visited Great Britain.

General Robbins, Colonel Litchfield, Colonel Bodine, Colonel Story and Colonel G. E. P. Howard were appointed as the association's representatives to select the team, to report to the board and make all other arrangements relative to competitions.—*World.*

Well Done.

At Treadwsy'a Park, Carson City, on Thursday of last week, the Carson team made the following scores:

NAME.	200 YARDS.	500 YARDS.
Crawford	45	47—92
King	41	50—91
Slocomb	43	44—87
Thaxter	45	42—87
Parker	41	42—83
J. Saffell	42	44—86

It is understood that the Police Rifle Team will not enter a team at this meeting of the California Rifle Association, as they have not had practice enough yet with their new rifles. This body of riflemen have made a great deal of improvement of late, and the time is not far distant when they will make older and more experienced teams look to their laurels lest they be taken away. The Police Team can congratulate themselves that they are under the instruction of Sergeant C. Nash, one of the old National Guardsmen, as there is no better instructor on rifle practice on the coast.

Fashions move in cycles. Gridley has an "old [illegible]" club.

NEW YORK AGENCY.

Mr. C. C. Pettus at the office of the "Sportsman," 29 Warren street, is duly authorized special representative of the BREEDER AND SPORTSMAN in New York to receive subscriptions and arrange advertising contracts.

SACRAMENTO AGENCY.

Residents of Sacramento and vicinity, desiring to subscribe or advertise in the BREEDER AND SPORTSMAN, can do so through our agent, Mr. M. J. Henley, Russ House, 1,009 J street.

ADVERTISING RATES.—Displayed $1 50 per inch each insertion or pro rata for less pace. Reading Notices set in brevier type and having no foot marks, 30 cents per line each insertion. Lines will average ten words. A discount of 10 per cent. will be allowed on 3 months, 20 per cent. on 6 months and 30 per cent. on 12 months contracts. No extra rate charged for cuts or cutting of column rules. No reading notice taken for less than 60 cents each insertion.

San Francisco, Saturday, April 14, 1883.

Bear in mind that the entries to purses, and nominations in stakes, Capital Turf Club, Sacramento, close Monday, the 16th inst. See advertisement for particulars.

THE CHICAGO TROTTING MEETING.

We are always are on the *qui vive* when Chicago is mentioned, especially when the intelligence is in relation to the sports of the turf and track in that famous city.

There is not a resident who feels a whit more interested, or who rejoices more heartily over the success of its meetings.

It is a grand place; it is filled with people who are more than grand. Enterprising, whole-souled, hospitable, spirited, in fact the eulogistic adjectives in Webster and Worcester can be applied without varying from the truth. It has always heen so since our acquaintance commenced, and though people are prone to underrate former periods, when partially blinded hy the brilliancy of the present day, due praise must be given those who contributed so liberally in the olden time to huild up the cause. Chicago was the first place to hang up "big money." This claim has been entered for Buffalo, and the enterprising people who inaugurated the Park Club are worthy of all honor if in this respect Chicago set the example. In 1867 Chicago "hung up" $20,000, and in 1868 gave a race meeting on the most liheral scale.

In 1873 there was "big money" offered to racehorses and trotters, and the instances could he multiplied from the inception of the Driving Park on State street, in 1863, to the present time.

The present association has eclipsed all previous efforts. Beautiful grounds, a splendid course, club-house, stands, stables, everything perfect. The large amounts given to race and trotting meetings is not the only laudahle move in this direction.

The burden has been removed from the owners of horses, and the correct principle established of relieving those, as much as possible, who furnish the actors for this magnificent stage.

California is greatly interested in Chicago. It is the first point to look for; the ground where the California colts can make their dcbut in the East. There they play their part before an assemblage who come from all parts of the Union, and nave the opportunity to display their mettle to the best advantage. The liberal response which our breeders made to the invitation to join in the Colt Stakes proves that they realize the importance of taking part and appreciate the advantages offered. Succeeding years will show still longer lists from the Sunset Slope, and it is not a rash prediction to make that before very many years nominations in the Colt Stakes will be as numerous as from any other State. There will he the battle ground to decide the question of superiority, and to settle the equine dispute hetween Orient and Occident. There will bc fierce struggles for supremacy, dctermined contests if they are waged in good fellowship and with knightly feeling. The chivalry of the whole country will congregate, and the guerdon of victory will bc a trophy worthy of the occasion. As the years come the entries will not be restricted to youngsters. At this Summer Meeting, Overman, Romero, Gihraltar, Rowdy Boy, Corette, will be the older representatives; of the California-bred division, St. Julien and Director will strive just as valiantly for the land of their adoption. Eva, Wildflower, Bonita, Hinda Rose, Ruby, etc., keep up the glory of the colts. This is a delegation which any State can be proud of, and with a fair share of good fortune is sure to make a display which will add to the credit of our stock.

The breeding of trotting horses is an immense interest on the Pacific coast at the present time. In a few years it will assume far larger proportions and it is patent that the surplus, above the home demands, will be so uumerous that other markets must be found. The Chicago meetings are the marts where the goods can be displayed to the best advantage. It is the most convenient of any point east of the Mississippi, and there will congregate the largest assemblage of purchasers. Visitors from this coast who cannot leave their business long enough to make the grand circuit can attend without the loss of a great deal of time. The day is not far off when the run will be made in ninety-six hours, and when the transportation of horses assumes the proportions it is sure to reach there is no question that the railways will afford superior facilities and reduce the cost from the present tariff. To convey the number of horses which will annually go eastward, a special train will be required. This can run on passenger time, making the necessary stop-overs and with every convenience for horses and those who accompany them. It is supererogatory to write that the Chicago people will do all in their power to forward the enterprise and give assistance in every way. Not entirely from their interests being so intimately blended with ours, the ruling motive being a a hearty good fellowship which obliges for the satisfaction there is in doing a good action. A number of years' residence in the "city of the lake" is the data on which we base this estimate and though nine elliptical revolutions of the earth mark the interval since we last saw it, most of the "old folks" are still there with additions of the same sterling stamp—pure gold and of standard weight.

There is little necessity for further exemplification of the spirit that prevails in Chicago than to call attention to the advertisement of the Summer Trotting Meeting, which appears in this number of the *Breeder and Sportsman*.

The large sums given in purses, and as premiums for a high rate of excellence, are not the only praiseworthy features.

The relief from the onerous ten per cent in entrance by breaking it with several payments, and without further liability than the amount actually paid in, is heartily appreciated by the owners of horses. There is no hampering with conditions outside the rules, no drawbacks, no penalties. There is a candid statement of this manner of doing business. Two and a half per cent of the amount of purse at the time of making the entry, May 1, the same amount the first of June, and the remaining five per cent at 8 p. m. of the day preceding the race. We look for Chicago to inaugurate a still more liberal arrangement and cut down the entrance to five per cent of the purse. In 1864 the Chicago Association gave a meeting when the money was added to stakes all through the programme, and more than half of those who made nominations inclosed ten per cent on the added money in addition to the forfeit, and were surprised when it was returned. Five per cent will insure against being overcrowded, as might he the case were the entrance free, and the success which attended the colt stakes that closed March 1 demonstrates that relief to owners means the welfare of the track. Bestowing a premium for lowering the records is another good move, and one which cannot fail to give satisfaction all around. Quite a large proportion of the owners of trotters value them more highly when they take a prominent place in the record, and the additional inducement of a valuable consideration will lead to more strenuous efforts, and the prospect of seeing the "best on record" beaten, has a fascination which will entice many who otherwise would have stayed away.

There is one feature of the programme we do not understand. Without taking the trouble to "hunt the matter up," we are under the impression that the time to be heaten in the various classes to obtain the extra premium is the fastest on record. Thus the five-year-old has to excel 2:18, which was made in California by Santa Claus, else we might imagine that it was the hest time made on the Chicago track which was the standard. But in the three-minute class 2:27 is the stent, whereas the Chicago mare Clara G, as long ago as 1871, won in Buffalo, in 2:30, 2:26½, 2:26, the race being for horses that never beat three minutes.

Before closing we must again present our sincere wishes for the prosperity of the Chicago turf and track, and this prosperity will he doubly grateful inasmuch as it will also add to the well-doing of the same interests here. Twenty years ago we predicted that eventually it would be the great "turf center" of this continent, and already the prophecy is fulfilled.

THE RACE MEETING.

Everthing is working favorably for the success of the race meeting on the Oakland Course. There are very few accidents or mishaps reported among the racehorses, and ahout the only one that has come to our knowledge is a slight strain to the hind pastern of Lady Viva, though had enough to compel her being thrown out of training.

There are astonishing trial runs reported, two-year-olds flying through the stretch under a hard pull in twenty-four seconds and the elder horses showing a rate of speed that is wonderful for the season. While the horses are doing so well, the track is sure to he in the hest possihle order, and Mr. Wiard has commenced work on widening the whole of tbe backstretch and further turn in order to give plenty of room at the starting point.

The racing at Los Angeles showed that the Santa Anita stable is in customary good order, and a half mile in forty-nine and one-half seconds by one of their two-year-olds, 1:44 by Gano and 3:41 by Lucky B, proves that the grey and Maltese cross will be prominent as of yore. Those which are working on the Sacramento course will be troublesome, however, and from Palo Alto there is sure to be a red-hot contingent so that matters will he very lively.

Then the weather, at least for the opening day, a week from now, is assured to be all that could be asked. The violent hailstorm that swept over the Oakland Course last Thursday has cleared the air to perfection, and though this was followed by a slight frost Friday morning, we feel justified in predicting the finest weather imaginable all through the meeting. There is more interest taken by the public than we have ever known in previous years, and this is an augury that there will he an immense concourse of people to witness the sport. Heretofore the spring meetings have not elicited much enthusiasm; owners were slow to enter into engagements, preferring to wait until fall, but a glance at the nominations will show that this lethargy has been entirely overcome, and the nominations are more numerous than ever before. We must not omit to mention the hurdle race on the opening day. Though with only two in it, these are so handy over the timber and so nearly matched in speed that the issue will be extremely doubtful. No one with the least tact for the turf sports can afford to miss seeing the Spring Meeting of the Pacific Coast Blood Horse Association.

THE TWO-YEAR-OLD TROTTING STAKE.

The nominations for the stake for two-year-olds to be trotted at the State Fair in the fall—which will be found in another place—are not so numerous as we anticipated. The cause for the lack of appreciation is not apparent, as the conditions were favorahle, and with a liberal sum added, and it probably arose from an apathy which was due to some peculiar state of the atmosphere about the date of closing. The encouragement which the directors of the State Agricultural Society give to colt-trotting should he met with a liheral response from the hreeders, and failure to respond will have a discouraging effect on future occasions. It is oftentimes the case that purses and stakes do not receive anything like the number of entries anticipated, and without there being a shadow of reason for the neglect. There seems to he a concatenation of circumstances which operate prejudicially and which cannot be explained.

The fourteen that are named, however, are enough to make a great race, if a fair proportion of them have no mishap between now and the time of trotting.

Some of them have been highly tried, and one of them, Dawn, has the distinction of the fastest record ever made by a yearling in a race. There is quite a remarkahle feature connected with the nominations, that being the number of sires represented, viz., Sultan with two, Electioneer with four, Del Sur, Nutwood, Brigadier, Belle Alta, Buccaneer, Nephew, General Benton and Steinway, each having a single representative.

This is a fine array of sires, and the dams are worthy of being coupled with the high blood on the paternal side.

MOLLIE McCARTHY AND HER DAM.

In an obituary of Mollie McCarthy, published in the New York *Spirit of the Times*, April 7, there are two errors. Mollie McCarthy was not bred by J. B. Chase, as A. Mailliard owned Hennie Farrow when she was stinted, and Theo. Winters purchasing her at Mr. Mailliard's sale. Mollie was foaled at El Arroyo. Again, there never was any doubt about her paternity, as Hennie was only bred to Monday in 1872. The story that she had also been to Eclipse Jr. was started on purpose to injure Monday after his celebrated daughter displayed her powers, and like nearly all of that kind of romancing about the blood of horses, finds believers, however far from the truth it may he.

SMALL FARMS.

Texas has ahown many aigna of an intention to lead the Southern States in enterprise; but the last report from there is by far the most promising—it is that a number of owners of large estates bave determined to cut up plantations into small farms and sell them on easy terms to actual settlers. Small farms mean high farming and populous, intelligent, atable, well-to-do communities. Many small farms in New York and New Jersey yield greater profits than an equal nnmber of over-large plantations at the South, for the simple reason that on each one the labor is done mostly by the owner, and done thoroughly. There are parts of the South where for climatic and sanitary reasons it wonld be nseless to ask white farmers to settle; bnt mnch of the agricultural portion of Texas, like the high ground of the other Southern States, is as healthy as any part of the North and offers to farmers the superior mdncements of short winters, greater variety of crops aud frequently better soil than they can find at the North. The Texas experiment, if managed with ordinary ability and honesty, will benefit every one concerned, and the remainder of the South will do well to keep an eye on it.

The ahove, which we copy from the New York *Herald*, is beyond question correct in a measure. It depends greatly on the locality to determine what small farms are, and a truck patch in one part of the country is dignified with the name of an estate in another. Beyond question are the advantages resulting from a limited ownership of land when a country is in a position to be divided into comparatively small farms, though there is a condition of affairs when this status does not exist, and in some of the stages of settlement there is an absolute necessity for large areas heing under one management. The business followed is another thing to determine the size of the farm, and while from ten to forty acres can he profitah y employed in vegetahle or fruit farming, giving a chance to make the lahor of several remunerative, there are other pursuits that demaud hundreds, it may be thousands of acres. California presents the best field in the whole of the United States for the profitable working of small farms, and it also gives the opportunity for carrying on the phases of rural pursuits that require large holdings without detriment, in fact, with decided advantage to public interests.

The valleys, plains and foothills are susceptible of heing cut into small farms, and those of moderate size, to the greatest advantage, and not very distant ia the time when the population will he multiplied into a dense collection of thrifty, well-to-do people. There are mountain ranges which afford the best of pasturage, and the rolling lands in all parts of the State cannot be excelled for breeding horses and cattle. There are advantages to the smaller stock breeder, to the smaller fruit-grower, to the man who cultivates a few acres of vines, in the operations of the larger, and Palo Alto, Rancho del Paso, Sunny Slope, Vina and other places of like character, present valuable lessons to those who cannot afford to experiment. Experiments in breeding, vine culture, wine making, etc., that have cost thousands of dollars to those who institute them, benefit the whole community engaged in the same pursuits. Failures are avoided, success accepted without the outlay of a dollar. Amateur farmers are the most enterprising. The man who is forced hy his circumstances to he conservative is chary of forsaking the old and tried routes. The day has passed when "hook-farming" elicited the sneers of a class which the "march of events," the progress of thia part of the world at least, has taught hetter, and the farmer who does not avail himself of printed instructions, as well as his own ohservation, is far hehind in the race of life. Large grain farms have stimulated the faculty of inventors to supply machinery that would take the place of human muscle, and the grain grower on limited acres uses the improvements to his great advantage.

While agreeing in the main with the sentiments expressed in the quoted editorial let us not forget the praise that is due to those who have prepared the way for sucessfully handling small hodies of land, or indulge in a crusade against those whose means enahle them to farm on a large scale.

CONFIDENCE.

We came very nearly discovering a man the other day who knew exactly the manner in which racehorses ran hefore instantaneous photography revealed the secret.

At least he claimed that he "knew all ahout it," and the attitudes represented hy the camera were familiar. With all that knowledge it was not many minutes until he was arguing that the disclosures were all wrong, and that it was an impossihility for the last spring to he made from the foreleg, and that he knew that the anterior aupports were the first to atrike the ground after the airflight.

It is rather humiliating for us folks who thought we knew all ahout the manner of progression of a horse in a fast gallop to acknowledge such complete ignorance if we are in the same hoat and the comfort of applying comparison hetween pot and kettle is only a trifling solace for our lack of penetration. As we have intimated before, the photographs have saved controversies that would have inundated the press of hoth hemispheres, for if with that indiaputable evidence before us thsre are sceptics, what sort of a chance would have been given the lunatic who attempted to sustain his position by ahstract reasoning?

COMBINATION SALES.

Very popular the auction sales under the above title have become in the East. They offer superior advantages to huyers and sellers, giving the opportunity to the first to make his selections from a large number of animals, and the seller secures the benefits of the attraction of numbers with the least cost for advertising.

The method introduced by Peter C. Kellogg, "Hark Comstock," is to fix up a date for a sale, notifying the public some months in advance of the date sclected. Up to a certain time animals are registered, and at the conclusion of registry a catalogue is published. This embraces all that are to he offered, and in addition there are advertisements in the papers that are the most likely to hring it hefore readers who are interested in the class of stock. Thus the man who has only one animal to offer secures all the advantages which follow a large lot, and with only a fractional and proportional part of the expenses.

The system will be found still more beneficial on this coast. It is a long distance from San Diego to the north line of Oregon, and the space is not cramped which is hounded hy the Rockies on the east and the Pacific ocean on the west.

The stock and purchasers are scattered over this great domain and to hring them to the same focus will he the result. Purchasers attracted by the magnitude of the offerings will come from places still further away. From the East, from Australia, the South American States and the horders of the Gulf of Mexico there will he huyers when the sales assume the magnitute they are sure to do before many years.

Feeling assured that the inauguration of these sales is of the greatest importance to the hreeders of California we are well pleased that Killip & Co. intend embarking in the business. That firm is sure to give the project all the attention that is required to insure success. The business is thoroughly understood, and every move will be in the right direction. It is palpable that the great necessity is knowing how to handle the details. That accomplished and the rest is easy. Months of preliminary work, untiring industry, activity to sieze advantages that may he lost from not striking while the iron is aglow, a knowledge of stock so as to present the merits in a proper light, are essentials, and all these are embodied in the members of this firm. The sales which they have already conducted are the hest recommendation. Those of S. B. Whipple, of Newland & Hammond, of A. C. Dietz and the recent one of the stock helonging to the estate of the late Daniel Cook afford ample testimony of capacity, and leave little to add.

THE JERSEY HERD BOOK.

Since our last issue we have conversed with a number of owners and hreeders of Jersey cattle in relation to the contemplated herd hook for the Pacific coast, and without an exception the design meets favor. There is little douht that the present system of registry is not only unsatisfactory, as it works rank injustice. There are ahsurd regulations, too ridiculous to he reconciled on any other hypothesis than the endeavor to favor a clique who control the affair. For instance, a gentleman gave ua the information a few days ago that Mr. Harmon imported some animals which were admitted to hc up to the full standard of hlood. The evidence was complete, not a point lacking, and yet they were denied admission on the ground that they sailed around Cape Horn. Furthermore, the secretary informed Mr. Harmon that it would he ohligatory on him, in future shipmcnts, to send them to New York, and from there hy the overland route to California. If Colonel Bruce were to refuse admission to Hereules, Lawyer, Haddington, etc., in the Amerlean Stud Book, on parallel reasoning, every hreeder of thoroughhreds in the United States would consider that he had gone crazy. The case of Mr. Harmon is stated to he only one of the many instances of equally as ahsurd ruling, and the only explanation is that the ohject is to subserve particular intercsts, in place of all thoso who are engaged in the business of hreeding pure Jersyes. With the unanimous desiro to see the work commenced and completed as aoou as possihle, immediate steps should be taken. We would much rather that auggestions and plans should originate with those who are directly interested than to offer advice, though there is an evident necessity for activity, and therefore recommend that a meeting he called not later than the 1st of May to take the preliminary steps towards forming an organization. As Mr. Mailliard was one of the first to import and hreed pure cattle of the race here, it seems eminently proper that he should summon his confreres and others to a conference.

STATE FAIR SPEED PROGRAMME.

There is such a press on the columns this week that many articles have been laid over, and it was also compulsory that the comments on the apeed programme of the California State Agricultural Society be deferred to another week. This was necessary in order to give it proper attention, as the advertisement will show that it is very comprehensive and with the offer of liberal sums for the horses and colts to run and trot for. The classification has been carefully studied to meet the horses that are likely to compete, and that in the whole it is one of the hest ever offered we feel confident of showing when the analysis is made next week.

Bear in mind that the entries to purses, and nominations in stakes, Capital Turf Club, Sacramento, close Monday, the 16th inst. See advertisement for particulars.

Names Claimed.

By Jno. G. Dnnn, Stockton, Cal.

SIERRA BELLE for hay filly, foaled May 4, 1880, hy Nephew, her dam by General Dana; second dam by Lorenzo Dow (the sire of Little John).

Pork as Food.

The question is again raised as to whether pork is wholesome or otherwise, some people declaring againat it warmly, as an article of food, etc., though they offer no solid reasons for their opinion or belief. Now, so far as our information and experience go, we can regard snch views as without the shade of a fonndation. Pork-eaters, who comprise about nine-tentha of the population of the civilized world, will scont at such nonsense. For all persons of active habits, pork is just as wholesome as anything else and far more sustaining. It is true that if too much of it ia eaten at a time—in other words, if people will make hogs of themselves—they will have to anffer for it as an over-mess of almost any other food. To discard pork wonld be to discard one of the main items going into our vital statistics. What would become of the army and navy, of the merchant marine, of, in a word, the great mass of our population, if pork were to be thrown overboard? The idea is supremely abanrd—the abolition of this flesh as a prime article of food would be just cause for a snmptuary revolution. No! go on, ye pork-eaters, among whom we nnmber ourselves, with a craving stomach; boil or broil your hams, pickle your sides, cabbage and krout your chines, sonse your pigs' feet, and enjoy yourselves upon swine's meat to your hearts' and pockets' content. Fling not dirt at the grave, patient, thankful grunter, who anticipates hia fate with a pleasure which he cannot express in words, bnt which he squeals to meet with the best possible grace. He may not laugh, it ia true, but he grows fat without laughing, so much more to his own credit and the profit of his friend who liberally bestows upon him the wherewithal to fare snmptuously every day.

We shall stand hy the pig. He is the patron of man. If he is generously treated it is because he is expected to return the compliment four-fold. If he is lazy it is because we give him nothing to do bnt eat, grunt and sleep, having in view not the good of the animal a tithe as much as the hope of an affluent reciprocation for all our kindness. Pork unwholesome! Nobody except a lean, cadaverous sedentary, biped, who is obliged to live, probably on account of early dissipation, on Graham bread and weak tea, wonld he guilty of snch a slander!—*Germantown Telegraph.*

The Red Bluff *Cause* gives the following account of transactions in sheep at that place recently: Lesler & Spicer, Colorado sheep buyers, have beeu several daya buying sheep, which they intend driving over the mountains as soon as the weather will permit. They have already purchased 9,400 head and want to get 600 more. E. H. Ward sold 3,000 ewea and 1,200 lambs to them, getting $2 35 for the former and $1 per head for the latter. They purchased 1,200 ewes and 1,000 lambs from Frank Houghton, paying him $2 per head for ewes and $1 for lambs. Collins & Swain 1,200 dry sheep at $2 25 each. Ed. Wright's band of dry sheep brought him $2 25 per head, and G. G. Kimball sold 2,000 stock sheep at the same price. The sheep to be delivered after shearing without the wool.

There is an effort making to introduce the game of cricket in Stockton. Jos. Fyfe of the Caledonian Club and others are interesting themselves in the matter. They have sent for the wickets, bats and paraphernalia to protect the shins of the wicket-keeper, and they are expected to arrive to-day or to-morrow. Membership in the proposed cricket club will not be confined to Caledonians.

The *Mirror and Farmer* gives the following recipe for the cure of caked bag in milch cows: Tincture of arnica, four ounces; tincture of aconite, one ounce; oil glycerine, one ounce. Mix and bathe the bag two or three times daily, rub it in well with your hand; give internally a teaspoonful of the mixture three times a day. Do not feed any grain to the cow.

Trained horses have shown in England that they are capable of jumping great distances. Chandler cleared thirty-nine feet over a break at Warwick; Calverthorpe, thirty-three feet over hurdles at New Port Pagnell; King of the Valley, thirty-five feet over the Wissedine Brook, Leicestershire; Peter Simple, thirty-seven feet at Boston.

A bill has passed both houses of the Tennessee Legislature allowing pools to be sold on all races controlled by blood horse associations and fairs. It prohibits the selling of pools to minors or intoxicated persons. The law has heretofore forbidden the selling of pools on any races run outside of the State.

The late storm was very severe on sheep in some parts of Tulare county. Of one band of 2,000 head over 900 died from the effects of exposure. Other bands in the foothills suffered. The sheep had been sheared and were not in condition to weather the rain and hail.

A bill is now pending in the Illinois Legislature giving owners of stallions a lien for season fee on mares bred to stallions. Such a law would be a very proper addition to the statutes of every State in the Union.

A correspondent asks for information regarding the pedigree of General Dana's dam. We are in the dark on that point, and if any of our readers can furnish the desired information we should he pleased to hear from them.

Annual Meeting of the American Jersey Cattle Club.

The approaching annual meeting of the American Jersey Cattle Club renders fit a few words as to some of the inconsistencies and abuses which have been so marked under the present management, and urges upon all members a determined effort for a change of administration, a radical revision of the rules of entry, a rigid adherence to the letter of the Constitution, particularly in the matter of solicitation of proxies by officers, a modification of the rules for admission of members, or doing away entirely with the provision for blackballing, which, in the hands of certain members, has so disgraced the club and created such general dissatisfaction. We believe in a registration fee of one dollar to all, members and non-members alike. The club was not designed to accumulate money; and as one of its supposed aims is to encourage the breeding of the Jersey cow, it could not, in our opinion, adopt a more acceptable or effective method to accomplish this than by making such change.

We believe no director, who has served his term of two years, should be eligible for a succeeding term. By this plan a continued change in the make-up of the board would be insured, and thus the continuance of any objectionable methods or cliques he prevented.

The rules of entry should be so amended as to admit any Jersey from the Island, be it prize winner, numbered and registered, or not. The committee of judges in Jersey should certainly not be asked or expected to select the importations, which is the effect of the present rules. The classes admissible to the Herd Register should be simply animals imported from Jersey, only, and animals bred in the United States and Canada. The purity of the blood would thus be absolutely insured, and the rules so simplified, that any novice could tell whether his animals could he entered. If the system at present in use in the secretary's office is a good one, let it be applied with more exactitude and considerable more courtesy. The secretary should be prohibited from canvassing for sales of cattle for any person; he should have no connection with the preparations of any catalogue, either for a breeder or an importer; he should be removed in toto from any temptation, or suspicion of temptation to help in the sole of any one person's animals. If the present salary will not attract a suitable person, we would donble it if necessary to insure an entirely unprejudiced person to occupy this, almost the most important position in the clnb.

We believe that the secretary should be appointed by the Board of Directors, that] any non-conformance with the desires of these, the controllers of the club, between the dates of its annual meetings, could be promptly punished. We think these changes worthy the attention of every member. This club ehould strive to become the true exponent of the really marvelous cow which has contributed so much to the dairy interests of the country, and whose future is beyond the vision of her most sanguine admirers.—*Brs. Gaz.*

Pigeon Shooting in England.

An effort, which promises to be snccessfnl, is being made to pass a bill through the English Parliament to suppress pigeon shooting. On the first vote taken upon it in the House of Commons it was supported by a very large majority. The *Observer* says that Mr. Anderson's proposal for amending the Cruelty to Animals act, bnt which might, with more propriety, be termed a bill for the Abolition of Hurlingham and the Gun Club, smacks too much of the grandmaternal legislation to be accepted without inqniry. That acts of brutal and wanton cruelty, whether practiced on wild or tame animals, ought to be put down by the strong arm of the law is not disputed by anybody, whether he be a supporter or an opponent of the measnre. The bill would have had a far better chance of passing had it heen solely aimed at the veritable anomaly which allows the torture of wild animals with impnnity, and not at what is, after all, a genuine, though artificial form of sport. The cruelties on which Mr. Anderson dilated, auch as the maiming and maltreating the trapped birds, ought, of course, to be severely punished, but snrely there is some less clumsy way of bringing the wrongdoers within the grasp of the law than by abolishing the sport of which the ahnses complained of are so very separable an accident. The arguments nsed on both sides of the House did not, it must be owned, throw any fresh light on the subject, hut the discussion will probably have served a useful purpose if it calls attention to the enormities perpetrated by the underlings who are employed at these matchee, and warns pigeon shooters—and, indeed, sportsmen generally—that even in the most legitimate forms of sport unneccessy cruelty will not be tolerated.

At a sale of greyhounds in London a splendid litter of eight saplings by Misterton, ont of Promotion, realized the handsome total of 476 guineas, an average of 59½ guineas per head. The white and blue hitch Match Girl, who went amias a ehort time before the Waterloo Cup, was bought by Mr. Shaw for 300 guineas, and her sister (Rosewater) was sold for 140 guineas. Another litter of saplings of the same pedigree as Match Girl realized 475 guineas, averaging 59½ guineas each. At this sale several matches were mooted, but only one was made, between Wild Mint, the Waterloo Cup winner, and Destrnction, to run a beat of three courses for £500 a side at the Haydock Park coursing meeting.

For Coughs and Throat Disorders use Brown's Bronchial Troches. "Have never changed my mind respecting them from the first, except I think yet better of that which I began by thinking well of."—*Rev. Henry Ward Beecher.* Sold only in boxes. Price 25 cents.

RACES.

$15,000 $15,000
IN PURSES AND STAKES.
California State Fair.
SPEED PROGRAMME FOR 1883.

FIRST DAY, MONDAY, SEPTEMBER 10.

No. 1. Running; Introdnction Stake, for all ages; three-qnarters of a mile dasb; $25 entrance, $10 forfeit, $200 added, $50 to second, third to save stake.

No. 2. Rnnning; California Derby; stake for foals of 1880; 1½-mile dash; $50 entrance, p. p., $300 added, second horse $100, third $50; closed August 1, 1882, with 11 nominations.

No. 3. Running; California Annnal Stake, for two-year-olds, foals of 1881; dash of one mile; $100 entrance, $25 forfeit, $250 added, second colt $100; third $50; closed August 1, 1882, with 22 nominations.

No. 4. Running; hurdle race; purse $150, of whicb $25 to second horse; entrance free; dasb of 1¼ miles over five hurdles; tbree to start.

No. 5. Trotting; 2:25 class; purse $1,200.

SECOND DAY, TUESDAY, SEPT. 11.

No. 6. Trotting stake, mile beats, for two-year-old colts; closed April 7 with 14 nominations.

No. 7. Trotting; purse $1,000, for four-year-olds and nnder.

No. 8. Trotting; 2:40 class; purse $1,000.

THIRD DAY, WEDNESDAY, SEPT. 12.

No. 8. Running; Maturity Stake, for four-year-olds; dasb of three miles; $100 entrance, $25 forfeit, $500 added, second $150, third $100; closed Aug. 1, 1882, with 7 nominations.

No. 10. Running; Nighthawk Stake; dash of one mile for all ages; $50 entrance, $15 forfeit, $200 added, second horse $75, third $25; stake to be named after winner if Nighthawk's time (1:42½) is beaten.

No. 11. Selling race; purse $200, of whicb $50 to second; entrance free; one mile and repeat; $1,000 fixed valuation; 2 pounds off for each $100 under and 2 pounds added for each $100 over fixed valne.

No. 12. Running; hurdle race; purse $200, of which $50 to second; entrance free; over six hurdles; three to start.

No. 13. Trotting; 2:22 class; purse $12.

FOURTH DAY, THURSDAY, SEPT. 13.

No. 14. Trotting; 2:30 class; pnrse $1,200.

No. 15. Trotting; purse $1,000, for tbree-year-olds and under.

No. 16. Pacing; 2:25 class; purse $400.

FIFTH DAY, FRIDAY, SEPT. 14.

No. 17. Free handicap stake; 2½ miles; $50 entrance, $20 declaration, $300 added, $100 to second, third to save stake; weights announced Sept. 8; declaration Sept 10, 8 p. m.

No. 18. Rnnning; colt and filly stake for two-year-olds; one-mile dash; $25 entrance, $10 forfeit, $200 added, $50 to second, third to save stake; winner of two-year-old stake first day to carry 5 pounds extra.

No. 19. Running; purse $250, of whicb $50 to second; for three-year-olds; mile dash; entrance free.

No. 20. Running; consolation pnrse, $250, of whicb $50 to second; one mile and repeat over four burdles; entrance free; three to start.

SIXTH DAY, SATURDAY, SEPT. 15.

No. 21. Trotting: free for all; purse $1,200.

No. 22. Occidental stake; closed Jan. 1, 1882, with fifteen nominations.

No. 23. Trotting; purse $300; for yearlings; mile dash.

No. 24. Trotting; three-minnte class; pnrse $1,000; entries close May 1, 1883, at whicb time 2½ per cent of entrance must be paid, 2½ per cent payable July 1 and 5 per cent August 1, 1883; to fill ten horses must pay first installment; parties not making payments when due forfeit their previous payments, and are debarred from starting.

Entries for tbe following events for 1884-5 were ordered to be closed with tbe above races:

No. 1. Rnnning; California Derby Stake for foals of 1881, to be run at the State Fair of 1884; 1¼-mile dash, $50 entrance, p. p., $300 added, second horse $100, third $50.

No. 2. Same stake, for foals of 1882, to be rnn at State Fair of 1885; same conditions.

No. 3. Running; Maturity Stake; three-mile dash, for four-year-olds in 1884; $100 entrance, $25 forfeit, $500 added; second horse $100, third $50; to be run at the State Fair of 1884.

No. 4. Running; California Annual stake for two-year-olds, foals of 1882; dash of one mile; $100 entrance, $25 forfeit, $250 added, second horse $100, third $50; to be run at the fair of 1883.

REMARKS AND CONDITIONS.

All trotting and pacing races are tbe best three in five except tbe two-year-old trot, nnless otberwise specified; five to enter and tbree to start; entrance fee, 10 per cent on purse, to accompany nomination; purses divided at the rate of 50 per cent to first horse, 25 per cent to second, 15 per cent to third and 10 per cent to fourth.

National Association rules to govern trotting; but tbe board reserves the right to trot beats of any two classes alternately, if necessary to finish any day's racing, or to trot a special race between heats.

To fill running races, three or more subscribers are necessary.

All two-year-olds, when running in their classes, shall carry 110 pounds, with tbe nsual allowance for mares and geldings.

All three-year-olds, when trotting in their classes, to carry 115 pounds, with the usual allowance as above.

Starters in all races must be named to the secretary or clerk of course at 5 p. m. the day preceding race, any rule to the contrary notwithstanding.

No added money paid for a walk-over.

Horses entered in purses can only be drawn by consent of judges.

Rules of the Pacific Coast Blood Horse Association to govern races, except when conditions named are otherwise. Non-starters in running purses will be held for entrance under rule 3.

All entries to be made in writing, giving name, sex, color and marks of horses; also name and residence of owner. In running races full colors to be worn by rider, and drivers of trotting races are respectfully requested to wear caps of distinct colors, to be named in their entries, as their horses will be designated on programmes by colors worn by drivers. This is necessary to enable spectators to distinguish the horses in the race.

Entries to all the above races except No 21 to close with the secretary on Wednesday, August 1, 1883.

Write "Entries to Races" on outside of envelope.

P. A. FINIGAN, President.
EDWIN F. SMITH, Secretary.

RACES.

$60,000.00.
PROGRAMME FOR THE
SUMMER TROTTING
Meeting of the

CHICAGO DRIVING PARK,
July 14, 16, 17, 18, 19, 20 and 21, 1883.

First Day, Saturday, July 14.

No. 1. Purse $2,500, 2:19 class, with $500 to the winner of tbe fastest heat, if better than 2:16.

No. 2. Purse $2,500, 2:40 class, with $500 to the winner of the fastest beat, if better than 2:25.

No. 3. Stake $1,000, four-year-old class, closed on March 1, 1883, with twenty-four nominations, with $500 to tbe winner of tbe fastest beat, if better than 2:19.

Second Day, Monday, July 16.

No. 4. Pnrse $2,500, 2:23 class, with $500 to the winner of the fastest heat if better than 2:19.

No. 5. Purse $2,500, 2:27 class, with $500 to the wiuner of tbe fastest beat if better than 2:21.

No. 6. Purse $2,500, 2:30 pacing class, with $500 to the winner of the fastest beat if better than 2:20.

Third Day, Tuesday, July 17.

No. 7. Purse $2,500, 2:17 class, with $500 to the winner of the fastest beat if better than 2:14.

No. 8. Pnrse $2,500, open to all pacers, with $1,000 to tbe winner of the fastest beat if better than 2:11¼.

Fourth Day, Wednesday, July 18.

No. 9. Purse $2,500, 2:30 class, with $500 to the winner of the fastest beat if better than 2:22.

No. 10. Pnrse $2,500, 2:21 class, with $500 to the winner of the fastest beat, if better than 2:17½.

No. 11. Purse $2,500, 2:25 class, with $500 to the winner of the fastest heat if better than 2:20.

Fifth Day, Thursday, July 19.

No. 12. Pnrse $2,500, three-minnte class, with $500 to the winner of the fastest heat, if better than 2:27.

Special—Five thousand dollars is set aside for a special purse on this day. Terms and conditions to be announced hereafter.

No. 15. Purse $2,000, open to all five-year-olds and nnder, with $500 to tbe winner of the fastest beat if better than 2:18.

No. 16. Stake $1,000, three-year-old class (closed on March 1, 1883, with 25 nominations), with $500 to the winner of the fastest beat if better than 2:21.

Seventh Day, Saturday, July 21.

No. 17. Pnrse $3,000, open to all horses whicb have not trotted better than 2:14 previous to January 1, 1883; subscribers to enter their name and post office address; the horse to be named at 8 o'clock p. m. of Saturday, July 14, the first day of the meeting, when tbe last 5 per cent will be due and payable; with $1,000 to tbe winner of the fastest beat, if better than 2:10½; five subscribers to fill.

Special—Five thonsand dollars is set aside for a special purse on this day. Terms and conditions to be annonnced hereafter.

CONDITIONS.

All tbe above pnrses (except Nos. 6, 8 and 13 pacing) are for trotting, and are divided, 50 per cent to the first horse, 25 per cent to the second horse, 15 per cent to tbe third horse and 10 per cent to the fourth horse.

Mile heats, best three in five, in harness, and to the rules of tbe National Trotting Association, except as bereafter specified.

Entries in all purses close on Tuesday, May 1, 1883.

Entrance fee 10 per cent of purse, as follows: Two and one-half per cent cash, whicb must positively accompany the entry; 2½ per cent on Friday, June 1, and the remaining 5 per cent, from those who start, at 8 o'clock p. m. of the evening previous to the race, at the secretary's office, 116 Monroe street, Chicago. No entry will be accepted or considered nnless the 2½ per cent cash accompanies the same, nor will any entry be allowed to compete unless the second payment of 2½ per cent is made or mailed on or before 11 o'clock p. m. of Friday, June 1, 1883, and any entry on which the final payment of 5 per cent is not paid at 8 o'clock p. m. of the evening previous to the day set for the race shall be considered drawn, and will not be permitted to start, bnt no entry shall be held or liable for any amount beyond tbe first payment of 2½ per cent, bnt failure to pay either of the payments when due shall be considered as a withdrawal, and shall disqualify the entry for competing in the race. It is the intention to place the whole matter of entrance on an absolntely cash basis, and no deviation from these rules will be allowed in any case or in any particular. No entrance is charged on the extra money offered for fast time in the several races.

N. B.—The special purses will be announced from time to time, as they are decided on. In arranging them consideration will be given to Maud S and St. Julien, who are barred by their records from entering in the class races; to a stallion race, should one be deemed advisable; to double teams, and to trotting with running mate.

For further particulars and blanks, and in making entries, address D. L. HALL, Secretary, 116 Monroe St., Chicago.

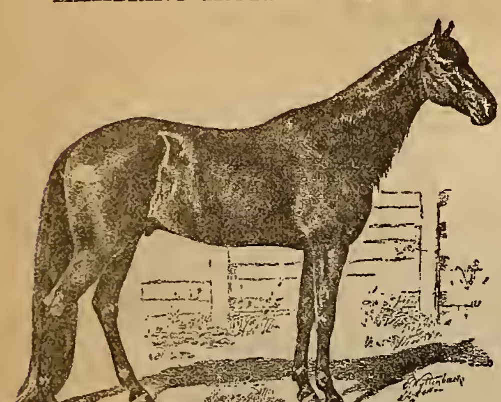
STALLIONS.

MAMBRINO TROTTING STALLION



ABBOTSFORD.

☞ Record at Six Years old, 2:21½. ☜

PEDIGREE.

BY WOODFORD MAMBRINO, HIS DAM COLUMBIA BY YOUNG Columbus. Woodford Mambrino by Mambrino Chief, his dam Woodbine by Woodford, a thoroughbred son of Kosciusko.

Woodford Mambrino is recognized to be the best son of Mambrino Chief. His own record is 2:21¼, and there are a large number of his get in the 2:30 list. Among them: Abbottstord, 2:21¼; Convoy, 2:22¼; Magenta, 2:24¼; Lady McFatridge, 2:29; Dacia, 2:29¼; George A. Ayer, 2:30.

Besides those having public records, he is the sire of the two celebrated mares owned by Robert Bonner—Manetta and Malice. Manetta, with a running mate, and harnessed to a road wagon, trotted two miles in 4:27¼, and Malice trotted a trial, on the same track, a mile in 2:19¾. Woodford Mambrino is also the sire of Princeps, the sire of Trinket; record, 2:14. Woodbine is also the dam of Wedgewood, record, 2:19. Young Columbus, the sire of the dam of Abbottsford, has nine of his get in the 2:30 list, so that on both sides of the house there are notable performers. Abbotsford is a rich rosewood brown, 15¾ hands, and of very high form. His get are very promising, his daughter Jasmine having won the Embryo Stake for yearlings in 1881, and every one which has been put in training has shown good speed.

TERMS.

Seventy-five dollars the season, to be paid before removing the animal. Mares not proving in foal can be returned the following season free of charge. Good pasturage at reasonable rates, and extra pains taken, but no liability for accidents or escapes.

LOCATION.

Abbotsford will make the ensuing season, 1883, on the ranch of S. B. Whipple, Esq., San Mateo, season commencing February 15th and ending June 1st, 1883. For full history see the issue of BREEDER AND SPORTSMAN of August 5th, 1882.

GEORGE BAYLIS, Agent, San Mateo, Cal.

MAMBRINO WILKES.

Black Stallion, sixteen hands in height, by George Wilkes, son of Rysdyk's Hambletonian, bred by B. J. Treacy of Fayette County, Kentucky. Dam Lady Christman by Todhunter's Mambrino or Idol, son of Mambrino Chief. Second dam by Pilot Jr. Third dam by Kentucky Whip. Idol's dam was thoroughbred and was by American Eclipse.

THIS IS THE LARGEST AND ONE OF THE BEST COLTS OF George Wilkes (weighing at this date 1,260 pounds) combining the Hambletonian and Mambrino strains and also several thoroughbred crosses. His colts demonstrate that he possesses in an eminent degree the same faculty of transmitting the family qualities to his offspring which put George Wilkes in the front rank as a sire of trotters.

☞ George Wilkes has twenty representatives in the 2:30 list, of which 10 have records of 2:25 or better, 4 of 2:20 or better and 3 of 2:18 or better.

Will make the ensuing season, beginning February 1st, 1883, at STOCKTON.

In putting the price by the season at the low figure of $40 the owner does not acknowledge, thereby, any inferiority on the part of this horse to any other sire of Trotters.

IRVIN AYRES.

UNDERMAN.

SIRED BY ELMO, DAM BY TOM HYAR, SON OF OLD Belmont, will make the season of 1883 from March 1st to July 1st at the Bay District Track, San Francisco.

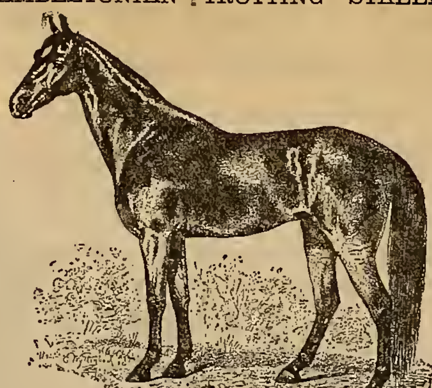
Underman is a dark chestnut, with blaze face and left hind foot white. Coming six years old, 15¾ hands high and weighs about 1,100 ...

... $20 for the season. Mares not proving with foal can be re... next year free of charge. No responsibilities assumed for ac... Apply to

FRED BENNETT,
Bay District Track, San Francisco.

STALLIONS.

HAMBLETONIAN TROTTING STALLION



BOB MASON

By Echo. His dam Belle Mason by Belmont, Thoroughbred.

Echo by Rysdyk's Hambletonian, his dam Fanny Felter by Magnolia (by American Star). Belle Mason by Belmont (Williamson's); First dam Lucy Johnson by the Pony (son of Imported Leviathan); second dam Catalpa, by Frank; third dam by John Richards.

WILL MAKE THE ENSUING SEASON, LIMITED TO TWENTY mares, commencing February 15, 1883, and ending June 15, 1883, at the stables of his owner, Figueroa street, Los Angeles.

DESCRIPTION.

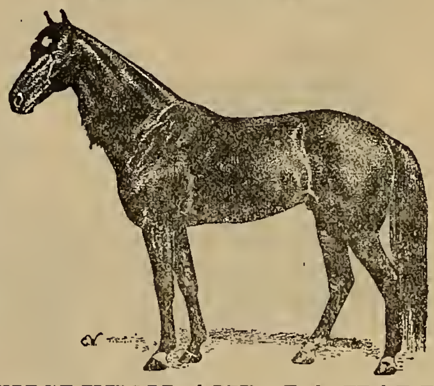
Bob Mason is a mahogany bay, with inside of off hind ankle white and star in forehead; sixteen hands, and weighs 1,100 pounds. Foaled May 10, 1879. He is of fine, kindly disposition, a natural trotter, and has shown great speed, but as yet has no public record. For full history of his sire, Echo, see BREEDER AND SPORTSMAN July 29, 1882. See also, for his full brother, Exile, BREEDER AND SPORTSMAN, issue of September 16, 1882.

TERMS.

One hundred dollars the season, payable at time of service. All mares at risk of owners. Mares not proving in foal can be returned the following season free of charge. Address

CHARLES J. ELLIS,
Post office box 55, Los Angeles, Cal.

THE TROTTING STALLIONS



SINGLETON AND LA HARPE.

SINGLETON WILL MAKE THE COMING SEASON, FROM March 1st to July 15th, 1883, at the farm of the owner, three miles north of Chico, Butte Co., Cal.

PEDIGREE.

Singleton is by Willie Schepper, a son of Rysdyk's Hambletonian, his dam Lightfoot (the dam of Pride) by Flaxtail, a son of Pruden's Blue Bull.

DESCRIPTION.

Singleton is a dark brown horse, tan flanks and muzzle, a little touch of white on hind feet and one fore foot, and star in forehead. He is 15¾ hands high and weighs 1,100 pounds. He was bred by Dr. M. W. Hicks, foaled spring of 1878.

TERMS.

Fifty dollars the season. Mares not proving in foal will be bred the following season free of charge. Mares from a distance will be pastured without charge during the season. Mares shipped to Chico, consigned to me, will be received on arrival of train, and taken to the ranch. Mares kept in any manner their owners desire, at reasonable rates. There is every convenience on the place, boxes, paddocks and plenty of shade and water.

LA HARPE

Will also make a short season at the above place on private terms. La Harpe is by Fame, a son of Alexander's Belmont, his dam Prairie Bird by Flaxtail, the dam of Flight and Prompter. Address

J. T. McINTOSH, Chico, Cal.

STEINWAY.

TWO-YEAR-OLD RECORD 2:31¾; 3-YEAR-OLD RECORD 2:25¾.

TERMS

WILL SERVE MARES THE PRESENT SEASON AND ENDING July 1, 1883, at the stock farm of the late Daniel Cook, Danville, Contra Costa county, Cal., at $100 for the season, payable before the animal is removed. Mares not proving with foal can be returned free the next season. Pasturage at $6 per month, and extra pains taken with mares in attendance, but no liability for accidents or escapes. Mares sent in care of of McCleverty & Noblett, Fashion stable, Oakland, S. J. Bennett, Martinez, or D. S. Smalley, Haywards, will be forwarded immediately to the farm.

DESCRIPTION.

He is a rich bay; 15¾ hands high; long, flowing mane and tail; two white hind ankles; remarkable style and lofty carriage; has a good, resolute head, set on a stout neck; his shoulders are of the Hambletonian form—do not mount very high at the withers; has great length and capacious middle piece; plenty of bone and substance, and his gait is big and square.

PEDIGREE.

Steinway was sired by Strathmore.

First dam Abbess by Albion, the sire of Vanity Fair, with record of 2:24.

Second dam by Marshal Ney, by imported Emancipation.

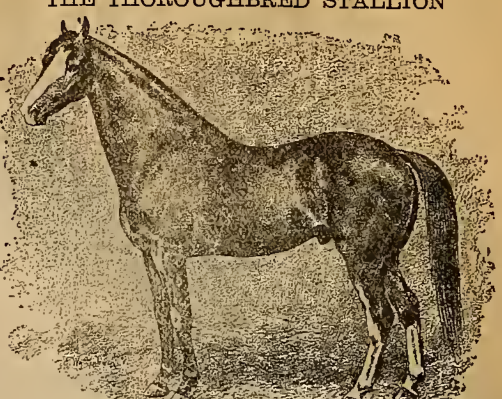
Third dam by Bertrand, by Sir Arcby.

Steinway's dam is the dam of Solo with five-year-old record 2:28¾, and also the dam of W. S. Buckner's colt Currency that trotted as a yearling last fall in 2:46. See N. Y. "Spirit of the Times of November 18, 1882. Strathmore is the sire of Santa Claus 2:17½; Chestnut Hill, 2:22½; Steinway, 2:25¾; Alice Stoner, four years old, 2:24; Nannie Talbot, four years old, 2:29; Solo, five years old, 2:28¾; Monitor, five-year-old record 2:29; by Rysdyk's Hambletonian, the sire of 35 in the 2:30 list. Address

SAMUEL GAMBLE,
Danville, Contra Costa Co., Cal.

STALLIONS.

THE THOROUGHBRED STALLION



JOE HOOKER,

BY MONDAY.

First Dam Mayflower, by imported Eclipse.
Second dam Hennie Farrow, by imported Shamrock.
Third dam Ida, by imported Belshazzar.
Fourth dam Gamma's dam, by Sir Richard.
Fifth dam by imported Eagle.
Sixth dam Bet Bosley, by Wilkes' Wonder.
Seventh dam by Chanticleer.
Eighth dam by imported Stirling.
Ninth dam by Clodius.
Tenth dam by imported Silver Eye.
Eleventh dam by imported Jolly Roger.
Twelfth dam by Partner.
Thirteenth dam by imported Monkey.
Fourteenth dam imported mare from the stud of Harrison of Brandon.

TERMS—$50 THE SEASON, TO A FEW MARES OF APPROVED breeding. Good pasturage for mares from a distance at $4 per month. Care will be taken to avoid accidents and escapes, but the owner must take the risks.

My place, where Joe Hooker will make the coming season, is five miles from Sacramento on the Freeport road.

This young stallion has proved to be one of the most successful racing sires, and every one of his colts that has been trained can run fast. Among them are Fred Collier and Jim Renwick. For history of Joe Hooker see BREEDER AND SPORTSMAN Jan 20, 1883.

THEO WINTERS, Sacramento, Cal.

THE THOROUGHBRED STALLION

WILDIDLE.

BY AUSTRALIAN.

DAM IDLEWILD BY LEXINGTON.

THIS GREAT RACEHORSE AND SUCCESSFUL SIRE WILL make the season 1883, from Feb. 15th to June 15th, at Judson's Wildidle farm, Santa Clara. For terms and particulars apply to or address

JAMES & H. C. JUDSON,
Owners, Santa Clara

Or to Wm. L. Appleby, Supt.

THE THOROUGHBRED STALLION
